Pardon the length of this letter. I am interested in the same things as you are. By carefully studying legislative problems, endeavoring to get the facts, and voting accordingly, I hope to do a good job as your Congressman.

With best wishes, I am,

Sincerely yours,

WALTER M. MUMMA,

Member of Congress.

"The Fifty-six Men Who Signed the Declaration of Independence Declared Their Beliefs to All the World: That All Men Are Created Equal, That All Men Are Endowed by Their Creator With Certain Unalienable Rights, and That Governments Derive Their Just Powers From the Consent of the Governed"—Dr. John R. Steelman, Battle Report—Washington

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. BOYKIN. Mr. Speaker, again Battle Report, Washington, under the guidance of the Assistant to the President, Dr. John R. Steelman, has brought to untold millions in their homes a direct report from high Government officials concerned with some particular phase of public administration vital to the Nation's welfare.

Additionally thereto, in this the forty-fourth Battle Report, and accompanying the reports of these public officials, is a film story of the latest development in modern warfare now being operated under the military title of "vertical development."

On the occasion of this teledocumentary, Dr. Steelman brings to the television audience Rear Adm. Allan E. Smith, United States Navy, commander of Task Force 95 in Korea; the United States High Commissioner to Austria, Ambassador Walter J. Donnelly; and, last but not least, a man well known on Capitol Hill, the great friend of every Member of this House from our newest page to the Speaker himself, Col. John C. (Johnny) Meyer, United States Air Force, and America's greatest living fighting ace, home from his victorious tour of duty in the Korean war.

Mr. Speaker, it seems like but a few months ago that "Johnny" Meyer, who, previous to his Korean service, served in the Congressional Liaison Division of the USAF, called at my office to say good-bye on his way to Korea to take up the splendid work of affording tactical support to the ground troops fighting in that far-off country.

Then one day came another report. Col. "Johnny" Meyer, who had accounted for 37½ enemy planes in World War II, and now in command of a jet fighter group in Korea, had brought down his first Russian MIG-15.

Another pause. Another day, and still another headline. This told us that "Johnny" Meyer, flying a Sabre jet, had brought down a second Russian MIG airplane. While Colonel Meyer dissents, the Russian MIG-15 has been acknowledged by eminent authorities to be the greatest fighter jet aircraft in the world.

Colonel Meyer's statement on this Battle Report certainly thrilled the American audience as he modestly recited the victories gained by the Sabre jets of the USAF Fourth Fighter Group in that narrow corridor south of the Korean border. This is where the real dogfights take place high in the heavens, thus keeping the Communists off the backs of our tactical planes, giving front-line close support to our ground troops.

Mr. Speaker, Battle Report, Washington, in its every aspect, more and more each week commends itself to the reading of every Member of this House. In order that all of the many friends of Colonel Meyers here in this House may become more conversant with the achievements of our Air Force in Korea, as well as with other aspects of our economic, politic, and military exploitations at home and abroad, I am extending my remarks and inserting the same in the RECORD.

The producer-director of this NBC program is Ted Ayers; the technical director, L. A. McClelland; the commentary, Robert McCormick. The script writer is Lou Hazam; the film editor, Bill Brooks; the floor manager, John Johnson; production assistant, Jean Montgomery; art by Joseph Ferrier; music adviser, Fritz Balzer; and sound by Bob Haines.

BATTLE REPORT, WASHINGTON—JUNE 29, 1951

ROBERT MCCORMICK, Washington, standing by, like the rest of the Nation, awaiting further developments on the cease-fire in Korea, and the world, whose hopes for peace stir once again, even as the battle continues in the Far East. Against this exciting new de-

velopment in Korea, NBC television brings you forty-fourth Battle Report.

Vertical envelopment, a new development in modern warfare spelled out by troop-laden helicopters taking off in mass formation. The idea, airborne mobility, that experts say will make the tactics of World War II look dated.

The helicopters are preceded by planes which move in upon the enemy to strafe and bomb, preparing the way for whole divisions to be moved wherever they are needed.

Divisions that will be sent into action so fast they can overcome the enemy's advantage in size.

To screen off the landing zone from the enemy's beach defenses, Corsairs race in to put down a cloud of smoke.

And now the giant twin-motored "egg beaters" come in for a protected landing. They disgorge their armored human cargo and drop heavy equipment which they will use to fight. In this way does this new mobility seek to give meaning to General Collins' remark: "Where the enemy mounts a wall of flesh, we must mount a wall of fire."

Marines go into action, blasting at the enemy with guns and artillery which only a few moments ago were not even there.

The flame throwers, too, go to work with their deadly man-made lightning, burning their way forward while their buddies blast.

Here come the Air Force fighters and bombers to join in their arrival, carefully timed so that they will do the most good. Object: to soften up the beach.

The invading force now amounts to a sizable army, packing a mean wallop. They are joined by tanks that add their weight to the attack. As wounded fall, versatile helicopters drop down to pick up the wounded and fly them away for speedy medical attention. Thus has the term "vertical envelopment" come to spell for many a new weapon, a weapon that may, in the opinion of one of our leading tacticians, make war in Europe tactically tough for the Russians.

Before we post the roster on Battle Report today, in person and via camera, drawn from the forefront of the battle against Soviet communism, a film story on a new development in modern warfare, plus the latest developments on the Korean cease fire, we will first hear from the Assistant to the President, Dr. John R. Steelman.

Dr. JOHN R. STEELMAN. Good evening, ladies and gentlemen. Next Wednesday is July 4—the one hundred and seventy-fifth anniversary of the signing of our Declaration of Independence. The President has proclaimed it as a national day of rededication to the principles which are stated so dramatically in that immortal document. Under the direction of a commission headed by Mr. Chief Justice Vinson, celebrations will be held in cities, towns and villages all over the Nation. But, regardless of whether we attend one of these celebrations or not—regardless of what we are doing or where we are on July 4—every one of us should give a thought to the event which has made this holiday.

In 1776, the 56 men who signed the Declaration of Independence declared their beliefs to all the world: that all men are created equal, that all men are endowed by their Creator with certain inalienable rights, and that governments derive their just powers from the consent of the governed.

This courageous act became a milestone in human history. Their beliefs became the foundation upon which this Nation was built—the very fabric of the American way of life. Those principles are our most precious heritage.

Wherever you are next Wednesday, won't you take the time to remember all the good things you have obtained—all the happiness you have found because of the freedom and opportunities which are ours? We owe a tremendous debt of gratitude to the men who pledged their lives, their fortunes, and

their sacred honor so we could live as free men. Let us remember them and rededicate ourselves to their ideas—which are our ideals.

My friends, today, by way of the cameras, drawn from the forefront of the battle against Soviet communism, is a film story on a new development in modern warfare. Additionally thereto, we shall hear from Rear Adm. Allen E. Smith, United States Navy, commander of Task Force 95 in Korea, as well as from United States High Commissioner Walter J. Donnelly, back from critical Austria to make report to the President. Also we are going to hear from Col. John C. Meyer, United States Air Force, and America's greatest living fighter ace, home from victorious service against Russian MIG's in Korean skies.

Mr. MCCORMICK. You are at sea now, off the shore of Korea again, as the battleship *New Jersey* lays down its initial bombardment upon Communist supply ports. This 45,000-ton superdreadnaught—which recently replaced the "Big Mo" in action there, has made its weight felt blocking the enemy's main supply routes from Asia and North Korea. And here a Navy rocket ship goes into action inside Wonsan Harbor against Red shore establishments, troop concentrations, and supply dumps—a spectacular night display of fire power. And finally, home from the war, aboard four destroyers come Navy warriors, after nine long months of fighting in Korea. As they are greeted by mothers, wives, and sweethearts, let us turn to another recently home from his assignment as commander of Task Force 95. For some pertinent words on the U. N. forces maintaining control of the seas in Korea, here is Rear Adm. Allan E. Smith.

Rear Adm. ALLEN E. SMITH. By July 4, 1950, the blockade of Korea and Formosa was established and has been effective ever since. Because our Navy has retained complete control of the sea lanes, thousands of tons of supplies and equipment have flowed by ship from our American industrial centers to our Army, Navy, and Air Force in the Far East. During the first 6 months of the Korean action Navy ships transported 239,554 military personnel and 5,000,000 tons of supplies and ammunition from the United States to the Far East. Over 10,000,000 barrels of aviation gasoline and petroleum products for planes, tanks, and trucks arrived by ship for the Armed Forces during this period.

However, logistic support of our Armed Forces is but one byproduct of our maintaining the control of the seas. Because of our effective naval blockade, the enemy was forced to resort to the last two remaining supply lines available to him, the western land road and rail system which passes from the Yalu through Pyongyang to Seoul and the east coast highway and rail lines from the Manchurian and Siberian borders to Wonsan, and thence also to Seoul. The surface ships of Task Force 95, our own carrier-based planes, and the United States Air Force are putting a noose around these last remaining supply lines. For the past several months the Air Force has been hitting the western land route hard as have the Carline Corsairs and the British Sea Furies. The eastern land route has been battered into a state of collapse by Navy Corsairs and Sky Raiders of Task Force 77 and the constant bombardment by the Navy gunfire-support ships of Task Force 95. The sea blockade and interdiction program illustrate the old saying that "an Army fights on its stomach." Over 10,000 Red soldiers surrendered recently because they were out of food and ammunition.

To help understand what some of the various types of ships do to help maintain control of the seas and damage the enemy, let us look for a moment at the destroyer mine sweepers and the smaller sweepers. They contribute to everything the bigger ships do, and have a number of specific accomplishments of their own. They're the

Navy's "me first" boys. The mine sweepers are the ships of the Navy whose job it is to clear enemy harbors in advance of an amphibious landing and to clear coastal waters of mines so that the larger ships can fire on targets ashore. They sweep newly captured ports so Navy supply ships can enter near the front lines with logistic support for the ground and air forces.

Some newsmen have referred to mines and mine warfare as the dirty-trick department. However, defensive mines in a large part are a perfect weapon for a nation with inferior sea power or a nation with no navy at all. In a fashion, using mines may restrict control of the sea or slow the movement of ships of a superior naval power. At some ports in Korea, this is precisely what happened to us. Complete control of the sea was regained after only a few days' delay, but under other circumstances such delays might have been disastrous. The Korean waters are noted for their extreme tidal currents. These currents in some cases cause the mines to "walk," and it obviously becomes dangerous if a mine "walks" into a previously swept channel. To insure full safety for the ships and men, these sea lanes are constantly being swept to clear all mines. Mine personnel are trappers and trap snappers rather than hunters. They seldom get a huntsman's personal satisfaction, and they collect no hazardous-duty pay. But the men of the mine sweepers have a pride in performance even exceeding that of the marines and the carrier-based pilots.

The cruisers, destroyers, and frigates do the blockading and naval gunfire interdiction choke off the flow of supplies to the Communists. They've also inflicted thousands of casualties in reserve areas and on the battle line while shelling enemy troops. Whenever our ground forces plan to advance, the Navy provides gunfire support along the east and west coasts of Korea. The mobile seagoing artillery protected the Eighth Army's flanks on both ends of the battle line when the Reds launched their recent spring offensives. Speaking of our 130 days successive bombardment in the Wonsan area, the commanding general of a U. N. Eighth Army Division expressed his appreciation for the naval bombardment and termed the accuracy of the gunfire outstanding. I have a copy of a dispatch here with me that was received just before I left the Far East. I would like to read it to you, and particularly to the parents of our naval gunners who may be viewing this show—I would like the parents of these boys to know that the job their sons are doing aboard our naval vessels has received a grateful "well done" from a ground general of a U. N. Eighth Army Division, and here is the message.

ANNOUNCER. Your shells exploded on enemy troops as close as 150 yards ahead of my men and dispersed the enemy troops before they could deploy against my division. The prisoners we have taken are more afraid of naval gunfire than they are of any other attack, because it is unseen and it is accurate.

Mr. MCCORMICK. And now, from Korea across Asia and the Middle East to Austria, where America, represented by these GI's in training, still sits across the council table from Soviet Russia. Here, in a city once a tourist wonderland and now a combat training center for our occupation troops, cable cars lift trainees thousands of feet above the valley. Then comes the hardening process on one of the toughest infiltration courses in all Europe. Just back from Europe to confer with the President on the tinderbox that is Austria comes our next guest. He brings you a report not only on the temper of the Austrian people but some interesting side lights on our fellow administrators there, the Russians. We focus now on the United States High Commissioner for Austria, Ambassador Walter J. Donnelly.

Ambassador WALTER J. DONNELLY. I have just returned from Austria to report to the President, the Department of State, the Congress, and to you on our mission there, which is unique in the world. Austria is the outpost of western civilizations in Europe. It is the only place where the four powers—the United States, Great Britain, France, and the Soviet Union—work together and where the Soviets do not have the veto power. We hold frequent meetings, and every 2 weeks I sit in the allied council with the representatives of France, Great Britain, and Soviet Russia, the latter being a lieutenant general in the Soviet Army. While common agreement is rare, the four-power machinery should continue until the state treaty is made effective and all of the occupation troops leave Austrian soil.

Austria has been occupied for 13 years—from 1938 until 1945 by Nazi Germany and since 1945 by the four powers. The United States and the two other western powers have long taken the position that a state treaty reestablishing Austria's independence and full sovereignty should be concluded. The Soviets have frustrated our efforts.

The situation in Austria is unique in another respect, too. It is the only place where we have a four-power occupation and nevertheless the Austria non-Communist government exercises complete jurisdiction over the country, including the Soviet zone. Free elections have been held at several occasions all over Austria with a minimum of interference with the rights of the people. The Communists have never succeeded in obtaining more than 5 percent of the vote and received less votes proportionally in the Soviet zone. This is due to the fact that the people there know them only too well.

Recently we asked the Soviet repatriation mission to leave the American zone since they had completed their mission there. The Soviets did not want to leave; we had to insist and finally to escort them to the Soviet zone.

We are all very proud of the way and manner in which the Austrian Government and the Austrian people have stood up against Soviet encroachment on their rights. The Austrian people are thoroughly prowestern and genuinely grateful to the United States, and all we have done since the end of the war to put Austria back on its feet and to overcome the disaster of the Second World War. Notably, the Marshall plan has put Austria and its people in a position to resume their economic life.

We are proud of Austria's friendship, and Austria is proud of ours.

Mr. MCCORMICK. High in the sky behind the enemy lines before the peace overtures began, an American plane finds its target, a Russian-built MIG, and lets the jet have it. As it falls to crash, the enemy pilot bails out and our side scores another kill. Two such kills as this were won in Korea by our next guest, whose total credits are but one-half plane short of the all-time wartime record.

In World War II air combat, such as you see here, he destroyed over 22½ enemy planes in air-to-air battle, plus 13 on the ground. Such a record helped win for him command of the Fourth Fighter Interceptor Group, which he took to Korea and led against the enemy in its first combat mission. He pauses to report on Battle Report before leaving for his new assignment as deputy commander of the One Hundred and First Fighter Interceptor Wing based in New Hampshire. America's greatest fighting ace today—Col. John C. Meyer.

Col. JOHN C. MEYER. The Sabre jets of the Fourth Fighter Group were primarily engaged in holding Communist jets at bay in "MIG Alley," a narrow corridor running 30 to 40 miles south along the Korean border in order to keep them off the backs of our tactical fighters operating along the battle front

in close support to our ground forces. During this period we had about 1,000 individual encounters with the Russian built 15's. Like our own F-86 Sabre, it is a high-speed swept-wing jet fighter.

From these dogfights 9 miles high over "MIG Alley" we learned some important technical and tactical facts about modern aerial warfare. These lessons are:

1. All air-to-air combat is taking place near or at the speed of sound.
2. The Russian-built MIG-15 is at least as good, performance-wise, as our own F-86 Sabre jet.
3. The jet airplane is a tough airplane to shoot down.

To go back—the combat maneuvers of aircraft at and close to the speed of sound places challenging requirements on the aviation industry and the Air Force to engineer—develop, and produce aircraft of continually improving aerodynamic design.

That the Russians already recognize this fact is brought out by the performance of their MIG-15 in combat against our F-86. These Russian-built aircraft were tough. They were tough to fight, tough to lick, and tough to destroy. Someone may ask why, if these, the enemy airplanes were so good, were we able, during the period of our encounters, to destroy 31 Russian MIG's while losing only 1 F-86? This is explained by an understanding of what I call the fighter aircraft complex; that is, the airplane itself and its performance, the armament and firing control system, which is the mechanical feature of the shooting performance in which the MIG holds its own with the F-86. In comparing the whole weapon—that is, the MIG and its guns and the pilot—against the F-86 and its guns and its pilot. The whole American weapon whipped the whole Communist weapon. Most significantly the pilots of the Fourth Fighter Group are the most experienced air fighters in the world.

The toughness of the MIG is not purely an attribute of that airplane, but rather a general characteristic of all jets. This is being borne out by the fact that our conventional fighters in the tactical support phase of the Korean war alone are suffering losses considerably higher than that of our jets so engaged. If we should become engaged in a global conflict where enemy air power would be encountered in large force, it is my opinion that other than jet fighters used for close support of our ground forces would not survive.

I believe that the most important single lesson to all Americans from this action of ours in Korea is that the Russian world power can produce an airplane equal in performance to America's best. Any nation which can do this has the potential for a first-rate air power qualitatively as well as quantitatively. Therefore, we must, in all fields of research and development—in fact, in our total national effort—continuously work toward insuring our security against any again rising international gangster.

Mr. McCORMICK. This is the battle that may soon be settled. This is where and this is how for exactly a year plus 4 days free men armed with guns, ships, tanks, and planes rose in might and indignation over the unprovoked invasion of South Korea and said to those who would deprive humanity of its freedoms, "This evil shall not be done." Joined as never before in their history and giving true meaning to what was formerly spelled only in words in a charter and in a name—United Nations—the democratic world put its forces shoulder to shoulder and challenged those who would make it slave. Here in the sweat born of the hot summer sun, here in the cold of the winds of winter, youthful Americans from Kokomo and Silver Spring, mustached Turks from Ankara, kilted Scots from Glasgow, laconic Britons from London show the stuff of which they are made.

And each day as the smoke of battle cleared and as night fell they stole out to find their wounded and bury their dead—The price of their heroism. We counted our own losses heavy—12,202 Americans killed, 10,512 missing, 158 captured. Should peace come, America, don't forget this, and permit not the silence that will follow the abruptly stilled sound to lull you into a sense of false security, for, if the past few months' history have taught us anything, they have taught us the need to be prepared.

Remember, the Communist bear still stalks half of Europe and most of Asia, and by his words and actions he shows that no lasting peace will be ours without strength. The climate in which each of us seeks to live out his life and raise his children will not come with ideals alone but with the might to match them. And freedom—freedom will always belong only to those who are willing to fight for it.

One hundred and seventy-five years ago the founding fathers of our Nation signed with their pens and backed with their blood this hallowed document—a declaration of all we live by still. That this occasion may not pass unnoticed in this crisis point in our saga, we call upon William Flaherty, who portrays Thomas Jefferson nightly here in Washington in Paul Green's historical drama *Faith of Our Fathers*. For some sentiments truly pertinent to our times, then, these words of Thomas Jefferson:

"The flames kindled on the Fourth of July 1776 have spread over too much of the globe to be extinguished by the feeble engines of despotisms; on the contrary, they will consume these engines and all who work them.

"All eyes are opened, or opening, to the rights of man. Let the annual return of this day forever refresh our recollections of these rights and an undiminished devotion to them. May it [the Declaration of Independence] be to the world the signal of arousing men to assume the blessings and security of free government.

"My God. How little do my countrymen know what precious blessings they are in possession of, and of which no other people on earth enjoy."

So, until we turn our cameras upon the Nation's Capital again next Friday to report on the battle of democracy against world communism, this is Robert McCormick putting a period on your forty-fourth Battle Report, Washington.

Airfields in French Morocco

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I offer for inclusion an editorial from the New Orleans Times-Picayune of July 16, 1951:

COOPERATION FOR DEFENSE

Announcement by the United States Air Force that arrangements have been completed for its use of seven airfields in French Morocco, with command headquarters in the capital of this African colony, should be welcomed as a good step forward in implementing western defense. We understand this is the first occasion on which the French have granted such bases for the use of another nation. The French are notably reluctant to agree to such limitations of their sovereignty, and congratulations for the

Government's move in the case of Morocco are all the more deserved.

While Britain has without hesitancy extended rights to air bases to the United States Air Force at several areas around Britain, the French until now have resisted such cooperation. But if adequate defenses are to be established against the undiminished threats of Communist aggression, the old notions of sovereignty probably will have to be replaced by a broader concept of international cooperation.

We prefer to think of the right to use air bases in the common defense as a matter of cooperation rather than as a giving up of sovereign rights. Presumably French logic has arrived at this same view in the case of Morocco. If that is the case, we hope it will be only a short time before French logic sweeps still further and agrees to grant bases for the United States Air Force in Algeria, Tunisia, and other areas in Africa, and even within continental France, if the security of the Atlantic defense requires it.

Aging Widows and Mr. Ewing's Foot

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the July 2 issue of the Richmond News Leader.

This editorial points up well the tirelessness of those who would make of our Federal Government a vast, suffocating, socialistic mass.

It is needless for me to recall at this time the many steps in the dangerous march toward complete state socialism which have been taken in the United States in recent years. It is important that we be vigilant, however, against the insidious efforts of such socialistically minded jumping jacks as Mr. Ewing. The Congress has put them back in their boxes repeatedly, but it is apparent that their springs have not been broken.

AGING WIDOWS AND MR. EWING'S FOOT

There is this to be said for Oscar Ewing, the Federal Security Administrator: He never gives up.

Four times in the past 4 years, Mr. Ewing has peddled his scheme for socialized medicine, and four times Congress has looked at the label and thrown his product away. Mr. Ewing has tried soft words and hot speeches; he has conducted a propaganda campaign in the teeth of a mandate not to spend money on propaganda; he has worked every source of political influence from Senator LEHMAN in New York to Senator MORSE in Oregon, and he has had Harry Truman himself to beat the drums at every whistle stop. And still Congress hasn't bought what Mr. Ewing has to sell.

So last week Mr. Ewing offered something new. He called in reporters and gave them the pitch: A plan to provide hospital insurance, at Government expense, for persons 65 and older and dependents of deceased persons insured under the Old-Age and Survivors Insurance System.

His sales talk was impressive. There are only 7,000,000 persons, he pointed out, in this group. They need hospitalization insurance. It would be very valuable to them. It would protect them against having to ask emer-

gency aid from their families, or from private or public agencies; it would reduce Federal, State, and local expenditures for public assistance. The cost of these benefits—up to 60 days of hospitalization per year for each beneficiary—could be paid out of social-security funds now on hand. No new taxes would be required. The program would be administered through State health departments. There would be a specific provision against any supervision or control over the details of administration or operation of any hospital. Widows with infant children would benefit; and all hands would receive (dramatic pause for effect) paid-up hospitalization insurance which would be valid not for weeks, not for months, but for life.

As we say, it was a good spiel. But we're not having any. We want no foot in the door, and that's what Mr. Ewing is putting forward here. In our view, the ills that afflict the body politic can be cured in sounder fashion than by employing old Dr. Oscar's patent tonic, body restorer, and mange cure. The stuff, we fear, is habit-forming. Once the sample had been swallowed—at a mere \$200,000,000 for the first year—the pressure to buy the family-size bottle would be far more difficult to resist. A law providing free hospitalization for 7,000,000 persons aged 65 and over, together with their dependents and minor children, would be merely extended or just broadened in its coverage to take in 143,000,000 more. And little by little, the very controls that Mr. Ewing now disclaims so piously would have to be applied. They could not be avoided. A controlled economy may operate without economy, but it cannot operate without controls.

We hope Congress will put this legislative elixir on the nearest handy shelf, just where it put the Wagner-Murray-Dingell bills. But while the lawmakers are about it, they might well look into Mr. Ewing's statement that the added expense of \$200,000,000 in new hospitalization services is "well within the means of the present insurance system." The social-security set-up is so fabulously unsound, from an actuarial standpoint, that one despairs of ever seeing the light of reason in its calculations. This Nation, though it doesn't know it yet, already stands committed to staggering burdens to meet the social-security payments of 20 or 30 years from now. But if Mr. Ewing has \$200,000,000 on hand that he doesn't need and can afford to spend on a new hospitalization program, then something is curiously wrong. The unneeded \$200,000,000 would help a little bit—not much, but a little bit—on the country's quarter-trillion-dollar debt.

When Congress conducts its hearings on Mr. Ewing's foot in the door, it might be an idea to inquire into that available \$200,000,000, put it to good use, and then put the bill in moth balls.

Draft Appeals Amendment

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I offer the following news item from the Washington Daily News of July 17, 1951. The amendment referred to in the item is one that I sponsored in order to reduce the difficulty in draft appeals. Under this amendment the number of

draft-appeal boards will be increased from one in each State to one for each Federal judicial district.

This change increases the number of boards from 48 to 96 and removes many hardships that formerly existed in the presentation of the appeals. Under the old system a man often had to travel hundreds of miles at heavy expense to reach the appeals board, then to find that the board usually had no members from his own area who were familiar with economic, business, and personal problems of his home city and county. In Texas, for instance, selectees have had to travel hundreds of miles to present their cases to the one appeals board in that State. In Louisiana it has been necessary for appellants from the northwestern part of the State to travel 350 miles to the appeals board.

This increased efficiency will not increase the costs of operation of the boards. Clerical help can be borrowed for appeals cases from local selective service boards in many instances. In large cities the same clerk may be used by a number of appeals boards. For the appellant, it reduces his travel costs, cuts down the amount of time he must be away from his work to perfect his appeal and produces a more satisfactory and speedy decision.

DRAFT APPEALS EASIER UNDER NEW REGULATION

Draft Director Lewis B. Hershey has amended selective-service regulations to make it easier for draft registrants who live away from home to appeal for occupational deferments. It was announced today.

Under the new rules, registrants who appeal for occupational deferments can have their cases shifted to the appeals board having jurisdiction over the area in which they now live. Formerly, they had to handle appeals through the appeal panels having control over their local boards.

Selective Service officials said the change was made because the old rules worked a hardship on registrants who had moved away from home and also on their employers who have the right to appeal for deferment of employees.

Report of Home Loan Bank Board

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I include a release of the Home Loan Bank Board, which is as follows:

WASHINGTON, D. C., July 14.—The last of the Government's investment in the capital of the 11 district Federal home loan banks has been paid back. William K. Divers, Chairman of the Home Loan Bank Board, reported today.

His statement followed the receipt by the Treasury Department of \$10,000,000 from the home loan banks of Little Rock and San Francisco, each of which paid off a balance of \$5,000,000.

The report emphasized that the regional banks of the System are now owned 100

percent by their 3,968 member institutions, chiefly savings and loan associations, which have financed more of the Nation's small homes than any other type of lenders. The members now hold capital stock in their district banks to the amount of \$262,315,975, which with earned surplus of over \$31,000,000 makes up a total capital of about \$293,500,000.

The Government's investment of \$125,000,000 in the capital of the Federal home loan banks was made during several years beginning in 1932, following an act of Congress in that year which authorized the creation of the Federal Home Loan Bank System as a reserve-credit network for home-financing institutions.

The first repayments of the United States Treasury funds were made in 1945. Since January 1, 1950, \$106,000,000 of the capital owned by the Treasury has been repaid, most of it substantially ahead of the schedule set down by law. On its investment in these banks the Government received dividends amounting to about \$26,175,000.

"The Federal Home Loan Bank System was established by Congress for two general purposes" said Mr. Divers. "First was to meet the seasonal and emergency credit requirements of the home-finance institutions which should join it as members. Secondly, the System was designed to make possible the shifting of home-mortgage funds from areas of surplus to areas of scarcity. Both of these functions have been carried out through long- and short-term loans to members, largely secured by home mortgages.

"Since they were established, the district banks have advanced to their members a total of \$3,819,000,000. Of this amount \$3,003,000,000 had been repaid as of last June 30, leaving \$816,000,000 outstanding at that date. No losses have been sustained. In turn, the member savings and loan associations of the System have made loans for the construction, purchase, repair, and refinancing of homes to an aggregate of about \$29,000,000,000 over that same period.

"While this total of lending to home owners is not a direct result of the support supplied by the Federal home loan banks, it does reflect the flexibility of the System and the part played by its member institutions in the American economy. Of course, those institutions have obtained the great bulk of their loan funds from their local savers and investors. At no time have advances from Federal home loan banks exceeded 5 percent of the combined resources of all members, which now are estimated at \$17,000,000,000."

Supplementing their capital, the district banks of the System have gained wide acceptance for their securities in the open market. Mr. Divers said. Since 1937 they have sold their consolidated obligations to a total of \$3,035,000,000. Securities amounting to \$547,500,000 are now outstanding.

Another source of funds expanded widely in recent years is the deposits of surplus cash of member institutions in their respective district Federal home loan banks, he added.

Have We the Strength of Character To Follow Road Leading to Peace?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. CRAWFORD. Mr. Speaker, it is refreshing to receive from the country a

frank expression of views from a thinker and a writer who is not so close to the picture as we Members of Congress are.

I have the honor to represent the Eighth Congressional District of Michigan, which is inhabited by American men and women who might be classified as the average. They go about their daily work in the pursuits associated with agriculture, manufacturing, transportation, communications, the services, merchandising, and the professions. They think as the average American thinks, and all of them have substantially grown up under our ideals and institutions.

There appeared in the Sunday, July 15, 1951, issue of the Saginaw News an editorial which raises a basic question. This is an editorial which should be read by the Members of the House and Senate, and I am pleased to submit it for the RECORD so that those who are interested may read what the editor of the Saginaw News, Mr. Otto C. Pressprich, had to say.

The editorial follows:

HAVE WE THE STRENGTH OF CHARACTER TO FOLLOW ROAD LEADING TO PEACE?

Pessimism overshadows the thoughts of many competent observers as the world watches the drama of truce negotiations unfold at far-off Kaesong in Northern Korea.

British fears have prevailed again, they say. The United States and the other United Nations have acknowledged defeat. The Communist aggressors will not be punished and Korea will not be unified after all. Red prestige will grow rapidly throughout the Orient and in other lands. Red propaganda will spread the word that the vaunted power of the United States and other free nations was challenged and fought to a standstill by Red China. Appeasement is the order of the day and it will lead to the same tragic results that came out of Munich.

Obviously much of this is true. British concern for her trade empire has been a large factor. Perhaps even greater in influence has been the Truman administration's dogged determination to go before the people of America in the 1952 elections as the architects of peace.

America's allies, looking to this Nation for rescue if the deal turns sour, are willing to pay a high price for peace. As a minimum, says United States News and World Report magazine, the price which the Red negotiators will demand is United Nations membership for Communist China, an end to economic sanctions against China, and perhaps assurances that the island of Formosa eventually will go to Communist China.

Can the United States afford to let so great a price be paid? This newspaper believes it cannot.

It may be that Formosa can be surrendered without incurring too much danger. The problem is largely military. We do not know whether retention of the island is vital to American security. But General MacArthur believes it is, and we have faith in his views.

It may be that western efforts to blockade the Chinese coast can be safely suspended. This again is a matter of military logistics which the layman is not able to analyze fully.

But it is the conviction of this newspaper that admission of Red China as a member of the United Nations would be an act of abysmal treachery to the millions of men and women who in two world wars have given their lives to the cause of making this world a decent place in which to live.

The United Nations is the world's chief instrumentality of establishing peace on a just basis. As presently constituted, it consists of a General Assembly in which all

member nations are represented and a Security Council made up of the delegates of 11 of the member nations. Five nations have permanent membership on the Security Council. They are the United States, Russia, Britain, France, and China.

The Security Council is in temporary eclipse because of the veto power granted to each of the Big Five on Russia's demand when the U. N. was founded. Use of the veto power by the Soviets has tied the Security Council's hands and it was only the fact that Russia was boycotting the Security Council in June 1950, that prevented Russia from vetoing Security Council sanction to halt the aggression when North Koreans crossed the thirty-eighth parallel a little more than a year ago.

But let us make no mistake about it. Russia will strive to give the Security Council full control of U. N. military forces if she ever manages to win a dominating voice in the Council. Stalin has only one Council vote now. If Nationalist China is thrown out and Red China seated, he will have two. Then will come the big Red drive to put a Soviet puppet in France's seat and thereby give Stalin and his politburo a long start toward full control. It is well to remember that communism already is so strongly entrenched in France that many of her army officers up to the rank of colonel make no bones about admitting that they are Communists.

If the Kremlin ever gains control of the Security Council, the world will see an international army enrolled under a Red U. N. banner and made so powerful that no nation or group of dissenting nations can hope to oppose it. That will be the day when a world-wide Communist empire goes into operation.

That day's coming can be prevented if the United States and her allies will stand firm and act courageously.

It is not enough—perhaps not even possible—for the free world to block Red aggression wherever it appears. We cannot hope to win if we let Moscow choose the time and the place for every test of strength. Our only chance lies in taking the initiative ourselves.

The initiative need not and should not be along military lines, though it will need the backing of a strong military establishment. It must give the people of the have-not nations, including the unhappy Red satellite lands, something to which to tie their hopes and aspirations.

The weapon with which we can strike effectively at Moscow's schemes is at hand. It has been forged for us by the Kremlin itself. It is the Kremlin's demand that Red China be seated in the United Nations.

What would be simpler and more potent than for the free world to take up the challenge and determine that seats in the United Nations shall be occupied only by representatives who have been chosen freely by the nations they are to represent?

Let the Red regime which now holds China in its armed fist have China's U. N. seat if the Chinese people themselves so determine in an honest election conducted by U. N. representatives. The Chinese people have lived under Red terror long enough to know whether they want to continue under it. The bloody purges of landowners and other enemies of the state which have been in progress nearly 3 years have caused the Chinese people to understand that their Red conquerors are not mere agrarian reformers.

The answer, of course, is that neither Chinese Dictator Mao Tse-tung, nor Joseph Stalin himself if Mao were willing, would dream of letting non-Communists conduct an election in China.

But a crusade for self-determination of all peoples would not only keep Red China out of the U. N. It could and should be used as the basis for an appeal to all people

in Red-slave states to rise against their masters.

It would have to be a sincere crusade. It would have to be made to apply to all peoples, including those in the British, French, and other colonial empires.

But it would be a spiritual crusade which would carry to all peoples the hope of regaining freedom, dignity of the individual and the other rights bestowed upon them by their Creator. It could be a crusade enlisting all people who recognize their duty to establish on earth not mere physical security but the Kingdom of God. Unless America and the other free lands develop some such crusade, we are likely to find ourselves fighting always a defensive action against Red aggressors and not winning any converts to strengthen our cause.

The time is ripe for this Nation to tell Moscow that we will use our veto power to keep Red China out of the U. N. until a Chinese plebiscite which we can recognize as honest has been held, and then to broadcast our stand to all peoples by every communication method that can be devised.

This is the road which leads to peace. Some of our allies may not have the courage, the strength of character that is needed to follow it. Have we?

The Japanese Peace Treaty—Activities of Senator Magnuson

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. O'CONOR. Mr. President, on June 26 the Washington Evening Star carried an article written by Columnist Doris Fleenor, which referred in a complimentary fashion to a distinguished Member of this body, the senior Senator from Washington [Mr. MAGNUSON]. The author pointed out the close and harmonious working relationship which exists between Ambassador Dulles and the Senator from Washington, and their joint efforts to bring the Japanese people back into the family of nations on a just and equitable basis.

It is only natural that the senior Senator from Washington, coming as he does from the west coast, should be actively interested in far-eastern affairs. For decades his State has been the gateway for trade with the Orient. During his 15 years of service in the Congress of the United States he has been prominently identified with legislation and problems relating to our merchant marine and fisheries industry.

Constantly he has sought to promote the welfare of these two basic segments of our economy. At the same time, he recognizes that the Japanese people must be given an opportunity to become self-sustaining, self-respecting, and useful members of international society.

To date the American people have extended to the Japanese people assistance totaling over one and three-quarters billion dollars. This represents a load which we cannot permanently saddle on the backs of the American people, nor do the Japanese want it so. It is encouraging to see one of our leading col-

umnists recognize the good work the senior Senator from Washington is doing.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DEPARTURE FROM CONFUSION—DULLES AND MAGNUSON NOW HAVE IN HAND MAIN OUTLINES OF JAPANESE PEACE TREATY FULFILLING TWO VITAL AIMS

(By Doris Fleson)

The careful and cooperative planning of a Republican diplomat from the canyons of Wall Street and a Democratic Senator from the Northwest is presenting Washington with a welcome departure from the current confusion and rivalry between the executive and legislative branches.

Between them, Ambassador John Foster Dulles and Senator WARREN MAGNUSON, of Washington, have in hand the main outlines of a Japanese peace treaty which will fulfill two vital aims:

1. It will bring Japan into the United Nations as an independent nation, freed of occupying forces and rearmed to do its part in the fight against Communist aggression.

2. It will replace the threat of another prewar Japan, the cut-throat economic competitor that the West learned to fear and hate, with a nation allowed trading room but required to obey the West's rules of conservation and fair trade.

The international political goals of the first part of this tall order are the special province of Mr. Dulles, and he has proved brilliantly successful with them in a hard recent week in London. When the British succumbed to Mr. Dulles' argument that Japan presented the only potential source of military strength now available to the Allies in the Far East, he was over the hump.

It was Mr. Dulles' inspiration to separate consideration of the economic problems posed by Japan from the general treaty. These economic aspects are covered by a blanket provision in which Japan obligates herself to negotiate settlements with the Allies in the fields of trade agreements, merchant marine, and fisheries.

Thus, the Senate will be free to act swiftly on the general question of mobilizing the political, social, and military force of Japan for the anti-Communist world. This will be a popular aim, and Senators are predicting that once allied accord is reached action can be had with reasonable promptitude.

From a domestic point of view, the Senate will be more skeptical with respect to the economic aspects. And this is where Senator MAGNUSON, whose special province is merchant marine and fisheries—he is head of that subcommittee of Interstate and Foreign Commerce—comes in.

As for the trade agreements, Japan, the Senate will be assured, can be fitted into the existing trade agreement structure. The State Department now possesses a vast experience in reciprocal trade agreements and is ready to promise the Japanese its prompt cooperation.

Senator MAGNUSON is starting his work on the problem of Japan as a trading and fishing nation entitled to an adequate merchant marine and fishing fleet with the premise that the West will not try to fence off the Pacific Ocean. He is aware that extremists here and in Great Britain would prefer to have it that way but he believes he can convince the majority to the contrary.

The Senator from Washington initiated his present studies with a trip to Tokyo and the Far East where he talked directly to Japanese officials. When their negotiators arrive, which will be soon, he expects to sit down with them and United States shippers and fishers and talk things over.

The Cease-Fire Discussion at Kaesong

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the important and interesting analysis entitled "After Kaesong," which appeared in this morning's Washington Post. This is written by the Alsop brothers, Joseph and Stewart, Connecticut's most renowned journalists. This week on Hartford's powerful radio station, WTIC, in a broadcast on which Representative A. A. RIBICOFF, and I participated, Representative RIBICOFF said that our constituents, the Alsop brothers, were America's top newspaper commentators on our foreign policy. It was this comment by my brilliant colleague, Representative RIBICOFF, a member of the House Foreign Affairs Committee, and a keen student of foreign policy, which caused me to read this column with such care this morning, and to call it to the attention of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATTER OF FACT

(By Joseph and Stewart Alsop)

AFTER KAESONG

There is a fairly simple explanation of the strange ritual at Kaesong—the talks about a cease-fire, as a prelude to an armistice, as a prelude to peace negotiations, which are carried on while the Korean fighting also continues. The cease fire and armistice are in fact expected to be the last serious acts of the Korean drama.

No doubt, when and if the generals and admirals successfully complete their labors at Kaesong, the diplomats and statesmen will go to work in their turn under somewhat less primitive conditions. No doubt there will be peace negotiations, with all the familiar trappings of agendas, proposals, and counterproposals, and loud haggings about the meaning of such terms as "free elections." But almost no one hopes that these negotiations will accomplish anything.

Gen. Nam II and Gen. Tung Hua clearly hold this view. Hence the North Korean and Chinese representatives are trying to crowd into the Kaesong agreement clauses that belong in a final settlement, such as provision for withdrawal of all foreign troops from Korea. Equally, the same view is held by the leading personalities in Washington and Tokyo. And that is why Vice Admiral Joy and his delegation are proceeding with such meticulous deliberation, even although this means that the somewhat desultory fighting is thereby prolonged.

The reasons for this view are also plain enough. After a cease fire and armistice, each side will hold roughly half of Korea. Each will demand a final settlement on its own terms—the United Nations calling for a settlement responsive to the wishes of the Korean people; the Communists demanding a "democratic" settlement which will insure Communist control of the country. This sort of negotiation is doomed to deadlock before it begins.

What then will be the consequences, if the bitter, bloody war in Korea simply tails out into a cease fire and armistice, without the

formal peace agreement that customarily concludes wars? Where will it leave us? Not too badly off appears to be the answer.

It is possible, in the first place, that defense of the postarmistice status quo can eventually be left to a greatly strengthened South Korean army, provided the Chinese also wish to recall their "volunteers" on reasonable terms and at a reasonable time. If not, some United Nations troops will have to be retained in Korea, as a safeguard against renewed aggression. But even if the American forces are thus prevented from saying a final farewell to a country they do not love, there will be substantial consolations, both positive and negative.

First, since Japan is so near, the Korean garrison can be relatively small. Most of the American divisions can be pulled back to Japan or brought home.

Second, even a small UN garrison will be a better guaranty against renewal of Korean hostilities than any peace treaty. No doubt its retention will be denounced by the same Senators who have attacked the administration for being overly hasty in recalling American troops from Korea 3 years ago. Yet General MacArthur himself planned to leave UN forces in Korea for several years, at the time when he expected to conquer the whole country.

Third, on the larger question of peace treaty versus no peace treaty, there is one advantage in having no peace treaty that almost no one seems to have thought of. In brief, the announced American policy is to neutralize Formosa for the duration of the Korean war; and this has been somewhat grudgingly accepted by the world at large. But if the Korean war is formally terminated, and we still seek to continue the neutralization of Formosa, we shall run into the worst trouble with our allies and in the United Nations that we have seen yet. In blunt language, we will not have a leg to stand on, and the resulting ruckus will risk splitting the Western alliance from nave to chops.

On the other hand, if the Korean fighting just tails out into a cease-fire, armistice, and deadlocked peace negotiation, the whole status quo will be perpetuated, including the neutralization of Formosa. It can and will be continued, under these conditions, without too much difficulty. And so we shall be borrowing a useful leaf from the book of the other side.

The plain truth is that this wind-up of the Korean fighting is a rather special test of American political sophistication. Shall we, because there is no formal peace, feel cheated? Shall we, because there is no more war, relax our whole defense effort? In that case, we shall be proven fools. Or shall we soberly take the result in Korea for what it is—a handsome though not decisive victory—and go on with our defense effort, because we realize that no local victory will remove the danger hanging over us? In that case, we shall be proven wise indeed.

Military Housing Conditions

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Washington Daily News, one in the edition of today and one in that of yesterday, and an

editorial from the Washington Star, dealing with military housing conditions.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

FOR SHAME

Disgusting conditions of substandard housing and rent-gouging in the vicinities of three of the Nation's large military bases are charged in a report by the Senate's preparedness subcommittee.

Senator JOHNSON of Texas, chairman of the subcommittee, says:

"We believe this report uncovers a serious situation which is having an adverse effect upon the morale of those Americans who have been called into military service."

That is putting it mildly if what follows in the report, prepared after on-the-spot investigations, is typical.

Bases investigated were Camp Breckinridge, Ky., 24 miles from Evansville, Ind.; Camp Bucker, 75 miles southeast of Montgomery, Ala., and Fort Leonard Wood, near Rolla, Mo.

Judging by pictures and details presented, nicknames given some habitations by GI's are more than apt. Near Camp Breckinridge, for example, are such places as the coalshed, the barn, the chicken coop, the tarpaper shack, the toolshed, the firetrap and the rat house.

Also near Breckinridge, the report asserts, a minister of the Gospel has cut up a former CCC barracks into three tiny apartments which he rents to soldiers' families for a total of \$148 a month. He pays \$25 for the whole building.

A private and his bride pay \$40 a month for two cramped rooms in a converted coalshed—no running water, no inside toilet, one room's ceiling so low a man 5 feet 8 inches tall cannot stand erect in it.

There is much more to back up the subcommittee's statement that servicemen are being shamelessly victimized at the hands of civilians whose property and lives the men in uniform are dedicated to defend.

Such conditions are revolting to every sense of decency. They are devastating to military morale. They reflect gravely on military commands which tolerate them.

Outraged public opinion should demand their prompt correction by action of Congress and of responsible military authorities.

[From the Washington Daily News]

UNCLD SAM'S DISGRACE

Anger is justly stirred because GI's and their families are being cruelly gouged by extortionate rents for miserable housing in the vicinities of military bases.

But it ought to be directed at the right culprits.

Towns near the Army camps named in the Senate preparedness subcommittee's stinging report are small and not well supplied with good houses for rent. That fact, and the natural desire of many soldiers to have their families with them while they can, make opportunity for gougers to demand and get outrageous rates for sheds, barns, and other makeshift shelters.

But it would be unjust to condemn whole communities for the gouging. A large majority of the residents of towns near Army camps are honest, patriotic Americans, who want to treat GI's and their families kindly and fairly. They doubtless deplore the scandalous housing conditions reported as deeply as does Senator JOHNSON's subcommittee.

Publication of the report has brought from Secretary of the Army Pace the promise of a positive program to correct those conditions. Congress should be vigilant to see that the promise is kept.

For surely a Government which can fritter away literally billions on doubtful and debatable projects—a Government which talks constantly of human needs—can afford, and is obligated, to make it possible for its fighting men and their families to live like human beings.

[From the Washington Star]

APPALLING, BUT HARDLY SURPRISING

The military housing conditions described in a report by the Senate Armed Services Preparedness Subcommittee are certainly bad enough to warrant all the denunciatory adjectives used by Chairman LYNDON JOHNSON. It is, indeed, appalling and disgraceful that families of servicemen should be living in such shacks and other makeshift quarters as are depicted in the report. But, considering the mobilization rush which followed the outbreak of war in Korea, it is hardly surprising that such conditions have arisen.

There is no condoning, of course, the rent gouging which the subcommittee found to exist in a number of instances. The investigators reported that increases of 100 percent in rents were commonplace in towns adjoining the rapidly expanded camps and that several cases involving 500 percent increases were discovered. There is no excuse for profiteering at the expense of men suddenly called to the defense of the Nation. Noting that some of the rentals charged servicemen or their families did not appear unreasonable, the subcommittee nevertheless criticized the living conditions which were forced upon servicemen's families.

However, it is not fair to blame the communities adjoining the reactivated camps for the lack of housing that developed after Korea. The shortage was inevitable under the circumstances which prevailed as we began our hasty remobilization last year. Nor is it right to imply, as the report seems to do, that local communities forced servicemen and their families to live in substandard quarters. The implication was contained in the report's comment that "the primary question was not one of rentals but of living conditions which were forced upon servicemen's families. . . . Those who offer unfit quarters to servicemen do not acquire dignity for their exploitation merely by reducing the margin of their profiteering."

It is evident from other statements in the report that no forcing was necessary to induce the men and their families to rent converted garages, coal sheds, chicken coops, barns, and the like. It was either live there or send their families back home, which military authorities advised the enlisted men to do in vain. To understand the conditions, one must remember that at the time of the Communist invasion of South Korea the three camps investigated by the subcommittee were abandoned World War II posts. Camp Breckinridge, near the town of Morganfield, Ky. (population, 4,300), has mushroomed from a ghost camp to a busy training center with 25,567 troops and 1,175 civilians. Camp Rucker, at Daleville, Ala. (population, 1,000), has grown into a 30,000-man center. Camp Leonard Wood, near Waynesville, Mo. (population, 2,000), has 32,000 men. All three camps were reactivated last summer to train the new divisions being raised for service in the emergency.

Many of the trainees insisted on bringing their families with them, despite warnings of Army officers of inadequate housing facilities. Perhaps the Army should have ordered the men to leave their families home, instead of merely advising them to. But there is a morale factor that must be considered in unnecessarily separating men from their families and sometimes this factor outweighs other considerations. So the camps soon filled to overflowing with military personnel and the little towns nearby were swamped

with servicemen and their families. Small wonder that barns and sheds were pressed into service for the overflow.

The Army Department has not been unconcerned about this situation. Trailer camps have been set up in some places and more are planned. Secretary Pace says that local authorities have been urged to provide more and better housing—a difficult task for communities which saw the camps evacuated after World War II and which have no assurance that another evacuation will not follow easing of the present emergency. An investment in housing now could become a total waste tomorrow. But more trailer communities should be feasible. And local authorities can help to relieve conditions by enforcing sanitary regulations, exposing profiteering, and applying rent controls wherever possible. The problem, in short, is one which requires a fine degree of cooperation between camp officials and the residents of adjacent towns. Apparently there was not sufficient coordination of efforts in the first rush of the remobilization program.

Korean Policy After the Cease-Fire

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. LEHMAN. Mr. President, the editorial page of the Washington Post of July 19 carried a very interesting letter by Mr. Yongjeung Kim, president of the Korean Affairs Institute, who is one of the leading spirits among Koreans in this country. Mr. Kim suggests a program for Korea. While I am not ready to pass judgment on the several points made in Mr. Kim's program, I think it is an extremely interesting one and worthy of attention and consideration. I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KOREAN POLICY AFTER THE CEASE-FIRE

The World's spotlight is focused on the truce meeting at the thirty-eighth parallel. The talks must succeed if the war-ravaged Korean people are to survive.

A cease-fire arrangement is the first step toward peace. The fact that it will end the bloodshed and destruction will make it acceptable to most Koreans, regardless of other considerations. Differences as to the future of Korea must not therefore be allowed to interfere with a prompt conclusion of a cease-fire agreement.

Koreans do not want to continue to be pawns in a struggle between the great powers. They want peace and the opportunity to determine their own fate. "All occupations are failures"—as General MacArthur said at Wake Island—regardless of the fine principles and motives behind them. Ignoring this truth will be a grave mistake.

As soon as an armistice is arranged, therefore, the statesmen should allow the Korean people to reunite their country and put their own house in order. How can this be done? Most Koreans—as well as others truly concerned with the future of the Far East—feel that the solution requires the following steps:

1. Creation of a peace committee, composed of near eastern and Asian representatives

and/or others to expedite the unification of Korea and the restoration of her independence. This body should be empowered to act as an interim national authority until a unified Korean government is established through national elections.

2. Organization of an advisory body, to consult and assist the peace committee, composed of one Korean from each province who is of good reputation, who at no time served under either of the present regimes, and who is not considered a former collaborator in the Japanese rule.

3. Dissolution of the two existing governments, since neither enjoys popular confidence, to provide the people with an unhampered opportunity to shape their own future (If the leaders of both sides would resign voluntarily, they would render a great service to the nation.)

4. Immediate establishment of local governments, through popular elections observed by the peace committee, to assume local civil and police functions from the present regimes.

5. Withdrawal of all foreign forces and simultaneous demobilization of all Korean troops under the supervision of the peace committee, to create a peaceful atmosphere before a general election.

6. Establishment of a national government through a general election observed by the peace committee soon after the local administrations are set up.

7. Neutralization of Korea through a guaranty by the members of the United Nations and China to respect Korean independence, sovereignty, and territorial integrity and to seek no special political or economic privileges.

8. An immediate start on reconstruction and rehabilitation of Korea by all nations, under the leadership of the United Nations, with a schedule that envisions substantial completion in 3 years, as a symbol of human conscience and a fitting monument to world peace.

The Korean problem can never be solved unless the Korean people are entrusted with their own destiny. Nor can it be settled as long as two rival Korean regimes are supported and condoned by foreign powers. Any attempt to save or merge the present governments will only perpetuate the long-standing evil. The Korean people must be free from the two extremist rules which they distrust and fear. It is the people—not these groups—who deserve support from the great powers in their struggle for survival and independence. It is these Koreans—not their power-grasping leaders—who have the great stake in the truce talks.

YONGJUNG KIM,
President, Korean Affairs Institute.
WASHINGTON.

Control of Prices

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles which appeared in the Washington Evening Star on July 18, 1951, under the combined headline "Justice Department and FTC take separate lines on prices."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

JUSTICE DEPARTMENT AND FTC TAKE SEPARATE LINES ON PRICES

CAMPAIGN OPENED AGAINST COERCION OF RATE SLASHERS

The Government today announced a prompt and vigorous campaign against anyone who attempts to force cut-rate merchants to raise their prices.

Launching the campaign as an anti-inflationary measure, Attorney General McGrath warned all levels of the business world that he will move to prosecute those who seek to coerce cut-rate outlets into putting price-tags up to agreed minimum levels.

Seriously concerned

In a formal statement, he said the Justice Department is seriously concerned over reports that such attempts already have been made.

The statement indicated grand-jury action may be in the offing in some areas against this type of activity, which the Department said is in violation of the Sherman Antitrust Act. The Department declined to comment on any specific actions.

At the same time, Assistant Attorney General H. G. Morrison, Chief of the Antitrust Division, said anyone who has knowledge of such practices "owes it to himself and to his country to bring such information to the attention of the Department of Justice."

Especially important now

He said conspiracies to maintain prices at levels higher than those set by active competition gain new importance in times of high prices and inflationary pressures.

The Department's new move stems directly from the Supreme Court decision of May 21 which cut the ground from under a main provision of the so-called fair-trade laws which exist in 45 States. They do not apply in the District.

That provision said a manufacturer may set the resale price for his product and require all retail outlets to abide by it. The Supreme Court ruled that such pricing agreements are legal only where the retailer voluntarily enters such an agreement with the manufacturer. Even though he is in a State where the law applies, the retailer who does not participate is not bound by the agreements.

It was this High Court ruling which set off the recent spree of price cutting in New York department stores.

NEW YORK STORES' RECENT WAR IS UNDER INVESTIGATION

NEW YORK, July 18.—Pricing policies and advertising claims of New York City's major department stores are under investigation by the Federal Trade Commission.

The action resulted from a complaint by the Better Business Bureau of New York City, which mentioned specifically the advertising claims of R. H. Macy & Co. and Gimble Bros.

Macy's was singled out for its claim that "we endeavor to save our customers at least 6 percent for cash, except on price-fixed goods," and Gimble's for its slogan, "For cash or for credit, nobody undersells Gimble's."

Charge misleading claims

The complaint charged that such claims tend to mislead and deceive the public and constitute unfair business competition of a most serious nature.

John C. Wood, chairman of the board of the bureau, said today that the bureau sent its complaint to Washington July 9. Yesterday, he said, the bureau received an acknowledgment from James M. Mead, Commission Chairman and former Senator from New York.

Mr. Mead's letter said the complaint had been referred to the Commission's investi-

gation bureau of antideceptive practices for expeditious action to determine whether such advertising warrants corrective action by the Commission.

Could issue cease order

Where it finds an unfair practice exists, the FTC can order the offender to cease, and may bring contempt action if the practice is continued.

Mr. Wood said the bureau had taken the matter up with the Trade Commission only after it had tried unsuccessfully to get merchants to discontinue voluntarily the advertising claims it held to be unfair.

The complaint brought to a head a controversy that has been building up for many years among retail merchants over advertisements about underselling. This long-standing friction flared into an open price war among several of the large department stores after a Supreme Court decision 2 months ago that manufacturers could not enforce fixed resale prices on retailers who refused to sign agreements with them.

MACY'S OUT OF BUREAU

The Better Business Bureau is financed by most of the large business and industrial concerns in the city and by many small businesses. Macy's has been out of the bureau for many years. Gimbel's is a member.

Jack I. Straus, president of Macy's, said the store had received a copy of the complaint. "It should be pointed out that the membership of the board of directors of the Better Business Bureau of New York includes several of Macy's competitors."

He said similar action in the past had resulted in dismissal of the action by the FTC.

Bernard F. Gimbel, president of Gimbel's, said any store making general underselling claims should be willing to have its books and records open to inspection by the proper authorities.

The Commission's investigation is expected to take months.

Friendly Relations Between the United States and the Soviet Union

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. HILL. Mr. President, the New York Times this morning carries a most timely editorial captioned "Slow mail to Moscow." The editorial deals in part with the McMahon joint resolution of friendship which, as we know, was passed by the Senate and the House of Representatives, expressing the friendship of the American people for the people of Russia. The editorial also deals with the letter of friendship written by President Truman to President Shvernik. I do not know just why President Truman's letter was addressed to President Shvernik; I never heard very much about him, although I suppose he still holds the job of President. Certainly the editorial emphasizes the fact that we should make every effort we can to let the rank and file of the people of Russia know of our friendship, as expressed in the McMahon resolution.

I ask unanimous consent to have the editorial printed in the RECORD.

editorial from the Washington Star, dealing with military housing conditions.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]
FOR SHAME

Disgusting conditions of substandard housing and rent-gouging in the vicinities of three of the Nation's large military bases are charged in a report by the Senate's preparedness subcommittee.

Senator JOHNSON of Texas, chairman of the subcommittee, says:

"We believe this report uncovers a serious situation which is having an adverse effect upon the morale of those Americans who have been called into military service."

That is putting it mildly if what follows in the report, prepared after on-the-spot investigations, is typical.

Bases investigated were Camp Breckinridge, Ky., 24 miles from Evansville, Ind.; Camp Bucker, 75 miles southeast of Montgomery, Ala., and Fort Leonard Wood, near Rolla, Mo.

Judging by pictures and details presented, nicknames given some habitations by GI's are more than apt. Near Camp Breckinridge, for example, are such places as the coalshed, the barn, the chicken coop, the tarpaper shack, the toolshed, the firetrap and the rat house.

Also near Breckinridge, the report asserts, a minister of the Gospel has cut up a former CCC barracks into three tiny apartments which he rents to soldiers' families for a total of \$148 a month. He pays \$25 for the whole building.

A private and his bride pay \$40 a month for two cramped rooms in a converted coalshed—no running water, no inside toilet, one room's ceiling so low a man 5 feet 8 inches tall cannot stand erect in it.

There is much more to back up the subcommittee's statement that servicemen are being shamelessly victimized at the hands of civilians whose property and lives the men in uniform are dedicated to defend.

Such conditions are revolting to every sense of decency. They are devastating to military morale. They reflect gravely on military commands which tolerate them.

Outraged public opinion should demand their prompt correction by action of Congress and of responsible military authorities.

[From the Washington Daily News]
UNCL SAM'S DISGRACE

Anger is justly stirred because GI's and their families are being cruelly gouged by extortionate rents for miserable housing in the vicinities of military bases.

But it ought to be directed at the right culprits.

Towns near the Army camps named in the Senate preparedness subcommittee's stinging report are small and not well supplied with good houses for rent. That fact, and the natural desire of many soldiers to have their families with them while they can, make opportunity for gougers to demand and get outrageous rates for sheds, barns, and other makeshift shelters.

But it would be unjust to condemn whole communities for the gouging. A large majority of the residents of towns near Army camps are honest, patriotic Americans, who want to treat GI's and their families kindly and fairly. They doubtless deplore the scandalous housing conditions reported as deeply as does Senator JOHNSON's subcommittee.

Publication of the report has brought from Secretary of the Army Pace the promise of a positive program to correct those conditions. Congress should be vigilant to see that the promise is kept.

For surely a Government which can fritter away literally billions on doubtful and debatable projects—a Government which talks constantly of human needs—can afford, and is obligated, to make it possible for its fighting men and their families to live like human beings.

[From the Washington Star]

APPALLING, BUT HARDLY SURPRISING

The military housing conditions described in a report by the Senate Armed Services Preparedness Subcommittee are certainly bad enough to warrant all the denunciatory adjectives used by Chairman LYNDON JOHNSON. It is, indeed, appalling and disgraceful that families of servicemen should be living in such shacks and other makeshift quarters as are depicted in the report. But, considering the mobilization rush which followed the outbreak of war in Korea, it is hardly surprising that such conditions have arisen.

There is no condoning, of course, the rent gouging which the subcommittee found to exist in a number of instances. The investigators reported that increases of 100 percent in rents were commonplace in towns adjoining the rapidly expanded camps and that several cases involving 500 percent increases were discovered. There is no excuse for profiteering at the expense of men suddenly called to the defense of the Nation. Noting that some of the rentals charged servicemen or their families did not appear unreasonable, the subcommittee nevertheless criticized the living conditions which were forced upon servicemen's families.

However, it is not fair to blame the communities adjoining the reactivated camps for the lack of housing that developed after Korea. The shortage was inevitable under the circumstances which prevailed as we began our hasty remobilization last year. Nor is it right to imply, as the report seems to do, that local communities forced servicemen and their families to live in substandard quarters. The implication was contained in the report's comment that "the primary question was not one of rentals but of living conditions which were forced upon servicemen's families. . . . Those who offer unfit quarters to servicemen do not acquire dignity for their exploitation merely by reducing the margin of their profiteering."

It is evident from other statements in the report that no forcing was necessary to induce the men and their families to rent converted garages, coal sheds, chicken coops, barns, and the like. It was either live there or send their families back home, which military authorities advised the enlisted men to do in vain. To understand the conditions, one must remember that at the time of the Communist invasion of South Korea the three camps investigated by the subcommittee were abandoned World War II posts. Camp Breckinridge, near the town of Morganfield, Ky. (population, 4,300), has mushroomed from a ghost camp to a busy training center with 25,567 troops and 1,175 civilians. Camp Rucker, at Daleville, Ala. (population, 1,000), has grown into a 30,000-man center. Camp Leonard Wood, near Waynesville, Mo. (population, 2,000), has 32,000 men. All three camps were reactivated last summer to train the new divisions being raised for service in the emergency.

Many of the trainees insisted on bringing their families with them, despite warnings of Army officers of inadequate housing facilities. Perhaps the Army should have ordered the men to leave their families home, instead of merely advising them to. But there is a morale factor that must be considered in unnecessarily separating men from their families and sometimes this factor outweighs other considerations. So the camps soon filled to overflowing with military personnel and the little towns nearby were swamped

with servicemen and their families. Small wonder that barns and sheds were pressed into service for the overflow.

The Army Department has not been unconcerned about this situation. Trailer camps have been set up in some places and more are planned. Secretary Pace says that local authorities have been urged to provide more and better housing—a difficult task for communities which saw the camps evacuated after World War II and which have no assurance that another evacuation will not follow easing of the present emergency. An investment in housing now could become a total waste tomorrow. But more trailer communities should be feasible. And local authorities can help to relieve conditions by enforcing sanitary regulations, exposing profiteering, and applying rent controls wherever possible. The problem, in short, is one which requires a fine degree of cooperation between camp officials and the residents of adjacent towns. Apparently there was not sufficient coordination of efforts in the first rush of the remobilization program.

Korean Policy After the Cease-Fire

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. LEHMAN. Mr. President, the editorial page of the Washington Post of July 19 carried a very interesting letter by Mr. Yongjeung Kim, president of the Korean Affairs Institute, who is one of the leading spirits among Koreans in this country. Mr. Kim suggests a program for Korea. While I am not ready to pass judgment on the several points made in Mr. Kim's program, I think it is an extremely interesting one and worthy of attention and consideration. I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KOREAN POLICY AFTER THE CEASE-FIRE

The World's spotlight is focused on the truce meeting at the thirty-eighth parallel. The talks must succeed if the war-ravaged Korean people are to survive.

A cease-fire arrangement is the first step toward peace. The fact that it will end the bloodshed and destruction will make it acceptable to most Koreans, regardless of other considerations. Differences as to the future of Korea must not therefore be allowed to interfere with a prompt conclusion of a cease-fire agreement.

Koreans do not want to continue to be pawns in a struggle between the great powers. They want peace and the opportunity to determine their own fate. "All occupations are failures"—as General MacArthur said at Wake Island—regardless of the fine principles and motives behind them. Ignoring this truth will be a grave mistake.

As soon as an armistice is arranged, therefore, the statesmen should allow the Korean people to reunite their country and put their own house in order. How can this be done? Most Koreans—as well as others truly concerned with the future of the Far East—feel that the solution requires the following steps:

1. Creation of a peace committee, composed of near eastern and Asian representatives

and/or others to expedite the unification of Korea and the restoration of her independence. This body should be empowered to act as an interim national authority until a unified Korean government is established through national elections.

2 Organization of an advisory body, to consult and assist the peace committee, composed of one Korean from each province who is of good reputation, who at no time served under either of the present regimes, and who is not considered a former collaborator in the Japanese rule.

3 Dissolution of the two existing governments, since neither enjoys popular confidence, to provide the people with an unhampered opportunity to shape their own future (If the leaders of both sides would resign voluntarily, they would render a great service to the nation.)

4 Immediate establishment of local governments, through popular elections observed by the peace committee, to assume local civil and police functions from the present regimes.

5 Withdrawal of all foreign forces and simultaneous demobilization of all Korean troops under the supervision of the peace committee, to create a peaceful atmosphere before a general election.

6 Establishment of a national government through a general election observed by the peace committee soon after the local administrations are set up.

7 Neutralization of Korea through a guaranty by the members of the United Nations and China to respect Korean independence, sovereignty, and territorial integrity and to seek no special political or economic privileges.

8 An immediate start on reconstruction and rehabilitation of Korea by all nations, under the leadership of the United Nations, with a schedule that envisions substantial completion in 3 years, as a symbol of human conscience and a fitting monument to world peace.

The Korean problem can never be solved unless the Korean people are entrusted with their own destiny. Nor can it be settled as long as two rival Korean regimes are supported and condoned by foreign powers. Any attempt to save or merge the present governments will only perpetuate the long-standing evil. The Korean people must be free from the two extremist rules which they distrust and fear. It is the people—not these groups—who deserve support from the great powers in their struggle for survival and independence. It is these Koreans—not their power-grasping leaders—who have the great stake in the truce talks.

YONGJEUNG KIM,
President, Korean Affairs Institute.
WASHINGTON.

Control of Prices

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles which appeared in the Washington Evening Star on July 18, 1951, under the combined headline "Justice Department and FTC take separate lines on prices."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

JUSTICE DEPARTMENT AND FTC TAKE SEPARATE LINES ON PRICES

CAMPAIGN OPENED AGAINST COERCION OF RATE SLASHERS

The Government today announced a prompt and vigorous campaign against anyone who attempts to force cut-rate merchants to raise their prices.

Launching the campaign as an anti-inflationary measure, Attorney General McGrath warned all levels of the business world that he will move to prosecute those who seek to coerce cut-rate outlets into putting price-tags up to agreed minimum levels.

Seriously concerned

In a formal statement, he said the Justice Department is seriously concerned over reports that such attempts already have been made.

The statement indicated grand-jury action may be in the offing in some areas against this type of activity, which the Department said is in violation of the Sherman Antitrust Act. The Department declined to comment on any specific actions.

At the same time, Assistant Attorney General H. G. Morison, Chief of the Antitrust Division, said anyone who has knowledge of such practices "owes it to himself and to his country to bring such information to the attention of the Department of Justice."

Especially important now

He said conspiracies to maintain prices at levels higher than those set by active competition gain new importance in times of high prices and inflationary pressures.

The Department's new move stems directly from the Supreme Court decision of May 21 which cut the ground from under a main provision of the so-called fair-trade laws which exist in 45 States. They do not apply in the District.

That provision said a manufacturer may set the resale price for his product and require all retail outlets to abide by it. The Supreme Court ruled that such pricing agreements are legal only where the retailer voluntarily enters such an agreement with the manufacturer. Even though he is in a State where the law applies, the retailer who does not participate is not bound by the agreements.

It was this High Court ruling which set off the recent spree of price cutting in New York department stores.

NEW YORK STORES' RECENT WAR IS UNDER INVESTIGATION

NEW YORK, July 18.—Pricing policies and advertising claims of New York City's major department stores are under investigation by the Federal Trade Commission.

The action resulted from a complaint by the Better Business Bureau of New York City, which mentioned specifically the advertising claims of R. H. Macy & Co. and Gimble Bros.

Macy's was singled out for its claim that "we endeavor to save our customers at least 6 percent for cash, except on price-fixed goods," and Gimble's for its slogan, "For cash or for credit, nobody undersells Gimble's."

Charge misleading claims

The complaint charged that such claims tend to mislead and deceive the public and constitute unfair business competition of a most serious nature.

John C. Wood, chairman of the board of the bureau, said today that the bureau sent its complaint to Washington July 9. Yesterday, he said, the bureau received an acknowledgment from James M. Mead, Commission Chairman and former Senator from New York.

Mr. Mead's letter said the complaint had been referred to the Commission's investi-

gation bureau of antideceptive practices for expeditious action to determine whether such advertising warrants corrective action by the Commission.

Could issue cease order

Where it finds an unfair practice exists, the FTC can order the offender to cease, and may bring contempt action if the practice is continued.

Mr. Wood said the bureau had taken the matter up with the Trade Commission only after it had tried unsuccessfully to get merchants to discontinue voluntarily the advertising claims it held to be unfair.

The complaint brought to a head a controversy that has been building up for many years among retail merchants over advertisements about underselling. This long-standing friction flared into an open price war among several of the large department stores after a Supreme Court decision 2 months ago that manufacturers could not enforce fixed resale prices on retailers who refused to sign agreements with them.

MACY'S OUT OF BUREAU

The Better Business Bureau is financed by most of the large business and industrial concerns in the city and by many small businesses. Macy's has been out of the bureau for many years. Gimbel's is a member.

Jack I. Straus, president of Macy's, said the store had received a copy of the complaint. "It should be pointed out that the membership of the board of directors of the Better Business Bureau of New York includes several of Macy's competitors."

He said similar action in the past had resulted in dismissal of the action by the FTC.

Bernard F. Gimbel, president of Gimbel's, said any store making general underselling claims should be willing to have its books and records open to inspection by the proper authorities.

The Commission's investigation is expected to take months.

Friendly Relations Between the United States and the Soviet Union

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. HILL. Mr. President, the New York Times this morning carries a most timely editorial captioned "Slow mail to Moscow." The editorial deals in part with the McMahon joint resolution of friendship which, as we know, was passed by the Senate and the House of Representatives, expressing the friendship of the American people for the people of Russia. The editorial also deals with the letter of friendship written by President Truman to President Shvernik. I do not know just why President Truman's letter was addressed to President Shvernik; I never heard very much about him, although I suppose he still holds the job of President. Certainly the editorial emphasizes the fact that we should make every effort we can to let the rank and file of the people of Russia know of our friendship, as expressed in the McMahon resolution.

I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SLOW MAIL to Moscow

Our correspondent in Moscow reports the republication in *Izvestia* of the rather sensational article in the new Soviet English-language magazine *News* in which Eugene Tarle, the Soviet historian, argues for friendly relations between the Soviet Union and the United States. Anything published in Russia is "official," but the Tarle article becomes doubly so when it is reprinted in the government organ for the edification of the Russian people. In the same dispatch our reporter notes that no mention has appeared in the Soviet press of the McMahon resolution or President Truman's letter to President Shvernik. Both documents emphasize friendship for the Russian people and the American desire for peace, but neither has yet been made public in Russia.

Here in one lightning flash we get a simultaneous glimpse of the scene on both sides of the iron curtain. On one hand, the President and Congress of the United States, constituting together the most powerful voice on earth, cannot get a public message through to the people to whom it is addressed. The President's letter and the congressional resolution express the official policy of this country, but the only version of American policy the Soviet peoples are permitted to know is what their Government chooses to tell them.

On the other hand, for weeks and months the Soviet press has been harping day after day on the points of conflict between America and the Soviet Union. It has combed history for examples to prove that we have always had aggressive designs on Russia and insisted that we are now bent on preparing for a war to exterminate the Russian people. Then suddenly, for some reason, the Kremlin line veers, and Professor Tarle, long in disfavor, is summoned to present the opposite side of the case. He discovers that there is no basis either in history or in present conditions for the existing strain in Soviet-American relations.

A turn of the same spigot, and Moscow can switch on hot water or cold—change its policy from "hate" to "friendship." As far as the Russian people are concerned, the sleight-of-hand artists can change our policy, too, to suit their convenience. For the people can never learn what we are really thinking and saying, can never know what to believe as the knob twists from one tune to another, until, as the President said in his undelivered letter, "communication is permitted to flow, free and open, across international boundaries."

An Earlier Congress Passed a Price-Control Law; Are We Too Smart To Learn From Their Experience?

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BUFFETT. Mr. Speaker, price control by act of Congress is not a new idea. The First Continental Congress tried it in 1777. Then, as now, the scheme had wide popular support.

Then, as now, prices rose in spite of price-control laws.

Then, as now, the Government was using irredeemable paper money. That

paper money ended up worth less than 1 percent of its original value.

Will the New Deal printing-press money end the same way?

It is too early to tell—but this much can be forecast with accuracy—unless sound money is restored, which means a currency redeemable in gold, the American dollar will some day meet the fate of all previous irredeemable currencies.

Price control by statute ignores all natural law and the teachings of history.

If persisted in, one does not need to be a prophet to foresee its ultimate consequences.

The revolutionary experience and consequences of price control are vividly described in the following paragraphs:

In the beginning of 1777, Congress, with the warm approval of the great body of the people, determined to enter into a course which the more sagacious men in America knew to be little better than insane. It imagined that it could regulate all prices by law, and maintain them at a level greatly below that which the normal operation of the law of supply and demand had determined. Laws with this object were speedily made in all the States.

The prices of labor, of food, of every kind of manufacture, of all domestic articles, were strictly regulated, and committees employed to see that these prices were not exceeded.

The measure, of course, aggravated the very evil it was intended to diminish. Goods that were already very rare and greatly needed were carefully concealed and withdrawn from sale lest they should be purchased at prices below their real value.

In most cases the law was disregarded, and sellers continued to sell, sometimes secretly, sometimes openly, at prices higher than the law permitted, charging an additional sum to compensate them for the risk they incurred.

Mob violence directed against the "engrossers, monopolizers, and forestallers," combinations of the more patriotic merchants binding themselves to sell only at the authorized prices, newspaper denunciations, and occasional legal punishments, were all insufficient and impotent; and in September 1777, John Adams wrote that in his sincere opinion the act for limiting prices, if not repealed, would "ruin the State, and introduce a civil war."

At last, in October 1778, Congress voted that "all limitations of prices of gold and silver be taken off," but the States continued for some time longer to endeavor to regulate prices by legislation.

Still more terrible in their consequences than the attempted limitation of prices were the laws which were passed by the different States at the invitation of Congress, making paper money legal tender, compelling all persons to receive it in full payment of debts or obligations contracted before the Revolution, and pronouncing those who refused to do so enemies of the liberty of America.

Few laws have spread a greater amount of distress, dishonesty, and injustice through a great community.

All those who subsisted on life incomes or fixed rents or interest of money found their incomes rapidly reduced to a small fraction of their previous value; while, on the other hand, vast wealth was suddenly created, as the whole debtor class were enabled to free themselves from their obligations.

Debts incurred in gold were paid off in depreciated paper which was only worth a twentieth, a thirtieth, a fortieth, or fiftieth part of its real value.

They were legally extinguished by a payment which was in reality not 1 shilling or sixpence or even threepence on the pound sterling. In a country where debtors were

extremely numerous, and where the whole social and economic system rested on the relation of debtor and creditor, this law opened the door to the most enormous and far-reaching fraud, but it acted differently on different classes, and this difference had an important influence upon the fortunes of the Revolution.

To the laborer who lived upon his daily wages, the depreciation was of little moment, especially if he had been too improvident to lay by any store for the future. Earning and spending in the same currency, the change was no disadvantage to him, and he was even benefited by the unnatural stimulus which the immense quantities of paper money thrown suddenly upon the market had given to all kinds of labor.

On the other hand, the wealthy and the saving and the helpless classes were in general utterly ruined.

Debts of merchants which had been contracted when goods were cheapest and had often been for years on the books were now discharged in paper not a twentieth part of the real value.

Widows and orphans in great numbers, who had been left fortunes in money, were paid off by guardians, trustees, or executors in depreciated paper.

Old men who had lent out the savings of industrious lives, and had been living comfortably upon the interest, were fortunate if they did not receive back their principal shrunk to perhaps a fiftieth part of its original value.

Everyone who had been sufficiently saving to lend was impoverished.

Everyone who had been reckless and improvident in borrowing was enriched, and "truth, honor, and justice," in the emphatic words of a contemporary American historian, "were swept away by the overflowing deluge of legal iniquity."

Among the enterprising men who had thrown themselves into the first movement of the revolution were many of broken fortunes and doubtful antecedents, many ardent speculators, many clever and unscrupulous adventurers. Such men found in the violent depreciation, the local variations, and the sudden fluctuations of the currency a ready path to fortune, and they soon acquired a new and sinister interest in the continuance of the struggle.

Among others, the gentleman who called himself Earl of Stirling, and who had attained the position of brigadier general in the American service, had entered it overwhelmed with debt, but by availing himself of the condition of the currency, he is stated to have paid off debts amounting to nearly 80,000 pounds with 1,000 pounds of gold and silver. Very seldom in the history of the world had the race for wealth been so keen, or the passion for speculation so universal, or the standard of public honesty so low.

"The first visible effect," wrote a contemporary American economist, "of an augmentation of the medium and the consequent fluctuation of value was a host of jockeys, who followed a species of itinerant commerce, and subsisted upon the ignorance and honesty of the country people; or, in other words, upon the difference in the value of the currency in different places."

"Perhaps we may safely estimate that not less than 20,000 men in America left honest callings and applied themselves to this knavish traffic." "The manners of the continent," wrote the Committee of Foreign Affairs in March 1778, "are too much affected by the depreciation of our currency."

"Scarce an officer but feels something of a desire to be concerned in mercantile speculation, from finding that his salary is inadequate to the harpy demands which are made upon him for the necessities of life and from observing that but little skill is necessary to constitute one of the merchants of these days."

"Speculation," wrote Washington, "peculation, engrossing, forestalling, with all their

concomitants, afford too many melancholy proofs of the decay of public virtue."

The vast gains rapidly acquired by privateering, the enormous rate of insurance, the enormous prices given for such European goods as arrived safely in America, had already produced a spirit of fierce and general gambling which the depreciation and fluctuation of the currency immeasurably increased.

Immense fortunes were suddenly accumulated; and, in the gloomiest period of the struggle, Philadelphia was a scene of the wildest and maddest luxury.

Many years after the peace with England had been signed the older Americans could clearly trace in the prevailing spirit of recklessness and dishonest speculation the demoralizing effects on the national character of the years of the depreciated currency. (History of England, by William E. H. Lecky, vol. IV, pp. 36-40.)

Mexican Farm Workers

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Friday, July 20, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent that an article entitled "Wetback Curbs Sought by Truman," which appeared in the New York Times of July 14, be printed in the Appendix of the Record. This article explains the comprehensive program to improve the lot of migratory farm workers which the President requested when he signed the bill authorizing the recruitment of Mexican farm workers.

There being no objection, the article was ordered to be printed in the Record, as follows:

WETBACK CURBS SOUGHT BY TRUMAN—PRESIDENT ASKS BROAD PROGRAM TO CONTROL MEXICAN LABOR AND IMPROVE FARM CONDITIONS

(By Louis Stark)

WASHINGTON, July 13.—President Truman proposed today that Congress provide a comprehensive program to improve the lot of migratory farm workers.

Mr. Truman signed yesterday the bill authorizing the recruitment of Mexican farm workers after congressional leaders had assured him that further legislation and appropriations would follow. Mr. Truman urged this program in a special message today:

1. A law to punish those who may harbor or conceal wetbacks (Mexican farm laborers who wade or swim the Rio Grande).

2. A law to permit the Immigration and Naturalization Service to inspect without a warrant places of employment where they have reason to believe illegal immigrants are working or quartered.

Soon after the President's message had been read, Representative EMANUEL Celler, Democrat, of New York, announced that he would offer a bill to implement the President's proposals.

It will seek a fine of \$1,000 or a year in jail or both for transporting aliens into the United States illegally, for concealing or harboring them or knowingly offering them employment.

The bill also would authorize immigration officers to enter any private property, other than a dwelling, where the officer has reason to believe an alien illegally in this country may be found.

The President also suggested a supplemental appropriation enabling the Immigration and Naturalization Service to expand its enforcement personnel as well as immediate congressional action to vote more funds for the Farm Placement Bureau of the Department of Labor.

H. L. Mitchell, president of the National Farm Labor Union, AFL, said today that unless the President sees to it that the Labor Department carries out its responsibilities regarding the farm-labor program better than in the past, increased appropriations for the Farm Placement Service will mean little to the American farmer.

"The present Farm Placement Service is grower-dominated and spends 98 percent of its efforts in working out plans to import cheap foreign labor for exploitation by industrialized farm enterprises," he declared.

These proposals, the President told Congress, would not take care of all problems affecting migratory farm labor. He pointed out that the President's Commission on Migratory Labor recently had submitted a very useful and constructive document that called for many additional changes in handling migratory labor.

Indicating his desire to see other recommendations by his Commission adopted, the President promised to submit additional suggestions to Congress for improvement in the working conditions and living standards of migrant workers.

The new law scarcely touches the problem of the wetback, he said. Last year, 500,000 of these illegal immigrants were returned to Mexico, he declared, and 300,000 the year before.

The presence of these illegal workers, according to the message, had depressed seriously wages and working conditions in the Southwest. Use of these illegal employees has affected legal contract workers from Mexico, as well as American farm workers, the President pointed out.

Safeguards provided in the law have little meaning, the President noted, if illegal immigration continued and if these employees were used by American employers to take the place of other workers.

Therefore, he declared, illegal immigration must be stopped and the use of our domestic labor force must be improved.

In advocating the punishment of anyone harboring or concealing aliens, the President pointed out that there was such a law on the statute books, but that it was not enforceable because penalties were not provided. To discourage the smuggling of aliens, he proposed that existing laws be strengthened.

The President was not satisfied merely with stopping illegal immigration, but also insisted that we must improve the utilization of our own citizens in the farm labor force.

As a first step toward this end, he asked that the Labor Department's machinery for ascertaining labor-market needs be surveyed to find how many contract workers to bring across the borders.

Jailing of Oatis Proves Disregard for Freedom of Press Under Soviet Rule

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. HILLINGS. Mr. Speaker, under leave to extend my remarks, I wish to

place in the Record two newspaper articles which compare the conditions under which agents of the Soviet Union gather news in the United States and representatives of our free press attempt to gather news behind the Iron curtain. These articles appeared in the Washington Daily News for Friday, July 20, 1951.

The summary action of the Communist rulers of Czechoslovakia in jailing the American newspaperman, Mr. Oatis, is further proof that under the Communist regime there is no freedom of the press:

SOVIET'S FEDOROV ROAMS CAPITOL AND WHITE HOUSE

(By Andrew Tully)

Mikhail Fedorov is a chubby little man with wavy brown hair and baggy trousers who lives in fashionable Quebec Place here and is seen often at the White House and State Department.

So what, you say?

So this: Mikhail Fedorov is a Russian who bosses the official Soviet news agency, Tass. And while AP Correspondent Bill Oatis languishes in a Czech jail as a "spy," Mikhail Fedorov moves freely about official Washington, enjoying the same special privileges granted American reporters.

ACCOMPANIES TRUMAN

Mike Fedorov attends all President Truman's press conferences. Like the other reporters, he can accompany the President on trips so long as Tass pays his expenses.

Mike Fedorov is one of five reporters in Washington representing Tass or the Communist Daily Worker, of New York. The others are all Americans—or, rather they are citizens of the United States.

In New York, headquarters for the United Nations and thus Moscow's principal propaganda outlet in the west, the roster of Soviet-employed newsmen is even larger. Tass has 15, including 9 American citizens; and the Moscow newspaper, Pravda, and something called the All-Union Radio Committee each has 1, both Russians.

Second in command to Mike Fedorov in the Tass bureau here is Larry Todd, a slim, pink-complexioned man. Mr. Todd was head of the bureau for many years until his bosses in Moscow suddenly sent Mr. Fedorov over here a few years ago to supplant him.

DESK AT STATE DEPARTMENT

The other two Tass bureau members are Jean Montgomery and Euphemia K. Virden. Completing the Washington roll is the Daily Worker's correspondent, Rob F. Hall, a bulky, amiable, pipe-smoking man.

Mr. Todd is Tass' State Department reporter, and has a special cubicle in the department's spacious press room, complete with desk, typewriter, and telephone service. Miss Montgomery is assigned to Capitol Hill and Miss Virden handles assorted assignments. Mr. Hall covers a little bit of everything for the Daily Worker, in addition to writing a daily Washington column.

There is no ban on where these people may go in search of news. They are not even excluded from the Pentagon's daily military briefings on the situation in Korea, although to date no Tass or Daily Worker correspondent has appeared at one of them.

IKE APPROVED BAN

Miss Montgomery did attend Gen. Dwight D. Eisenhower's press conference just before he left on his first look-see tour of Europe. When she asked to be allowed to be present, Defense Department press officials checked to see if it was O. K. The military was opposed, but the White House, State Department, and General Ike himself all insisted she be permitted to attend.

Miss Montgomery also attended the briefing held by Lt. Gen. Elwood P. Quesada on the atomic bomb tests at Eniwetok and the press conference held by Defense Secretary George C. Marshall upon his return from Korea.

Tass, of course, also bought the full transcript of the Senate hearings on the discharge of Gen. Douglas MacArthur during which many military secrets came out.

OFFICIALS AT DISADVANTAGE

There's no doubt, though, that the presence of these representatives of international communism put United States officials at a disadvantage. This was emphasized a couple of years ago when Senator BRIEN McMAHON, Democrat of Connecticut, chairman of the joint congressional Committee on Atomic Energy, was having a press conference.

Suddenly Mr. McMAHON broke off the press conference. He explained, "I can't say anything more with that representative of the Kremlin present." He was referring to Jean Montgomery, sitting unobtrusively in a corner.

MINOR INCONVENIENCES

At the White House, Press Secretary Joseph H. Short, Jr., also has to be cautious. Whenever he wants to let the press know that the President is making a trip, but doesn't want it announced immediately for security reasons, he has to call the White House corps in one by one; if he called a press conference Moscow would get all the dope within an hour.

But these are minor inconveniences for these agents of Communist Russia. True, they resent them because it is their job to obtain as much information as possible. But Bill Oatis, from his Czech cell, would tell them they were pretty lucky.

AMERICA'S OATIS SITS LOCKED IN A PRAGUE PRISON

(By Kermit McFarland)

Paid news reporters from Communist countries in Europe may roam Washington, New York and other United States points at will.

But there are no American reporters roaming Communist Czechoslovakia.

There is only one American reporter in Czechoslovakia—he's in prison.

The rest either have been kicked out or beat it in time to escape the fate of William N. Oatis, the slight, shy Associated Press reporter who got 10 years after a rigged-up trial in which he was charged with spying.

ORDERED FROM PRAGUE

In Czechoslovakia B. C. (before Communism) there normally were 25 to 30 western newspaper men—American, French, or English.

Four American reporters were ordered out of Prague last year. Two others escaped just in time, one after Mr. Oatis was arrested last April. And still another, who quit Prague on a routine transfer 2 years ago, since has been accused of spying by Communist propaganda.

American and other outside newspapermen had been unwelcome in Czechoslovakia since the Communists took over in 1948. Their situation became more and more unpleasant as the Reds tightened their grip on the once-democratic republic.

But it was not until last year that the Communists really cracked down on the intruders.

In January 1950, they ordered two American newsmen out of the country. They were Richard Kaschke of the Associated Press, now in Germany, and Rob Roy Buckingham of the United Press.

OUSTED TWO MORE

Three months later they ousted two more—Nathan Polowetzky of the AP, now in Korea, and John Higgins of the UP. Mr. Polowetzky's name was used freely in the Oatis trial. The prosecution referred to him as "the spy, Polowetzky."

Dana Adams Schmidt of the New York Times left Prague in May, last year, just before Mr. Oatis went there. He had been tipped off he was about to be arrested and his name had been hooked up to so-called espionage activities in trials inflicted on some unfortunate Czechs.

After Mr. Oatis' arrest last April, the United Press ordered its Prague correspondent, Russell Jones, to Frankfurt, Germany. Mr. Jones thought he was coming out for a day's conference, but his employers told him to stay out.

FORCED EMBASSY CUT

A. I. Goldberg, chief of the Associated Press bureau in Prague when the Communists took over, left there 2 years ago on a routine transfer. But in the Oatis trial, he was pictured as head of an espionage ring.

The Communists didn't stop at ejecting newsmen.

They forced the American Embassy in Prague to cut its staff, first by two-thirds, later to 12 persons. And they closed United States free libraries in Prague and Bratislava, arresting and convicting four of the Czech employees for espionage.

ALL RELEASES CENSORED

He said all he did was follow his routine duties in supplying information and news about America. Actually, all the releases distributed by Mr. Kolarek had been censored by Czech officials.

The newsmen who were lucky enough merely to be expelled were accused of unobjective reporting. The facts are the Czech Communists imposed such severe restrictions on imperialist newsmen that it was practically impossible to learn anything—or use it if they did.

SELDOM AT CONFERENCES

Joseph C. Kolarek, the information officer at the American Embassy, was given 3 days to get out of Czechoslovakia. He got.

Mr. Kolarek, now in a State Department office here, was accused of a slanderous campaign against Czechoslovakia.

They seldom were permitted at official press conferences and ultimately their only sources of information were the official news agency and the Communist radio.

Since Mr. Jones, of the UP, left Prague, there are only six American newsmen left anywhere behind the iron curtain—covering an area of 70,000,000 persons. And one of them represents the Communist Daily Worker in New York.

All of them are in Moscow—and you know how much real news they can gather there.

Inflation in the Building Industry

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an editorial entitled "Surplus Heads," published in the Wall Street Journal of July 18, 1951, dealing with the activities of the Federal Government in the attempt to take inflation out of the building industry.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SURPLUS HEADS

The Federal Government lately has been going through quite a few gyrations to take the inflation out of the building industry.

It has used tighter mortgage regulations, allocation of building materials, and what are in effect licensing arrangements to restrict certain types of building—all for the announced purpose of reducing the demand, and hence the price pressure, on building materials and skilled labor.

But surprisingly—well, perhaps not so surprisingly at that—the Government hasn't done anything to check the most fertile source of inflation in the building industry, Government building. On the contrary, the construction programs of the Government which are under Government sponsorship seem to be booming along at an increased pace.

The situation in Los Angeles, as reported by our Mr. Rees, is an extreme case, but not a unique one. There a \$111,000,000 public housing project is under way which with older projects will provide a Government home for nearly 1 in every 20 Los Angelenos. You might think from this that housing was short in Los Angeles. It isn't. Vacancies in private dwellings there are the highest since the thirties. A recent survey showed, among other things, 2,000 apartments renting for less than \$40 a month—and vacant.

Across the country, private housing construction declined 7 percent between May and June. But did total housing construction decline so as to relieve the pressure on building materials? Not at all. More than 42,000 public housing units were launched in Government-sponsored projects. This means that total housing construction increased—from 97,000 units in May to 144,300 units in June.

So we have the Government's regulation X to curtail the credit to private homebuilders. And we have Government-sponsored projects, like the Los Angeles one, creating millions in new credit by issuing bonds guaranteed by the United States Treasury.

We have a tight materials-allocation program to insure that needed materials go into defense work at the expense of the homebuilder and the private apartment builder. And we have the Government, all over the country, competing vigorously for the scarce materials to build Government apartments. To build them, incidentally, where there is already surplus housing.

One local realtor remarked, "We need public housing in Los Angeles like we need a hole in the head." Well, looking at the Government's criss-crossed anti-inflation program in the building industry, it strikes us that there's a surplus of heads of that model.

Propaganda Trial of Archbishop Stepinac Was Embarrassing Mistake for Tito

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Embarrassing Mistake," which appeared in the East St. Louis (Ill.) Journal of July 16, 1951:

EMBARRASSING MISTAKE

In his swing away from the Stalinist pattern of communism toward a government a little more compatible with the democratic West, where his best hope of survival now rests, Marshal Tito has been trying to undo some of the political mistakes of recent years.

One of these mistakes was the propaganda trial of Archbishop Joseph Stepinac. The

Catholic prelate was sentenced in 1946 to 16 years in prison for alleged collaboration with the enemy, and subversive activities. It was one of the early efforts to undermine organized religion among the satellite nations and followed a familiar Soviet pattern.

That the archbishop is now an embarrassing prisoner has been made apparent by the attempts of the Yugoslav Government to free him without repudiating the evidence it once manufactured.

He was offered his freedom if he would leave the country immediately. The archbishop replied that leaving the country was a matter to be decided by his ecclesiastical superior, Pope Pius XIII.

So the Yugoslavs next made their offer to the Vatican. And the Vatican has replied that while it would very much like to see the archbishop freed, Archbishop Stepinac wishes to remain near his faithful, and so the Vatican will respect his wishes in the matter.

And so the archbishop remains in prison, an increasingly strong symbol of faith in God and mankind. It must indeed be difficult for Marshal Tito to retrace the path he once embarked on. If his regeneration is to be sincere, it will have to be complete.

Power Payoff

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregon Daily Journal of July 17, 1951:

POWER PAYOFF

As usual the United States Senate is showing a more thorough understanding of the need for western power and reclamation than is the House of Representatives.

The House Appropriations Committee threatened to wreck the Pacific Northwest's power development program by slashing \$60,100,000 from 1952 budget requests.

It voted to cut the appropriation for McNary Dam (key to the current Columbia Basin program) by \$6,900,000. It disallowed the \$10,000,000 sought for continuing the Albeni Falls project. It cut Detroit Dam \$2,000,000 and Hungry Horse Dam \$1,000,000. It threw out completely appropriations sought to start The Dalles Dam on the Columbia, Ice Harbor on the lower Snake and Hells Canyon on the upper Snake.

The House committee also slashed deeply into the Bonneville Power Administration's request for funds for transmission lines and substations, maintenance and operation. It cut \$7,000,000 from the construction budget and recommended a 10-percent, across-the-board reduction in personnel.

The Senate Appropriations Committee subsequently restored \$5,000,000 to the BPA construction budget and voted to limit the personnel cut to administrative personnel. And the Senate itself voted 57 to 19 against cutting \$16,000,000 from going reclamation projects.

All power interests of the Pacific Northwest, public and private, have united in requesting the Senate Appropriation Committee to restore House cuts for McNary, Albeni Falls, Ice Harbor, The Dalles, and the Dexter re-regulating dam at Lookout Point.

The Columbia basin interagency committee, composed of Pacific Northwest repre-

sentatives of Federal agencies and State governments, has requested the defense mobilization board to intercede with the Senate committee in behalf of the same projects.

Five of the Pacific Northwest's six Senators, Senator Cordon being the only exception, voted in favor of starting new projects in eight States.

As pointed out by the Pacific Northwest Public Power bulletin, cuts proposed by the House committee would have the same effect as would the bombing of Bonneville dam. They would reduce aluminum production by 100,000 tons a year and they would continue the Pacific Northwest's power shortage indefinitely.

Only excuse given by the House committee for its devastating cuts was an unwillingness to appropriate any funds for new projects and the opposition of the fish interests.

We submit that this is false economy and faulty reasoning.

The Pacific Northwest is dangerously short of power.

This places severe restrictions on industrial development and war connected industries such as the light metal and heavy chemical, shipbuilding, and aviation industries.

And increasingly heavy and imperative power demands are being made by the Hanford plutonium plant.

The power projects at issue are self liquidating. The region's Federal power system has already returned more than \$224,000,000 to the United States Treasury, making possible a net profit of \$68,000,000.

In short, Uncle Sam's investment in Columbia basin power development has proved sound.

It should be continued on a systematic, business-like basis.

Hold the Line—Real Estate Man Pleads in Support of Defense Production Act

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter I received from a real-estate broker in my district who expresses his feelings on the Defense Production Act. I feel that every citizen interested in the welfare of the country should read the fine thoughts of my constituent. The letter follows:

Congressman MELVIN PRICE,
United States House of Representatives,
Washington, D. C.

DEAR MEL: I am much concerned by the tremendous effort being made by many business, industrial, and farm groups to block continuation of an effective control bill to prevent further inflation. Although the present control legislation hurts "business as usual," I am convinced that positive controls are necessary and that voluntary plans are no good whatsoever. I know that the general public in this area is in accord with the thinking of Charles E. Wilson and Eric Johnston on this matter of controls and inflation.

Being in the real-estate business in a heavy industrial area, I know that many industrial workers in need of homes are suffering considerable hardship under regulation X. Of course, this situation has ad-

versely affected our business and the construction of necessary housing, but regardless of the personal sacrifice, we should hold the price line and do the job needed for defense preparedness. It is folly to underestimate the constantly worsening international situation.

I hope that my 46 months' active duty during World War II and subsequent 66 months' Organized Reserve status proves not to have been in vain. It's time for statesmanlike action in Congress; let's hold the line and stay prepared. If we need more taxes to pay as we go, let's raise more taxes. With best personal regards, I am

Respectfully yours,

Ethical Standards in the Government Service

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent and stimulating statement on ethical standards in the Government service, presented before the special subcommittee of the Senate Labor and Public Welfare Committee, considering this subject, by Mr. Benjamin V. Cohen, former counselor of the State Department, and member of the United States delegation to the General Assembly of the United Nations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MR. BENJAMIN V. COHEN ON ETHICAL STANDARDS IN THE GOVERNMENT SERVICE, BEFORE THE SENATE LABOR SUBCOMMITTEE ON SENATE CONCURRENT RESOLUTION 21, JULY 3, 1951

I am glad to appear before the committee on its invitation to say a few words on the maintenance of ethical standards in the Government service. While not now in the Government service, I have served in Government in various capacities for more than 15 years.

Whatever differences there may be as to the proper activities of a modern state, I believe that there should be general agreement that a highly trained, competent, and trustworthy Government service is a well-nigh indispensable adjunct of effective, democratic government in our time.

Moral standards in Government inevitably reflect the moral standards of the community. But as Government service in the higher and more important echelons involves the exercise of a public trust, it is important that the moral standards in such echelons should reflect the highest and not the lowest standards of the community.

I think on the whole moral standards in Government service do compare quite favorably, as they should for the reasons I have stated, with moral standards outside of Government.

But nonetheless the maintenance of high ethical standards in Government is too important to be taken for granted. We should constantly be on guard against the erosion of standards in Government by reason of public neglect, complaisance, indifference and at times hostility.

While the public should be alert to guard against and to condemn departures from the high standards which the public has a right to expect in its Government, loyal, faithful, and competent public servants are entitled to the respect and appreciation of the public that they serve. It is a little unfortunate that disinterested devotion and enterprise in the public service are not always recognized and that it is sometimes thought that promotion and confirmation may more readily be secured by those who do not put their necks out.

Departures from high standards on the part of a few Government servants are no excuse for the indiscriminate maligning and abuse of Government servants.

Obsolete and cantankerous notions of what the Government service really is, still color too much of our public thinking about the Government service. The old notion still survives to some extent that Government jobs are easy jobs obtained through political favoritism by those who cannot make the grade outside Government. The notion still survives to some extent that Government servants are bureaucrats delighting in the proliferation of red tape and obstructing and not facilitating the operations of Government.

And to these old notions that Government officials are proverbially lazy, stupidly wooden, and painfully inefficient has been added the equally perverse notion that Government officials who are neither lazy, stupid, nor inefficient are prone to be worse; they are reputed to be overzealous or punitive in their ideas of law administration and enforcement.

While of course there are great differences among our Government servants as there are among any large group of our people, nonetheless as a whole they are honest, hard-working, and intelligent and among them are found many men and women of exceptionally high character, ability, and devotion. I recall only recently speaking with a large industrialist who was indulging in some of the stereotyped complaints against Government bureaucrats. I took some satisfaction in being able to point out to him that two of his top and trusted advisers only a few years ago had been vilified as arch Government bureaucrats.

But much more serious in its possible effect on the public service is the notion that has recently been exploited that disloyalty and immorality are rampant in the Government service. I am deeply convinced that the detection and rooting out of the black sheep is made more difficult and not less difficult by smearing the whole flock.

It is one thing to review the qualifications of officials holding security-sensitive positions to make certain that they clearly measure up to the high standards which should be required of those in such positions, and to make promptly such changes as may be in the public interest. But it is quite another thing to expose all public servants to the peril of being denounced by secret informers, and of being adjudged suspect of disloyalty and being declared ineligible for any public position on undisclosed evidence.

Indiscriminate attacks against the integrity of the Government service are themselves a threat to the integrity of the Government service. In this connection I should like to draw your attention to an article by Mr. James Reston, in the New York Times of June 19, 1951, in which he points out that Foreign Service officers are becoming increasingly reticent in their reporting for fear that their reports may become a source of internal political controversy and for similar reasons are increasingly reluctant to accept assignments in politically sensitive areas.

When public servants become afraid of being publicly pilloried for the forthright performance of their public duties, the integrity

of the public service and the safety of the Republic are threatened. Where abuses exist in the public service they must be eliminated, but the elimination of abuses must and can be accomplished without destroying the morale and vitality of the public service.

I shall now attempt to offer a few suggestions to assist in maintaining and improving the standards of Government service.

(a) A Public Service Council: I would propose the creation of a Public Service Council to guard the integrity of the public service from threats from within or without the service.

I think such a council should be composed of retired public servants with long and distinguished records in the executive, judicial, or legislative branch of Government. It should be composed of men like Judge Learned Hand, Admiral Nimitz, Ambassador Grew, former Congressman James Wadsworth, and former Secretary Harold Ickes.

I would not burden or involve the Council in individual disciplinary proceedings. I would authorize the Council to look into situations which affect the maintenance of standards within the Government service and have the Council issue from time to time reports upon how such situations should be dealt with. I should think that such reports dealing with live situations would be more helpful than a single code of rules of conduct which gives rise to questions as to the applicability of the rules to particular situations.

I should hope that one of the situations which the Council would reveal and report on would be the operations of the loyalty and security programs and their effects on the Government service.

I should think the Council should have a small but highly competent staff. Inasmuch as experience indicates that most commissions lose some of their vigor with the lapse of time I should like to see as an experiment the whole membership of the Council and its staff changed every year or two.

In order that the Council's work should not be considered as directed solely at the elimination of abuses in a negative way, I should like to see the Council authorized to issue a limited number of degrees or citations for long-sustained and truly outstanding contributions to the public service beyond the call of duty.

(b) The establishment of permanent under secretariats for career public servants: I would also suggest that there should be established in the various departments and agencies a permanent under secretariat to be held by a career public servant. Such position should carry great standing and prestige and be suitably remunerated.

I do not think it is a good practice for a permanent public servant to look forward to the holding of a political office in his department or agency as the crowning event of his career. But the highest permanent position in a department or agency should be regarded as a position not inferior in prestige and remuneration to a Cabinet position. While I would avoid making any hard and fast rule, I do not think as a general proposition non-political career men should hold political offices or be responsible for political decisions.

It is, I think, unfortunate that we do not follow more closely the practice of other democracies in holding political officers politically responsible for the administration of their departments, instead of trying to reach back of them and make civil servants defend themselves politically. It should be the job of the political head of a department to see that his department is properly run, and if it is not, he should bear the blame, not the career men who are supposed to be subject to his directions. A high-ranking permanent career official should be able to help the career officials of lesser rank to avoid accepting responsibility for political decisions. If

a career official is constantly worried about defending politically the advice he gives his superior, his objective and nonpolitical judgment is likely to be seriously impaired. To translate expert advice into political action and into terms which will be understood by the Congress and the public, the political offices in government should as a rule be held by men with political experience and understanding.

(c) Publicity of sources of income of public officers: I would further suggest that public servants should file with the head of their department or agency a statement of their income and the sources thereof. I should also suggest that not only former public servants but all those who receive fees or other compensation for representing private clients before a department or agency should file a statement disclosing such fees and compensation with such department or agency. Such requirements might not wholly eliminate subtle trafficking in influence, but they would help to determine to what extent people are paid for their work and to what extent they are paid for their influence.

While it may be helpful to try to set up standards to govern the conduct of public servants after they withdraw from the public service as well as while they are in the public service, it is extremely difficult to legislate morals and attempts to do so may be ill-advised.

Public service should be made attractive as a permanent career and also as a temporary career. But you do not make public service attractive as a permanent or temporary career if you make it too difficult for a public servant to withdraw from the service. Able men and women want to retain some freedom of choice. If a lawyer gives 10 or 15 years to specializing in the work of the Federal Communications Commission or the Securities and Exchange Commission he would be gravely handicapped in reentering private practice if he could take no cases in the field to which he had given the best years of his life.

Private practitioners before a Government agency no less than public servants within the agency acquire special knowledge and experience from their work. But knowledge and experience may be used properly or improperly. Of course a lawyer should not take a particular case for a private client if he had worked on the other side of the same case for a private or a Government client. But a lawyer who has long and honestly served a Government agency may sometimes have more respect for the work of the agency than a lawyer who has always dealt with the agency at arm's length.

(d) The elimination of money as an influence in elections: Senator BENTON has directed the attention of the committee to the lavish use of private funds in primaries and elections. In that connection I should like to offer a concrete proposal which if accepted should, I think, make it possible for the Congress to reduce to a minimum if not eliminate altogether the need of private funds to finance political campaigns.

My proposal is that a reasonable and equal amount of free time on radio and television should be made available to all candidates in Federal, State, and local elections and primaries.

The air waves belong to the public and are not privately owned. Licenses to use the air waves should be conditioned on the licensee's undertaking to permit the free use of his facilities for reasonable periods at election time by political candidates or their chosen spokesmen. I do not believe that the exaction of such a condition would result in the surrender of any valuable wave lengths by existing licensees. The exaction of such a condition from those seeking to obtain or renew licenses to use the public's air waves seems to me to be reasonable, just, and proper.

With free radio and television time available to enable candidates to reach and present their views to the electorate, it should be feasible to limit rigidly campaign contributions and campaign expenditures.

I have long been of the opinion that it would be better and cheaper for the taxpayer in the long run for the Government to pay the necessary costs of election campaigns than to have those costs privately financed. But until the rise of the radio and television as a principal medium of campaigning there were many practical difficulties in working out a feasible scheme to eliminate the private financing of campaigns. But the availability of the radio and the television has greatly reduced these difficulties.

It would undoubtedly be a mistake to assume that all campaign contributions are improperly motivated. But when large sums of money are used to finance elections and the better-financed candidates have an advantage over their rivals, the time has come when the influence of money on elections should be eliminated.

I remember a story which may be apocryphal which used to be told in the old days when it was thought that some of the utility companies had been active in raising campaign funds. The story was to the effect that a gubernatorial candidate had to decide whether he would let the utilities or the gamblers finance his campaign and he took the gamblers' money because he thought fewer strings were attached to their money. Perhaps if the candidate had had the benefit of the work of the crime committee he would have had more difficulty in making his choice.

Be that as it may, I think that in the end in some way or other the public does pay and pays heavily for the private money that goes into campaigns. The elimination of private money as an influence on elections should help to maintain and improve the ethical standards on government and in public life.

McCarthyism Versus Trumanism

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BUTLER of Maryland. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very pertinent article which appeared in the Baltimore Sun this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOP GOVERNOR RAIPS CRITICS—TRUMANISM NOT MCCARTHYISM IS REAL PERIL, KOHLER SAYS

MADISON, Wis., July 19.—Wisconsin's Republican Governor today invited four Democrats who had asked him to take a stand on "McCarthyism" to "join with us in an effort to throw out Trumanism."

Gov. Walter J. Kohler told the Democrats in a letter that "Senator MCCARTHY's activities please neither the Communists nor certain Democratic leaders."

"I am of course aware that you are primarily interested in getting newspaper publicity," Governor Kohler wrote. "I can assure you, however, that if you will denounce the condonation of Alger Hiss by Dean Acheson (Secretary of State); if you will excoriate the Missouri ballot frauds, the mink coat,

deep-freeze and RFC scandals, the Kansas City killings of Democrat leaders in Democrat headquarters and the general incompetence of the Democrat Party in the Nation you will get far more newspaper space than by asking my opinion of communism in government.

THROW OUT TRUMANISM

"And you will be performing a useful public service as well. I invite you to join with us in an effort to throw Trumanism and all it stands for out of our national life next year."

Kohler addressed the letter to State Senator Gaylor A. Nelson, Assemblyman William Proxmire, James E. Doyle, and Henry S. Reuss. They had asked the Governor to declare where he stood on "McCarthyism."

They referred to charges made by Senator MCCARTHY, Republican, Wisconsin, that there are Communists in the State Department and to subsequent investigations last year by the congressional committee headed by Senator Tydings, Democrat, Maryland.

The Governor said MCCARTHY's charges "have been given neither a full nor a fair hearing by the Tydings committee."

ADMINISTRATION PROTECTED

He added:

"The way in which the Tydings committee handled this investigation has left the American people with a feeling that it was only interested in protecting the Democratic administration and not in discovering whether Communist sympathizers had been able to infiltrate into this administration.

"Like Senator MCCARTHY and like all loyal American citizens, I am emphatically opposed to the infiltration of Communists into our Government, as I am unequivocally opposed to communism anywhere."

Losing Our Freedom: Through Treaty

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Losing Our Freedom: Through Treaty," written by James Ratliff and published in the Cincinnati Enquirer of July 15, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOSING OUR FREEDOM: THROUGH TREATY

(By James Ratliff)

Americans have found a new way to hand over their freedom—without firing a shot and with the United States Constitution nodding approval, says a sober Cincinnati businessman back from his third international conference.

Surprised Cincinnati audiences who have heard talks by William McGrath, president of the Williamson Heater Co., generally agree that Uncle Sam has indeed found a new way of cutting his own throat.

Mr. McGrath says we can—and do—legislate ourselves into collectivism by international treaty. For treaties, once confined to wars and things like international fishing grounds, are now being cooked up to control our everyday lives and make a joke of the Declaration of Independence.

We are "giving America away," thunders a past president of the American Bar Asso-

ciation in agreement with Mr. McGrath, a Democrat. "It's more dangerous than communism because fewer people are aware of it," chimes in a Cincinnati attorney, another Democrat.

"I have been concerned about the situation for some time," says "Mr. Republican" Senator ROBERT A. TAFT.

How is it that something that so concerns men of both political faiths has not reached the public?

"The press has been ignoring the problem of law by treaty," believes Mr. McGrath, although he is aware that legal journals have debated the subject for 2 years. And he knows the American Bar Association has considered everything from an amendment to the Constitution to special treaty clauses that they're not sure will protect America.

There are three major reasons why America is having treaty trouble:

1. America is the only country in the world which unreservedly makes any treaty supreme to any law in the land. Acts of Congress or even municipal ordinances which conflict with our international treaties are superseded. Article VI of the Constitution guarding our liberties provides this.

2. Treaties are now being dreamed up by international dreamers which would regiment us if we sign them. And if we sign them they're our supreme law. And we're close to signing several. And only half of our Government—the Senate—votes on a treaty.

3. Any time America sits down in international conferences of the 60 U. N. nations our negotiators are a free enterprise island in a sea of socialistic planning. Even well meaning treaties come out of such sessions in a form likely to upset our constitutional liberties.

Mr. McGrath has just returned from his third year as a delegate at the International Labor Organization in Geneva, Switzerland. Now a United Nations organization, the ILO is the sole surviving appendage of the old League of Nations. We got into it in 1934 under the urging of Mrs. Frances Perkins, then Secretary of Labor. The U. N. took it over after World War II.

The purpose of the ILO is laudable—endeavoring to raise labor standards all over the world, Mr. McGrath reports. This means better working conditions, higher living standards and fuller recognition of the rights of employees. Obviously, these embrace tremendous goals in other countries, he notes.

To accomplish these aims, the ILO operates like a congress and passes resolutions, recommendations, and conventions. The first two are nice friendly suggestions that every country ought to turn into law. Conventions are actual drafts of laws, and each country is supposed to submit the convention for ratification to its own lawmakers. For the United States such ratification, by the Senate alone, automatically creates supreme law.

Some of the proposals being pushed at ILO include ideas like nation-wide collective bargaining (which could mean actual communism, with a small "c"), abolishment of all private employment agencies, and legalization of the closed shop. In the latter case, a treaty to this effect could, theoretically, slip through the Senate alone and create law that Congress as a whole has rejected.

Mr. McGrath points out that much more far-reaching treaties are emerging elsewhere in the U. N., too.

The covenant of the Universal Declaration of Human Rights is a virtual world constitution. If it passes the United States Senate and is signed by the President we may find that we have traded away some of our precious Bill of Rights.

Instead of the rights charted for us by men like Thomas Jefferson, we would find ourselves part to an ambiguous document originally authored by 3 Russians, 14 assorted

U. N. members, and 1 lone American. The lone American was Mrs. Eleanor Roosevelt.

The U. N. Covenant on Human Rights is an honest attempt to bring decency and liberty to the world by setting down on paper a virtual world constitution that the U. N. hopes some day all nations will adhere to. But many Americans find it far inferior to the Constitution it could conceivably supplant in America.

No great reform in the world today more strikingly illustrates our dilemma than the genocide (race murder) treaty now in a Senate committee. Who could frown on a law designed to punish horrible crimes like the deliberate Nazi attempt to wipe out whole races in murder camps?

Yet the way the law is worded many lawyers insist it could possibly drag Americans before international tribunals for minor racial arguments in any American village. That's not the kind of law our forefathers came over here to establish.

Is it just a theory that treaties take precedence over American laws? After all, for 162 years of our Constitution we've never had much complaint.

"We've never had treaties like we have today," says Mr. McGrath, pointing to a famous case in California. Out there an alien Japanese just tossed California's land law into the Pacific Ocean. How? He based his case on the U. N. Charter and the appellate court upheld him with 12 ominous words:

"The United Nations Charter has become the supreme law of the land."

Another Japanese beat a Seattle municipal ordinance to get a pawnbroker's license; a sailor hurt in Naples sued the United States Government, both under international treaty. Some foreign attorneys couldn't even wait until we ratified the Declaration of Human Rights.

They demanded freedom of the 11 convicted United States Commies under it in a complaint filed with the U. N. If the Senate had already ratified the treaty, then American citizens convicted in an American court for violating an American law might have been freed.

Maybe all these things are only symptoms, but Mr. McGrath believes the doctor should be called before the disease becomes incurable.

They Told Us Then

EXTENSION OF REMARKS OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. CRAWFORD. Mr. Speaker, the President and others have placed so much emphasis on what has been said by the spokesmen for organized industry, and recently the President was so bitterly critical of these spokesmen, that I feel the Record should carry at least some observations on this subject contrary to that view.

June 14 President Truman made a radio appeal to the people of this country urging them to line up behind his recommendations for a stronger price control law, a longer price control law, and altogether he led millions of people to believe that all we needed to do to save our economic life was just to pass another law.

Mr. Henry Hazlitt, in Newsweek of July 2, 1951, made some pertinent observations, and under the unanimous

consent granted to me to revise and extend my remarks, including certain material, I now submit these observations as a part of the debate:

THEY TOLD US THEN

(By Henry Hazlitt)

Mr. Truman's radio appeal of June 14 exposed more than ever the logical and factual weaknesses of the administration's case for price control.

"These people who say we should throw out price controls and rent controls," the President said, "are all wrong. They are just as wrong now as they were back in 1946. They told us then that if we would just put an end to price controls, everything would be rosy and prices would stay right in line."

Though prominent labor leaders and farm groups have been opposing the continuance of price-and-wage controls, Mr. Truman picked the National Association of Manufacturers to symbolize the whole opposition. "The NAM," he said, "put full-page advertisements in the papers all over the country [in 1946] saying if we would just take off price controls, there would be plenty of things to buy at reasonable prices."

The NAM did make the mistake of implying that if price controls were removed, the competition and increased production resulting would in themselves bring down prices. But what Mr. Truman has forgotten is that this mistake was not confined to the NAM. It was President Truman himself who, on February 14, 1946, declared: "Production is our salvation. . . . Production will do away with the necessity for Government controls." And Chester Bowles, his price administrator, said 4 days later: "Production is the only answer to inflation."

I recall these statements because I quoted and took issue with them in an article in the New York Times of February 25, 1946. I pointed out then that such statements represented "at most only a half-truth. . . . For prices are determined not only from the side of supply, but from the side of demand. Demand is now far greater than it was before the war because money incomes are far greater. And money incomes are greater principally because the supply of money and bank credit has been almost tripled since the outbreak of the war. . . . the solution to the problem of high prices, in brief, is not production alone. It is the production of more goods combined with the cessation of production of more money and bank credit."

Returning to the subject in the Times of May 6, 1946, I wrote: "Unless there is a radical change in our monetary and credit policy, the upward pressure on prices today seems likely to continue for at least several years. . . . The cure for the present inflation is a change in Federal fiscal and money policy, not constant renewals of price control."

Prices in fact continued to go up, not because price control was taken off, but because the administration continued to increase the supply of money and credit. At the end of April of this year, the total demand and time bank deposits and currency outside of banks was \$15,000,000,000 more than at the end of June 1946.

Mr. Truman, in his recent radio address, of course utterly ignored the fact that the upward pressure on prices today comes from his own administration's monetary and fiscal policies. And he went on to imply that those who, like himself, favored the price control, were inspired only by the loftiest patriotism, while those who opposed price control were merely lobbyists, who placed private interests above the national interest.

After the representatives of the administration testified in favor of a good, strong law, he explained, the congressional committees heard from 124 witnesses, represent-

ing all sorts of private organizations. And do you know how many of them came out for the bill? Twenty, just twenty. Instead of concluding that this might indicate some possible weaknesses in the bill, or some real dangers to producers and production, Mr. Truman implied that the 104 opposing witnesses were all placing their private interests above the national interest.

Mr. Truman's strange idea is that the only way to be a real friend of the consumer is to make things tough for the producer. But it is a little hard to see just how the consumer gains by measures that discourage production.

Huge Lobby Fund of National Tax Equality Association Should Be Investigated

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. REED of New York. Mr. Speaker, a notorious political propaganda organization, masquerading under the pious sounding name of "National Tax Equality Association," is now trying to raise colossal lobby funds totaling more than \$31,000,000 for use in attempting to high-pressure and intimidate the United States Senate in connection with the pending tax legislation. The activities of this organization are nothing less than wholesale racketeering, principally for the benefit of an unscrupulous bunch of professional lobbyists and agitators. In its campaign of misrepresentation and intimidation, this organization professes to be seeking only so-called tax equality, but its real aim is to cripple, and if possible to destroy, thousands of useful non-profit organizations such as the farmers' cooperatives, building and loan companies, mutual savings banks, and mutual insurance companies. If this propaganda organization should succeed in its reprehensible campaign, it would leave the farmer, the small-business man, and the wage earner at the mercy of the huge high-profit organizations, who are its principal contributors.

While this organization loudly complains of tax exemption, at the same time it claims complete tax exemption for itself and for the huge propaganda lobby funds it collects from its deluded supporters. In the recent tax hearings before our Ways and Means Committee, the racketeering character of this group was thoroughly exposed and its claims were completely discredited. Nevertheless, it is actively continuing its callous campaign of deceit and distortion, in which it is attempting to "soft soap" Congressmen who agree with it and at the same time vilify and misrepresent those who disagree.

I have in my possession photostatic copies of letters recently sent out, by the thousands all over America, by this National Tax Exaggeration Association seeking to raise lobby funds of nearly \$2,000,000 from stock insurance companies and stock insurance agents alone.

Since the alleged insurance tax inequalities amount to only 6 percent of the total alleged tax loopholes of which this organization complains, a simple mathematical calculation shows that the total lobby funds it is now seeking to raise aggregate more than \$31,000,000. In fact, its money-begging letter to insurance agents states that the lobby fund of nearly \$2,000,000 sought from stock insurance interests is based upon a formula which has been cut down considerably in comparison with other business groups that are supporting this effort.

These letters ask the stock insurance companies to contribute on the basis of "\$25 for each million dollars of premium income" while they ask the insurance agents to contribute on the basis of \$400 per million dollars of premium income.

Ironically enough, this so-called tax-equality association evidently does not really believe in equality because the amount it asks from the insurance agents, most of whom are comparatively small-business men, is 16 times greater, in proportion, than the contributions it seeks to collect from the stock insurance companies themselves, most of which are large and prosperous.

These money-begging letters further state that this organization's "job in the next few months is a big one and it takes money to carry it out with the effectiveness that will spell success." These letters to the stock insurance agents also say "This is a big fight in which you have a big stake. If we are to be successful, adequate finances are absolutely necessary."

Of course these money-begging letters do not explain just how this racketeering organization proposes to use these huge lobby funds in its attempts to bamboozle and intimidate the Senate Finance Committee and the Senate.

This is a very serious matter and it ought to shock not only the Senate Finance Committee but also the rest of Congress and the American public in general.

Perhaps the Senate committee now engaged in public hearings on legislative ethics may be interested in exploring this scandalous mess. However, since I understand that committee is not requiring witnesses to testify under oath it would probably be better for a thorough investigation of this matter to be made by the congressional Committee on Lobbying or by the congressional Committee on Organized Crime in Interstate Commerce.

At the conclusion of my remarks I am inserting two letters sent out by the National Tax Equality Association, now masquerading under the name of "Insurance Men's Committee for Tax Equality."

INSURANCE MEN'S COMMITTEE
FOR TAX EQUALITY,
Chicago, May 24, 1951

Mr. CHARLES E. HODGES,
President, American Policyholders'
Insurance Co., Boston, Mass.

DEAR MR. HODGES: Did you know that the favorable tax position enjoyed by your mutual insurance company competitors permits them to escape Federal income taxes which amount to about one-third of their dividend payments to policyholders? That's a sizable advantage when it comes to selling

capital stock insurance and an advantage that will become even greater when stock insurance company taxes go even higher, which appears to be inevitable. With an excess-profits tax of 77 percent or more, the total tax advantage will amount to nearly two-thirds of the present payments of policyholder dividends.

Here are the facts: Even though mutual insurance companies are presently subject to Federal income tax, they do not pay on the same basis as their stock competitors. They are taxed on gross income after deducting dividends paid to policyholders, while their stock competitors are taxed at regular corporate rates on their entire net income.

Reliable research shows that mutual casualty insurance companies pay only about one-fourth the tax that a stock company would pay on similar net earnings. For instance, stock casualty companies (at the old tax rates) pay about 22 percent of their underwriting and investment income in Federal taxes while mutuals pay less than 6 percent. For the year 1949 this meant a saving of approximately \$26,000,000 or 28 percent of policyholder dividends totaling \$92,000,000.

A similar situation exists in the fire field. Mutual fire companies would pay approximately \$14,000,000 more if they were taxed on the same basis as their stock competitors. This amounts to 37 percent of policyholder dividends totaling \$38,000,000 in 1949.

These organizations have ample ability to pay full income taxes on their underwriting and investment income just like their stock competitors. If they were required to do so, the policyholder dividend would be largely neutralized as a competitive factor.

Experience under excess-profits tax during the years 1941-45 showed that mutual insurance companies could escape this tax almost entirely through the policy holder dividend device. This will happen again unless the mutual-insurance companies are placed on the same tax basis as capital stock insurance companies.

For the past several years every member of this committee has shared with many other thousands of businessmen the conviction that the tax subsidy afforded all mutual and cooperative competitors of tax-paying business by existing Federal income tax laws must be done away with. To this end, we support to the hilt the objectives of the National Tax Equality Association.

We believe you will agree with us that, with Federal taxes and deficits mounting ever higher, the most propitious time in recent history has now arrived for all of us in the capital stock insurance business to take a more prominent part in the Nation-wide effort to resolve this problem, which the National Tax Equality Association has carefully planned and is ably conducting.

Remember, Federal Government will cost not less than \$70,000,000,000 in the next fiscal year. Is it not then high time for Government to stop equivocating about seeing that all businesses shoulder their just share of this burden? If there ever was a time, now is the time to press home the demand for justice with all possible force. Surely we cannot fail to get the necessary remedial action if we will see that this is done.

NTEA's job in the next few months is a big one and it takes money to carry it out with the effectiveness that will spell success. It is the hope of our committee that the stock insurance companies will help put this program over by underwriting \$50,000 of its cost.

For your guidance in considering a subscription, we suggest a formula of \$25 for each million dollars or fraction thereof, of premiums written by your company for the year 1949. We believe you will agree that this is the most equitable way of apportioning the total among the various companies concerned.

We profoundly hope that your company can be counted upon to align itself with us and the other stock insurance companies in supporting this effort 100 percent.

Sincerely yours,
EDWARD J. BACHMAN,
Chairman.

INSURANCE MEN'S COMMITTEE
FOR TAX EQUALITY,
Chicago, June 1, 1951.

DEAR FELLOW AGENT: Our insurance men's committee for tax equality takes pleasure in enclosing another educational folder in connection with the very important matter of Federal income-tax differential between stock and mutual-insurance carriers. We are sending you this information because we think that you will want to be informed on this subject, as it has been the personal experience of those of us who are well acquainted with the facts that such information is of great help in the production of business for our own offices.

We were very hopeful that the capital-stock companies would see fit to underwrite the entire cost of this educational and legislative program. However, we have not been notably successful in securing their financial help up to this time. In spite of this disappointing development our committee has, with the financial help extended to the National Tax Equality Association by other trade groups, been able to carry out a rather limited part of the program to get tax equality in the insurance business.

We are sure that you will feel as we do that this very important program cannot be allowed to bog down for want of financial support from our own people. If we are going to secure a revision in the tax law which will eliminate the tax differential that now makes over half of the mutual insurance dividend possible, we had better see that this matter is taken care of in the next tax bill, otherwise, it is likely to be years before the subject can again be reopened before the Congress.

This is a big fight in which you have a big stake. Victory can be had if we all get behind this effort immediately. If we are to be successful, adequate finances are absolutely necessary.

Time is short, and we do need your help now. We, therefore, urge your consideration of making a subscription and suggest as a basis for determining the amount a formula of \$10 per \$25,000 of your agency's premium income. This formula is similar to those used by other trade groups that are supporting the fight for tax equality. We are well aware, however, that premium volume does not always reflect an agent's ability to contribute to a campaign of this kind. With that in mind, our formula has been cut down considerably in comparison with other business groups that are supporting this effort.

Will you help make the fight successful? Please make your check payable to National Tax Equality Association and mail it today in the enclosed return envelope.

Sincerely yours,
EDWARD J. BACHMAN,
Chairman

Spend for Dredging Instead of Seaway

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following letter and an article from Boston Business for June 1951:

PROPELLER CLUB OF
THE UNITED STATES,
Boston, Mass., July 19, 1951.
HON. THOMAS J. LANE,
House of Representatives
House Office Building,
Washington, D. C.

DEAR SIR: We concur with the views expressed by Colonel Gallagher in the attached article and desire to bring these to your attention as you deliberate on the present rivers and harbors bill. We sincerely believe this most important harbor of Boston has been greatly neglected and believe it is of vital importance to this community and the Nation, both in times of peace and national emergency.

Sincerely,

HERBERT S. EVANS,
President.

SPEND FOR DREDGING INSTEAD OF SEAWAY
(By Col. Leonard B. Gallagher, manager, Maritime Association, Boston Chamber of Commerce)

The great hue and cry of the proponents of the St. Lawrence Waterway project that it is vital to our national security, caused by the hearings held before the House Committee on Public Works in Washington, has temporarily subsided. The opponents have opened their attack on the project.

The whole argument causes many people seriously concerned in strengthening our national defense to ask themselves a lot of questions. This applies particularly to the great number of persons who are directly or indirectly interested in the development and the readiness of the port of Boston for an emergency.

The St. Lawrence advocates would have the Federal Government spend more than a billion tax dollars under the guise of national defense. It would take 7 years to build the waterway, and it would only operate 7 months a year. Only 10 percent of American-flag shipping could use it.

MORE ESSENTIAL PROJECTS

The thought occurs to a lot of us that there are many other projects already in existence that are essential to our national security. By this is meant that our navigable rivers and channels essential for the conduct of the commercial shipping business are in many cases badly in need of maintenance dredging to insure their efficient operation. It seems that we should fix up these existing navigational facilities essential to our national defense, including a number in Greater Boston and New England before we take on any new navigation projects of doubtful value.

It has been difficult to get adequate appropriations locally for this maintenance work, for it has been hard to arouse sufficient interest to get our congressional delegation behind this matter. There are no members of the New England congressional delegation on either the House or Senate Public Works Committees. This lack of representation probably works against us in securing funds for needed Boston and New England projects.

This year the total amount advocated for the maintenance of river and harbor work is approximately \$41,000,000 for the entire United States. The Chief of Engineers is understood to have submitted a much larger figure, but it was cut down in the Bureau of the Budget, probably as a nondefense item, in their opinion. Needless to say, when a project is constructed it is known that there will be a certain amount of maintenance work necessary, from year to year, after its completion. It is the responsibility of the Federal Government to see that these funds are provided.

A HIGH-TIDE PORT

At the present time the Port of Boston is what might be termed a high-tide port because, while the main channel leading into our harbor from the sea is 40 feet in depth, the channels leading off it to the various piers and terminals are in most cases of a much lesser depth. Modern freighters and tankers require at least a 35-foot channel in which to operate safely and economically day and night at all stages of the tide.

In Boston we have an average high tide, above mean low water, of 9.5 feet. The extreme low tide is approximately 2 feet below mean low water. Thus it is readily seen that at times a 35-foot channel, at mean low water, may only be 33 feet deep. With the effect of adverse winds taken into account it will be even less than 33 feet, and in addition, 2 feet of water under a vessel is normally considered essential to insure control.

In Boston Harbor we have projects that are essential to the efficient operation of the port that are in great need of maintenance dredging. As an example, we have the Reserve Channel, which services the Army Base (nine berths), Castle Island (seven berths), White Fuel Co., Boston Edison, and others. This channel is supposed to be 30 feet in depth. However, it has shoaled up, and at the present time, has a controlling depth of 26 feet. This means that ships must await high water to reach their berths, thereby, in many cases suffering delays with increased costs of operation (\$100 plus per hour).

ONE OF BUSIEST CHANNELS

This channel is one of the busiest in Boston Harbor and, in addition, it would certainly seem that, since the Armed Forces may see fit to take over and operate their property at the Army base at any time, it would certainly be necessary in the national defense to have this channel maintained to its project depth of 30 feet. The cost involved is approximately \$400,000. The Congress recently has directed that a survey be made to consider deepening this channel to 35 feet.

The Mystic River has a controlling depth of 27.5 feet. The project calls for 30 feet and recently Congress has authorized 35 feet, but no funds have been allocated. Super-tankers operate to the berths of the Esso Co. under high-tide conditions. Needless to say, this important waterway should be dredged to 35 feet without delay.

Chelsea River, along which is stored 50 percent of the oil of this community, has a project depth of 30 feet. Congress authorized the Corps of Engineers to make a report as to the advisability of increasing its depth to 35 feet. This report is now long overdue. On the Chelsea River, it is necessary to operate the tankers at high-tide slack-water periods. If we had 35 feet of water, it would be possible to operate at both high and low stages of tide. This would increase the time available for transiting the narrow bridge openings and would spread out the bridge openings in such a way that there would be less interference with highway traffic. Money should be allocated to deepen this channel at once.

MORE SHALLOW PLACES

There are many other places where shoaling has occurred. There are 24-foot shoals in the Narrows of Georges Island, 22-foot shoals inside Hull Gut in the center of the channel, a 23-foot shoal in the entrance to Weymouth Fore River off Sheep Island in the center of the channel, and a 23-foot shoal in West Gut off Prince Head in the center of the channel.

The Cape Cod Canal, of tremendous importance in an emergency as well as ordinary use in time of peace, has an authorized depth of 32 feet, but has a controlling depth of 28 feet in the approaches.

The American Sugar Refinery Co. has great difficulty in getting ships to their plant in the Fort Port Channel due to shoaled conditions.

All of the above shoals should be dredged without delay to at least the authorized depth.

It seems that before we start any projects, such as the controversial St. Lawrence waterway, adequate funds should be appropriated so that the existing channels necessary for the commerce of the country and absolutely vital for national defense should be put in first-class condition. Every time someone tries to get money for maintenance dredging or for rivers and harbors projects, the encounter the cry of "pork barrel." This is an unfortunate situation because adequate channels are essential to our commerce and national defense.

MANY OTHER PROJECTS

Besides the maintenance dredging, there are many new projects in New England that have been authorized by Congress for which no funds have been appropriated to complete. Many of these projects are 4 and 5 years old. Many of them are rather small and require very little money. We find the towns and States have their money ready to contribute but the Federal Government lags behind and will not appropriate their part so they drag on from year to year. At the same time we can appropriate billions to the Marshall plan, point 4 plan, and do most anything except to properly maintain the channels necessary for the conduct of our commerce and essential for our national defense. The June 26, 1950, Life magazine presents the story of the enormous French hydroelectric project, La Grotte, now being built with Marshall plan money.

In Boston we also are awaiting funds to complete several authorized new projects, such as the deepening of Mystic River to 35 feet, the completion of the extension of the President Roads anchorage, and the Weymouth Fore River project. All of these are economically justified and urgently needed.

Have we gone crazy in this country that we can construct new work for foreigners all over the world and we can't provide funds to fix up our own house? Can we spend a billion on the controversial St. Lawrence and not afford to spend \$400,000 to fix up the Reserve Channel? Many think that the St. Lawrence project will benefit almost solely the Canadians and foreign-flag operators with the Americans paying the big end of the check. Let's stop it and insist that our congressional delegation secure more adequate funds for the maintenance of our channels and also to initiate new and economically justified work in this area without further delay.

National Service Life Insurance

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including a letter from Hon. Carl R. Gray, Jr., Administrator of Veterans' Affairs, and my reply thereto. Both are letters relative to an opinion rendered by the Solicitor of the Veterans' Administration, to which I made reference in an extension of remarks on July 5, 1951.

The letters referred to follow:

VETERANS' ADMINISTRATION,
Washington, D. C., July 14, 1951.

Hon. JOHN E. RANKIN,
House of Representatives,
Washington, D. C.

DEAR MR. RANKIN: This will respond to your letter of July 3, 1951, concerning the interpretation of Public Law 23, Eighty-second Congress.

Enclosed is a copy of an opinion by the Solicitor, prepared after reexamination of the question as to whether the disability insurance authorized by section 602 (v), National Service Life Insurance Act, is available to the holders of life-insurance policies authorized by section 10 of Public Law 23. The conclusion stated in the Solicitor's opinion appears inescapable and I have approved the opinion.

The conclusion reached with reference to this matter has the merit of not committing Congress to a possibly unintended course of action; it does not in any way usurp legislative authority, since any other legislative intention, previously existing or subsequently formed, may be embodied in express legislation.

Sincerely yours,

CARL R. GRAY, Jr.,
Administrator.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D. C., July 17, 1951.

Gen. CARL R. GRAY, Jr.,
Administrator of Veterans' Affairs,
Veterans' Administration,
Washington, D. C.

DEAR GENERAL GRAY: This will acknowledge your letter of July 14 in response to my letter of July 3, concerning the interpretation of the disability-income provision available to holders of National Service Life Insurance term policies issued pursuant to section 10 of Public Law 23.

Of course, I had read the Solicitor's opinion when I wrote you asking you as to "where in the legislative history of this act there is any authority for the opinion which the Solicitor has rendered." Since your have failed to make reply to my question, I assume, therefore, that you are unable to find any authority in the legislative history for the opinion which the Solicitor has given to you and which you have approved, and which will, therefore, be binding in the administration of this act.

Fortunately, this is a question which can be, and I am sure will be, tested in the courts. The net result, however, will be to place an added expense upon some individual veteran or one of the veterans' organizations—an expense which could have been avoided if careful consideration had been given the legislative history of the act, as I requested. I have no doubt that any court will sustain my view of this matter and will overrule the opinion which you have approved.

Sincerely yours,

J. E. RANKIN,
Chairman.

Controls and Spending

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the Rec-

XCVII—App—286

ORD, I include the following editorial from the Oregonian for July 13, 1951:

CONTROLS AND SPENDING

The Truman administration has got itself into a strange and strained situation on price and wage controls. But so has Congress. And it is the obvious intention of the administration to make political capital of the congressional revolt against controls which the administration refused to invoke in the first place and which Congress forced upon it.

The wisdom both of the administration and of Congress certainly can be questioned. We get the definite feeling that the conflict between the two has become more important to the participants than the national welfare, however sincere they may believe themselves to be.

Representative HARRIS ELLSWORTH, Republican, of Oregon's Fourth District, has been calling for an end to price controls. Recently, he wrote:

"Only the portions of the law authorizing price and wage controls were to expire (on June 30). The remainder carries on through until 1952. When the act was under consideration by Congress last summer, the President had requested production controls, but did not want authority to control prices and wages.

"Under the pressure of a new war in Korea and threat of total war, Congress insisted on writing the price control sections. Perhaps that was the reason for setting the expiration date this year. Strangely enough, the President is now placing the greatest emphasis on price-control authority. Meanwhile the Korean venture seems likely to end, at least for a while, and our economy has absorbed the impact of defense production thus far and does not seem to be too much worried about the so-called major impact of defense buying which is supposed to come this fall."

Many economists agree that price and wage controls are necessary evils, either for their real or psychological effect, though only stop-gap barriers to inflation. But it is obvious from past experience that controls are virtually useless unless they are imposed early in the inflation emergency and applied rigidly—as harmful as this may be to production and employment in some lines. This, the Truman administration refused to admit.

Congress, on the other hand, is inclined to slap on controls for short periods, then knock them off about the time that some benefit to the consumer may be in sight. Congress is, we think, thoroughly inconsistent.

In the present situation, assuming an end to the war in Korea, the key to the Nation's welfare lies in the effects of scheduled and anticipated Federal spending for rearmament and other purposes in the next 2 years. Mr. Ellsworth and some other Members of Congress appear to discount this impact, but Congress as a whole appears disinclined to take the long chance and slow down the defense program—to space it out over a period of years, instead of jamming the main effort into the next 2 years.

If Congress intends to cut the muscles out of the controls program, just when these heretofore atrophied organs are beginning to develop, it would be better advised to throw out price and wage controls entirely and rely on the stimulus to production to take up the inflation slack. This, of course, would give the Truman administration campaign material for 1952—whether truly or falsely based—but someone has to demonstrate a little political courage if the Nation is to stay strong.

We cannot see any probability of averting further, more serious inflation—with or without price and wage controls, as we have known them—if a 10-year armaments and world-aid program is to be stuffed into a 2-

year package. We think it is incumbent upon the administration and Congress to get together and decide whether a spending rate, largely for defense, of around \$70,000,000,000 in fiscal 1952 and \$90,000,000,000 in fiscal 1953, is truly necessary to meet the menace of communism.

Katharine Lenroot

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several of the many tributes from the press of the Nation to Miss Katharine Lenroot on the occasion of her retirement as Chief of the Children's Bureau.

There being no objection, the tributes were ordered to be printed in the RECORD, as follows:

[From the Washington Star of July 11, 1951]

A NOTABLE CAREER OF SERVICE—KATHARINE LENROOT RECALLS THE LONG BATTLE HERE IN THE TWENTIES FOR THE WELFARE OF THE NATION'S WOMEN AND CHILDREN

(By Thomas L. Stokes)

Like Gen. Omar N. Bradley, who got into West Point from an alternate's position and went on to a distinguished military career, Katharine Lenroot, a young woman from Wisconsin, entered as sort of an alternate back in 1915 into the Children's Bureau, then a scraggly orphan of the newly created Labor Department. Thus began a notable career of public service to our Nation's women and children.

Retiring after 17 years as Chief of that Bureau, now in the Federal Security Agency, she recalled the circumstances. The Bureau, then operating with a handful of people on an annual budget of \$25,640, suddenly got an increase of \$168,000 under the awakening social impulse of the Woodrow Wilson New Freedom and had openings for 26 women. She took the civil-service examination and qualified. But she was twenty-seventh on the list. Then someone resigned—and she got a job.

But there was nothing accidental about her career, as was the case, by his own account, of Omar Bradley, who apparently had not the least thought of being a soldier but was induced to try for West Point by an older man in his Missouri community who pointed out it was the way the get the education the young man coveted. Katharine Lenroot knew what she wanted. She grew up in the atmosphere of the La Follette reform era in Wisconsin, which her father, Irvine L. Lenroot, later United States Senator helped to promote and make a reality as the speaker of the Wisconsin House of Representatives. She had studied at the university under Prof. John R. Commons and was inspired by that great teacher to an interest in labor problems. After graduation she worked for 2 years in the State's industrial commission before beginning her great adventure in Washington.

What still is most vivid to Miss Lenroot, looking back on it all, was the fight here during the 1920's for recognition of the Federal Government's responsibility for welfare, which, in her chosen field, meant the welfare of the Nation's women and children. The

spark of the "new freedom" had flickered out meanwhile, and laissez faire lethargy again was the order in Government. The fight revolved about the Sheppard-Towner bill for Federal grants-in-aid to the States for a cooperative program of maternal and child welfare for which an appropriation of \$1,200,000 was proposed.

She smiled over the memories.

"They said we were just a bunch of spinsters and flat-chested old maids. Why, such an appropriation would wreck the Republic."

Cautiously the act was limited to 5 years. Thereafter it was renewed for two. Then, presto, Congress cut off the aid and relegated the Children's Bureau to a research and reporting agency—and that was so recently as 1929, the tag end of the "Coolidge prosperity" which nearly everybody thought then was going to last forever. That remained the Bureau's function until its reinvigoration in 1935 in the Roosevelt New Deal.

It is still a bit astounding to Miss Lenroot how negligent and apathetic we were about our human resources in the twenties. Significant, perhaps, was the fact that in the La Follette-Costigan unemployment relief bill of 1932 it first was proposed to turn over relief administration to the Children's Bureau, as that was then about the only Federal agency acquainted with the special problems involved in the depression. However, other agencies were created for that purpose.

It is a bit astounding to Miss Lenroot, too, how quickly the climate changed around Washington when the depression woke us up, and also a matter of pride, for she was in the midst of all of it and the long-overdue adjustments for which she had worked—abolition of child labor eventually through the Wages and Hours Act after the Supreme Court had nullified an anti-child-labor act of Congress and a constitutional amendment had failed; extension of aid to the aged, as well as expansion of maternal and child care, and all the other things. In all of these she had pioneered.

She is proud of her Bureau and its devotion, its personnel's readiness to give 12 hours a day and Saturdays and Sundays often. Proud, too, of her predecessors who inspired and trained her—Julia Lathrop and Grace Abbott, the two previous chiefs—and very happy that the work is to be carried on by Martha M. Elliott, formerly her associate director, who for the last 2 years has been with the World Health Organization.

As the job of the comparatively recent past was to establish a pattern of Federal responsibility for welfare, with use of the taxing power for the benefit of all the people under national leadership, so Miss Lenroot feels that the emphasis for the next decade must be on getting the people, under this now accepted pattern, to recognize and accept responsibility as individual citizens for what happens in their communities. We cannot let responsibility become too remote, off here in Washington, if our democracy is to remain a living institution.

[From the Washington Star of July 12, 1951]

TOUGH BUREAUCRAT TAKES A REST—MISS KATHARINE LENROOT PLANS TO TRY A BIT OF LEISURE AFTER LONG YEARS OF NOTABLE PUBLIC SERVICE

(By Lowell Mellett)

A great bureaucrat is departing from the Washington scene and millions of people in this and other lands have cause to note her departure with gratitude as well as regret. The cause for regret is obvious. It is the loss of the selfless service of a public servant supreme in her field. The gratitude is felt by those who have seen and appreciated the weight of the burden she has carried during a great part of her 60 years. They are grateful now that she is able to pass this burden

on to a competent successor and obtain for herself a little of the leisure that has long been due her; grateful also that she can leave knowing she enjoys the world's approval of the work she has done.

The bureaucrat is Miss Katharine Lenroot, successor to two other great women, Julia Lathrop and Grace Abbott, as Chief of the Children's Bureau. It is significant perhaps of the stature of the Children's Bureau that it is known just as that, although it is only a segment of the Federal Security Agency, as it was formerly of the Labor Department.

What does it take to be a bureaucrat whom everybody applauds and nobody belittles? President Truman in granting Miss Lenroot's request to be relieved wrote: "Toughness is a quality not often attributed to women, but the plain fact is that you have been a tough and persistent champion of America's children." (He could have said children everywhere, considering the effort expended by Miss Lenroot in the international field during recent years.)

It is difficult to think of Miss Lenroot as tough. Good looking, gracious, charming, and, above all, gentle, but surely not tough. However, the President knew what he was talking about. He knew that when the Chief of the Children's Bureau had committed him to a course of action he could expect her, in her own gracious, charming, and gentle manner, to hold him to it.

They came to know the tough side of the lady bureaucrat in Congress, too, as witness her success in defending necessary appropriations against querulous committee members, sometimes wearied with well-doing. It may be thought that a children's bureau, by its very nature, would be immune to attack. And it is true that the Senate laughed the other day when Senator **MARBANK** solemnly remarked, "I am in favor of children." But there was a time, and not so long ago, when the Federal Government considered children, like the weather, as something it couldn't do much about.

Probably in her memory Miss Lenroot will take greatest satisfaction in the part she played in obtaining acceptance of Federal responsibility for the welfare of the Nation's children. That came first in 1922 with the passage of the Sheppard-Towner Act, providing financial assistance to poverty-stricken States. This beginning came to an end in 1929, but the principle was again accepted by the New Deal and nobody now doubts its validity. So we have an anti-child labor law, provisions for maternal care and other evidences that an American child is regarded as an American child, regardless of the State in which it lives.

Miss Lenroot has also had the physical toughness required of a good bureaucrat. Not tough enough perhaps to run the gamut of the Washington cocktail circuit, but tough enough to take her work home with her and devote many night hours to it; and to include Sunday in her workweek.

Few have earned so well the leisure she now seeks, but one wonders whether she will really get it.

[From the Madison (Wis.) Capital Times]

MISS LENROOT LEAVES UNITED STATES POST—CHILDREN'S FOSTER MOTHER APPROVES PRESENT GENERATION

WASHINGTON—A white-haired spinster who has devoted her life to the betterment of children said Tuesday that this is "a wonderful generation" but that much remains to be done to bring out the best in American youth.

Miss Katharine Lenroot, known as the foster mother of America's children, is an authority on the subject.

She has spent 36 of her 60 years with the United States Children's Bureau—the past 17 as chief of the Bureau. Now she is retiring and making plans to live out her span

in a little house in Westchester County near White Plains, N. Y.

The daughter of the late Senator Irvine L. Lenroot, Republican, of Wisconsin, she was born at Superior, Wis., March 8, 1891. She was graduated from the University of Wisconsin in 1912.

A few hours after the White House announced her resignation, Miss Lenroot—blue-eyed and demure—sat reflectively in her office and talked about her favorite subject, children.

She has no illusions, she said, about the world which children must cope with—"It is a world of rapid change and much uncertainty."

"Some children may suffer. But, by and large, our young people have developed the sense of responsibility, readiness, and initiative to deal with this world."

But the plumpish lady, whose energy belies her years, is by no means satisfied by all that has been accomplished in public services to children in recent years.

"We hear so much talk of the release of atomic energy," she said. "There are amazing possibilities in the release of human energy."

The amount of money spent for children Miss Lenroot called infinitesimal compared with the billions spent on atomic research.

"Children," she said "must be given first-class opportunities."

She deplored the tremendous waste of human resources—juvenile delinquency, wasted talents of handicapped children, teen-age narcotic addicts, and the stunted personality and character of the children of some working mothers.

"Much of this can be remedied," Miss Lenroot said, "by intensive research and the kind of environment necessary to bring out the best in children." "Here," she said, "is where the emphasis must be in the coming decade."

Miss Lenroot said child-rearing techniques now have quite properly swung back to the middle ground—between overemphasis on regimen and controls, and overemphasis on permissiveness.

"But most of all we have to rely on common sense," she added. "And that is a pretty good thing to rely on. That is the way the human race has developed so far."

Much has been accomplished in child welfare since Miss Lenroot joined the Children's Bureau in 1915. "Then," she recalled, "one-tenth of our babies died in their first year. * * * Many States had no child-labor laws. * * * Orphaned children were institutionalized and forgotten. * * * There was no Federal aid to States."

But much remains to be done, she said.

In her letter of resignation to President Truman, Miss Lenroot urged continued and unceasing concern by this country for the children who are its future.

During her years as foster mother to the Nation's children, she was tempted many times to adopt a child. But, she said, she always abandoned the idea because she could not do justice to her Government job, too.

"Now," she said, "I do not think it would be wise to adopt a child at my age."

[From the Montgomery (Ala.) Advertiser]

UNITED STATES CHILDREN'S BUREAU BOSS RESIGNS AFTER 36-YEAR CAREER

WASHINGTON, July 9.—Katharine F. Lenroot is stepping down as Chief of the United States Children's Bureau. In her place President Truman has named one of her chief aides, Dr. Martha M. Eliot.

Mr. Truman accepted Miss Lenroot's resignation Monday, effective August 31, "with real regret."

Between the two women, and the small Bureau staff, the country has seen a spectacular drop in infants' deaths in recent decades, abolition of child labor, the growth

of public aid for impoverished mothers—and beyond American shores, a growing world concern for child welfare.

Wisconsin-born, golden-haired Miss Lenroot was the daughter of the late United States Senator Irvin L. Lenroot. But she ignored possible paternal aid on her first job hunt. She took a civil-service exam in 1915 and landed the post she wanted; a small job with the Children's Bureau.

Her first assignment was in slums where she saw children of 6 working 12 hours a day. Since then her drive has been to force public aid for neglected children, orphans, those in trouble with the law.

Miss Lenroot is now white-haired. Twelve-hour working days were common on her calendar. She was seldom seen at Washington parties. In her letter of resignation she says, "I have reached the age when I must have more leisure." She will retire to her home near Hartsdale, Westchester County, N. Y.

President Truman's letter accepting the resignation told Miss Lenroot, "toughness is a quality not often attributed to women but the plain fact is that you have been a tough and persistent champion of America's children."

Dr. Eliot will carry the same degree of "toughness" into the post. News of the appointment reached her at her Quebec summer home. She has just finished 2 years as assistant director of the United Nations World Health Organization.

She took her M. D. degree at Johns Hopkins in 1918. In 1923 she became an instructor of pediatrics at Yale University, where she remained until 1934. There she plunged into her first big research job on child health, a community study of rickets, and the effect of sunlight and cod liver oil on the disease. Later she repeated the study in Puerto Rico.

During her last 10 years at Yale she held a second job, Director of Child and Maternal Health for the Children's Bureau. In 1935 she became Assistant Chief of the Bureau and moved to Washington.

Her pungent testimony was one of the forces that wrote a section on child and maternal health into the social-security law. She became administrator of the Federal grants-in-aid to the States for developing health services for children and mothers.

In 1942 she successfully campaigned for a fund of \$125,000,000, which was spent through State boards to help pregnant wives of United States servicemen in the four lowest income brackets.

In 1947 she was the first woman elected president of the American Public Health Association.

[From the Washington Post of July 15, 1951]
CHAMPION OF CHILDREN—SHE CAME FOR 1
YEAR AND STAYED 36
(By Nicha Searle)

"Well, I might stay a year," the young girl from Wisconsin thought as she arrived in Washington with a job as special investigator in the Social Service Division of the Children's Bureau at \$1,200 a year.

Today, nearly 37 years later, Katharine F. Lenroot, retiring Chief of the Children's Bureau, is looking forward to another type of future. In this one there is time to read and think, time for a "real vacation," and a chance to enjoy the responsibilities and benefits of a citizen in a community where there is a vote.

In her letter of resignation, Miss Lenroot said, "I have reached the age when I must have more leisure." The "Grand Old Lady" of women Government workers will make her home in Hartsdale, Westchester County, N. Y.

But it's a cinch she won't get too far away from her main interest in life—the welfare of children. Although her last day as chief

of the bureau she has headed for 17 years will be August 31, she will be right back at her favorite work between September 21 and 26. Miss Lenroot will act as cochairman of the Inter-Agency Conference on Personality Development in Children being held at Princeton, N. J.

Quite a few changes have taken place since that day almost four decades ago when Miss Lenroot arrived in Washington. She remembers one of her assignments as special investigator in 1915 which took her to the poorer neighborhoods of the city.

There she saw 7- and 8-year-old children working as many as 12 and 14 hours a day stringing beads or making artificial flowers. She remembers seeing one young mother who returned to work the day after her child was born since that was the only way to bypass starvation.

One prevailing opinion in the early days of the Bureau, Miss Lenroot found, was that it dealt with "luxury services." Children, Miss Lenroot states firmly, are an emergency. And it is this practice of treating every case individually and as quickly as possible which has earned her the name of "foster mother to millions."

She remembers with a smile the passage of the Social Security Act in 1935 (one of the high spots of her career) and her worries about the budget.

"We'll need at least \$100,000 for the Bureau," she earnestly told the then Assistant Secretary of Labor Arthur J. Altmeyer. "You'll get more than that," the Assistant Secretary predicted.

"I've been in the Bureau longer than you and I know Government appropriations," Miss Lenroot insisted.

To her complete surprise, the Bureau was given the fabulous sum of a million and a half dollars. With it came the welcomed responsibilities, under title V of the act, which provided for grants to States for their development of maternal and child health services, services to crippled children and child welfare services.

The White House Children's Conference in 1950 is another milestone in the life of children, Miss Lenroot believes. It was there that men and women of all professions gathered to find out how they could interpret to the parents of the world the scientific information and resources they possessed. The conference also stood out, says Miss Lenroot, because of its citizen participation—almost 100,000 individuals were engaged in its work.

President Truman, in a letter paying tribute to Miss Lenroot's tenure of office as a public servant, said:

"Toughness is a quality not often attributable to women, but the plain fact is that you have been a tough and persistent champion of America's children. You have made them both your vocation and avocation. The children of this country are better off for your having been in the Government."

As the President said, "What greater satisfaction could anyone take into retirement?"

The Present World Situation

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a stenographic transcript of remarks by Hon.

Dean Acheson, Secretary of State, made off the record and from notes, to a group of magazine and book publishers, on June 29, 1951, which was made public at the request of several of those who were present.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, it is a pleasure to be with you this afternoon. It is particularly pleasant since it gives me the opportunity to thank all of you who gave so generously of your time and efforts, both working here at home and through the special panel which went abroad, to help us on our overseas information service. You did a tremendous job for us, and we are very deeply grateful.

This afternoon I am going to try something of an experiment. I am asked to speak with you on what is called the present world situation. Now that is something of a problem, because I have also asked my associates who are dealing with the various geographical portions of our work to come and tell you in some detail about it, and I do not want to anticipate what they are going to say. Therefore, I thought we might spend a little time on trying to discover what the present situation is; and, if we can get that in our minds, then perhaps some of the things that my associates say to you may have a little more meaning.

There are several preliminary observations I would like to make about the present situation. One of them is that it is not a situation clouded in obscurity. There is a blinding light thrown upon it—in fact, so much light that the question arises whether the light is not too strong and too multi-colored for reading purposes. I have had a few figures collected for me on some of the contributions to knowledge on this subject which are being put out by Government and by you, who are sitting here. My own Department, the State Department, puts out each year 1,200 press releases dealing with the present international situation. Every day we put out 320,000 words over all channels of the Voice of America. Every day we put out 40,000 words through the five wireless bulletins which we send to all parts of the world. Each year we put out 20 publications in the field of documentation of diplomacy, each one of these volumes containing from 100 to 1,500 pages. We put out 70 volumes a year in the field of current information, running from 100 to 500 pages. We put out 200 volumes a year, each running from 20 to 500 pages, on treaties and international actions.

The ECA, the Treasury, the Department of Commerce, and the Federal Reserve Board probably put out together some three times as much as we do on the international situation.

The Congress has made this one of its main subjects of interest, and you have with you this afternoon the two leading contributors to a congressional work of 2,000,000 words on far-eastern policy. I think I led with 418,000 words and General Bradley came a poor second with 278,000.

Outside of the governmental field, there are 500 books a year printed on international affairs and the present international situation, and there are 3,000 magazine articles a year which are sufficiently important for bibliographical listings. Of course I cannot even begin to estimate the number of words put out in the news columns and the editorials.

So you see there is plenty of light being thrown on the present international situation. As I say, the light may be too strong and it may be too varied for reading, but the situation certainly is not developing in gloom.

There are three things that I would like to talk with you about for a moment in the light of all these volumes of words I have talked about. I have had some 20 or 30 important monographs in the Library of Congress examined from three points of view. One was to find out when the writers of these monographs thought the present situation began. When is "present," in other words? The second thing was, what do these authors, these writers of these important monographs, believe to be the common characteristic, or what is the outstanding characteristic of the present, as distinct from the past or the future? The third was, what are the essential steps recommended for dealing with the present?

You will be interested to know some of the results of this inquiry. Let's take first of all when the present situation began. When is "present"? One writer says the present situation began in 1905 with Japanese victory over the Russians in the Russo-Japanese War. Another writer says it began with the conference at Yalta. Another says it began with General Marshall's mission to China in 1945-46. Another says it began with the invention of the airplane. Another says it began with the great upsurge of population which took place when modern medicine checked the death rate of the last century. Another one, who is not quite so modern, says it began with the Protestant Reformation. Another says it began with the collective action taken against aggression in Korea. Another, a medievalist, says it began with the Portuguese exploring the Senegal River 500 years ago. Another says the "present" began with the dropping of the atom bomb.

The main point in common that we can find in all these writings is that the present is upon us now. All we can say is what the little boy said to the little girl when he was looking over the fence and she was on the sidewalk. She asked, "Are you going to Mary Brown's party?" and he answered, "I am to it." All we know is that we are in the present, but when it began we cannot tell. We can say that there is no one moment when it began. We can say that there will probably be no one moment when it will end. But it is with us. Human experience is not like a book, it is not written in chapters.

The next thing that I had examined was, what is the fundamental quality of the present? How do you tell the present? How do you know something is present and is not characteristic of the past? Going through these monographs, we come upon these theories. One is that the fundamental quality of the present situation is that it is a contention between great powers over the control of territory and that in this contention between great powers ideological differences not only are secondary but really obscure the real meaning of the present time. Another writer says that the fundamental characteristic of the present is that it is a conflict between ideologies and that the old conflicts of states about territory have nothing to do with the present. Another says that it is fundamentally a struggle between the rule of law, imposed in the classic conception of the state, and a conspiracy, on the other hand, which is the revolt of men against the state. Another says that it is the struggle between the awakened peoples of Asia and the decadent peoples of the West. Another says that the fundamental quality of the present situation is that nations have tended to renounce the healthy interest in national self-interest and have run off after the will-o'-the-wisp of collective security. Another one says that the quality of the present is that nations have not renounced their interests in national security and have failed to set up collective security in a world commonwealth.

All that we get out of these analyses of the quality of the present is that struggle is at the heart of the times in which we live, that the times in which we live are onerous, but that there is hope for mankind if we will keep our minds on the heart of the problem.

When we come to look for the heart of the problem, we find it somewhat confusing. It reminds me of some words in the introduction of Henry Nevins's book, *Changes and Chances*—you remember that is the first of three volumes in his autobiography. He was a wonderful man, whom many of you I am sure knew while he was alive. He was a great war correspondent of the *Manchester Guardian*. In his book he discussed one of the prayers in the Book of Common Prayer. The words I refer to are:

"That so, among the sundry and manifold changes of the world, our hearts may surely there be fixed where true joys are to be found."

Nevins said that he always thought the writer of that prayer was slightly naive, because, if one only knew what the true joys were, it would be no difficulty to keep one's heart fully fixed upon them. If we only knew what the heart of the problem was at the present time, it would not be difficult to keep our minds on it.

Now we come to the third thing that I asked to have looked up in these monographs—what is the line of action necessary to deal with the present situation? One writer says that we must recognize that what we are involved in is the struggle for the minds of men and that we must spend vastly more money on that and not waste our funds on economic or military expenditures. Another one says that the minds of men are trivial things at best, and that the minds of men follow their stomachs and, therefore, the thing to do is to concentrate on economic activities, and intellectual and ideological results will follow. Another writer says military power is the only thing that counts in our time—forget all this nonsense about propaganda and economics and concentrate on the military problem. Another one says that the real heart of the matter is a struggle for power as based upon position and therefore what we must do to settle the contention of our times is to come to agreement dividing the world into power areas. Another one says that the heart of the matter is to get away from the outmoded ideas of national sovereignty and go in for world government so that all differences between nations will be mere partisan friction, and war, if there ever is any war, will become merely small civil disturbances.

Summing up all of this, what you get out of the people who are writing most seriously about our time is that there is no sovereign remedy, that there is no one course to pursue, that there are many courses, many attitudes, which we must take. I think this is a rather long-winded way of coming to a conclusion which all of you recognize is inherently sensible, that there is not any one characteristic of our time, there is not any one answer to it. It has many characteristics and there must be many answers to it. I venture to put down here some of the attitudes which seem to me essential for us to have in mind as we struggle with the times in which we live.

The first attitude which seems to me essential is the recognition that, whenever the present began and whenever the present will end, it will be with us for a very long time. If we will get that firmly in mind, we will begin to get over the impatience which leads people to try to find magic solutions. If we will recognize that we have before us a long period of work, then we have the beginning of wisdom. Once we understand that we have a long period of work before us then we can see that the object of our efforts is not

to remove these problems. They are not removable. The object of our work is to reduce these problems to manageable proportions.

If we can reduce them to manageable proportions, and if we will then accept continuity of responsibility in managing those problems, we begin to see some daylight ahead. But we cannot for a moment believe, if we are really sensible in facing the present, that the problems can be escaped. We must believe over and over again, and understand over and over again—as though we heard them for the first time—Lincoln's great words in his message to Congress of December 1862: "We cannot escape history." We cannot escape the problem of the present. We can only escape it by death or defeat. If we are going to deal with those problems, we must be willing to deal with them for a long time. We must be willing to reduce them from almost impossible problems to manageable problems, and we must have a sense of continuing responsibility in dealing with them.

The second very important attitude for us to take in dealing with the problems of the present is to avoid over-dramatizing any particular problem or over-emphasizing it. That is always our danger, not peculiar to the United States but common to everybody. The particular problem with which we are dealing seems to us to be the overwhelming problem of all time. Take Korea, for instance, which God knows is important enough. There is a phrase which has been applied to it which is typical of this attitude which I am urging you to avoid. The activities of the U. N. in Korea have been described as "the reluctant crusade." That phrase seems to connote that Korea is the place where the show-down between the east and west is going to occur. The reluctant crusade—reluctantly the East and West get into the show-down. Now if anything is important, if anything is true about the situation in Korea, it is the overwhelming importance of not forcing a show-down on our side in Korea and not permitting our opponents to force a show-down.

That has been the whole heart and essence of the policy which the administration has been following and which General Marshall and General Bradley so brilliantly described in the hearings before the joint committee. Korea's significance is not the final crusade. It is not finally making valid the idea of collective security. It is important perhaps for the inverse reason that in Korea we prevented the invalidation of collective security.

Collective security is not something which is established once and for all by some dramatic gesture. Collective security is like a bank account. It is kept alive by the resources which are put into it. In Korea the Russians presented a check which was drawn on the bank account of collective security. The Russians thought the check would bounce. They thought it was a bad check. But to their great surprise, the teller paid it. The important thing was that the check was paid. The importance will be nothing if the next check is not paid and if the bank account is not kept strong and sufficient to cover all checks which are drawn upon it.

The third attitude which I think is important for us to have in mind is a proper sense of proportion about the problems and difficulties which come before us. In getting the proper sense of proportion about our difficulties the first thing that we must do is to understand that the present situation is a great deal more serious than the United States as a whole has yet come to realize. We must understand that the Soviet Union is a much tougher adversary than the United States has yet realized. We must not only understand that but we must understand something else, and that is that the Soviet

Union is not the only difficulty that we have. Behind and beyond the Soviet Union, and our problems with the Soviet Union, lie other difficulties, perhaps even greater. The important thing about our actions in the present is that we must so act in dealing with the immediate difficulty that we manage also the more long-range ones.

What do I mean by those general words? Twice in our lifetime we have dealt with problems before us as though the solution of those problems was the solution of all problems. We dealt with the Kaiser as though the defeat of the Kaiser was the defeat of all such menaces to the world. And yet there immediately grew up after that Hitler and Tojo. Then we dealt with Hitler and Tojo, and then we found looming behind them Stalin and the menace of communism and the Soviet Union.

Now what lies behind the Soviet Union? I see two problems. I am not saying these are caused by the Soviet Union, but I am saying that here are problems which we must reduce to manageable proportions in our dealing with the present. One is the awakening of the vast populations of Asia, populations which are beginning to feel that they should have and should exercise in the world an influence which is proportionate to their numbers and worthy of their cultures. That force is a force which can be turned to good, or it can be a force which can rend to pieces a world which has imprudently managed its immediate problem and which finds itself weakened, perhaps shattered in facing these upsurging forces of Asia. Therefore in thinking about the Soviet Union we must think about this shadow on the rock behind it. We must manage our difficulties so prudently that we have strength and initiative and power left to help shape and guide these emerging forces so that they will not turn out to be forces which rend and destroy.

In addition to the emergence of these peoples of Asia with the ambitions and possible power—which has to be thought about in relation not only to the existing power but also to the power which might be left after some imprudently inaugurated struggle had torn the Western World apart—there are the great problems of the world's growing hunger, of its growing numbers, of its deficient knowledge of the very elemental methods of staying alive.

These are the problems, these are the shadows on the rock behind the Soviet Union, of which we must never lose sight. All of this has to do with getting the proper perspective on the difficulties before us.

Another attitude which we must always keep in mind is the need to match our strength with the interests which we must defend. We hear it said—and it is wisely said—that there must be a balancing of commitments and capabilities. Too often people say that when they mean that we should reduce our commitments to meet whatever our capabilities may be at any time. Nothing could be more erroneous than that. What we must do is to be conscious of our national interests. A commitment is a national vital interest of which we have become conscious and for which we have made provision, but we may have national interests, which are just as valid, of which we have not become conscious, and for which we have not made provision—about which we should immediately become conscious and about which we should immediately make provision.

Another attitude which we must have in mind is that there is no unitary approach. I suggested this a moment ago when I talked about cures which have been put forward for our modern evils. To think that there is a unitary approach is a fallacy. We must use all means at our hand, whatever they are, and not say that one is the answer, or one or two are the answers. If you take, for instance, the views of those who urge that

propaganda is the sole necessary weapon to survive and win in the modern world, you easily find yourself in the ridiculous position where you may have all the people of a nation on your side, but those people are politically organized as an effective opposition to you. To a very large extent—not completely, but to a very large extent—that is the situation which exists in China. I believe that the vast masses of the people in China are sympathetic to the United States, and yet those masses of people in China are organized effectively against us so that they are a very strong opponent. So propaganda is not the sole answer. It is an important weapon, and we must use it—we must use it fully but it is not the sole answer.

Neither is dealing with governments alone the sole answer. The idea that we can make arrangements with this, that, or the other government, without regard to popular support founded on free consent would all too probably involve us in excessively brittle alliances. We have a very good illustration of that sort of brittleness in the arrangements which were made between Hitler and Mussolini; they seemed very fine but they were very brittle, and when the pressure was put upon them they broke down. As it turned out, not the nations but only their passing masters proved to be the parties to the alliance.

We must be aware of both the fallacy of recovery without defensive strength and the fallacy of military strength upon a shaky economic foundation. These two things are of vital importance. They go together and they are at the heart of our efforts at the present time in the North Atlantic Treaty countries. There you have a community, an important community, a virile one, one which has come through grave and deep economic troubles and has been fighting its way up for some time.

Economic well-being is not enough by itself. The countries which we have aided along the upward road now see that the situation demands a tremendous effort to build up, along with us, military strength as well as economic strength. Defensive strength is as integral to recovery as a fence is to a cornfield. Yet in seeking to replenish military strength it is necessary to avoid putting too great a load on our allies or on ourselves, for that matter.

There must be a very carefully worked out balance between the firm economic foundation and the strong military defense so that the military defense does not bring down the economic structure in ruins and so that the economic structure is built up for the purpose of defending itself with its military components.

We must also recognize that there is no substitute for strength at the center. Alliances are important. It is of vital importance to us that our allies in the North Atlantic Treaty and in the Rio Treaty be strong and that the bonds between them and us be strong. But it is equally important, if not more important, that there be strength at the center of these groups—the strength of the United States, its economic strength, its military strength, which will, in itself, breed strength at the periphery of our associations. The same applies in the United Nations. In that union of nations there is no substitute for the strength of the United States at the heart of the great group of powers which share our determination to uphold the principles of the charter.

In building that strength it is very important that we should not underestimate ourselves. We have to meet and face limitations and difficulties. But if every time a difficulty comes along somebody says, "Oh, to do that will wreck the economy of the United States," that is underestimating ourselves. I have no doubt that there is a point beyond which the United States cannot go, but I am equally sure that we are

not anywhere near that point. Therefore the thing to do is not to be timid about ourselves but to realize that our great strength is there to be used, and to use it wisely and economically and sensibly to create the defenses which we need.

May I say right here in connection with this business of creating strength at the center, we must not for one second allow any development which may occur in Korea to lull us into a belief that now we have turned the corner, and now things are going to get better, and therefore we do not need to make the effort which we have been making. I think we need to make it even more than we made it before. If it is possible to bring about an end of the fighting in Korea, it will be because of the efforts which we have already made and the sacrifices of the men in Korea. The success of our policy will mean only one thing, and that is that we have held off this conspiracy against us and that we have some time now which, if used wisely, will give us the power and give us the union with powerful allies which can deter world war III. If we do not do that, if we allow ourselves to be lulled by Korea, I can assure you that, just as certainly as you are sitting here, we will be hit within the next 6 months to a year with a much tougher blow somewhere else. If we do not make the efforts now, we will be unprepared for that blow. We may completely deter it if we now all bend together every effort we can to going forward with the program.

Another point is that we must believe that time is on our side. I concede to you that in saying this there is an element of faith. There is an element of faith, because I believe that we are people who act. Time is not on our side if we merely sit in the shade and fan ourselves. Time is on our side if we go to work. We can do much in time. We can strengthen ourselves; we can strengthen our allies. We have a vast productive power which is now not harnessed, much greater than those opposed to us. We can harness it. There is much we can do and, if we will do it, time is on our side. If we don't do it, it is not.

Therefore, we come to the matter of will. We have a strong geographical position. We have people who are skilled in industry, who have courage, who make fine soldiers and producers. We have natural resources. We have the productive plant. All of those things are no good at all unless they are cemented together and thrown into action by will. I believe that the American people have that will and that they can put that will strongly behind everything of a material nature that they have so that they, along with their allies, will secure for the future the things they value.

Another attitude of the utmost importance is that we must keep constantly before us the goal toward which we are working. What we are working toward is a situation in which the normal course of settling disputes will be negotiation. We are enthusiastic people, and occasionally we get so enthusiastic about what we are doing that we believe that is the end instead of the means. We must never get ourselves into the state of mind where we say that we are building this strength in order to use it. We are building this strength in order that we may never have to use it, in order that we may get to the point where the normal way to settle things is to sit down, to argue about them, to negotiate about them, and to find a solution with which all parties concerned can live, even though it is not ideal for any of us.

That is not really a hopeless ambition. It seems a long way off—and it is a long way off when you are dealing with the Soviet Union under the present imbalance of power—but we have reached a situation in the Western Hemisphere where negotiation is the normal way of settling disputes. The normal way for the American republics to

settle all their differences—and there are very grave and serious difficulties—is by negotiation and reasonable settlement. That has taken nearly 60 years to work out. It has taken all of that time to build up the trust of the American republics among themselves and between them and us. For years we were called the "Colossus of the North," and we took actions from time to time which made the other American republics apprehensive of us, but I think that no longer exists. I do not believe there ever took place in the world a more harmonious or constructive meeting than the recent meeting between the foreign ministers of the American Republics, in which all sorts of questions, vitally affecting all our countries, were taken up and discussed. Sometimes points of view were very far apart. On one very tough economic question it took staying up all night for 3 nights to get people to realize that there was a good deal in common between them. But we solved that question and we will solve other differences in this hemisphere in that way.

There is one last attitude which I should like to stress, and that is that we must always keep in mind that we must deal with these problems within a pattern of responsibility. I should like to talk a little bit about what I mean by a pattern of responsibility. I mean that we must act with the consciousness that our responsibility is to interests which are broader than our own immediate American interests. Great empires have risen in this world and have collapsed because they took too narrow a view. There is no divine command which spares the United States from the seeds of destruction which have operated in other great states. There is no instruction to that one of the fates who holds the shears that she shall withhold them from the thread of life of the United States. We must operate in a pattern of responsibility which is greater than our own interests. We cannot yield to the temptation, because we are virile and enthusiastic, of thinking that, because we believe a thing, it just must be right. We must not confuse our own opinions with the will of God.

That is essential for leadership. It is not merely a moral dissertation which I am making. It is essential to leadership among the free nations if we are going to maintain the sort of coalition which we have. We cannot take the attitude that we will coerce nations, that we are so right that if they do not do exactly what we want them to do we will withhold economic aid, or we will withhold military aid, we will do this, we will do that. If we take that attitude, then we are creating a relationship indistinguishable from that which exists between the Soviet Union and countries associated with it. That must never be our attitude. We are the leader. We are accepted as the leader. But we will continue to be accepted as the leader only if the other countries believe that the pattern of responsibility within which we operate is a responsibility to interests which are broader than our own—that we know today what Thomas Jefferson was talking about when he spoke of the need of paying a decent respect to the opinions of mankind.

How can we institutionalize that sense of responsibility? The means are at hand, have been used, and must continue to be used. The means lies in the United Nations. There is much talk these days that the United Nations has proved itself ineffective—it does not do this, it does not do that, we must scrap it in favor of some other kind of coercive machinery. I do not agree with any of those views.

I don't think anyone is more conscious than I am, unless it be General Bradley, of the difficulties of working within a coalition as large as the group in the United Nations who are associated together in Korea. There are a thousand problems in working with so many nations, considering their

points of view and modifying your own so that you may maintain a true friend. But I assure you that it is worth it a million times. Whatever loss there is in efficiency of operation is gained a million times by the strength which comes from the group's believing that the leader is paying attention to other people's points of view. We should be forever grateful to the United Nations for furnishing a forum where the United States of America, to maintain its leadership, must enter and must explain itself to the rest of the world, and do so in terms which are so persuasive that countries will be convinced, do so under circumstances where the United States and its representatives listen to the representative of the smallest country in the world who has a point of view which he wishes to express, do so under circumstances where we make every effort to harmonize the views, adjust views, and may not force views down other people's throats. If we do that, then I believe the United States will avoid that narrow view which has led to the destruction of great powers and great empires in the past. The United States will lead into a new course in which the free nations will continue to be free nations, freely associated, freely, willingly, and eagerly accepting leadership which they believe considers their interests as deeply as it does its own.

The St. Lawrence Seaway and National Defense

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. LARCADE. Mr. Speaker, under previous authority to insert my remarks in the Appendix of the RECORD, I wish to submit a digest of an address on the St. Lawrence seaway by Hon. Lionel Chevrier, Canadian Minister of Transport, as follows:

THE SEAWAY AND NATIONAL DEFENSE

The following is a digest of an address on the St. Lawrence seaway by the Honorable Lionel Chevrier, Canadian Minister of Transport.

From the point of view of national defense, the development of the St. Lawrence deep waterway is of the greatest importance. In February of this year the permanent Joint Board of Defense made a joint recommendation concerning the military value of the project. The Board recommended its early construction—stressing the need for the additional supplies of hydroelectric power vital to the expansion of the military strength of the two nations and the value of the seaway as an inland waterway relatively safe from enemy action. This will enable the two countries to move war materials at less cost in money and resources than by any other means. It will permit greatly increased shipbuilding and ship repairs in the relatively well protected Great Lakes shipyards.

The addition which this project would make to the military potential of the United States and Canada will far outweigh the initial expenditure in manpower, money, and critical materials. It must be realized that much of these materials will be required in any event, because if this project is not now proceeded with, alternative sources of power will have to be provided. Without the construction of the seaway the large deposits of high-grade iron ore in Labrador

cannot be moved economically and expeditiously to the Great Lakes steel centers.

Look at the map of North America and you will find that the Great Lakes-St. Lawrence seaway lies almost in the center of the five physiographic regions of the North American Continent. The upper end of the seaway links the Canadian west to the Atlantic seaboard and the American West to the Port of New York. It joins the wheat fields of western Canada to the United Kingdom market.

When one realizes that more yearly tonnage passes through one of the bottlenecks in the upper lakes region, namely, the locks at Sault Ste. Marie, than through the Panama, Suez, Manchester, and Kiel Canals put together, this gives some idea of the tonnage that is likely to come through when the development is completed. The building of the Panama Canal through the Isthmus of Panama, the construction of the Suez Canal, linking the Mediterranean with the Red Sea, were logical projects. They were the inevitable and the right thing to do, no matter at what cost. On the proposal to construct the deep waterway in the St. Lawrence River to link the Great Lakes to the Atlantic Ocean, the verdict will be the same.

The friendly relations existing between Canada and the United States for well over a century have been greatly enhanced by two world wars. These wars, and particularly the last one, have brought us together more than ever before. They have shown that on many problems not only do we think alike but frequently we act together. Such was the case of Ogdensburg, on the Joint Permanent Defense Board, at Hyde Park, on the Alaska Highway, in the Northwest Passage, and perhaps more particularly in the air by means of our transborder services. Our Governments think alike on the development of the St. Lawrence waterway.

I believe the vast majority of our people think alike, but we must translate this thinking into action. We must act together upon it so that, to use the words of a great British statesman, in the days to come the Canadian and American peoples will, for their own safety and the good of all, walk together in majesty, in justice, and in peace.

Universal Military Training

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. REED of New York. Mr. Speaker, this mother has registered a legitimate complaint. Once we adopt universal military training this treatment of our boys will be mild, indeed:

JULY 17, 1951.

HON. DANIEL A. REED,
House Office Building,
Washington, D. C.

DEAR SIR: I am writing this letter because I want to call to your attention several conditions at Fort Dix which I feel should be investigated.

Our eldest son has nearly completed basic training at that camp and I feel I can speak freely now without showing partiality.

He had been there about 2 weeks when he wrote home requesting civilian underwear. As we understood it, the serviceman is permitted to wear that type if he so desires and we complied with this request.

Our second request from him was for a gun-cleaning kit as there were only four

such kits available to a group of 64 men in his barracks. Such a shortage meant that the last man to whom the kit was available would have to wait several hours in order to clean his gun. There are plenty of these kits available to the civilian, as we found out when we complied with his request.

Our third request was for fatigue pants which were purchased locally and sent to him.

Our fourth request was for a fatigue shirt as one of the two he had been issued had been stolen from the laundry line. He asked his supply sergeant for a replacement and was told that it would necessitate a long wrangle from the quartermaster and he may as well get along without it.

There is a generous supply of these shirts at the PX village in the center of the camp. The boys may purchase these shirts but they are unable to get any replacements. It's the first time that either I or any of my friends have heard of a soldier having to buy his own clothes. If there are plenty of clothes why are they not given to the soldier instead of him having to buy them. This does nothing for their morale or for that of the parents. It seems to me that something is definitely wrong here. Up to this point in our son's career as a hired soldier, we have sent him approximately forty dollars worth of equipment and clothing.

In his eighth or ninth week of basic, they were ordered to go on a supposedly 10-mile hike. This turned out to be 20 miles, with full pack. They were given a 20-minute rest and then immediately ordered to do a 4.4-mile speed march in 52 minutes. This is another sample of the Army's common sense. Is it any wonder the fellows were collapsing all along the line of march? Very recently they marched 6 miles out to a machine gun range, fired all morning, then marched 6 miles back for noon chow. They were allowed one biscuit with gravy for their main dish. As they were the last group to eat and there were plenty of biscuits, they asked for more and were refused. That same afternoon an Army truck drove away from the mess hall with the back of the truck half full of biscuits which were dumped. Seems senseless, doesn't it?

We are also led to believe that our sons will be given tests and placed in the branch of the service for which their aptitudes show them to be of the most value. Such was not my son's case. He was tested and should have been placed in an office working with tabulating machines or with personnel. But because of his build, they were compelled to place him with a combat infantry unit. He became thoroughly disgusted and volunteered for paratrooper training.

Also, we parents wonder why so many athletes are deferred. If a young man is physically able to play such rigorous games as football, baseball, and basketball, to mention a few of the most common ones, is he not able to do something of more value to help out in this national emergency? A good many parents do not like this show of partiality and I trust many of our servicemen are much disturbed over it.

Also, the officers training our sons were to use good language in addressing the trainees, so we were also led to believe. I have never heard such name calling as our son has told his dad about. Only in the service does any man have to take such remarks and not be able to talk back. I realize that this is an individual habit that no organization can cope with but cannot the right sort of officers be put in charge of the trainees?

All in all, I would say that there is much to be done to make better feelings in the service and boost morale at home.

As a mother of two servicemen, the one of whom I have written and the younger son who is a member of the active Naval Reserves and expects to be called to duty

soon, I feel that I have the right to ask that you do all in your power to correct or at least better these conditions.

Very sincerely yours,
A CHAUTAUQUA COUNTY MOTHER.

As America Observes One Hundred and Seventy-fifth Anniversary of Declaration of Independence Slovaks Recall Lost Independence of Native Land

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. PRICE. Mr. Speaker, I have always felt that our greatest weapon against Communist terror is the truth. We must find the truth through work and understand the enslaved behind the iron curtain. Those behind the iron curtain risk their lives daily and now they await us, who live in freedom to act to help them.

We worry too much about the strength of the enemy without attempting to fathom the weakness. Believe me, there is uneasiness, hidden tension, uncertainty behind the enemy's mask of invincibility.

The Communist empire's ultimate and determining weakness is the hatred and hope of the peoples and nations whom her empire enslaves—the non-Russian peoples—the Slovaks, Poles, Latvians, Estonians, Ukrainians, Byelorussians, Macedonians, and other ethnical groups.

To the peoples of Eastern—Central—Europe and of the entire Soviet empire, America must once more proclaim her allegiance to the liberation program of freedom and self-determination. We must announce, not in diplomatic whisper but so that the entire world will hear, that we stand with the peoples longing for freedom and against the tyrants who enslave them. We must declare that these peoples—the Slovaks prominent and proud among them—are our friends and our allies whom we are ready to aid—their underground partisans—as the Slovak Biela Legia, white legion, the underground forces in the mountains of Slovakia; whose outside contacts are the Slovak Liberation Committee; and the National Committee for the Liberation of Slovakia—who today are harassing the Communist octopus but tomorrow, with their ranks increasing a millionfold, will be gnawing at the very nerve center of this monster.

America's true allies are not the dissident products of the Kremlin, but the victims of Communist oppression.

The world witnesses our opportunity and America's opportunity to take or forsake these peoples, the kinsmen of our naturalized citizens.

We must speak to each group behind the iron curtain in terms it can understand.

The best way to speak to the peoples of Slovakia, is to let them know what their kinsmen in America have accom-

plished and in that manner to enlist the fire, the spirit, and the optimism of all Slovakian speaking underground partisans, to increase their struggle against the Communists, for it will be a renewed courage and hope secure in the knowledge that America, as the true friend of liberty, is supporting a common cause.

Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith two articles from the oldest Slovak newspaper in America, *Slovak v Amerike*, written in honor of the one hundred and seventy-fifth anniversary of our Declaration of Independence.

[From the *Slovak v Amerike*, New York City, of July 3, 1951]

AMERICAN INDEPENDENCE IS 175 YEARS OLD—THE CONTRIBUTIONS OF SLOVAKS TO THE PROGRESS OF AMERICA

[Written in honor of the one hundred and seventy-fifth anniversary of the Declaration of Independence Day by John C. Selranka, editor of *Slovak v Amerike*]

When we as Americans are celebrating the one hundred and seventy-fifth anniversary of the Declaration of Independence of the first Thirteen Colonies of the United States, it is fitting and proper that we look at the past and see what the Slovaks have contributed to the progress of this country, which gave them freedom, liberty, and pursuit of happiness.

The first prominent Slovak to come to the United States was Count Maurice Benovsky, King of the Island of Madagascar in 1785. He had letters of introduction from Benjamin Franklin, noted American statesman. However, it is stated that some Slovaks fought with the armies of Polish General Pulaski and Kosciusko and that on one occasion even Benovsky visited these generals during the Revolutionary War.

We have historical records that various missionaries came to the new country even before the Revolutionary War. One of them named Henry Loskiel baptized Indians in the Passaic region of New Jersey 100 years before the Declaration of Independence.

Slovaks took part in the Civil War and had their own battalion under the leadership of Col. Geza Mihalotzy, who received sanction of the great emancipator President Abraham Lincoln for those ventures. Colonel Mihalotzy fought gallantly and died near Chattanooga, Tenn., where he is buried in the National Cemetery. Thousands of other Slovaks fought and died with him on President Lincoln's side.

Let us continue and examine the records of the Spanish-American War. We still have Slovaks living who fought in that war.

In narrative we come to the World War I, in which thousands of Slovaks fought and died. Among those especially the heroism of Sgt. Matej Kocak a valiant soldier is outstanding. Kocak received the Congressional Medal of Honor from both Army and Navy. He died on the battlefield of France, where he is now buried.

During World War I those Slovaks who were not naturalized joined the Czechoslovak legions under the leadership of Gen. Milan R. Stefanik, Slovak scientist who rose from an ordinary private to the rank of general in the French Army during World War I, within a period of 2 years. General Stefanik, was on the military staff of General Pershing and Marshall Foch. This is a great chapter in American history by itself.

Let us continue with World War II in which some 85,000 Americans of Slovak birth and descent fought. Slovaks bought \$65,000,000 worth of war bonds under the leadership of able Father John J. Lach, of Whiting, Ind., and launched Liberty ships named for Gen. Milan R. Stefanik, Rev. Joseph Murgas, well-known inventor of radio, and Rev.

Stephen Furdek, known as the father of American Slovaks. Bombers and various planes, ambulances, etc., were donated to the fighting American forces. Some 5,000 American Slovaks made the supreme sacrifice on various battlefields. One of them was a Catholic Slovak chaplain, Father Seccina, of Indianapolis, Ind.

Now the Korean war found the American Slovaks again in the front lines and many of them paid supreme sacrifices. Lt. Stephen Matejob, of New York City, graduate of West Point Military Academy, is one of the many American Slovak soldiers who were decorated for their gallantry.

This is only the contribution of American Slovaks in brief from the military side.

ONE HUNDRED YEARS OF CULTURAL AND ECONOMIC CONTRIBUTION

Slovaks began to settle in this country right after the revolution of 1848. In fact the revolution in 1848 was inspired by the American Declaration of Independence.

During these hundred years the Slovak people in America built over 500 churches of various denominations, some 300 schools, 100 halls, and 12 strong national organizations, with total paid membership of half a million and assets of \$50,000,000. These same organizations paid in death benefits and charity some \$40,000,000 to their members and their widows and orphans.

These same American Slovaks educated some 1,500 priests and ministers, vast number of teachers and college professors, doctors of medicine, scientists, newspapermen, professional sportsmen like Johnny Risko; Pete Latso; Andy Padko, J. Oracko, of Notre Dame; Karcis, of Pitt; Bednar, of Bethlehem; etc.

They have earned great reputation in steel mills, mines, numerous factories, as managers, superintendents, and labor leaders. From the rank and file of the Slovak union workers in America the Hon. John T. Kmetz, born in Slovakia, was appointed Assistant Secretary of Labor by President Truman.

Americans of Slovakian birth became members of State legislatures; namely, George A. Hricko, Senator John Haluska, Michael Gervenak, John J. Pekar-Baker, John Yourishin, John Mikula, etc., in Pennsylvania; and Senator John Smolka, Stephen Zona, Frank W. Sotak, George Fedor, etc., in Ohio; Michael Matta, counselor for registration commission of Philadelphia and Joseph A. Franek as first mayor of Farrell, Pa.; Joseph Mittuch, born in Slovakia, as mayor of Carteret, N. J.; Assemblyman John J. Vavrence and Dr. Stephen A. Lesko, both of New Jersey; Stephen A. Toth, assistant attorney general of New Jersey, the late Peter P. Yurchak, deputy attorney general of Pennsylvania; and the present Deputy Attorney General Paul Selecky and Mayor Koss, of Wallington, N. J.; Mayor Andrew Kovack, of Whiting, Ind.; Senator Joseph Virostek, of East Douglas, Mass.

Julius Badzik, assistant prosecutor of Cleveland, Ohio, Judge Michael Tremko, of Chicago; the late Judge George Teney and Councilman Mary Sotak, of Cleveland; Assistant Prosecutor John Ruslnack, of Detroit; Prosecutor Francis Doctor, of Washington County, Pa.; Police Chief George Matowitz, of Cleveland, known as gangbuster, Prosecutor Matthew Melko, of Middlesex County in New Jersey; Prosecutor Joseph Molitoris, of Warren, Ohio; City Attorney John D. Dluhy, of Clifton, N. J.; Michael Kosik recently appointed Secretary of Anthracite Reconciliation Commission of Scranton, Pa.; well-known boxer, Steve Hamas, and singer, M. Halama Yurkanin; Kozak, Tkach, and Slovak bankers, namely, M. Bosak, Joseph J. Chilla, J. Wills, and others too numerous to mention have proven themselves to be capable public servants,

although only first and second generations of American Slovaks.

During the 100 years of Slovaks in America some 120 publications and newspapers were founded to acquaint the new immigrants with the American ideals. These newspapers published in the Slovak language were the greatest torch bearers of American liberty and culture. They reached every mining town and far away hamlets, bringing Americanism to the new inhabitants and the future Americans, who raised their children and educated them in the gospel of Americanism as advocated by Washington, Jefferson, and Lincoln, etc.

From these Slovak newspapers the new immigrants learned just as much and sometimes even more than an average American knew about their institutions and after 100 years of Slovak life in America, this newspaper is very happy to report that although it was founded 62 years ago, there is great interest among the Americans of Slovak origin and descent for its continuance.

In other fields Slovaks have shown remarkable progress in this great land of opportunity. For instance, in the films the daughter of a Slovakian miner from Scranton, Pa., Miss Elizabeth Scott, is today a leading cinema star in Hollywood. Miss Marienka Michna is a leading pianist, Maestro Rudolf Petrak is a leading member of the New York City Opera Company and has made tremendous success on the radio and television. Alois Havrilla was awarded many prizes for his excellent English diction as radio announcer and commentator.

The sons of Slovak immigrants today occupy positions in leading American universities as for instance the late Dr. Stephen Yeshko, noted scientist, was professor of Georgetown University; Ivan I. Kramoris, professor of Marquette University; George Washkovich, professor of Hunter College; George Kondie, professor at St. John's University, Brooklyn, N. Y.; Dr. Mary Wargo, scientist at the Mellon Institute of Pitt University, etc.

Former West Point Military Academy graduates, namely, Col. Benjamin Chapla is with the United States Army in Germany and Stephen Faris with the American Embassy in Rome. Others are on duty in various parts of the world.

Sons and daughters of American Slovaks are missionaries in various foreign countries reaching as far as Dark Africa, where they are spreading the culture of Christianity.

Others born in Slovakia, namely, the late Joseph Pulitzer, revolutionized American journalism. Dr. Edward Steiner, of Grinnell College, Iowa, is credited with giving men like Harry Hopkins a start in life. Dr. Steiner proudly claims to be of Slovakian origin.

Distinguished Americans are proud to have Slovaks as their intimate friends. The late Edward L. Vaczy, former tenement house commissioner under Mayors John Hylan, James J. Walker, Joseph V. McKee, and John P. O'Brien, although born in Kosice, Slovakia, was an intimate friend of the late President Woodrow Wilson and the late President Franklin D. Roosevelt as well as famous Gov. Alfred E. Smith.

American cardinals, namely, Gibbons, Hayes, Mundelein, Dougherty, Spellman, Stritch, and Mooney and many bishops and archbishops often paid tribute to the Slovaks for their contributions to the progress of America. Leading American orator the newly consecrated Most Rev. Fulton J. Sheen, auxiliary bishop of the archdiocese of New York, often praised the Slovaks in his remarkable addresses.

The late Col. Stephen Bonsal, confidential adviser of President Wilson wrote and spoke about the Slovaks with great zeal and enthusiasm. This can be said also about thousands of other Americans, who have often praised the Slovaks for their contri-

bution to the gigantic progress of America even in the United States Congress on numerous occasions.

Slovaks are Americans by choice. Their children are intermarrying with other nationalities and thus adding to the melting pot for richer, better, and greater America than their fathers and forefathers found over a century ago and decades that followed.

Today, when we pause to pay tribute to the fathers of our great country, the United States of America, we pray that the Almighty will continue to bless it and that with America's help we may be able to free the oppressed people of Slovakia and their neighboring countries, who are suffering under Communistic rule.

God bless America.

[From the Slovak v Amerike, New York City, of July 5, 1951]

WHAT WAS SLOVAKIA LIKE 175 YEARS AGO?—"LONG MAY OUR LAND BE BRIGHT WITH FREEDOM'S HOLY LIGHT"

(Written in honor of the one hundred and seventy-fifth anniversary of the Declaration of Independence day, by John C. Sciranka, editor of Slovak v Amerike.)

When an American reads about the one hundred and seventy-fifth anniversary of the birth of our American Nation, he no doubt will present a question. What was Slovakia like 175 years ago?

Let us look at the record and see for ourselves.

One hundred and seventy-five years ago, when our American fathers signed and proclaimed the Declaration of Independence, Slovakia was living through the period of its renaissance.

Slovakia was the first independent and democratic state of central Europe. It had its first King Samo in the seventh century.

Just to better illustrate the Slovakian history take for instance the year of 1492 when Columbus discovered America. In that same year on February 9, 1492, King Vladislav II opened the Hungarian Diet with a proclamation in the Slovakian language, which was translated into Magyar (Hungarian) by Valentine, Bishop of Varadin.

This we mention to prove that the Slovak culture is ancient. Prior to the discovery of America by Christopher Columbus, King Matej Korvin (Matthias Corvinus) often called the just, founded in 1443 the first university at Bratislava, called University of Istropolitana. This university was opened 10 years before the University of Budapest in Hungary.

This should suffice for an introduction.

Let us continue. When the Liberty bell tolled in Philadelphia and the Declaration of Independence was heralded to the world, great leaders were mapping the future of the Slovak nation. Foremost among these was Jan Holly (1759-1849), known as the Slovak Homer. Holly as a student for a Catholic priesthood devoted much of his time to reading and translating classical literature, including Virgil, Homer, Horace, and Theocritus. (See the book, Slovaks, written by the late Peter P. Yurchak and sold by Rev. John Lach, of Whiting, Ind.) This period also belongs to Anton Bernolak, to whom the Slovaks owe their literary language. In 1746 even foremost Hungarian Scholar Bel admitted about the Slovak language: "It is no whit inferior in gravity and grandeur to the Spanish, nor in sublimity and strength to the English, nor in richness of thought and expression to the German, nor in softness and euphony to the Italian, nor in imperiousness to the Magyar (Hungarian)."

Anton Bernolak, a Catholic priest compiled and published a monumental six-volume-polyglot dictionary. Bernolak founded in

1783 a Slovak educational guild. In 1787 he published his *Philologico-Critical Dissertation on the Slovak language*, which proves that 175 years ago, when our American independence was born, the Slovaks were a highly developed cultured people.

During this period there were other great Slovak intellectuals. Let us mention but a few of them, namely Jozef Ignac Bajza (1755-1836) who wrote in every field and stood in the vanguard of the Slovakian renaissance.

History tells us that Juraj Fandly (1754-1811) was then perhaps the best stylist of this period. He was a devoted follower of Bernolák and devoted his life to the practical enlightenment of his people. He wrote many popular books on agriculture and animal husbandry.

Canon of Ostrihom

In this period the Slovaks had Juraj Palokovic (1763-1835) as Canon of the famous cathedral in Ostrihom. He was a passionate supporter of the Slovak language and the Slovak national cause. Ostrihom is even now the famous city, in which is the see of Hungarian cardinals.

Canon Palokovic published the dictionary of Bernolák and also all the translations of poet Jan Holly at his own expense. Holly translated Aeneid and Palokovic gladly paid the publishing expense which was a great help for the Slovak literature. (This is a good example for some of the rich American Slovaks who fail to support Slovak literature.)

Slovak Cardinal Rudnay.

Just imagine 175 years ago, when the Declaration of Independence was proclaimed in America, Slovaks had their cardinal. Now after 175 years, in America we haven't even an American bishop of Slovak birth or descent although there are over 1,000,000 Slovak Catholics in this country.

His Eminence Alexander Cardinal Rudnay became primate of Hungary—just like Cardinal Mindszenty—Cardinal Rudnay gave generously for the support of a Slovak cause and especially toward the publications of Slovak books. It was Cardinal Rudnay who bluntly said "I am a Slovak; and though I should sit in the chair of Peter I shall remain a Slovak."

Yea, Slovaks had great men. Later on the persecution of the Slovak nation came and feudal system as well as Magyarization did much harm to the Slovak culture. Nevertheless the nation, strengthened by the past sacrifices of such leaders as mentioned here, fought valiantly for its existence. The Slovaks won over the Hungarians and the Czechs. Now, they are fighting the battle of their lives with the Communists. There are few real Slovak Communists. And even those few leaders who came to prominence like Vlado Clementis, deposed foreign minister of Czechoslovakia now awaiting sentence; Laco Novomesky, Gustav Husak, etc.; took communism as an adventure, thinking that they could outsmart Stalin and Moscow. They found out too late that they played a very hazardous game.

Now that we Americans of Slovakian origin or descent have a proof that when the Declaration of Independence was proclaimed 175 years ago the people of Slovakia were on the top with high ranking dignitaries; this should make us all feel proud of our Slovak ancestry. This should also make us guard our American heritage against the evil forces. After the period of renaissance, Slovakia deteriorated by its gentry and by the laxity in work and spirit for those great ideals for which the above mentioned have so nobly sacrificed. The punishment came as a result of this negligence.

The Slovak people after the death of Bishop Karol Kuzmany, first president of the Slovak Academy of Arts and Sciences, whose delegation visited the United States of America in 1935 and 1936, lost their

bishops, and it was only after the establishment of the first Czechoslovakian Republic in 1918, with the help of American Slovaks, that the first three Slovak bishops were appointed by the Vatican, namely Most Rev. Marian Blaha, Most Rev. Jan Vojtassak and Most Rev. Karol Kmetko. Bishop Blaha and Vojtassak visited the United States in 1926. Bishop Blaha died. Bishop Vojtassak, 74, is now in prison, sentenced to 20 years by the Reds with two other bishops, Most Rev. Michael Buzalka and Greek Catholic Ordinary, Most Rev. Pavel Góddic. Bishop Kmetko was elevated to the rank of Archbishop and he died several years ago after persecution by the Communists.

American Slovaks have a great obligation toward the homeland of their ancestors, historic country of Slovakia which they should restore to its free and independent status.

Let us pledge on this the one hundred and seventy-fifth anniversary of the Declaration of our American Independence that we will do everything in our power to liberate the land of Saints Cyril and Methodius, Svato-pluk, Ratislav, Mojmir, Holly, Bernolák, Rudnay, Stefanik, Hlinka, and Tiso.

God bless America and Slovakia.

In Washington It's Waste as Usual

EXTENSION OF REMARKS

OF

HON. O. K. ARMSTRONG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. ARMSTRONG. Mr. Speaker, in the July 1951 issue of the Reader's Digest there appeared a most important article by Mr. Stanley High entitled "In Washington It's Waste as Usual." This article makes a most valuable contribution to the discussion of the need for economy in the Federal Government and ways to attain reduction of nonessential spending. I commend the article to the attention of my colleagues in the House.

IN WASHINGTON IT'S WASTE AS USUAL.

(By Stanley High)

In the defense sacrifices required of the people of the United States, is the Government of the United States leading the way and setting the example?

The answer is: No.

We are told business as usual is out. For the families of several million young Americans, life as usual is out. But in Washington, bureaucracy as usual, waste as usual, pork barrel as usual seem to go on.

Instead of conserving manpower needed in defense, the Government hoards and wastes it.

Instead of reducing nonessential spending, many bureaucrats are using the defense effort to justify more spending.

"Strict economy in nondefense spending is required," said President Truman in his \$71,500,000,000 budget message. But when Members of Congress began to look for ways to put this strict economy into actual practice, the President issued a warning that, for any savings made, Congress would have to take the risk.

The President asks for \$1,333,333,333 for public-assistance programs—three times the average amount for 1943 to 1947. "Why should this hugely augmented sum be needed for public assistance," asks the New York Herald Tribune, "when we are already in a period of unprecedented full employment, with severe labor scarcity in the immediate offing?"

Recently General Marshall, Secretary of Defense, declared: "We must husband our military and industrial manpower with the utmost care. We must avoid waste of the productive energies that have helped make our Nation powerful."

Let us see how our Federal Government is avoiding such waste of manpower:

Prior to the outbreak of war in Korea, civilian employment in the Federal Government had leveled off at about two million—nearly two times the number employed at the outbreak of World War II. From June 30, 1950, to January 1, 1951, civilian employees were added to Government payrolls at the rate of 1,000 a day. During January the hiring rate went up to 2,000 a day. The present budget will probably add 500,000 more. Then the army of United States Government civilian employees will be nearly as big as the combined total of all the men in the Army, Navy, Air Force and Marines as of last spring.

"The build-up is already nearing runaway velocity," says the Washington Star. "The whole outlook is a dismaying one."

While some increases in the Government's civilian employment are now undoubtedly necessary, the average American is bound to be dismayed by the way in which Government manpower, already employed, is wasted.

Recently Senator PAUL DOUGLAS of Illinois inquired into the number of hours worked per year by Government employees. He found that, with vacation, sick leave and holidays, most of them get 10 weeks off every year, at full pay. The average Government employee works 1,650 hours a year. In private industry, says Senator DOUGLAS, 1,900 working hours per year "is considered a very liberal standard." Thus the Government employee gets 6 weeks more time off annually than the non-Government worker.

It has been estimated that, if Government employees put in the same number of hours per year as the employees of private industry, the taxpayers would be saved at least \$200,000,000 annually and the country's vital manpower pool would probably be increased by 100,000 workers.

In January a committee of the House, headed by JOHN BELL WILLIAMS of Mississippi, reported on its investigation of employee utilization in the executive departments. In numerous sample agencies, among the hundreds of employees whose only job was to make out purchase orders, it was found that the average workload was two orders per worker per day. A large percentage of the purchases were for less than \$20 each. The cost of putting through each purchase order averaged, in the Treasury Department, \$7.06, in the Bureau of the Mint, the cost was \$13.98, and in the United States Coast Guard, \$23.94. In the Interior Department the average cost was \$9.95 per order. Records of the National Park Service showed that one copy of a 50-cent magazine, with procurement charges added, had cost the taxpayers \$13.89. To the purchase price of \$2.45 worth of drinking cups for the Bureau of Reclamation, the administrative cost added \$17.35. In one large quantity of purchases for the Office of Education, investigators found that overhead added 33 percent to the cost of each item purchased.

The committee found that, in order to give the appearance that they had work to do, employees were forced to falsify records by signing erroneous work-progress reports. Employees were threatened with punitive action when they refused.

An employee testified "There was not enough work to keep more than a third of us busy at any time. Supervisors sat and talked all day. I was told to write personal letters, etc., just to appear busy in case some of the officials came through the room."

The committee brought to light the vicious circle of waste and inefficiency by which, to increase the salary status of the

officials involved, small offices are made into big offices and ridiculously divided into endless divisions, branches, sections, units, etc.

Many thousands of loyal, hard-working Government employees resent these conditions. "I can see no difference in a padding of payrolls and padding a budget," one worker told the committee, "and as a taxpayer I object to both." But employee objections make little headway.

Last July the President requested the heads of 14 Federal agencies to cut down their spending programs, in the interests of national defense. Many expenditures were suddenly regarded as essential for defense. In the October 1950 issue of Commerce, Jack Robbins points out that "at the Agriculture Department officials conveniently reasoned that the Department's connection with food production insured against any economizing there." A Labor Department official said: "In view of the duties assigned to the Department under the President's executive order of September 9, there may even have to be some expansion here." The Secretary of the Interior found little chance to curtail the activities of his Department because, in his words, "they are essential to the national security."

The Committee on Federal Tax Policy estimates that the present budget can be cut by \$10,000,000,000 without any injury whatever to national defense. Senator BYRD, calling for a reduction of \$9,000,000,000 and for increased efficiency, declared that the alternatives are "financial disaster" and "military impotence."

But when proposals for specific reductions are made in Congress they are likely to have hard going. In a newsletter, a Senator recently assured his constituents that the President's budget should be cut before any new taxes are voted. But a little later, he wrote to his constituents that when a proposal was made to close down a Federal project in his State he at once "jumped into the fight," saved the project and indicated that it would have bigger appropriations next year.

A Member of the House recently declared that "in voting for appropriations I intend to use this yardstick: If it will help the defense effort, I am for it. If it will not, I am for postponing it."

But to this commendable standard, the Congressman made an exception for a flood-control project for his own district. Although outside the strict military, he favored it as badly needed.

In one of the most dramatic and carefully considered economy efforts in United States Senate history, Senator DOUGLAS last year made an item-by-item fight on the Senate floor to reduce pork-barrel spending in the notorious rivers and harbors bill. In all he made proposals for 84 specific cuts in the current measure and 50 proposals for future reductions, to save more than \$2,000,000,000. But, with special interests backing each of these 134 items, every proposed saving was defeated.

Only insistent, aggressive pressure from the American people—whose money is being wasted and whose security is imperiled—can bring this run-away situation under control. There are some indications that such pressure is beginning. Lately there has been a notable increase in mail from constituents—making sharp demands for economy on the part of Congress. These demands have already strengthened the efforts of Congressmen who believe with Senator BYRD that our strength and preparedness in all respects depend upon reduction in nonessential spending.

But there will be no adequate reductions unless pressure from the people is greatly increased. To add to that pressure without delay is, I believe, an obligation upon every patriotic American.

Résumé of Findings of the Subcommittee on Mines and Mining in Connection With Recent Hearings on the Defense Minerals Production Program

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1951

Mr. ENGLE. Mr. Speaker, the Subcommittee on Mines and Mining of the House has conducted hearings over a period of months on the administration of the Defense Production Act of 1950 as it relates to the production of critical and strategic minerals and metals. The abysmal failure of this program has appeared as clearly to us as it has to the Preparedness Subcommittee of the Senate Committee on Armed Services, which recently reported on the failure of our defense agencies to prepare us with sufficient supplies of tungsten. I wish to make available to the Members of the House at this time, and to the public generally, a résumé of the findings of the Subcommittee on Mines and Mining in connection with these hearings on the defense minerals production program. The résumé is as follows:

RÉSUMÉ OF FINDINGS OF THE SUBCOMMITTEE ON MINES AND MINING IN CONNECTION WITH RECENT HEARINGS ON THE DEFENSE MINERALS PRODUCTION PROGRAM

Following the enactment of the Defense Production Act of 1950 the Department of the Interior, through its Defense Minerals Administration, issued several statements and press releases pledging cooperation and assistance to the domestic mining industry for the purpose of "keeping mines, smelters, and mills at maximum efficient operation and in expanding production of those mineral commodities in short supply."

METHODS AVAILABLE

The principal methods which were announced as having been worked out and available to provide Government assistance to expand domestic minerals production under the Defense Production Act included (1) Government guaranty of private loans, (2) direct Government loans, and (3) procurement contracts. A program providing for Government participation in approved projects to be conducted by private enterprise for the exploration of known deposits of certain minerals and metals also was announced.

NOTHING DONE

The Defense Production Act was signed by the President on September 8, 1950. By the end of March, 6½ months later, evidence gathered showed that little or nothing had been or was being accomplished under the act to encourage and expand the exploration, development, and mining of strategic and critical minerals and metals in the United States and pointed to the need for an investigation of the situation.

The Subcommittee on Mines and Mining of the House Committee on Interior and Insular Affairs, at my request, held a 9-day series of hearings on the subject from April 4 to June 18. The subcommittee held the hearings for the purpose of determining: (1) The authority and responsibilities of each administrative unit of the Government having any jurisdiction over various phases of the defense minerals production program;

(2) the policies formulated and decisions rendered by each unit of the Government in reference to such programs; (3) what had been accomplished and was being done or proposed under the Defense Production Act of 1950 to encourage the exploration, development, and mining of strategic and critical minerals and metals from domestic sources; and (4) the reasons for the delays in executing the necessary programs.

ONLY ONE CONTRACT

Eight months after the enactment of the Defense Production Act of 1950 the subcommittee found that only one procurement contract had been made under the act to stimulate and encourage the expansion of the domestic production of strategic and critical minerals and metals; no assistance had been granted for exploration; and no loans had been granted to mine operators for the purpose.

Although the subcommittee hearings brought several of the agencies concerned with the defense production of minerals and metals into closer contact with each other, impressed upon these agencies the urgency of developing the domestic mining industry, and brought the existing mechanism into closer balance and operation, little has been accomplished under the Defense Production Act to alleviate the current shortages of minerals and metals and the much greater shortages expected in the future.

As of July 1, 1951, almost 10 months since the President signed the Defense Production Act, only two procurement contracts had been made under the act for the domestic production of minerals and metals, and only one direct RFC loan and one guaranteed bank loan had been made for the purpose. On July 1 the Defense Minerals Administration had received 761 applications for Government participation in domestic exploration projects but had entered into only 50 contracts for the purpose. The Government's share or participation commitments in these exploration contracts totaled \$2,219,534 or 57 percent of the total cost—a drop in the bucket in relation to the amount of exploration work that needs to be done throughout the United States, or when compared with the \$1,000,000,000 project the Secretary of the Interior felt to be necessary and was planning 3 years ago for the purpose of attempting to survey and determine the mineral resources of the United States.

NO TUNGSTEN

Although the military and essential civilian requirements for tungsten are reported by Government officials to be nearly astronomical and the anticipated future supply from both domestic and foreign sources to be far below the amount required, it was not until May 10 that the agencies announced a support price to encourage the domestic production of tungsten.

Limited manganese and chromite programs are still in the works. The "consideration" stage is about as far as copper, lead, zinc, and mica expansion programs have gone.

Several factors appear to be directly responsible for the failure of the agencies to take prompt and adequate measures to alleviate current and anticipated shortages of minerals and metals through a necessary expansion of the domestic mining industry. We find that—

COMMITTEE FINDINGS

The Office of Defense Mobilization laid down a set of policies which provided that direct Government loans be reduced to a minimum and that extreme care be used to avoid expansion of marginal producers which may require continuing subsidies.

The defense agencies charged with the responsibility of expanding mineral and metal production facilities have been proceeding

too cautiously and apparently with little or no regard to the urgency of the times—callous to the minerals and metals shortages closing small-business enterprises throughout the Nation, contributing to inflationary pressures, and endangering the economy and security of our Nation.

The quantities of minerals and metals hoped for and anticipated from overseas sources of supply during the next 5 years or during a total world war under the guise or label of "strategic assumptions" and "calculated risks" also restrict the effort being made to expand the production of minerals and metals from domestic sources of supply. In some items, such as manganese and copper, emphasis has been given to projects from which little or no production would be obtained until 5 or 6 years hence; projects or programs which would result in more immediate production appear to have received much less consideration.

THEORISTS IN GOVERNMENT

The lack of funds with which to make contracts and commitments has been a serious bottleneck. As a result of an administrative interpretation of the Defense Production Act, funds must be set aside to cover the gross commitment of a contract or program. The agencies are not permitted to proceed on the prudent-reserve theory. For example, although the defense agencies firmly believe that the tungsten price-support program will not cost the Government one red cent, it is required that the total gross commitment of \$180,000,000 be earmarked and set aside. The same is true of the aluminum-expansion program to the tune of approximately \$600,000,000. During the fiscal year ended June 30, 1951, the defense agencies obtained \$1,600,000,000 in borrowing authority. Practically all of this already has been earmarked and set aside against gross commitments for all types of materials. About half the amount, or close to \$800,000,000, has been earmarked for aluminum and tungsten alone, whereas \$100,000,000, or less, probably would be sufficient on a prudent reserve basis. We have been informed that a support-price program to encourage the expansion of copper, lead, and zinc production would require \$1,500,000,000 a year to be earmarked under the present method of doing business under the Defense Production Act. I explained this problem to the House Committee on Banking and Currency during recent hearings. I am pleased to find that the Committee on Banking and Currency proposes to amend section 303 (c) of the act so that an amount not to exceed the probable ultimate net cost to the United States of any contingent liability need be earmarked from the total funds authorized to be borrowed under the act.

UNBELIEVABLE CONFUSION

The hearings held by the Subcommittee on Mines and Mining also revealed that an unbelievable state of confusion and uncertainty exists among the agencies concerned with the expansion of the domestic mining industry. They seem to have learned little from the experiences of the World War II agencies. So many agencies and sub-agencies are concerned with various phases of the minerals and metals problem that the formulation and execution of an effective national minerals policy is practically impossible today. At the request of the Subcommittee on Mines and Mining, the Defense Production Administration submitted a list of various Government agencies, committees, and groups that have a significant interest in strategic and critical minerals and metals. The size of the list is startling to say the least. This list contains the names of 50 departments, agencies, and sub-agencies of the Government, including the President and the Executive Office of the President, 5 major United States Government

interdepartmental committees; 14 congressional committees and subcommittees; and 9 major international groups. The confusion and acute lack of organization and coordination that exist today as a result of close to 70 agencies, committees, and groups significantly concerned with minerals and metals points to the urgent need for a single Federal agency to coordinate and execute minerals and metals policies at the same high level as now exists in the case of agricultural products.

MOBILIZATION PLAN NEEDED

The domestic minerals industry is in great need of positive and detailed mobilization plans that will guarantee not only maintenance of current rates of production but also the increased production demanded in the interest of our national economy and security. To the extent the Congress does not direct such accomplishment by law, I trust the committees of the Congress will induce action by other means.

Correspondence Between the President and Mrs. Guyer

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to call to the attention of every Member of Congress some correspondence between the President of the United States and Mrs. C. Irvin Guyer, of Springfield, Mass. Mrs. Guyer's letter gives a clear and forthright picture of the plight of millions of Americans who are living under the threat of inflationary prices.

The Chief Executive's reply to Mrs. Guyer is as clear and forthright as the housewife's letter to the President.

I cannot help but wonder how many Members of Congress are answering their mail from consumers as honestly and as boldly as the President replied to Mrs. Guyer.

The correspondence follows:

To the PRESIDENT OF THE UNITED STATES:

SIR: I understand that right now Washington is crowded with lobbyists, lobbyists representing the cattle interests, the real-estate interest, the farm interests, etc., all fighting to weaken price-control legislation or to eliminate it entirely. Nowhere have I heard of any lobbying being done for a very large and pretty important group of Americans who will certainly be seriously affected by any further inflation—the housewives.

Since I cannot afford a trip to Washington to lobby for the housewives personally, I am writing to ask you, Mr. President, to speak for us.

Will you tell Congress, Mr. President, that we feel it is absolutely imperative to roll back prices wherever unfair profits are being made, since the budget of the average housewife simply will not stand the \$360 a year increase in the cost of living which would otherwise result? Will you tell the cattlemen that we feel a profit of 150 percent of parity is too high, and that the proposed roll-backs on the price of beef were certainly justified? Tell them, please, that steak disappeared long ago from the tables of most average American families and that a further increase in the

cost of living would mean the disappearance of hamburger—that the housewife would have to turn to fish and other substitutes. Thus the cattlemen would be destroying their own markets. Or do they feel that the profiteers will buy enough steaks to make up for the absence of any beef whatsoever on the table of the average American family? No doubt \$360 is a very trifling sum to the cattlemen now lobbying in Washington—just a very small fraction of the cost of one of the many lavish parties they are putting on in their efforts to influence some of our Congressmen, but to the average American family it looms pretty large.

Take my own case for example, as I believe I am fairly representative middle-class housewife. I have five children, the oldest of whom has just completed her first year at the State University, and the youngest will enter kindergarten in September. My husband is a successful "small-business man" who works every day and several evenings a week trying to earn enough to support us. He is also the organist of our church. No 5-day—40-hour week for him. My oldest daughter is working for the summer months to earn money to help defray her expenses at college for the coming year. My 16-year-old daughter is also working during the summer to earn money for her schooling.

My 14-year-old boy earns what he can by mowing lawns, caddying, etc., and even the two smallest boys help with the household chores, as I cannot afford the extra help needed to run a household of this size. Thus far we have been fortunate. We have been able to "keep our heads above the rising tide of inflation," but another increase in living costs would just about submerge us.

But, Mr. President, will you tell Congress that even greater than the effect a ban on roll-backs would have on the family budget would be the moral effect on the American family. We know that with the outbreak of war in Korea and before the price freeze could be imposed, many unpatriotic Americans took advantage of the situation and raised their prices, while the more scrupulous voluntarily held their prices down. Are our children going to be led to believe that in our American democracy the greedy are rewarded and the honest penalized? What else can they believe if those producers who are making unfair profits are not compelled to roll their prices back?

Mr. President, we have never made it a practice in our family to blame the Government and the politicians for all the evils that beset the world. We believe that you are doing everything in your power to hold down the inflationary forces that are threatening to wreck our economy, and that many Members of Congress are fighting with you. However, it is apparent that an alarmingly large number of them are succumbing to the pressure of the lobbyists, perhaps believing that the American public is indifferent to the situation.

Will you tell them, Mr. President, that we are not indifferent about continuing price controls and roll-backs where indicated? We realize that either some prices will have to go down or others go up in order to correct present inequities. We know that a further increase in prices will mean a further deflated dollar which could lead us into national bankruptcy and the depression so eagerly awaited by Communists all over the world. Surely they must understand, Mr. President, how cleverly the Communists have maneuvered us into the present situation. What a diabolically clever piece of strategy to call for peace talks just at the time the Defense Production Act must be renewed, believing that with the hope of peace in Korea the American people will be stupid enough to relax controls. How they must be chuckling as they sit back and watch the combined forces of greed and

partisan politics preparing to tear down the barriers that have been erected against runaway inflation.

Mr. President, we can't let this happen. Will you once again remind the Members of Congress that a terribly grave responsibility rests on their shoulders? Will you urge them to forget the pleas of the pressure groups and think only of the danger that is threatening our country and the entire free world? Inflation must be stopped before it wrecks our entire economy and sets the stage for communism to take over. The only way to prevent this is by passage of a strong price-control bill with no weakening amendments. Congress alone has the power to do this.

Tell them, Mr. President, we are counting on them not to let us down.

Respectfully yours,

ALICE L. GUYER

Mrs. C. Irving Guyer.

DEAR MRS. GUYER: Thank you for your thoughtful letter about the need for price controls. It means a great deal to me to get letters like yours. And I have been getting many of them—letters from places like Houston, Tex.; and Oakland, Calif.; and Cincinnati, Ohio; good, heartening letters from big cities and small towns and R. F. D.'s all across America.

These letters prove what I believe so strongly, that millions and millions of Americans—housewives like yourself, and workers, and businessmen, and farmers—know the facts about inflation and understand them very well. They know the lobbyists are working hard here in Washington to get the Congress to pass weak control laws, which will keep us from putting up a successful fight against inflation. And they know how badly off we'll be if the lobbyists win.

I don't think you can fool most Americans once they have the facts. And I'm convinced that more and more Americans are learning the facts about inflation. And the more of our fellow citizens who do know the facts, the easier it will become to ward off the lobbyists' attacks and get the kind of legislation that the people of this country need and are entitled to.

You asked me in your letter to speak for you and all the other housewives, who aren't represented here in Washington by any lobby organization. Of course I will do that. It's what I have been doing. It's what I'm here to do. I have been speaking for you and working for you as hard as I can to make clear what the issues are in this fight against inflation and to convince the Congress that we must get a strong new control law on the books.

Let me say this to you. If we can't beat off the lobbies this time, we will just make a new start and try again. I want you to remember always, that though the special interests may have a triumph now and then, the people's interest is sure to carry in the end. Once the people know the facts and understand where their interests really lie, they are an irresistible force. Nothing can stop them.

That is our whole history as Americans.

I would like to ask you to remember one thing more. In Springfield, Mass., the cattle ranchers of the west may seem very far away. It must be hard, sometimes, not to identify them all with their self-styled "spokesmen" in Washington. It is just as hard, sometimes, for people out west not to identify all eastern businessmen—even small-business men like your husband—with the "spokesmen" of the "big interests" in New York, or the paid propagandists of the National Association of Manufacturers.

But these are both mistakes—mistakes none of us can afford. Most of the cattle-men and most of the businessmen are good

patriotic Americans, who want to safeguard their own interests, like anybody else, but not at the country's expense.

I am sure you know this. I am sure you realize how little the big paid lobbyists in Washington may really represent the members of their own organizations, much less anybody else. But these "spokesmen" have been filling the air with so many violent accusations against whole groups of Americans, that I fear sometimes lest many of us may forget how much we have in common—how much our welfare as individuals is bound up with our common welfare as American citizens, working together.

If we all remember that and keep it constantly in mind—in spite of all the shouting by the "spokesmen" and the "special pleaders," we can win the battle for price controls and the bigger battle that lies behind it—the battle for peace and security in the world.

Sincerely yours,

HARRY S. TRUMAN.

Amendment to Price-Control Bill Detrimental to Efficient Administration

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. WOLVERTON. Mr. Speaker, the price-control bill now before the House was reported to the House by the Banking and Currency Committee with approximately 57 amendments. In addition to this large number, there were upward of 75, maybe a hundred, more, offered from the floor of the House. Unfortunately many of these amendments were not subject to roll-call votes. Some of the amendments were meritorious, others were not.

My voting upon each of the amendments was based upon the theory that under present conditions we need an adequate price-control bill, but one that will not handicap either producer, businessman, or consumer to a greater extent than necessary.

In order that there may be some understanding of the reasons of my vote with respect to some of the outstanding amendments, I herewith submit the following by way of explanation of my vote against the adoption of amendments I hereafter mention.

First, The Poage-Cole amendment provides cost-plus pricing on every product at every stage of production and distribution. The costs which must be included are direct costs as well as indirect costs, many of which cannot accurately be measured on individual products. In the case of agricultural commodities, the processors' costs must even include parity prices—which processors do not pay when farm commodities are below parity. Most of them are. Processors of wheat, corn, peanuts, tobacco, potatoes, barley, oats, grapefruit, lemons, oranges, chickens, eggs, and apples, to name outstanding examples, would have to be allowed prices which represented a so-called reasonable profit

not just on their actual costs but on raw-material prices substantially higher than they actually paid. Grapefruit is selling at 53 cents a box—26 percent of parity—but the grapefruit processor could set his price based on raw material cost of \$2.02 a box. Potatoes are \$1.08 a bushel, 59 percent of parity. The potato-chip manufacturer, however, could pretend, in setting his price, that he had paid \$1.82, the parity price, for potatoes. There are innumerable such examples. But this does not end the plus features of the amendment. Every processor or manufacturer must be allowed for each item he makes a profit equal to 85 percent of his average profit for that item during the three most profitable years of the 4-year 1946-49 period. This cost-plus system would cost consumers, industry, and Government billions of dollars. Even worse, it would paralyze both price control and American business, because 85 percent of American corporations simply do not have the kind of cost-and-profit data required by this amendment.

It can be readily seen that the adoption of this proposed amendment could be highly detrimental to the consumers' best interest. Thus, my vote against it.

Second, The Davis amendment would freeze for a period of 4 months all wages and all prices except farm commodities selling below parity. It would not freeze rents. Since only five major farm items are selling above parity, this amounts to a freeze of everybody except the farmer and the landlord. Food and rents could rise while wages remained frozen. Costs to business could rise as farm commodities or imported raw materials rose in price, but business could not get essential price relief for 4 months, not even those companies operating in the red. Many might have to close their doors, throwing thousands out of work. The inflexibility in pricing would create chaos in defense production. As an example, an increase in the prices of machine tools was ordered last week to break a bottleneck in defense production. Since this order came after the July 7 deadline for price increases provided for in the Davis amendment, the machine-tool-price increase would be canceled, and this bottleneck in vital defense production would continue to the detriment of our rearmament program.

While there may be some advantages to be gained by the adoption of this amendment, yet it seems to me on the over-all application it could be detrimental to the workers and the consumer; hence, my vote against it.

Third, The Hope amendment to ban slaughter quotas removes the only effective device for distributing fairly and equitably among established slaughterers all of the available livestock sent to market. The National Association of Independent Beef Slaughterers declares the amendment would "result in the slaughter of many of our independent slaughtering firms." Without quotas only the big packers and the black-market operators would obtain supplies of livestock if marketings are reduced or if military purchases rise substantially.

Small slaughterers outside the major marketing areas would be squeezed out and meat famines would occur in many regions. The quota system assures a fair supply of meat to all.

My first inclination was to support this amendment, but, as I gave the matter further study, I came to the conclusion that it could, under certain circumstances, and, on the basis of past experience, prove highly detrimental to the consumer; hence, my vote against its adoption.

The Cole amendment requiring a profit on every species of meat for every segment of the processing industry would inaugurate an entirely new pricing system in the packing industry and enable it to capitalize on current high demand for its product. The present law already guarantees "a generally fair and equitable margin" for all processors of agricultural commodities, including livestock. This amendment would guarantee profits to individual meat processors on lines which are not normally profitable to those firms. These higher prices are not necessary to assure fair over-all profits to the industry. They would merely increase the packers' total profits at the expense of the consumer. Prices would be higher particularly on the cheaper cuts of meat purchased by low-income families.

This amendment has, in my opinion, no justification for its adoption. It would change the bases on which this industry has operated in the past and undoubtedly increased prices to the consumer. Hence, my vote against its adoption.

The Fugate amendment, prohibiting the scheduled two additional roll-backs on beef cattle, knocks out reductions to consumers which would average 10 cents a pound on retail cuts of beef. Thus, the consumer would have to continue to pay present retail-beef prices. The original 10-percent roll-back on cattle prices gave only negative relief to the consumer by preventing an increase in retail prices. The two additional roll-backs would give the consumer positive relief in lower prices on all cuts. Even after all three roll-backs scheduled for cattle prices, beef cattle would remain at 122 percent of parity, or 22 percent higher than the relative fair price determined under the parity formula. Since most agricultural commodities are selling below the parity level, the farmer would still derive greater relative purchasing power from the raising and sale of cattle than from the production of almost any other farm commodity, thus providing adequate incentive for increased production of beef cattle.

My opposition to this amendment was more fully set forth in my speech appearing in the CONGRESSIONAL RECORD on a previous day. I do not favor this amendment because it would greatly handicap the Administrator in making possible lower prices to the consumer. I am strongly in favor of giving all the necessary help that is possible to accomplish the purpose of price-control legislation.

How We Lost One War and Got Into Another

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the fourth in a series of articles I wrote for the Scripps-Howard newspapers:

WASHINGTON, June 1951.—One reason we Americans don't have a successful policy in Asia is that too many of our officials have a vested interest in failure.

We are not talking about those who were in our Government—and some of whom may still be in our Government—who knowingly made decisions that were calculated to deliver to communism the fruits of Allied victories in World War II.

We are talking about the good men, patriotic men, who felt that the difficulties in Asia were so great that we were licked before we started. Viewing Asia through the gray glasses of pessimism and despair, they not unsurprisingly failed.

And having failed, they seem determined that nobody shall replace them who with greater courage and confidence in the ability of America to inspire and uplift the oppressed masses of Asia, might succeed.

There is nobody so tenacious of position as the man who has said that a task is impossible and fears that somebody will come after him and prove that he was wrong.

There were three American generals who failed in China.

One was the late Lt. Gen. Joseph L. Stilwell. Stilwell had the job of consolidating the anti-Japanese forces in China with virtually no outside aid, because we were devoting 98 percent of our effort to defeat Hitler.

The job required somebody with the tact of an Eisenhower. Stilwell was a cantankerous man of great personal courage, who was cast in the wrong job. We now know that he was being flattered and used by a group in our State Department.

As I write this I have in my hand a copy of a secret report that was sent October 10, 1944, by John Stewart Service, State Department political liaison man with the Communists at Yenan. It is addressed to General Stilwell. In it Mr. Service, who, incidentally, is still in the State Department, repeats the transparent lie that the Chinese Reds are democratic eight different times.

He urges Stilwell to disregard "any ties of gratitude" to Chiang Kai-shek for his long resistance to Japan and to force a union of the Nationalist and Red armies under American command. "There is only one man qualified by experience for the job," Service states, leaving Stilwell to conclude that it is Stilwell.

At Service's prodding, Stilwell reached for complete authority in China, which would have meant supplying American arms to the conspiracy which was dedicated to achieving absolute domination of the country. Chiang balked, and Stilwell had to be recalled.

Gen. George C. Marshall, Stilwell's close friend and unwavering supporter, followed Stilwell to China with a directive from the White House and State Department to force the unity Stilwell had sought by threatening the free Chinese with loss of American support if they refused.

Since the Communists never want unity, but control, they were able by their obstruc-

tionary tactics to thwart Marshall's mission. He came home a bitter and disillusioned man, who damned both sides in China indiscriminately. With the orders he took out, his failure was inevitable and not necessarily his own fault.

General Marshall clings to his opinion that China is a hopeless mess. The man who performed so brilliantly as Army Chief of Staff in World War II cannot concede that even indirectly he could ever have been wrong.

Gen. David G. Barr was sent to China in 1948 when the fate of the Nationalist government had already been determined by the negative United States policy pursued in the crucial years of 1946 and 1947. He naturally was discouraged.

Against these three generals who failed, we have any number of American military men with equal or superior knowledge of Asia who have succeeded there—to the limit permitted by our State Department and President.

General MacArthur was one. He's no armchair strategist. He has shown in Japan that it is possible to reverse the tide of prejudice against westerners, to substitute trust for hate. But MacArthur was bypassed by the State Department on every political decision outside his command in Japan.

Until the Senate hearings, General MacArthur had never once received an official invitation to give his views on what we could and should do in China.

Lt. Gen. Albert C. Wedemeyer is another general who has a habit of success. Wedemeyer went to China between Stilwell and Marshall's visits. He succeeded admirably with the Chinese but his report to Washington outlining what would—and did—happen in China and in Korea, if certain American steps were not taken, was suppressed.

Maj. Gen. Claire L. Chennault, the leader of the Flying Tigers, is another American military man intimately acquainted with China who has a record of achieving the impossible.

Along with these three from the Army, we have the Navy. Seven admirals in succession have said that the job of keeping Asia free can and must be done—Admiral Harry E. Yarnall (retired) and Admiral Thomas C. Hart (retired), before World War II.

Rear Adm. Daniel E. Barbey, the first Navy commander who went in after the war, was removed because he spoke out against the reckless policy of turning China over to the Soviet Union after his men had fought clear across the Pacific to keep Japan from getting China's manpower and resources and turning them against the United States.

He was succeeded by Admiral Thomas C. Kinkaid (retired), whose eyes just flash when he talks about the mess our Government's policy of negativism and defeat has made out there. You wouldn't call Admiral Kinkaid a know-nothing or "just emotional about Chiang Kai-shek."

Admiral Kinkaid was followed by Admiral Charles M. Cooke (retired). He is pretty good, too—so good that he planned most of the brilliant strategy of our Pacific campaigns. He is so concerned about helping Chinese stop Chinese Communist expansion, so we won't have to, that he is out in Formosa now working as a private citizen to help save what he knows is so important to this country.

And Cooke was followed by Vice Adm. Oscar S. Badger and Admiral Arthur C. Radford, who both disagreed with our policy of doing just enough to be held responsible for what happened in China, but not enough to succeed—the worst of all policies.

On the one hand are three men who failed in China. They say it can't be done.

But on the other hand are 10 equally able men who succeeded. They say it can be done. Whose judgment are you going to take?

If I am sick, I don't want a doctor who can explain to me, no matter how eloquently, why he can't get me well. I want one who is determined to find a way to cure me.

President Truman alone under our system has the power of calling in a new panel of physicians.

Long Beach, Calif., Shipyard Can Handle Any Navy Job

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. DOYLE. Mr. Speaker, I herewith call the attention of every Member of Congress to a newspaper comment appearing in the Long Beach (Calif.) Press Telegram recently with reference to the Long Beach navy shipyard. I was very sure that the content thereof would be valuable and informative as to the present status of the world-famous Moreell Dry Dock which can handle any ship afloat.

If I had the privilege of showing you and my other colleagues pictures of this great and famous Moreell Dry Dock at the Long Beach navy shipyard, you would see five great ships of the Navy undergoing work at the same time. The drydock is 1,105 feet long and 155 feet wide, and has a 17 feet 7½-inch concrete and steel floor. The concrete in the structure would pave a two-lane highway for a distance of 115 miles.

This necessary and history-making Navy shipyard on the shores of my beautiful home city of Long Beach, Calif., is situated within what is commonly known as the Long Beach-Los Angeles Harbor. This harbor, Mr. Speaker, has the prominent protection of a great Federal breakwater which extends from Point Fermin on the southwest to a point approximating Newport on the northeast. It is said that thus results one of the best protected and most adequate and available harbors in any port in the world.

I, myself, have had the inspiration of seeing the fleets of the United States Navy peacefully at anchor within that harbor on a day when I stood in review with the then Secretary of the United States Navy, the Honorable Curtis D. Wilbur.

The newspaper comment follows:

LONG BEACH YARD AGAIN CAN HANDLE ANY NAVY JOB

With the huge Moreell drydock now in operation for the first time in many months since subsidence forced its closing, the Long Beach naval shipyard today stands ready for any job that may be required.

Between 50 and 60 major ships can be repaired at one time with the facilities now in operation, the Navy reports.

Employment in the yards is well over 6,000 and by late summer to total number of workers will reach 7,000, a Navy spokesman said.

The yards were reactivated February 1, after being closed several months, and already 125 ships sent here for repairs or

overhaul have been completed and returned to action.

To handle the fighting ships there are three drydocks in operation. The Moreell dock is 1,105 feet long and 155 feet wide. Today it had five ships in it being worked upon at once. The two other docks are 693 feet long and 104 feet long. There also is a floating drydock in the yards.

The Moreell dock contains 50,590,000 gallons of water and can be pumped dry in 2 hours when no ship is in it. The floor of the huge structure is 17 feet 7½ inches thick, of concrete and steel and the dock, plus the dike constructed around it as part of the subsidence remedial work, contains enough concrete to construct a two-lane highway 115 miles long, the Navy reports.

The Moreell dock is one of the largest in the world and can handle any ship afloat.

The yards now are receiving more than \$2,000,000 worth of stores a week to stock the fighting ships. Purchases locally are averaging \$879,000 a month, the Navy report shows.

The civilian payroll is over \$2,000,000 a month.

Communist China Uses Clever Plays To Push Its Hate Drive Against United States

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward Hunter:

COMMUNIST CHINA USES CLEVER PLAYS TO PUSH ITS HATE DRIVE AGAINST UNITED STATES

(By Edward Hunter)

HONG KONG, July 14.—New plays being produced in Communist China are pointing up the thoroughness and the long-range character of the Red regime's hate campaign against the United States.

They show that there is nothing temporary about Red China's hate drive. Instead, it has been made a part of all the normal spheres of life, education, the theater, journalism, religion, and commerce.

No Chinese, no matter what his age or work can escape participation, although the accusations are often crudely drawn, the technique with which they are taught is centrally directed and skillful. Take a book of plays, for instance, just put out by Red China, entitled "Pictures of Violent Deeds by Imperialist Americans." There are five one-act plays in the book, in the course of which Americans are shown perpetrating almost every crime known to man.

WRITTEN IN SHANGHAI

The plays were written by the Shanghai Drama Academy, which operates directly as part of the government propaganda machine. Leading playwrights of China are members, and do the writing under Communist Party guidance.

These plays are sent to schools, factories, and every sort of social and political organization throughout the country, for production by amateur and professional play troupes. Failure to perform them voluntarily makes the members liable to self-criticism as backward elements, a charge frequently followed by purges. Untold tens or hundreds of thousands of Chinese have

seen the plays. Many have had so much fun helping in the production that they willingly absorb much of the anti-American propaganda.

INCLUDE KNOWN NAMES

The plays have been made even more convincing by including characters known by name throughout the nation. They are written as documentaries in play form, and supposedly tell the true, inside story of great events. The first play in this book is entitled "The Warmonger," and has Gen. George C. Marshall as its principal character. Others include Mrs. Marshall and Ambassador Leighton Stuart.

How can an ordinary Chinese know that the scenes shown to him in such a matter-of-fact manner, and the words put into the mouths of these people, are lies? With no opportunity to learn different, the people accept what they hear and see as truth. These teachings are part of a permanent policy uninterrupted by such incidents as a lull or a truce in Korea, a fact of the utmost significance to America's future.

MARSHALL SLANDERED

The plot of this first play is a simple one. General Marshall is portrayed as posing as an advocate of a coalition government for China while actually masterminding military operations against the Communists.

He is portrayed as arranging petty bribes and instructing Ambassador Stuart that our first task is to hook in all the intellectuals. Stuart is shown as a craven, confused intriguer.

Delegates of the middle-of-the-road parties are shown comparing notes on how much money they have been paid by Marshall, and a scene sure to amuse the audience is the one in which one delegate complains that he has received less than another. This slapstick comedy is made to appear as if it were true by the use of actual names and party designations.

MRS. MARSHALL, TOO

Mrs. Marshall is portrayed as a comic character, who constantly refers to her love for China, but always to a ridiculous China of the dead past, saying, for instance,

"I love this peaceful nation, built upon rites and the virtue of complacency. Long pigtailed, bound feet, ceremonial greetings, bowing and the kowtow—you couldn't find another country like it in this world. So very cute, really."

Any modern young Chinese, hearing such words, will bristle at them. Put into the mouth of the wife of the American envoy by Chinese Communist propagandists, the effect cannot be minimized.

MISSIONARIES ALSO TARGETS

A harder nut for the Communist propaganda ministry to crack was the problem of disparaging American missionaries, most of whom have spent their lives teaching tolerance and human betterment. But the problem was tackled frontally—the play, The Hypocrite, badly accuses the missionaries of virtually every vice known to man.

The plot puts an elderly missionary in the role of a conniving sadist who first impoverishes neighboring farmers, then takes over their land for himself. One scene shows a Chinese mother on her knees, begging for the return of her land. As she kneels, an American Embassy official steps up to snap her picture. Then the Americans are shown having a good laugh over the trick—the photo will be used in America to prove how the Chinese are being converted.

Even the American's traditional generosity in foreign countries is undermined. In the play, Such Is Their Discipline, a little boy is run over by an American Army truck when he goes out to get some American candy, relief packages are shown to contain nothing but spoiled food, and Chinese have

women are raped by American soldiers after accepting their gifts.

The purpose of these plays is frankly stated in the preface—to oppose the United States in accordance with China's historic and righteous cause.

New York Young Republicans' Recommendations for a Positive Foreign Policy in the Far East

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JAVITS. Mr. Speaker, appended are resolutions adopted by the board of governors of the New York Young Republicans Club on July 10, 1951:

RECOMMENDATIONS FOR A POSITIVE FOREIGN POLICY IN THE FAR EAST

I

Whereas the military operations in Korea were occasioned by Communist aggression growing out of the artificial division of that country without the sanction of the Korean people, and

Whereas the purpose of the UN military opposition to Communist aggression in Korea was and is to show that the free peoples of the world can and will stop aggression, and to establish freedom and government for Korea by Koreans; Therefore, be it

Resolved, That the only basis for a permanent settlement of the Communist aggression in Korea be the evacuation of the country by Chinese military forces and the unification of Korea, in accordance with United Nations directive, under a democratic government with national elections to be held under U. N. supervision at the earliest opportunity, and the maintenance of security by a U. N. police force until Korea can defend itself; and be it further

Resolved, That preparations be instituted through U. N. channels for the full reconstruction of Korea on a sound economic basis.

II

Whereas the Communist regime in China is judged by the U. N. to be guilty of unwarranted aggression, and has ignored or disobeyed various U. N. directives; Therefore be it

Resolved, That the United States oppose the admission of Communist China to membership in the U. N. so long as the Communist regime in China defies the authority of the U. N. and does not demonstrate its willingness to comply with the U. N. Charter, and, if necessary and possible, use its veto power for that purpose.

III

Whereas the Communist Chinese regime has been the main obstacle to peace in Korea; Therefore be it

Resolved, That, in the event of continuation of hostilities, the United States ask the United Nations to impose a naval blockade of Communist China, and such other measures of a military or economic nature as may be necessary to bring the war to a speedy and successful termination.

IV

Whereas the Government of the Republic of China was one of the founders of the United Nations and has remained loyal to it; and

Whereas the Chinese Government was forced to withdraw from the mainland and

remains on Formosa as the only spokesman for Chinese freedom from Communist tyranny; and

Whereas a tradition of deep friendship between the United States and the people of China has been a fundamental characteristic of American policy; Therefore be it

Resolved, That—

(a) The Assistant Secretary of State be commended for proposing a new positive policy regarding the Government of the Republic of China, reaffirming this country's cognition of it as the only legitimate government of the Chinese people;

(b) The United States give the Chinese Government, presently located on Formosa, fullest assistance;

(c) Formosa itself not be surrendered to Communist control for any reason whatsoever.

V

Whereas events in Asia have a direct bearing upon world peace and American security; and

Whereas the people of Asia are deeply concerned with the establishment of their independence and with the peace and security they need for developing their countries; and

Whereas communism seeks to exploit weakness and poverty; Therefore be it

Resolved, That the United States initiate action toward the formation of a Pacific Pact for the defense of the free countries of East Asia, to include the non-Communist nations of Asia as well as the other non-Communist nations directly concerned with the maintenance of peace in that area, and that the United States urge the United Nations to undertake such programs of economic advice and assistance as shall be necessary to place the national economies of the Asian nations on a sound, progressive basis.

Military Agreement With Spain

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I submit these observations.

I certainly hope that our bungling State Department will not tie the hands of our able Admiral Sherman in his current negotiations with Spain, because of the influence of the British Socialist Government.

The other day, the British Bevan Party manifesto took a position against British rearmament and to deny overseas bases to America.

We would indeed be suckers if we permitted the British to influence our position in this matter.

It is elementary that Gibraltar must be kept open in order that the Mediterranean arm of the Atlantic be free. Militarily, this is of the utmost importance, because—

First, it is an avenue on which air-sea power could be brought to bear against the Soviet Union and her European satellites.

Second, it is the sea lane of logistic support for southern France, Italy, Yugoslavia, Greece, and Turkey.

Third, it is an efficient sea lane to the Middle East and the largest petroleum lands in the world.

Finally, it would be a formidable water barrier against a European continent held by the Red army, if that should come to pass.

Since Russia recognizes nothing but force, a military alliance with Spain would be a strong deterrent to the Com-mies and might prevent world war III. If war should come, we would be badly crippled without it.

This agreement with Spain is dictated by our own national self-interest. It is hoped that nothing will be permitted to stand in the way of its consummation.

Price Controls

EXTENSION OF REMARKS

OF

HON. F. D. ROOSEVELT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. ROOSEVELT. Mr. Speaker, I am sure that my colleagues will be interested in reading the following letter from leaders of the Liberal Party in New York City, which I am convinced reflects the thoughts of an overwhelming majority of our citizens on some of the actions which this Congress is taking:

LIBERAL PARTY OF NEW YORK STATE,

New York, N. Y., July 16, 1951.

HON. FRANKLIN D. ROOSEVELT, JR.,

House Office Building,

Washington, D. C.

DEAR MR. ROOSEVELT: It seems almost inconceivable that Congress should permit a few powerful special-interest lobbies to shear it of its sense of responsibility to the people of the Nation in the fight against inflation. It is equally strange that, at the moment when watered control bills threaten further mulcting of both the Government and the consumer, Congress is considering shifting the major tax burden from the wealthy to the lower-income groups.

There is something fantastic in this whole attitude. Congress does not know whether there will actually be a truce in the Korean War. Congress does not know whether the Communist truce move is another Kremlin tactic to hoodwink Congress and the Nation into relaxing our defense efforts. Congress must know that, even if a truce does materialize, our country and the free world will still remain in mortal danger from Soviet imperialist expansionism. Surely Congress must realize that the defense-production program must continue unabated—must, in fact, be accelerated. Under these circumstances, how can Congress even consider opening gaping holes in the dikes against inflation?

We must have a Defense Production Act tailored to the needs of the Nation, not to the greeds of a few. We need strong, effective price controls, including roll-back powers. We need strong rent controls, not blanket rent increases. We need heavier taxation to pay for defense, but it must be imposed strictly in accordance with ability to pay. This principle rules out sales taxes or other regressive taxes on any level from which they may be transmitted to the consumer, including such camouflaged sales levies as the so-called consumption tax.

We urge you to do everything you can to stem the inflation build-up in Congress. We urge you to lend every effort toward passage of strong control legislation on all fronts, including prices and rents, and toward enactment of equitable tax measures. We

urge you to help undo the serious potential harm to the Nation that lurks in the DPA bill passed by the Senate.

We want to take this occasion to express our gratitude to all those Members of Congress who have been carrying forward the fight for effective anti-inflation controls. We have consistently followed and appreciated such efforts. We are sure that constituents have, too.

Sincerely yours,

MARK LEWIS,
Chairman, National Legislative Committee.
BEN DAVIDSON,
Executive Director.

TVA Provides Flood Control—The Missouri Valley Should Have Flood Control Protection

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. EVINS. Mr. Speaker, as the Members of the House, I believe, know well, the Tennessee Valley Authority has been an excellent example of how, through foresight and planning, floods can be prevented and controlled, and lives and property can be saved.

In the prevailing conditions of disaster in the great States of Missouri and Kansas the people there might well take a lesson from the Tennessee Valley in the matter of flood control, conservation, and the saving of lives and property under conditions of unusual rainfall and other factors causing high waters. One such disastrous flood as has been so recently experienced can and has caused loss far in excess of what would have been the actual cost of constructing proper dams and other flood control installations. The people of the Missouri Valley area can profit from the experience of the TVA and the Corps of Engineer flood-control projects in the Tennessee Valley area.

In this connection, Mr. Speaker, I desire to have included in the RECORD with my remarks an editorial from the July 15, 1951, issue of the Nashville Tennessean entitled "Flood Control Is Possible." The editorial is as follows:

FLOOD CONTROL IS POSSIBLE

For the simple reason that it has worked so well, the flood control program of the Tennessee Valley Authority is often all but overlooked when TVA's benefits to this region are assessed.

The benefits of this aspect of the TVA operation are brought home forcibly, however, by the millions of dollars worth of damage being wreaked by rampaging waters in Kansas and Missouri. Though it offers little comfort now to the thousands of residents of that area who have lost so much, the fact remains that a Missouri Valley Authority could have averted much of the destruction being heaped on numerous cities and acres of rich agricultural land.

According to the last annual TVA report, the Authority's flood control program has saved the Tennessee Valley some \$45,000,000 since 1933. When compared to estimates of

the Midwest flood damage—which go as high as \$1,000,000,000—this may seem to be a relatively small sum.

It is a significant figure, however, because it shows that a comprehensive flood control program incorporated into a valley development plan does provide reasonable safety from disasters like that now seen in Kansas and Missouri.

In its report issued earlier this year, the President's Water Resources Policy Commission said the development of possible multiple-purpose projects on the Missouri River and its tributaries "would protect the major points now subject to flood damage and would provide the maximum feasible amount of reliable flood protection and control."

Yet, this protection has been denied to the people now suffering because of both local and national opposition to an MVA. Even limited projects have been long blocked. In 1938, for example, Congress approved two reservoirs on Missouri tributaries that would have made the current situation much less serious. But those reservoirs were never built, largely because of the hostile reaction of residents whose land would have been inundated.

In the wake of this present catastrophe, it is possible that the people of Missouri and Kansas will reexamine their attitudes about flood control and that the outsiders who have opposed a Missouri Valley Authority because of its cost will recognize their false economy.

If, in taking a new look at the problem, they want any proof as to the effectiveness of valley-wide flood control, it can be found in abundance right here in Tennessee.

Great Britain Offers Assistance in Flood Disaster

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. CARNAHAN. Mr. Speaker, yesterday the following note was presented to Secretary of State Dean Acheson:

BRITISH EMBASSY,

Washington, D. C., July 19, 1951.

His Majesty's Ambassador for the United Kingdom presents his compliments to the Secretary of State and has the honor to inform him that he has been instructed by His Majesty's Principal Secretary of State for Foreign Affairs to inquire whether there is any aid which His Majesty's Government in the United Kingdom and the British people can give to those who have been afflicted by the disastrous fires and floods which have recently occurred in the States of Kansas and Missouri. Sir Oliver Franks would be grateful if Mr. Acheson would let him know what suggestions the United States administration wish him to transmit to His Majesty's Government in the United Kingdom.

Mr. Speaker, this offer of aid to our own people who are victims of the recent floods and fire in Kansas and Missouri is sincerely appreciated. Adversity and disaster strike at unexpected times and places without selective distinction. It may come to any human being anywhere throughout the world. In adversity, friendship, expressed through voluntary help, is man's greatest gift. The

American people are deeply touched by this warm friendship displayed by our British friends and hope that arrangements may be made which will permit our friends to give and our own disaster victims to receive the assistance of those who desire to help us.

Drew Pearson Falsifies George Washington's Views on Price Controls

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BUFFETT. Mr. Speaker, in the Washington Post of July 20, 1951, the Drew Pearson column carries some excerpts from a letter written to James Warren on March 31, 1779, by George Washington.

A part of what Mr. Pearson lifted from Washington's letter is inaccurate. The entire excerpt deliberately misrepresents George Washington's views on price controls, as expressed in that letter.

Actually, Washington pronounced price control to be wrong, and did so in this very letter, but Mr. Pearson chose to omit that passage of the letter to James Warren.

The following is the section of the Pearson column which misrepresents Washington's views:

GEORGE WASHINGTON ON ECONOMY

Here is what George Washington wrote about inflation and price control on March 31, 1779, in a letter to James Warren:

"Is the paltry consideration of a little dirt pelf to individuals to be placed in competition with the essential rights and liberties of the present generation and of millions yet unborn?"

"Shall a few designing men for their own aggrandizement, and to gratify their own avarice, overset the goodly fabric we have been rearing at the expense of so much time, blood, and treasure, and shall we at last become the victims of our own abominable lust for gain?"

"Our cause is noble, it is the cause of mankind; and the danger to it is to be found within ourselves."

Now here is what George Washington actually said in that letter about price control:

"Let vigorous measures be adopted; not to limit the prices of articles, for this I believe is inconsistent with the very nature of things, and impractical in itself, but to punish speculators, forstallers, and extortioners, and above all to sink the money by heavy taxes. To promote public and private economy; encourage manufactures, etc."

Following is the complete excerpt from Washington's letter that deals with inflation and price control, as it appears in the Writings of Washington, volume 14, pages 312-313:

TO JAMES WARREN

MIDDLEBROOK, March 31, 1779.

Nothing I am convinced but the depreciation of our currency proceeding in a great measure from the foregoing causes, aided by stock jobbing, and party dissensions has fed

the hopes of the enemy and kept the British arms in America to this day.

They do not scruple to declare this themselves, and add, that we shall be our own conquerors. Cannot our common country America possess virtue enough to disappoint them? Is the paltry consideration of a little dirty pelf to individuals to be placed in competition with the essential rights and liberties of the present generation, and of millions yet unborn? Shall a few designing men for their own aggrandizement, and to gratify their own avarice, overset the goodly fabric we have been rearing at the expense of so much time, blood, and treasure? And shall we at last become the victims of our own abominable lust of gain? Forbid it heaven; forbid it all and every State in the Union; by enacting and enforcing efficacious laws for checking the growth of these monstrous evils, and restoring matters, in some degree to the pristine state they were in at the commencement of the war. Our cause is noble, it is the cause of mankind; and the danger to it, is to be apprehended from ourselves. Shall we slumber and sleep then while we should be punishing those miscreants who have brought these troubles upon us and who are aiming to continue us in them, while we should be striving to fill our battalions, and devising ways and means to appreciate the currency; on the credit of which everything depends? I hope not. Let vigorous measures be adopted; not to limit the prices of articles, for this I believe is inconsistent with the very nature of things, and impracticable in itself, but to punish speculators, forestallers, and extortioners, and, above all, to sink the money by heavy taxes. To promote public and private economy; encourage manufacturers, etc.

Measures of this sort gone heartily into by the several States would strike at once at the root of all our evils and give the coup de grâce to British hope of subjugating this continent, either by their arms or their arts.

The first, as I have before observed, they acknowledge is unequal to the task; the latter, I am sure, will be so if we are not lost to everything that is good and virtuous.

Korea, Gibraltar in the East, Strong and Free, Can Prevent China, Russia, and Japan From Again Cutting Each Other's Throats and the UN's Too

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. SIEMINSKI. Mr. Speaker, on the map, Korea resembles Florida. Shaped like a rough-hewn springboard, it has been used for more aggressive moves in the last 57 years than any other country in the world.

The United Nations must make Korea strong and free, a Gibraltar in the East, to prevent China, Russia, and Japan from ever again cutting each other's throat and that of the UN too.

The slaughter of American boys at Pearl Harbor would never have occurred had the ports and airfields of Korea been available to the United States. The war with Japan would have been avoided.

When Japan crossed the Yalu in 1931, the League of Nations threw its birthright away because it failed to punish

the aggressor. The United Nations saved its birthright when it poured firepower into Red aggressors for their dastardly June 25, 1950, attack on the people of Korea.

The United Nations must, indeed, make Korea strong and free, a Gibraltar in the East, to prevent China, Russia, and Japan, as they have in the past, from ever again cutting each other's throat, and that of the United Nations too.

Practical System of Organizing Reserve Components

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I submit the following editorial from the Washington Post, issue of July 17, 1951:

REASSURING RESERVISTS

As a counterpart of the universal military service and training law, the Defense Department has at last come up with a more practical system of organizing reserve components. The improvement, as embodied in the Brooks bill, is overdue. To many reservists and to the House Armed Services Subcommittee, which has just issued a plain-speaking report on the subject, the system by which men have been called to active duty during the limited emergency has seemed to operate without rhyme or reason. It has kept many men on tenterhooks, and it has seemed to discriminate against the enlisted men and junior officers, whereas the better-paid field-grade officers have not been called. To be sure, there has been reason back of the system in most cases, it has operated on the basis of need. However, the reserve program has this against it—that many officers and enlisted men, when they signed up, did not anticipate a limited emergency and did not know what they were getting into.

That confusion should soon be remedied. Under the new proposals an Assistant Secretary in each of the services would be given responsibility for Reserve affairs, thus assuring top-level continuity and interest. The Reserves would be divided into three components—the Ready Reserve, the Standby Reserve, and the Retired Reserve. The Ready Reserve would be what its name implies—it would be composed of individuals ready for mobilization at any time the need arose. They would be required to take annual active-duty training. The second category, the Standby Reserve, would consist of men who would be available only upon declaration of war or proclamation of national emergency by Congress. Within the Standby Reserve would be another subdivision, the Inactive Status List, whose members would receive fewer perquisites and would be subject to call only when qualified officers of the other Reserve components had been exhausted. The Retired Reserve could be employed on the same basis as the Standby Reserve.

This seems to us a sensible plan with which to implement the Reserve obligations of universal service. All persons governed by the UMS law who had served less than 8 years on active duty would be required to participate in the Reserves. Those with less than 4 years of active duty or 3 years

of accredited training would be placed in the Ready Reserve; the others would be in the Standby Reserve. In time of emergency a priority system by which individuals and units of the Ready Reserve would be called would be publicized.

Particularly important is the proposed establishment of a promotion system in the Reserves approximating that of the Regular services. This would eliminate one of the chief complaints, particularly with respect to the Army, where Reserve promotions have been few and far between. The proposals, of course, are aimed at the future; undoubtedly, even if necessary legislation is adopted, some difficulty will be experienced in satisfying the desires of present reservists as they are fitted into the new scheme. But in any event the proposals are a positive step forward at a time when it is imperative to get a definite program to sustain reservist morale.

A Free Economy, the Only Source of Ample Food and Shelter—4,000 Years of Failure of Price Control

EXTENSION OF REMARKS OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. GWINN. Mr. Speaker, I want very briefly to give you a little sketch of 4,000 years of uninterrupted failure of price controls as applied in the experience of nations from the beginning of civilization. We have heard from time to time that our experience with price controls dates from Leon Henderson, or from 1942.

That American passion for economic freedom has deep roots in our history becomes clear when one reads the words of the president of Princeton, John Witherspoon, in a letter to George Washington:

Fixing the prices of commodities has been attempted by law in several States among us, and it has increased the evil it was meant to remedy, as the same practice has done since the beginning of the world.

Is that really true? What does the historical experience of mankind teach about this fundamental issue, which touches the life of every man, woman, and child?

CONTROLS TRIED 4,000 YEARS AGO

The temptation for people in power to tamper with prices and production seems to be a very ancient human game. Thus, in the Laws of Hammurabi, King of Babylon—2285–42 B. C.—we find wage controls for boatmen, reapers, threshers, shepherds, laborers, artisans, bricklayers, tillers, stone cutters, milkmen, and carpenters. Regulated also were builders' fees and warehousing, as well as rental of cows in milk, calves, oxen, wagons, and freight and passenger boats. On the basis of historical evidence, we know that ancient history, throughout the changing centuries, is characterized by a never-ending succession of popular upheavals against tyrannical rules and regulations imposed upon the people from above. This continued

strife reveals one of the fundamental themes of human history—a struggle between regimentation and freedom.

We find later laws in ancient history, like, for example, the Hittite Code—1350 B. C.—which was discovered in Baghaz Kot in Asia Minor, that attempted to establish provision for wages and prices. The very fact that such laws had to be abolished or drastically revised under popular pressure indicates that even in ancient times rulers met with deep-seated resentment against their attempts to block the activities and trade of their citizens.

ROME HAD FREEDOM

History tells us that the Roman Republic, under a constitution guaranteeing freedom, became the envy of the "barbarians" of other countries. Its soldiers were increasingly victorious in their conflicts with the half-hearted mercenaries of neighboring nations that enjoyed little freedom. The glory that was Rome extended throughout what is now Western Europe and northern Africa because Rome was the center of freedom. There were no planned economies. As Gibbon tells us, freedom, honor, and justice were universally recognized virtues. And the freedom of Rome extended to its colonies.

The recurrent famines of earlier days were experienced with less and less frequency. Rome gave the civilized world the highest standard of living then known to mankind. But what happened? The leaders reached out for power. The republic became an empire. At first the emperors were cautious. They talked freedom as they planned a police state. Gibbon says, "Augustus was sensible that mankind is governed by names; nor was he deceived in his expectation, that the senate and the people would submit to slavery, provided they were respectfully assured that they still enjoyed their ancient freedom. A feeble senate and enervated people cheerfully acquiesced in the pleasing illusion." And so the people were fooled by bread and circuses. They looked to the government to supply more and more of their needs. Production declined everywhere. Prices skyrocketed.

ROMAN CONTROLS FAILED MISERABLY

Emperor Diocletian decided to maintain his popularity with promises to fix prices and reduce the cost of living. So in A. D. 301, he issued an imperial edict fixing the prices of commodities for the whole Roman Empire. His grandiose scheme was ushered in with a fanfare of benevolent propaganda. In fact, in the preface to the edict, the Roman Emperor shows an insight into the laws of psychological propaganda technique which is as startling as it is up to date. He assures his people that the coming economical control system is built on the highest motives of making the whole nation participate "in the blessings of that peace for which we have laboriously striven." He continues that in order to make this price-fixing system work, it is necessary for the rulers like "watchful parents of the whole human race" to help the people with remedies from above, and that such measures have become necessary,

since humanity cannot achieve such good results by its own free action.

The edict goes on to explain how the people have become greedy; how exorbitant profits were being made; how monopoly was running wild, and the people, therefore, needed protection from foes within as well as foes without. The only cure was a complete over-all control of food, clothing, wages, and so forth. Reading the list of commodities which the emperor asked his Mike DiSalle of that day, Maximianus, to take control of, reads astonishingly like our own modern OPS lists: Farm products, dyes, needles, feathers, filling for upholstery, seeds, wine, oil, meat, poultry, fats, sea food, building timber, wooden posts, finished wagons, agricultural implements, and so on ad infinitum.

In order to enforce his imperial law, Diocletian built up a huge bureaucracy to administer his universal price-control system. A contemporary observed has characterized the situation in the following words: "The number of ministers, of magistrates, of officers, and of servants who filled different departments of the state, multiplied beyond the example of former times."

The price-control police forces of Diocletian had as their legal weapon, severe penalties against any breach of the law. Death was the punishment for those who dared sell above maximum prices. Death also for the buyer who aided and abetted him. Death, too, for those who bought and sold illegal stocks. However, human nature being what it is, these penalties did not affect the general picture, and no bureaucratic machinery or legal apparatus could prevent a complete breakdown of the law of supply and demand with all the economic and social evils resulting from it.

Economic historians of the Roman Empire find that a situation developed which was as tragic as it was prophetic. Because the scarcity of production was heightened by the interference from price-control laws, prices on consumers' goods in the actual market rose to catastrophic heights. The control system which was put into operation to combat inflation, in this manner actually created inflationary trends which broke the backbone of the economic life of a great empire. Everywhere the results soon became visible: Building and construction stopped entirely. The arts and sciences fell into decay to such an extent that modern historians can recognize immediately the crudity and purility of the craftsmanship of this period. Artistic creativeness and inventive skill did no longer thrive in this new atmosphere of economic tyranny.

History goes on to point out that while the economic waste was incredible the trades sank to ever lower levels. Poverty was created among the broad masses, while the merchants and small entrepreneurs were impoverished into bankruptcy. Landowners and manufacturers, who were the hardest hit, lost interest in a system of economic slave control that took away the private inventiveness and enterprise of the human genius.

In the realm of agriculture the situation became so bad that the Emperor found it necessary to order the farmers and the farm laborers controlled by serfdom under state supervision. That this measure could only lead to a worsening of the agricultural situation is perfectly explainable by the well-known historical law, that soil tilled by slave labor never yields abundant fruits such as land cultivated by free farmers.

To meet this general extremity of national economics the Emperor, therefore, naturally turned to the device which is as common as it is artificial, namely, of exorbitant taxation. Taxes and surtaxes multiplied in a hopeless effort to fill an ever-empty treasury.

Thus ends the only total price-control system which the history of the Roman Empire records. Diocletian alone, of all the Roman emperors, was foolish enough to attempt it. If he had listened to the history of his Empire, he might have observed how earlier attempts of partial price fixing under emperors like Tiberius, Commodus, and Alexander Severus all had broken down. However, like many panic-stricken tyrants in the history of mankind, Diocletian apparently fancied that, if the price-control system only could be made totalitarian and foolproof, it would work where partial attempts have broken down. He lived to see the tragic mistake of his economic tyranny over a whole nation's life, since his experiment ended with such a complete failure that the edict had to be repealed as useless and unenforceable. Soon after the poverty-stricken and indignant people forced his abdication on May 1 A. D. 305.

The more serious lesson of this Roman price-control experiment is grasped, however, only if one realizes that its long-range effect on the Roman Empire was directly connected with the economic destruction of the greatest empire of ancient history. As the historian, Jules Toutain, has pointed out, the economic breakdown of the Roman Empire made it fall an easy prey to the attack of the barbarians who, a few generations later, poured in over the borders of the Empire south of the Danube and west of the Rhine. What had once been a proud and great nation had deteriorated into a mass of people which had lost both the productive initiative and the national self-esteem which make a people strong and healthy. One of the fundamental laws of national defense is that only a nation in which freedom has been preserved under law is able and willing to take up arms in defense of human rights and human dignity.

Upon the grave of the Roman Empire the well-known historian, Samuel Dill, of Oxford, has written the following epitaph, which we may do well to remember:

The system of bureaucratic despotism, elaborated finally by Diocletian and Constantine, produced a tragedy in the truest sense, such as history has seldom exhibited: In which, by an inexorable fate the claims of fancied omnipotence ended in humiliating paralysis of administration; in which determined effort to remedy social evils only aggravated them until they became unen-

durable; in which the best intentions of the central power were, generation after generation, mocked and defeated alike by irresistible laws of human nature and by hopeless perfidy and corruption in the servants of government.

It is not surprising that kings, who were notorious for their excessive egotism, should be found in the list of rulers bent upon price control. There is Philip IV, of France, who, in 1306, antedated Hitler's Jewish pogroms by six centuries, and who created a dire scarcity of wheat, bread, and clothing throughout his nation by his price-control system.

There are English kings, like Henry III and George II, who tampered with prices of grain and bread until Parliament rose up in indignation and repealed these royal price-control attempts.

There was Edward II, who, on an island like England, hit upon the ridiculous scheme of safeguarding production level on sea food by a control system which was inaugurated as a benefit for the people, but actually turned out to be such an impossible flop that all fish disappeared from the markets in the British Isles.

FRENCH CONTROLS FAILED

A complete survey of ancient, medieval, and modern price-control systems proves that they created scarcity instead of production and ill will instead of cooperation. One of the most illustrious and meaningful examples of this historical law we find as we turn to the history of the French Revolution.

When the leftists of that day—the Jacobins—decided to destroy French culture and French enterprise, they made use of the old tyrannical medium of a violent price control. Being experts in revolutionary technique, they chose to place iron control upon 39 necessities of life under the agency called committee of public safety.

The picture of what happened to the French revolutionary price-control system runs true to pattern.

As one historian, Andrew Dickson White, wrote in 1876:

The first result of the maximum was that every means was taken to evade the fixed price imposed, and the farmers brought in as little produce as they possibly could. This increased the scarcity, and the people of the large cities were put on an allowance. Tickets were issued authorizing the bearer to obtain at the official prices a certain amount of bread or sugar or soap or wood or coal to cover immediate necessities.

As another historian reports this era:

Prices were fixed. Any attempt to profiteer on necessities was made punishable by death. To break all opposition, the terror was established. The tribunal revolutionaire began sending scores of innocent people to the guillotine every day. Between March of 1793 and July of 1794 nearly 3,000 people were executed in Paris and about 15,000 in the provinces. At Nantes three or four thousand prisoners were thrust into old boats that were sunk in the middle of the river; at Lyon they were shot down in groups of as many as 200 at a time.

The Civil War of the Vendee began in 1793. Insurrection against the revolutionary government spread into Poitou, Anjou, and Brittany. Threat of famine compelled the rationing of food. There was much discontent on that account. The Hebert group

attempted to incite the famished people to an attack on the convention. Robespierre acted swiftly. Hebert and his chief lieutenants went to the guillotine. That was in March 1794.

Robespierre, then 35, became the uncontested master of the situation. From April to July 1794, his authority was unchallenged. He moved rapidly toward his goal of complete social equality. It was ordered that the confiscated properties of enemies of the Republic should be given to deserving patriots. Saint-Just was charged with this distribution, and was authorized to revise the code of social institutions in the interest of pure democracy * * * trial by jury was denied to those suspected of conspiracy and the tribunal was authorized to make condemnations without the hearing of witnesses. Heads began to fall faster than ever. It was the great terror. In 45 days there were 1,285 executions.

The great terror was an expression of Robespierre's impatience to realize his ideal state. He wished to destroy all opposition to the establishment of social and economic equality. But he had overreached himself. The razor of the Republic began to lose its popularity. The pitiless apostle of liberty, fraternity, and equality began to lose prestige. The word "tyrant" was murmured. * * * On July 28, 1794, Robespierre and his brother, Saint-Just, and 19 others were executed. That ended the terror, and it all but ended the Republic. Democracy followed autocracy to the guillotine. The death of Robespierre ended the dream of pure democracy and equality. No man dared to espouse the perilous cause that had brought death to its devotees. The Robespierre legislation in the interest of equality was either suppressed or ignored and, to the delight of the merchants, price control was abandoned.

All price fixers do not meet so violent an end as that of Robespierre but the wrath of the hungry and disillusioned people always descends upon them.

A sigh of relief and a new spirit of self-governed activities swept through France. The farmers plowed and planted, and during the month of July 1795 they could once again harvest their crops as free men after the disastrous and negative years of revolutionary price control. Liberty had conquered once more.

EARLY AMERICAN OPA'S

Coming now to the United States, we find the resistance to Government tampering with the laws of supply and demand greatest of all. A limited price control was attempted during the American Revolutionary War, but the alert and freedom-loving citizens, taught by experience, soon totally rejected this Government interference with the economic life of the States.

Led by Connecticut and Massachusetts, the New England States went in for regulating prices early in the Revolutionary War. This emergency measure was motivated quite as much by the fact that the continental currency lost its monetary value as by the self-evident fact that British blockade created a severe shortage of consumers' goods. The inevitable result was that the 1774 price level soon broke down, and as early as the spring of 1777 Connecticut, Rhode Island, and New Hampshire were forced to raise the level for maximum prices. In Rhode Island, however, the town of Providence objected strenuously. It di-

rected its representatives in the legislature to fight such measures, as they created scarcity and produced animosity.

In Connecticut, Governor Trumbull warned in a public statement:

If we affix a low price to provisions and articles of importation we shall find that the farmer will cease to till the ground for more than is necessary for his own subsistence, and the merchant will not risk his fortune on a small and precarious prospect of gain.

The good Governor was really advocating what later generations prefer to call controlled inflation, even though he must be excused for not knowing the modern devices of economic deception called farm subsidies and cost-plus contracts.

Soon the States, including New York, Pennsylvania, and New Jersey, began to labor under keen misgivings, however, that the price control as such was a deceptive technique. This discovery led to an interstate convention being called in New Haven in January 1778. The war was still raging and the longed-for victory for independence still did seem far away. In a stampede of economic panic, the delegates voted, therefore, to adopt a price advance of 75 percent above the 1774 price level.

What was meant to be a radical cure threatened to become a disaster, since a run-away inflation soon began to encompass the national economic life. The Continental Congress very quickly realized that it had to reverse its policy in order to avert sure economic doom. In its meeting of April 8, 1778, it declared, therefore, to the sorely tried war-torn Nation:

It hath been found by experience that limitation on the prices of commodities is not only ineffective for the purpose proposed, but likewise productive of very evil consequences to the great detriment of the public service and grievous oppression of individuals.

The courageous and wise pronouncement by the Continental Congress had a reassuring effect upon the States. In fact, so much so that price fixing was permitted to lapse for about a year. During this period, the American people discovered that price fixing could not serve as a safeguard against the heavy inflation which their just War of Independence gave them to carry as an additional price for freedom. They recognized this as an economic fact which proved that, measured in money values, they all were becoming poorer as together they were winning their freedom.

In 1779 the last brief attempt was made at price fixing as a remedy to control a deeply wounded war economy. On May 25, 1779, the town of Boston adopted a price schedule for 15 articles on a month-to-month basis. And in July of the same year, a State convention at Concord adopted a general price level, stipulating that violators were to have their names published in the newspapers as enemies of the country. The background for this threat against violators was, of course, the fact that the very outcome of the whole war hung in the balance.

Yet, even so, history records that penalties were rarely imposed. Indeed, the

laws were, for the most part, not enforced. They remained, as Prof. Allan Nevins has pointed out, on the statute books.

And as soon as the fortunes of war turned, the States rid themselves of the fruitless and scarcity-producing price-control system, which they had grasped in a moment of panic. It is to the undying glory of the men and women of the Revolutionary period that a whole year before Cornwallis surrendered at Yorktown, all the States had already repealed their price-control laws.

Such was the depth of their belief in freedom as a producer of goods and services. Price control in America was over—not again to be revived for 160 years.

They fought not merely for independence. They fought for freedom and learned right in the middle of war itself that freedom produces more food and clothing and shelter than controls can produce. They emancipated freedom from Europe and European controls.

During the postwar period, under the Articles of Confederation, our colonial ancestors lived in an era of high prices. The unsecured revolutionary currency was issued in such quantities that "not worth a continental" became a popular phrase. The monetary situation interfered seriously with trade and tended to foment discord, distrust, and disunity.

It was in this atmosphere that the Constitutional Convention met in 1787. It is worthy of note that no delegate to this convention seriously proposed that our Government should have the power to fix prices. Their generation had learned that Government price fixing would not work and so this power was not listed among those delegated powers which the people gave their Federal Government.

To exercise such power now is sheer usurpation. It was the adoption of our Constitution with its limitation on control that brought the new era of food and shelter. We need to remind ourselves that this era started right here in America. Our example spread around the world until the world rejected freedom for many forms of collectivism. With that has come again the ghastly prospects of starvation and famine. That has been the rule of life throughout history except where for brief periods of time freedom of the people has been maintained.

This has always existed whenever land has been used in common and regulated by some central authority. The planned economies of lords, kings, and dictators have always resulted in famine and want.

Freedom, which is synonymous with ample food and shelter, is the first great achievement of modern times. Under the Constitution, Americans were free to own their lands, work out their own plans, and enjoy the fruits of their labor without regulations by authority or oppressive taxation. With this freedom has come agricultural science and invention of machinery, increased supplies of food, intellectual advance, improved means of communication, steam, electricity, and all the wonders that only the imaginative and creative minds and

spirits of free men and women may comprehend for the future blessings of mankind.

Mr. Speaker, this debate has clarified one fundamental thing; namely, the fact that we are today witnessing the old, old fight between two contradictory political systems of government. On the one hand we have the advocates of government control over national life and national production. They willingly abandon freedom. To adopt price controls in peacetime would be clear proof that the European idea of government control and government domination and compulsion has moved permanently into the political philosophy and political life of this great Republic.

Those who do not believe that freedom will solve our economic problems should stop fooling themselves. They continue to talk about freedom, but they do not really believe in it. They give lip service to liberty, but the moment the test comes they call for continued and increased power for public officials.

Mr. Speaker, the test is here. Are we going to give our people, and the rest of the world true statesmanship, built on first principles.

I am reminded of the words of a free American from the debate on price regulations of February 14, 1777, in the Continental Congress, where Mr. Benjamin Rush stated:

The salvation of this continent depends upon the authority of this Congress being held as sacred as the cause of liberty itself. It becomes us, therefore, to be careful of the remains of our authority and character.

We know that what this Nation and other nations expect from the United States at this crucial moment in history is production and more production of vital foods and clothing and shelter for consumption at home and especially food for people abroad. Half of the starving are dependent upon us. The managed, controlled, and forced spirit of man will neither produce nor work nor fight nor make sacrifices necessary to rebuild a world civilization which was wrecked by an evil domination system which was built on absolute government control.

It is deplorable that 15 years of false indoctrination has dulled our sense of liberty, our passion for its products. Having won a complete victory over government-controlled systems in Germany and Japan, we too are in danger of continuing to follow the false philosophy of good coming from government interference, the Hegelian doctrine of the omnipotent state. It is Hegel who said:

A state is the divine idea as it exists on earth and we must therefore worship the state as a manifestation of the divine on earth. The state is the sole condition for the attainment of the particular end and good. The state must, in its constitution, permeate all situations.

The Members of this House are the representatives of a free people against these prophets of doom and gloom and their fundamental philosophy of life and Government so completely out of line with truth and fact. I agree that what is at stake is our entire economic future, only I believe that our future, as our glorious past, should be dedicated to free-

dom and faith and not to price control and fear.

We have corruption and we have black markets because we have man-made control instead of adherence to that fundamental law called the law of supply and demand. A natural law which is as inevitable and basic as the law of gravity cannot be set aside by any law even of Congress. Freemen meeting in a free market doing their free selling and buying proves to be far more honest in the long run than people who have Government officials looking over their shoulders every time they turn or every time they finish a product. Freedom is more honest than Government and so much more productive.

Everything that is happening now points to the fact that if we now continue to substitute expediency for faith in freedom we are on the road to weakening more and more the central idea upon which the Republic was founded. We are on the way to corruption and disintegration. To guarantee that this catastrophe shall not happen to the last bastion of free enterprise or free economy in the whole world we must keep free from price controls and hold fast to our free economy.

If we cannot read history so well or act so courageously as our forefathers in dealing with price controls, we can imitate them. Let us take a leap of faith in freedom if we would have food, clothing, shelter, and the good life.

Reserve Report

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the New Orleans States, issue of July 17, 1951:

Representative OVERTON BROOKS' subcommittee of the House Armed Services Committee reports the sort of confusion, injustice, waste, and stupidity in the reinduction of reservists that is old stuff to all who read the newspapers or are in conversational contact with men in the service.

The origins of this unhappy mess are to be found, we think, in the legislation enacted by Congress. The draft law itself lays down some of the broad requirements for military service and stipulates who shall be liable to induction. Then the President of the United States supplements the law with some directives specifying who may be inducted and who may be excused for one reason or another. Finally, the National Director of the Draft, General Hershey, adds some directives and regulations, which leaves the local draft boards with bundles of confusing instructions.

The draft boards are required to meet their quotas, and in numerous instances they are subject to the influences of politicians and kin and employers, so they excuse some from serving and induct some who have legitimate reason to be excused.

All of these enormities grow out of the fact that Congress never had the courage to

write a universal training and service statute that would exempt no one, not even the IV-F qualified for limited service. The injustices of which Representative Brooks speaks will all be eliminated when universal military training is adopted, and in all probability not before.

MacArthur a Candidate

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial from the Mountaineer, Ripley, W. Va., of June 29, 1951:

OUR GUESS WAS, AND IS YET, MACARTHUR IS A CANDIDATE

Have you lost the weebegone look in your eyes when you learned that General MacArthur had been relieved of his command in Korea? Are you one of those that let out those woeful moans and felt like all things had come to an end? Were you one of those who thought all was lost in Korea because MacArthur had been dismissed?

How has the war progressed since in your estimation the only man that had brains enough to run it, General MacArthur, was relieved of his command and a subordinate officer, General Ridgway, took command? Are you aware of the fact that victory has crowned almost every day's fighting since MacArthur lost command and General Ridgway took command? The foregoing was not written to take any glory from MacArthur, it was written to show you how wrong you were. Possibly if MacArthur had stayed in command he may have done as well, but it is most certain he would not have done better. At least, he had not up to this time done near as well.

Do you remember we told you in the first issue of the Mountaineer after MacArthur's dismissal that he would be a candidate for President, and all the hullabaloo raised about his dismissal was for political purposes. You may have thought we were wrong, we could have been wrong, and could even yet be wrong when we tell you that MacArthur is a candidate for President. If we are wrong, the four speeches he made in Texas were misdirected. General MacArthur hardly mentioned the war in Korea and he attacked domestic matters all together. All four speeches were purely political.

Do you remember another thing that we told you, that the Republican leaders in making a campaign issue of MacArthur would be riding a dead horse. We also told you that the MacArthur shows were all out of proportion and that they would dwindle and dwindle fast. His invasion of Texas was the best proof that his popularity could not last. In the four speeches he made in Texas he never had more than a fourth to a third of a crowd expected and advertised for.

Yes, MacArthur is a great man, truly a great man. He wanted to carry the war into China and the Joint Chiefs of Staff did not think it was best to invade China at that time. Finally this difference went so far that the President had to dismiss General MacArthur. The General's dismissal was not to take anything from him, it was done to carry on the Korean war the way the Joint Chiefs of Staff thought best.

Whether the war should have been carried into China (Manchuria) at that time no one knows. It may never be known whose judgment was best. To have carried the war into China may have brought Russia into the war at once. That is another thing no one knows. The Chiefs of Staff said no, we will not attack Russia at this time, and MacArthur said his hands were tied if he was not allowed to carry the war into China (Manchuria). MacArthur said he didn't think Russia would attack us. Who knows?

You who think MacArthur was right, don't complain that we are having to fight in Korea, for if we carried the war into China it would be a far, far greater job. It would take every soldier boy we have on that eastern front. You most certainly know that the East isn't the only place we have to have boys, ships, planes, and guns.

President Truman was put on the spot. He had to dismiss MacArthur or carry the war into China. The President's Chief of Staff advised that to carry the war into China was at that time an unnecessary risk. The President had to act.

There is no doubt but what MacArthur was sincere, and we will never know whether he or the Chief of Staff was right.

The sad part for MacArthur wasn't his dismissal. His dismissal made a great hero of him. The sad part of it was the Republican Members of the Senate and party leaders about Washington attempted to capitalize on his dismissal, and, as we told you in the first issue of the Mountaineer following his dismissal, MacArthur would end up the goat. Isn't it evident to you now, you, who abused the President for what he did, that MacArthur would have been much better off if the Republicans had not attempted to use him for campaign bait.

Regardless of how the war ends in Korea the MacArthur affair should never have been made a campaign issue. It is very evident now, to most any kind of observer, that the Hoovers and Tafts erred seriously when they backed MacArthur solely for political reasons.

The Korean war was the Republicans' No. 1 vote getter for 1952. But when the party backed MacArthur and advocated making war on China at the very great risk of starting world war III, they lost their No. 1 campaign complaint. Mr. TAFT, the chairman of the fault-finding committee, sure has erred in this one.

The investigation of President Truman's dismissing of MacArthur has flopped. This investigation was demanded by Senator TAFT and his colleagues. Why did they want the investigation? Was it that they were in sympathy with MacArthur? Not at all. General MacArthur and TAFT are not personal friends. It was for discredit to the President. Now, you realize that nothing has come from the investigation except to strengthen the President's position by 100 percent.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I would like to call attention to articles in the May and June issues of the Hoosier Farmer. They are thoughtful articles concerning the St. Lawrence seaway. One is written by Hassil E. Schenck, president of the Indiana Farm Bureau, Inc.

The articles follow:

[From the Hoosier Farmer for May 1951]

FARM BUREAU FAVORS ST. LAWRENCE SEAWAY NOW

(By Hassil E. Schenck, president, Indiana Farm Bureau, Inc.)

For many years the American Farm Bureau Federation has been on record by resolution favoring the St. Lawrence seaway project. This project is designed to provide water transportation for most seagoing vessels into all the Great Lakes area. While being on record favoring this over a long period of years, up to now it has been given only passive support.

In the January meeting of the American Farm Bureau Board it was decided that in the light of recent developments, that considerable attention should now be given to the promotion of this project.

The Mesabi mines have furnished a great portion of the ore which has made possible the great iron and steel cities of the Great Lakes area. This supply is rapidly being exhausted. The new source of supply (and it is a source which will last for many, many decades) is the Labrador area. The most logical and lowest-cost method of getting this ore to our great iron and steel centers is by way of the proposed St. Lawrence project.

I doubt if this will very greatly affect the railroads of the country, because if we should allow our iron and steel centers to depreciate, many railroads now serving them would of necessity depreciate along with them. It is true, it would adversely affect some of our eastern seaboard, such as Boston, New York, and Baltimore, but a seaboard should be the means to an end in rendering service to the people and the economy of a country, not the end itself.

ELECTRICITY IS SHORT

A considerable shortage of electric power is reported in the Northeast which makes absolutely necessary the erection of a plant to supply additional low-cost energy and this needs to be taken into consideration. I am not advocating Government-owned power plants, but would advocate that private corporations be given first options on such power plants, if, and when established.

If there are other more economical methods than the hydroelectric process, then, of course, the most economical method should be used.

Another factor in which the farmers of the great Middle West are vitally interested, is that of getting their exportable farm produced commodities to the ocean and also in getting imported commodities needed in the Midwest here at the lowest possible cost. The farmers of Indiana and other States in the great Midwest (the breakbasket of the world) would stand to benefit very materially by lower costs on incoming and outgoing traffic.

Canada is vitally interested in this project and according to authentic reports, is not only ready and willing to join in the construction of the St. Lawrence seaway project, but if we are not ready to cooperate, their interest is so great that they are contemplating the project alone. Should this happen, it would put United States shipping in a position where it would have to pay toll on all incoming and outgoing traffic, with all revenues going to the Canadian Government.

A GRAVE MISTAKE

It would seem a grave mistake, when the United States would have far greater use, because of her greater population and production, than would Canada, that the United States Government should not have her proportionate share of these tolls.

The arguments being used against the St. Lawrence project are little different from those advanced against the Erie Canal and the Panama Canal, both of which are wholly

United States owned. One of the big objections is that the expenditure would not be economically justifiable. Both the aforementioned projects have not only proved economically sound, but are commonly acknowledged as very essential to our present-day transportation procedures. As we look to the future, it might well prove a great asset in our mobilization plans and at the same time greatly strengthen our national defense.

FARMERS ARE INTERESTED

Farm Bureau is not acting blindly on this, but only after the most careful studies and consideration. The farmers in Indiana may well take their time and effort to contact their Congressmen and Senators, informing them of their interest in the St. Lawrence seaway project.

[From the Hoosier Farmer of June 1951]

ST. LAWRENCE SEAWAY WILL SAVE UNITED STATES MONEY

"It is likely that Government spending will be increased rather than reduced if the St. Lawrence project is not constructed," declared the Great Lakes-St. Lawrence Association in a study entitled "The St. Lawrence Seaway and Power Project and National Security," issued recently.

The report, prepared under the direction of Dr. N. R. Daniellian, executive vice president of the Great Lakes-St. Lawrence Association, formerly a member of the economics faculty of Harvard University, states that the seaway will provide a submarine-free route for the transportation of much-needed Labrador ore to Great Lakes steel centers.

WILL SAVE MONEY

Pointing out that United States taxpayers will pay higher prices for steel, bread grains, and ships if the St. Lawrence seaway is not built, the report declared, "We cannot afford not to construct it."

St. Lawrence resolutions are in committees in both House and Senate. The seaway has been urged for national security by Defense Mobilizer Charles E. Wilson, Secretary of Defense George C. Marshall, the Joint Chiefs of Staff, and chairman of the Munitions Board, John D. Small.

Without the seaway, the Daniellian report states, steel costs will rise because of higher transportation expense for bringing iron ore to steel mills. Also, lacking the cheap seaway water route, the Government will pay from 5 to 10 cents more on every bushel of agricultural produce transported from the Midwest to overseas destinations.

The report points to the experience of the last war, when shipbuilding costs were unnecessarily high because there was no direct access from the Great Lakes to the ocean. Obstructions in the St. Lawrence River, to be removed by pending legislation, made it necessary to float ships on pontoons from the Great Lakes down the Mississippi River to tidewater.

Mobilization goal for steel production, 130,000,000 tons of annual capacity by 1960, will require 158 million tons of iron ore. The necessity of importing 40 to 50 million tons of this ore has put the spotlight on the Labrador reserves, now being developed.

"If the St. Lawrence proper is not constructed, alternative power and transportation facilities will have to be provided to meet increased power and transportation shortages," the report states. "Much more steel and manpower will be required to provide the alternate facilities—ore boats, loading and unloading facilities, additional rail facilities, and steam electric plants—than will be needed to construct the St. Lawrence seaway and power project."

The report concedes that all defense spending is inflationary, whether under-

taken as private or public projects, but points out that the effect of the St. Lawrence project will be less inflationary than other means of solving current shortages. The cost to the United States, \$566,000,000, of which \$192,000,000 is for power to be paid by New York State, and \$374,000,000 is for navigation—is expected to be repaid in 50 years by income from navigation tolls and power revenues.

Price and Wage Controls

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. HOWELL. Mr. Speaker, in presenting the following statement by the American Association of Independent Industries, I want to commend their sound and statesmanlike contribution to public thinking at the time that we are attempting to legislate effectively on the important problems of price and wage controls and taxation.

The association's views on these subjects are in refreshing contrast to the narrow self interest views of many other business and farm groups who are presently attempting to have controls abolished or weakened to a point where they may become a mockery.

Truly workable and effective controls are essential to preserve our economy, and the enactment of a Federal sales tax would be a serious blow to the working man and to business in general.

STATEMENT BY ED STEVENS, DAWSON, GA., PRESIDENT OF AMERICAN ASSOCIATION OF INDEPENDENT INDUSTRIES, ON CONTROLS AND TAXES

The American Association of Independent Industries is one business group which recognizes that you can't control inflation without controls. Large business and banking interests in this country cry "havoc" about inflation and then pressure Congress to avoid passing anti-inflationary legislation.

The association I head believes such shenanigans are dangerous for the American people and equally dangerous for American business.

You simply can't lick inflation by encouraging runaway prices. Runaway prices are bound to occur without controls where needed commodities are in scarce supply.

By controls I mean commodity and wage controls. You can't have one without the other. With around fifty-eight billions to be spent on defense the coming fiscal year, inflation will strike like 100 A-bombs unless we prepare an adequate defense against it.

The American Association of Independent Industries, comprising several hundred small manufacturers and businessmen from approximately 20 States also wishes to go on record against a sales tax in any form. Such a tax is cruel because it hits those least able to pay. Big business and financial groups trying to put over a vicious sales tax will reap the whirlwind of contempt from the American public if such a tax is foisted upon the people. Like Samson in Biblical times American business may bring the Temple down on its head. American business cannot afford to sow the seeds of ill will

which a sales tax in any form would certainly provoke.

The businessmen in my association are neither short-sighted nor greedy. The vast majority of American businessmen are just like our Members. But some of their spokesmen are men who never learn. These alleged business leaders are the best friends communism has in our country. But they are so feather-brained, they don't realize it.

Crime in America: Its Effect on Foreign Relations

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Crime in America: Its Effect on Foreign Relations, which I delivered at Columbia University on July 10, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The title of my talk tonight, "Crime in America: Its Effect on Foreign Relations," may seem a bit far-fetched to some, but it is not.

History has placed the United States in a position of world leadership. We did not seek this place, but we cannot foreswear it.

In the nineteenth century Britain occupied such a place in history and imposed upon the world the Pax Britannica, largely through her mastery of the seas. In the late pagan and early Christian world Rome occupied a similar place and imposed a Pax Romana, principally due to her power at arms.

Today we seek peace, but we know that it will not be a Pax Americana, in the sense that there was a Pax Britannica or a Pax Romana, because no one nation today possesses the strength at sea or at arms to enforce peace on the rest of the world.

The Pax Americana, if there is to be one, and God knows there must be if life as we know it is to survive, must come principally from a moral and ethical leadership of the community of nations. The United States, as the richest and most powerful nation in the world today, must supply that leadership. The free world looks to us to do so. There is no other to take our place.

Viewed in this light, it is easy to see that almost everything we say, almost everything we do—indeed, almost everything we think—has its reflection on the delicate scales of international affairs. Take so obscure a thing as the Naval Observatory in Washington, for example. The clocks of the Nation are set by this federally operated observatory. When World War II dramatized the awful necessity for global thinking, we learned that problems as local as commuter-train timetables had to be considered with a view to keeping tracks clear for supplies destined for battlefields around the world. And the commuter-engineer's watch, adjusted to observatory time, took on an international significance. Even congressional enactments affecting the size of or the price to be paid for our agricultural production assumes importance to people overseas.

Thus it is with domestic crime in the United States. It, too, is tossed upon the scales.

As the leading nation in the community of nations, it seems to me that we have two major problems to solve. One of these concerns the working out of our own foreign relations. The other concerns the necessity of keeping ourselves vital and clean within—an example for other nations to follow. Let us tonight consider the second of these major problems, first, because the successful solution of our foreign affairs depends first upon a healthy vigorous nation at home. History has shown us that nations as great in their time as we in ours, have fallen in the hour of their greatest prosperity from corruption within. Rome was one of these. And, in more modern times, France discovered that corruption at home was more dangerous than the Germans on the other side of the Maginot line.

In my opinion we cannot overemphasize the necessity for healthy public morals at the basic unit of government, and of politics, in the United States—the locality. Our Federal Government is a collection of the morals and the politics of the thousands of localities throughout the Nation. The ordinary course of a man up the political ladder in the United States is by successive steps from the locality. Ordinarily, he takes an interest in his county or ward or city election, perhaps seeks office there, and then may or may not proceed to the State or national level of office and politics.

In the locality, however, the moral tone of his later service—as Governor, Senator, Ambassador, or President—has usually been set.

If the community is one in which the racketeer is the man to see when it comes time to elect an alderman, judge, or mayor, then we are fortunate if in later service this man arises above the moral tone of his beginning. There really is no great distinction between the traffic ticket fixer and the fixer on any level of government, domestic or international.

Similarly, it is the sum total of the economic well-being of our communities that make for a United States with a healthy economy. The racketeer and the gambler are parasites on the community and the Nation. They perform no useful service; they produce nothing. We found, during the course of our investigation, that these parasites drain from our people billions of dollars a year, which otherwise might be diverted into useful enterprises—which, instead of producing cases for the relief rolls, would produce substantial citizens, working each day as part of a great team, to keep this a substantial country.

Then, too, some criminal gangsters and unethical people had wormed their way into government at all levels. This was and still is sapping some of the vitality and strength from our democratic processes. It has caused some loss of confidence and even in some places disrespect of a few public officials.

Another point that I want to make as to the effect of crime on our foreign relations is one which concerns world opinion. Not everyone in the world knows us as well as we know ourselves. Actually we are a people of great good will. The national predilection for the under dog hasn't changed. The parasites are few—the Nation as a whole is a nation of hard workers—a heritage which we acquired from our forefathers who had to work hard in order to carve a nation out of a wilderness. We are gregarious—known as a nation of joiners.

In other words, all in all, we're not hard people to know. The great majority of the

people of the United States, of the Members of Congress, and of the executive branch of the Government, fit into this picture. Our investigation showed that to be true. For every crooked politician there were 100 public servants, working quietly and efficiently at their job for the benefit of their people.

But the smudge on the picture comes from this 1 out of 100—from this small minority who are the criminal element, who get into politics, who hand-pick public officials, who manipulate deals, who run gambling establishments, who kidnap and murder.

Those stories go over the wires from America—and our enemies abroad are quick to pick them up and magnify them. This, they may say, is the typical America—this is the gangster ridden, Wall Street dominated, war-mongering America.

Nothing, of course, but be a greater lie. In fact, the disclosure of our crime committee should serve to ennoble America in the eyes of the democracies of the world, and also in the eyes of the peoples behind the iron curtain if they can get the story of what we did.

For our crime committee is showing just how vital America is by doing this job. It was an example of a branch of the Government in a democracy responding to the people's will in seeking out and exposing conditions in politics, in Government, and in the communities which should have been sought out and exposed. I say that we responded to the people's will in doing so because before we undertook this investigation many fine and fearless public officials, editors, and citizens' groups had undertaken similar investigations on their own in their own communities. They were led to the conclusion that there were interstate aspects to this situation that they couldn't tackle on a local level and that is when we stepped in. I have evidence in the form of thousands of letters and hundreds of scribbled notes from telephone conversations that in doing so we were following the will of the people.

Our job is to bring home the facts and bolster them by exposing the present and potential dangers in organized crime. Woodrow Wilson was right in stating that the American people can successfully cope with any evil if they know the facts. It was necessary to give accurate accounts of these facts by every means at our disposal: Senate reports, press reports, radio, and television. And, hoping that it may be of some assistance, I have written a book setting forth the story as it unfolded before my eyes.

The people are now vigorously and with continuing determination following through with further exposures, revised laws, increased interest in law enforcement and in Government generally. America is becoming a cleaner country and is thereby increasing its economic and spiritual strength. This is indeed a demonstration of the intelligence and courage of a free people.

The recent MacArthur hearings by the Senate Armed Services and Foreign Relations Committees strengthened our unity here at home and those abroad, who think, must know that it was a great lesson in the value of self-government. Consider this paragraph of the unanimous report of the two committees:

"To these critics of our form of government who contend that public discussion of such matters creates dissent and breeds confusion, we have a simple answer. Those who are still privileged to breathe the air of freedom utilize such discussion as a means to temper the steel of national determination and unity."

The work of the Senate Crime Committee of State and local commissions followed up by necessary legislative and law enforcement reforms is democracy at its vital best—democracy that periodically cleanses and purifies and rebuilds itself—as does the great Mississippi River which flows by a section of my home State.

This part of the story of crime in America deserves to be on the positive side of these delicate scales of international affairs, which, as I said earlier, everything we do in the United States affects one way or the other.

As the leading nation in the world today, it is not enough for us to control the domestic criminal at home, which we hope to do especially now that his existence has been high lighted, but we must take the leadership in controlling the international gangster who is abroad in the world.

The international gangster is not too different from his domestic counterpart. There is a parallel between the code of the domestic criminal and the social philosophy of the totalitarian state. Both are predatory. Both have the same insolent disregard for man's freedom and independence.

I am convinced that to survive effectively, domestic crime and corruption must grow in power and greed. Either the civilized elements of society collapse under their drain of plunder, or these same civilized elements refuse to be plundered and rid themselves of their parasites.

Totalitarian nations must also expand to keep pace with internal pressures. An ever-increasing police force is necessary in such nations to keep the home front productive and in subjection. We see these states bursting their borders out of sheer necessity to gobble up provisions for their unproductive watchdogs. But they never have enough. The annexed nations also soon have need of expensive watchdogs to keep them producing. And so it goes.

The preparatory type of nation has caused us a great deal of trouble in the twentieth century, but at no time has it been successful in the final analysis. We have seen several predatory nations fall. Unfortunately, it took the arms and the blood of ourselves and our allies to accomplish their fall. Our foreign policy now should be directed at keeping such nations within their own borders—where, I believe, if such a policy is successful, they eventually will fall of their own weight, or their leaders will be forced to make changes in the social structure in keeping with the ideals of more enlightened society to prevent their falling. Our answer must be in a positive foreign policy that is based firmly upon the American heritage of good will, of respect for the underdog, and for the individual liberty and dignity of man.

When we consider wheat for a hungry India, we must not allow ourselves to be heckled into attaching strings that smack of a political deal with a starving man. That's a little too much like the gutter type of ward politics I discussed at the beginning of the evening—when we give a hungry man a bowl of soup in return for his vote. It gives some basis to our enemies' claims.

We must not allow our own prejudices—and we do have some—to extend to political feuding with our allies. I am thinking particularly of our great and good friend Britain. It seems to me that many of us in the United States have been rather petty and mean in our criticism of Britain. This has extended beyond the international field into criticism of internal affairs in the British Isles. Britain today is a Socialist State—but it is a state that completely recognizes the freedom of man—and it seems to me

that is where our legitimate interest in British internal affairs ends. We are not socialist—we do not intend to be—but as long as Britain respects the freedom of man, and I think that shall be as long as there is a Britain, then I think it is not for us to say "Tsk, tsk—how horrible are the British with their socialized medicine and their socialized economy." That's none of our business.

We are prone to forget that among our allies today are proud nations—and justly so. We are inclined to lay down a policy and say: "This is it." Then we act like an abused rich uncle if every one of them doesn't step right up and agree. They shouldn't be expected to agree immediately. A conference table isn't built that way. If we give in a point, our critics at home are inclined to scream that "America is always giving in to Britain or France." "It's time," they say, "to stand up for America." Thus they again insult our allies. But you rarely hear them say, as in the case of Japan, that Britain and France have given way to the American viewpoint.

Negotiation on the Japanese peace treaties has done a great deal to strengthen the ties between the United States, Britain and France, but at one stage of the proceedings it was feared that this issue might lead to a serious breach.

The French were at first opposed to making any peace treaty with Japan for fear it would antagonize Russia. The French were told that no precedent for the treaty with Germany would be set by the treaty with Japan. If France didn't wish to go along on the Japanese treaty, the United States would break with France on this issue. France decided to come along.

Then the British, fearing Japanese trade rivalry, wanted Japan kept economically weak. It was pointed out to the British that Japan was the great Far Eastern bulwark of democracy and that the United States had poured \$2,000,000,000 into Japan to keep the country from going Communist. It was pointed out that Japan, an island not unlike Britain, had to build up strong trade in order to live. And the British were convinced that cooperation rather than rivalry would be better in insuring future peace in the Far East.

This Japanese peace treaty should now be given No. 1 priority by the United States. It should be a fair and liberty treaty. In Japan we have the most westernized nation in the Far East, one that has developed the techniques of industrialization of the west, one that has quick potential for joining the free nations of the west as a bulwark of democracy.

My own criticism of our foreign policy to date has been that it was in many cases too negative. For a long time now, it has seemed to me, we have based our foreign policy to much on what Russia might or might not do. Just as we in the United States do not gage our domestic policies on the whims of the racketeers, so we should not gage our foreign policy on the whims of a Stalin.

We have become the leader of the world—not through choice but through history. President Truman and the State Department, with the backing of both parties in Congress, are pressing in the right direction and have made very substantial headway.

In America the decent people do band together, not only to make war on the criminal but to set the policies which prevent the criminal from becoming sufficiently obnoxious to require that war be made on him.

The analogy applies to the international field. Law and order, justly administered and backed by an enlightened public interest can defeat the domestic criminal on the home front. A body of international law,

vigorously and intelligently enforced by all freedom-loving nations, might well prove the downfall of totalitarian ambitions for all times. Within the family of nations there now exists enough free societies to outweigh the aggressors if they would but use their power of justice and intelligence. And if we trust our own mature weapons of justice and intelligence, and use them as forcefully as the aggressors use their primitive weapons of armed might.

What should such a body of law encompass? And how should it be enforced? The answers to both these are already astir in the hearts of millions who will not settle for less than their faith in that ideal society. This vision has already expressed itself in noble experiments here and there.

Enough such experiments towards a body of civilized international law have been tested to give us vision and conviction to proceed.

We have in the U. N. seen representatives of the family of nations sit down at conference tables and thrash out their problems. We have seen the power of world opinion force would-be aggressors to sit down and submit themselves to these conferences.

We have seen authoritarian states submit to the majority will of nations. When the General Assembly voted down the veto of the Soviet Union, and thwarted Russia remained within the United Nations, it was an historic day in the progress of mankind. Twenty years ago Germany and Japan walked out of the League of Nations when thwarted. Today the power of world opinion has become so strong that even the toughest aggressor thinks twice before flouting it. And before this world opinion we, the free and progressive nations, have everything to gain. The strong-arm men of jungle force have everything to lose.

We have seen the beginnings of a World Court of Justice. We have seen individual aggressors tried, convicted, and executed for their crimes against the family of nations. The simple clauses of international law behind the Nuremberg trials can be the beginnings of a body of law which will one day be most helpful in freeing us from the threat of renegade aggressors.

Recently we have seen one man successfully crusade for an international treaty against brute aggression. Dr. Lemkin, of the law school of Yale University, has persisted against terrific odds to get his genocide treaty ratified by the United Nations. Briefly, genocide—race murder—means killing or inflicting bodily harm or hardship to weaken the physical strength of any group. And the treaty provides punishment for such crimes against humanity. Broadly interpreted, this treaty outlaws the brutal stock in trade of every aggressor group or nation. The humanitarian power of world opinion was so skillfully used that even Soviet Russia dared not oppose the treaty, and voted with the rest of us for its ratification.

This treaty is so well constructed that it passed all arguments before the New York Bar Association. It was recommended in a resolution by that body for ratification by the United States Congress.

It is up to us to see that this convention is ratified by our Congress. For by our example others may be encouraged to give this humanitarian treaty reality.

We have made much headway through the U. N., the Atlantic Pact, and the proposed Pacific treaty offers great hope. Little by little, the nations whose people believe in freedom, but who are strong enough to repel aggression if necessary, are getting together, becoming more closely united. Let's hope that unity by law for our mutual pro-

tection can come faster. Good neighbors, when menaced by gangsters, meet, agree on laws for protecting themselves from the lawless elements. It's time we took further steps to do this in the free international neighborhood. To lead and show the way in this direction is America's greatest challenge.

Death of Admiral Forrest P. Sherman

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial on the death of Admiral Sherman published in today's Evening Star.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

ADMIRAL FORREST P. SHERMAN

When Admiral Sherman was asked the inevitable question about the state of the Navy, during his testimony in the MacArthur hearings, he replied that the Navy was stronger in ships and men and morale than at any time since the peak of its power in World War II.

He said it then with confident pride of a good Navy man. But he could also have said it with justified pride in a personal accomplishment. More than any other one man he could have claimed credit for a remarkable transformation within the Navy under his command as Chief of Naval Operations.

Admiral Sherman was brought back to Washington from his command of the naval forces in the Mediterranean, late in 1949, to become the youngest Chief of Naval Operations in the history of the Navy. No man could have been summoned to take a tougher job. Navy morale was pretty well shot. The popular Admiral Louis Denfeld, regarded within the service as the Navy's champion in its losing fight under unification and economy, had just been relieved. There was incipient revolt in the Navy's high command, out of tune with the administration, out of tune with the Secretary of the Navy, and feuding with the other services.

Although he had risen in the Navy by his own superior abilities and a gallant war record, Admiral Sherman was not well known to the public. His part in drawing up the finally approved plan for unification of the services had not made him particularly popular with his brother Navy officers. But from the beginning of his services as Chief of Naval Operations, the Navy began to regain its lost ground. He brought an extraordinary high type of leadership to the top. His sagacity—recognized by his classmates at Annapolis in 1917 in the The Lucky Bag observation that "He is our most convincing argument that 'brains is king'"—and a pleasing personality, coupled with conscientious devotion to duty, won the respect of colleagues in the other services and his political superiors. He was the most frequently mentioned successor to General Bradley as Chairman of the Joint Chiefs. There are few men in Washington who have risen, in the short space of less than 2 years, to the high position he had come to occupy as one of the Nation's chief military-policy makers.

Admiral Sherman had started on the delicate mission which took him to Europe within 10 days of his return from another visit to Korea. When he left Washington he was tired. He had sought, by rigid self-discipline, to save his strength to meet the demands of exacting and never-ending responsibility. His death at 54 comes as another warning of the price we pay these days for loading good men down with heavier tasks than the strongest of them can carry. His death is a grievous loss to the Navy and to the country he served with such distinguished dedication of his fine ability.

Rewriting the Constitution

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rewriting the Constitution," published in the Bismarck (N. D.) Tribune of July 13, 1951. I invite particular attention to the fact that Representative USHER L. BURDICK, of North Dakota, who is quoted in the editorial, has an outstanding record as a Member of the Legislature of North Dakota, as speaker of the house, and as lieutenant governor. He is one of the outstanding citizens of the State, and a man peculiarly versed in legal and State matters.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REWRITING THE CONSTITUTION

Congressman USHER L. BURDICK, of North Dakota, is much concerned, and properly so, over the apparent authority which the Charter of the United Nations holds over even the Constitution of the United States.

The Congressman is not alone in his concern. Through the country there is a growing demand that safeguards be established to protect the Constitution from being superseded or rewritten by United Nations documents.

The concern stems in part from a decision handed down about a year ago by the California court of appeals, and containing what have been termed the "12 most ominous words of legal meaning" uttered in our time.

CHARTER IS NOW SUPREME

In holding that the California alien land law is nullified because it is in conflict with an international treaty, the court said unanimously:

"The United Nations Charter has become the supreme law of the land."

To students of government, this was tantamount to saying that the Constitution already has been superseded by the United Nations Charter.

The reason why this is true is simple. The Constitution itself states that treaties made by the President, and approved by the Senate, shall be the supreme law of the land. The United States subscribed in a constitutional manner to the United Nations Charter, as a treaty. Therefore, the Charter now is the supreme law of the land.

Moreover, any of the covenants or conventions sponsored by the United Nations

have the standing of treaties and become the supreme law of the land once ratified by a two-thirds vote of the United States Senate.

Thus it has happened that a law passed by Congress and held unconstitutional by the United States Supreme Court has later been upheld by the Supreme Court after a treaty covering the subject had been ratified by the Senate.

Persons who feel deeply about the importance of preserving the Constitution point to this as proof of a dangerous anomaly: The Constitution can be used to negate itself and to, in a measure, deprive the people of the United States of the very guarantees of individual liberty that the Constitution was intended to preserve.

There are several examples of how this can work

One is in the international covenant of human rights, which some scholars feel would supersede our own Bill of Rights. Our own Bill of Rights states that "Congress shall make no law respecting an establishment of religion, or prohibiting free exercise thereof; or abridging the freedom of speech or of the press; or the right of people peaceably to assemble." Thus the Bill of Rights makes these three freedoms untouchable.

But the international covenant says: "Freedom to manifest one's religion or beliefs shall be subject only to such limitations as are pursuant to law and are reasonable and necessary. * * *

If the covenant were ratified, on the ground that the purpose was to implement a treaty, the Supreme Court might say that Congress could pass laws about religion, free speech, and free assembly.

CAN IT BE USED TO RESTRICT?

Another example is in the North Atlantic Treaty, ratified in 1949. The Constitution says that only Congress can declare war. The treaty says that we must regard an attack upon any one of the other signatory nations as an attack upon ourselves. This means that the moment one of those other nations is attacked, we are at war whether we want to be or not and without a declaration of war by Congress.

Still another example is in the genocide convention, which has gone into effect without the adherence of the United States. The convention outlaws mass murder, which is a purpose with which all persons will agree. It also defines genocide as "causing serious * * * mental harm to members of" a "national, ethnical, racial, or religious group." BURDICK interprets this as a prohibition against "hurting the feelings of anyone belonging to any sect, nationality, or religion." He feels that it can be used to destroy free speech and free press in the United States.

The North Dakota Congressman has proposed a constitutional amendment which provides that a two-thirds vote of the entire Congress, instead of just the Senate, must be had to ratify a treaty.

It also has been proposed that the Constitution be amended to eliminate the provision that a treaty is a "supreme law of the land." The effect of this would be to make treaties effective only insofar as they do not conflict with the Constitution.

Americans were among the most idealistic supporters of the United Nations and have been among the most idealistic advocates of United Nations covenants and conventions intended to implement the Charter. They want to give this attempt to create greater harmony and justice among the family of nations every chance to work.

At the same time they treasure their Constitution as the final guardian of their individual liberties. They would not knowingly

stand still while the Constitution and the safeguards it contains were whittled away by a series of international agreements about which they know little and have scant opportunity to debate.

Certainly the framers of the Constitution did not intend, when they wrote the phrase that makes treaties the supreme law of the land, that such treaties were to take priority over the Constitution itself.

The question is a difficult one, but one which deserves consideration by all thinking citizens and certainly by Congress. There is no more sacred human document in this land than our Constitution. Any question, however slight, as to its preservation, should not be lightly dismissed.

Gross Rent in Relation to Income for Non-Farm-Dwelling Units

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEPARTMENT OF COMMERCE,

BUREAU OF THE CENSUS,

Washington, July 20, 1951.

HON. SIDNEY R. YATES,
House of Representatives,
Washington, D. C.

MY DEAR MR. YATES: In accordance with your request of July 10, 1951, I am enclosing data on gross rent in relation to income for non-farm-dwelling units in the United States. Separate figures are shown for one-person households, for dwelling units constructed after 1945, and for those constructed before 1945.

The data are based on a preliminary sample of dwelling units enumerated in the 1950 census of housing. Because they are based on a sample, they are subject to sampling variability and may differ from the results which would be obtained from a complete tabulation.

Tables 1 and 5 contain summary distributions of the renter-occupied dwelling units to permit an evaluation of the units for which the percentage of gross rent to income was computed. No computations were made for families and individuals occupying their quarters rent-free, those having incomes of less than \$100 during 1949, those with incomes of \$10,000 or more, and those for whom income or rent was not reported. If the income was over \$10,000, the specific amount was not reported in the enumeration. Tables 2, 3, 6, and 7 are based on those units which reported a rental amount of \$1 or more and an income of \$100 to \$9,999.

The median of 56 percent shown in table 3 for total families and individuals with incomes from \$100 to \$999 is slightly smaller than the corresponding median of 59 percent provided to Senator SPARKMAN several weeks ago. The 56-percent figure is based on a more detailed tabulation which enabled us to calculate a more refined median.

The enclosed data have not been published by the Bureau of the Census. If you make them public, it would be appreciated if you would cite the Bureau of the Census as the

source and state that the figures are based on a preliminary sample from the 1950 census of housing.

A technical note explaining some terms and a statement of sampling variability is enclosed.

Sincerely yours,

ROY V. PEEL,
Director, Bureau of the Census.

TABLE 1.—Primary families and individuals in nonfarm renter-occupied dwelling units, for the United States: 1950

Source: Preliminary sample data from the 1950 Census of Housing.

TECHNICAL NOTE

Gross rent: The gross rent is the contract monthly rent plus the reported average monthly cost paid by the renter for water, electricity, gas, and other fuel. (Contract monthly rent is the rent contracted for by renters of non-farm-dwelling units at the time of enumeration; the rent is the amount contracted for regardless of whether it includes furniture, utilities, or personal services.) If furniture is included in the contract rent, the reported estimated rent of a dwelling unit without furniture is used in the computation instead of contract rent.

Income: Income is the total amount of money income received in 1949 by all members of a primary family, or by a primary individual, from the following sources: money wages or salaries; net income (gross receipts minus expenses) from the operation of a farm, business, or profession; net income (or loss) from rents; interest and dividends; pensions; veterans' payments or assistance; receipts from roomers or boarders; royalties;

and other income such as alimony, contributions for support from persons who are not members of the household, periodic income from estates and trust funds, and periodic receipts from insurance policies or annuities.

Gross rent as percent of income: The "gross rent as percent of income" is the percent of the income which is paid for gross rent. The yearly gross rent is expressed as a percentage of the combined 1949 money income of all persons in the primary family, or the income of a primary individual. The percentages were computed for each primary family and individual; the medians were based on the separate computations and not on aggregate amounts of rent and income for a particular group.

Primary family, primary individual, and one-person households: A primary family consists of a head and all persons related to him by blood, marriage, or adoption and residing with him. If no persons related to the head are living with him, the head is considered a primary individual; there may or may not be nonrelatives living with him. A one-person household consists of a primary individual living alone.

Year built: The "year built" for a dwelling unit refers to the calendar year in which construction was completed. Dwelling units are classified by the date of original construction of the structure in which they are located, not by the year of any remodeling, additions, reconstruction or improvements that have taken place.

Nonfarm renter-occupied dwelling units: A unit is renter-occupied if any money rent is paid or if it is occupied rent free. Units occupied rent free are those which are not occupied by the owner and for which no money rent is paid. Nonfarm units consist of urban and rural-nonfarm dwelling units.

Source and reliability of the data: The figures in tables 1 to 4 are based on a preliminary sample of a total of 38,000 dwelling units, of which 17,000 were nonfarm renter-occupied, selected from those enumerated in the 1950 census of housing. These dwelling units are located in about 14,000 census enumeration districts systematically selected from all enumeration districts throughout the Nation. The figures for tables 5 to 8 are based on a sample one-fifth as large as the sample for tables 1 to 4.

Because the figures are based on sample data, they are subject to sampling variability. The chances are about 19 out of 20 that the differences due to sampling variability between the figures in the enclosed tables and those which would be obtained from a complete tabulation of the 1950 census data are less than the variability indicated below.

Estimated percent	Sampling variability (in percentage points)					
	Total renter-occupied dwelling units in table—			1-person households in table—		
	1	2	4	1	2	4
2 or 98.....	1	1	1	1	1	1
5 or 95.....	1	1	1	2	2	2
10 or 90.....	1	1	1	2	3	2
25 or 75.....	1	1	1	3	4	3
50.....	1	1	1	4	4	4

For example, 14 percent of the primary families and individuals reported rental amounts which were less than 10 percent of their income (table 2). The chances are about 19 out of 20 that a complete tabulation of the 1950 census would show that the proportion paying less than 10 percent of

their income for rent would be between 13 percent and 15 percent.

Estimated percent	Sampling variability (In percentage points)						
	Total renter-occupied units in table 5	Renter-occupied units built in 1945 or later in table—			Renter-occupied units built in 1941 or earlier in table—		
		5	6	8	5	6	8
2 or 98.....	1	2	2	2	1	1	1
5 or 95.....	1	3	3	3	1	1	1
10 or 90.....	1	5	6	5	1	1	1
25 or 75.....	1	7	8	7	2	2	2
50.....	1	8	9	8	2	2	2

The following table gives the sampling variability for medians shown in table 3 and table 7:

Median of "gross rent as percent of income": Total column in table 3:	The chances are about 19 out of 20 that the median which would be obtained from a complete tabulation would be between—	
	18 percent.....	17 and 19 percent
56 percent.....	52	and 60 percent
28 percent.....	22	and 30 percent
19 percent.....	16	and 22 percent
16 percent.....	13	and 19 percent
13 percent.....	9	and 17 percent
10 percent.....	6	and 14 percent

Table 7.	
21 percent.....	18 and 25 percent
18 percent.....	17 and 19 percent
56 percent.....	49 and 67 percent
26 percent.....	23 and 29 percent
19 percent.....	18 and 20 percent
16 percent.....	15 and 17 percent
13 percent.....	12 and 14 percent
10 percent.....	8 and 12 percent

Although the figures are based on data obtained from the 1950 census, there may be differences between the data in the enclosed tables and the data to be published in the final 1950 census reports, apart from differences caused by the sampling variability. The main reason for such differences is that the preliminary estimates do not include all of the refinements that result from the careful examination of the schedules and tables to which the census data will be subject prior to the publication of the final report.

In addition to sampling variability and limitations of the types mentioned above, the estimates are subject to biases due to errors of response and to nonreporting. The possible effect of such biases is not included in the measures of variability, data obtained from a complete count of all dwelling units are also subject to these biases.

Some Facts About the Livestock Situation

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, while the livestock farmer does not take the position that he should have any special consideration that is

not extended to all other groups of agriculture, it appears that the public should be advised of some of the facts in regard to the livestock industry.

Most of the discussion seems to be leveled at the beef producer, so we should get the picture of the extent of this industry. A rather small percentage of the beef of the Nation is marketed as choice corn-fed beef. This probably does not represent more than 6 or 7 percent of the beef and many markets have very few of this class of animals.

Of course there has been a great demand for beef as the result of rather full employment but there are many factors involved. Ever since 1913 when the Underwood Tariff Act was passed, we have been on a beef-importing basis and part of the difficulty in controlling beef prices is due to the world price situation. The sheep industry is one apparent example—we have less sheep in the United States today than we had 50 years ago and domestic production has not been encouraged. The world price of wool has gone to \$1.01 which is some 200 percent of parity. In other words, it is evident that it is difficult to control prices on any commodities when the world price is so much higher than our own domestic prices. Our imports of beef percentage-wise, of course, are a much smaller part of the national beef production than are wool imports a part of the national production and consumption, but the influence is there just the same.

IMPORTANCE OF DAIRY CATTLE TO THE BEEF SUPPLY

On January 1, 1940, before World War II, we had in the United States a total of 68,309,000 cattle. Of this number over 50 percent, or 36,432,000, were classed as milk cattle.

It appears that few people realize that a large percentage of the beef supply of the Nation comes from the dairy industry.

There are two factors which should be very evident. First, beef from beef cattle is naturally an expensive product when one realizes the investment involved in keeping a cow a whole year only for the calf she may have. Second, beef produced as a side line to the dairy industry is important so far as the supply and price are concerned.

A large proportion of the processed meat and soft meat is derived from the dairy industry. This, of course, applies to a large percentage of veal as well. A high percentage of the cattle numbers in the United States are in the Corn Belt with Chicago as the livestock capital of this country and the world. The principal beef-producing States in numbers marketed are Texas, Iowa, Illinois, Minnesota, and Wisconsin. Since January 1, 1943, the numbers of milk cattle in the United States have been less than the number of nonmilk cattle. On January 1, 1951, we had an estimated total of 84,000,000 head of cattle, 37,500,000 of which were milk cattle and the balance, or 46,500,000 were nonmilk cattle.

WHY THE LIVESTOCK MEN OPPOSE THE ADMINISTRATION'S BEEF PROGRAM

As previously pointed out we had a total of over 68,000,000 head of cattle on January 1, 1940. Then came the heyday of the Henderson-Bowles regime and while the housewife was having difficulty in getting a piece of meat at the market for her family, the livestock producers increased their cattle numbers from 68,000,000 on January 1, 1940 to 85,000,000 on January 1, 1945. This was an increase in numbers of 17,000,000 head of cattle or a 25-percent increase at the very time the consumer was denied the opportunity of buying any meat. Immediately following World War II, large numbers of cattle were slaughtered and shipped out of the country, mostly to England.

One of the main objections that the livestock men have to the present program of Mr. DiSalle, is due to the fact that he started off on the same road that was proven to be so ridiculous under the Henderson-Bowles approach. Mr. DiSalle, started out by putting in a program to license the number of people who could slaughter cattle and thus discourage slaughtering; and although he had no control over imports, the result was that imported cattle sold for from 5 to 10 cents per pound more than domestic cattle. This just does not make sense. So long as Johnston and DiSalle talk about quotas we can expect continued confusion.

THE OLEO LEGISLATION INCREASED BEEF PRICES

The United States has less dairy cows now than it had 15 or 20 years ago and the milk production per capita is going down each year. If we had maintained the number of dairy cattle in proportion to the population of the country and had not subsidized the production of vegetable oils, our supply of beef would have been considerably greater than it is at the present time. In other words, if we had the additional 5,000,000 dairy cattle that have been eliminated as the result of subsidizing oleo, we would have a more ample supply of beef now. In fact a bill was recently passed to bring in several thousand Mexican laborers to help harvest the cotton crop at Government expense, all of which adds to the vegetable oil subsidy.

There are some indications that more consideration will be given to the livestock industry legislatively, but at the present time a large part of the criticism accorded to the livestock producers is the result of either unwise or unfair legislative advantages given to the vegetable-oil producers and nonlivestock producers in the Nation.

THE HOG SITUATION

Whereas the Department of Agriculture was anticipating a huge Government stockpile of pork in 1948, the hog producers saw the handwriting on the wall and marketed their animals in such a way that the Government was not called upon to advance any Federal funds for disposing of surplus pork. This hog situation is easier to keep under control because a large percentage of commercial hogs are raised in a comparatively

small area. The States of Iowa and Illinois alone produce a large percentage of the commercial hogs of the Nation, with parts of Indiana, Kansas, Nebraska, Missouri, Minnesota, and Wisconsin also producing large numbers.

While there has been considerable complaint about the price of meat it should be kept in mind that the price of pork in 1948 was one-third less than it has been during the past year in the Corn Belt. The pork production can be increased rapidly as was shown during World War II, whereas the increase in beef is a much slower process.

LACK OF LIVESTOCK LEADERSHIP

It is apparent that the entire livestock supply could have been handled with much less heat and more common sense if we had had a more thoughtful approach to the problem. Livestock leadership was offered by the Farm Bureau, National Grange, and other farm organizations in its advocacy of an increase in production but it was not cheerfully accepted or appreciated.

The quickest way of getting an increased meat supply is through chickens. Within a few weeks' time millions more chickens can be made available and there has been considerable increase in this field but there is no doubt but what if as much time and effort had been extended to increase meat production as has been spent in trying to confuse and harm the program, the result would be that we would have a more acceptable situation than we are facing at the present time.

Over the years the price of cattle at the market, including commercial veal, has been slightly higher than pork. There is a relationship between the prices of these two meat products and an increased supply of one will have an influence on the other. This also applies to the relationship between other protein foods, such as chickens, eggs, and cheese. It was only a few months ago that there was considerable public criticism of the support program for eggs providing the Midwest producers 25 cents per dozen. However, the day they took the support price off eggs it was evident the results might not be as satisfactory as some people anticipated. The support on eggs was a stabilizing influence. The removal of this support is most assuredly going to result in less production and higher prices.

It appears to me that the time has come when we had better stop trying to level the guns against the small percentage of our people as the farmers are becoming a small percentage of the population. The fact that farm labor is difficult to obtain and the fact that a few hundred of these people harvest the crops while our own farm boys go to the cities or into the Army, is evidence to most everyone that the farming business is not so attractive or rosy in comparison with other industries. In other words, there is plenty of land and great opportunities for more people to produce if they desire to do so. The difference between what the producer receives for his product and what the consumer pays for it is rapidly becoming

greater. The producer is being criticized for the price that he is not receiving but is being held accountable for. If one realizes the cost of production, including the transportation costs, taxes, and all that goes with it, it should be evident that it is unfair to hold the producer responsible for the increased cost of food. It should be kept in mind that the producer of food puts in many more hours of work every day than the average worker.

This is not altogether a problem here in our own country, it is a world problem. It is ridiculous to listen to the voices that compare 1939 prices with present prices. In August 1939, although it was the seventh year of the more abundant life of the New Deal, you will find according to the official report of the United States Department of Agriculture, that cotton was bringing 8 cents plus to the farmer, hogs 5 cents plus per pound, and wheat less than \$1 per bushel. Milk was selling for less than \$1 per hundred pounds in Wisconsin. The Federal land bank foreclosed more farms in Wisconsin than in any year in its history.

After all we hear a lot about what the agricultural programs have done, the facts are that no real attempt was made to help the farmer until the Steagall amendment to the Price Control Act was adopted. The war and talk of war has been a factor in maintaining prices since that time and of course we have had an increase in the public debt of about \$200,000,000,000 which is also in the picture.

The philosophy of the support program as initiated by the Steagall amendment has been weakened by unwise agricultural leadership but this situation can be improved as the problems arise. We have at least adopted a policy that the labor involved in agriculture is worthy of a minimum wage somewhere near the support given other groups of our society. This is not a political matter. It is fundamentally an economic question and in the future I believe we are going to find more consideration and equality extended to the livestock industry than we have up to this time.

Instead of further wrecking the livestock industry like the sheep industry by lack of support, and the dairy industry by subsidizing the vegetable oil substitutes, it appears we can look forward to more general support and consideration of American agriculture. This will be more apparent when we realize that we have weakened our system of conserving soil fertility by giving preference to soil depleting crops.

AGRICULTURAL POSSIBILITIES AND THE FUTURE OF THE LIVESTOCK INDUSTRY

Anyone familiar with the agricultural possibilities of our great country should realize that we can increase its agricultural production more and more materially when there is an incentive to do so. Few people realize that ever since 1925 we have been on an agricultural import basis in pounds, bushels, and tons. While propaganda might be that we have shipped large quantities of certain agricultural products, in total pounds,

bushels, and tons, we have been on an agricultural import basis ever since 1925. During the depression and the low-price years of the New Deal we had the largest agricultural imports we ever had in the history of this country, and since 1940, our so-called exports have been subsidized and given away, have been pretty well taken care of by imports for which cash was paid. Of course, we have given away half a billion dollars worth of tobacco under the Marshall plan to feed the starving people of Europe. While such procedures may not be a good public policy in the future it is hoped that a constructive approach can be made to this problem.

We have many undeveloped acres of land in this country and the State of Wisconsin alone has 4,000,000 acres of marshland that could be drained and converted into good productive land, to say nothing of the thousands of acres of cut-over land that could be used for raising farm products and developing livestock production, and additional millions of acres adaptable to trees and forestry.

Fundamentally, so long as we have opportunities for expansion and food production we should be able to meet the situations as they present themselves because any country that has the potential possibilities of adequate food supplies can, with the right attitude, meet the economic problems that arise.

Question of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENDER. Mr. Speaker, whatever happened to Governor Dewey? Did he forget to take along some "information specialists" on his trip?

The Bonus Riot of 1932

EXTENSION OF REMARKS OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Bonus Riot of 1932 Back in News," written by Richard Morris, and published in the Washington Post of July 22, 1951; also an article entitled "Secret Testimony of Commie on Bonus March Made Public," published in the Washington Times-Herald of July 14, 1951.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Washington Post of July 22, 1951]

BONUS RIOT OF 1932 BACK IN NEWS

(By Richard Morris)

A representative of the Comintern likened it to "an alarm clock waking somebody up out of a dead sleep."

General MacArthur called it "a bad-looking mob animated by the spirit of revolution."

A newspaper reporter compared it to "ancient Carthage," with thousands of men "encamped just as, in ancient times, were the mercenaries of Hasdrubal."

Anyone who saw it recalls a scene of distress that led to degradation and death, and finally to despair.

The 2-month siege of the Nation's Capital by hungry, ragged, determined veterans of World War I reached its climax in rioting and bloodshed 19 years ago Saturday.

What brought this snowballing army of men—on foot, by automobile, by freight train—to Washington from Portland and Lansing and Memphis and Jersey City?

The story of the bonus expeditionary force, with emphasis on the role of communism in its march and battle, was told again July 13 on Capitol Hill.

The principal narrator, John T. Pace, 54, of Centerville, Tenn., told a subcommittee of the House Un-American Activities Committee how he almost succeeded in his mission to gain control of the army for communism.

Pace, who led a Michigan delegation to Washington in the 1932 bonus march but renounced the Communist Party in 1935, showed a remarkable faculty for recalling dates and events of the depression crusade.

"The party instruction was to support the demands of veterans in all of their struggles and specifically where their actions were self-initiated in defiance of the law," Pace testified at a closed session of the subcommittee 2 years ago. He was called to amplify this testimony 9 days ago, when it was first released.

It was Pace's "candid opinion" that, had the agitation been continued another week, "the Communists would have gained the leadership of the bonus expeditionary forces, thereby resulting in forcing the Government to take the action that they did take, at a time when the results would have been much more disastrous."

There is evidence that Pace may have exaggerated the party's capabilities at this point, for many adherents of the bonus army had begun to vacate the Capital—since Congress had adjourned without enacting the \$2,000,000,000 cash bonus—before the ill-fated riot of July 28.

Perhaps the dispersal of the legions under Commander Walter W. Waters provided an opportunity for the Red minority to seize the control it had so long sought, only to be frustrated at every turn by the police and the veterans themselves.

Joseph Zack Kornfeder, a member of the party's central committee in 1932 but now an anti-Communist, told the subcommittee:

"The spontaneous outburst of the bonus march created a crisis in the central committee of the Communist Party, because the party, although working for the creation of such a movement, had, as it were, missed the boat in getting it started; so it started by itself and the problem then arose as to what could be done to get hold of this runaway movement and catch up with it."

The size of the bonus army, which began descending on Washington late in May 1932, was variously estimated at a maximum of from 10,000 to 20,000 men. Pace testified

that no more than 100 Communist Party members participated.

"The active party group, party faction that we knew were reliable party members, would number no more than 25," he said.

At the outset, the advent of Red agents was anticipated. On May 28, the Washington Post reported that a group of former servicemen, now members of the Workers Ex-Servicemen's League, affiliated with the Communist Party, will be segregated from the main army so as to avoid any untoward incidents.

On May 30, the invaders began arriving in force. They were greeted by Patrolman James E. Bennett of the Traffic Bureau, whose first published comment was:

"Fellows, you're welcome here. But the minute you start mixing with Reds and Socialists, out you go." The morning paper said the men cheered him.

Waters, who had become recognized as the leader of the main force, then voiced an oft-repeated slogan:

"You won't have to eject them. If we find any Red agitators in the group, we'll take care of them and take them to the District line. We came here under the same flag for which we fought."

An optimistic system of discipline was inaugurated. It was said to be stricter than the Army, with company organization, reveille, field kitchens, schedules, and policing details.

Representative WRIGHT PATMAN, Democrat, of Texas, author of the bonus bill then bottled up in the Ways and Means Committee, said he had ascertained that "all the men are orderly, sober, and sincere."

He also said that Police Commissioner Pelham D. Glassford "deserves commendation for the great consideration" shown the men.

Glassford, a retired brigadier general who made his motorcycle his headquarters, soon became a storm center because of his methods of handling the situation. Pace, the Communist leader, told how his contingent of 700 or 800 defied police orders and camped at Thirteenth and B Streets SW. They were visited by Glassford.

"He immediately became very fraternal with us. We were busy building furnaces to cook on, cleaned out the apartment, took shower baths, and he furnished us with the necessary straw ticks, straw, and cooking utensils, and food for the first real supper we had had since we left * * *."

"We were quite disturbed by the fact that the men began to think quite a bit of General Glassford, which didn't do our cause any too much good."

On May 31, the BEF's system of ferreting out Reds was tested. Two men who were distributing Communist literature in billboards at Twelfth and D Streets SW., were given a hearing by a "kangaroo court" and sentenced to 10 lashes on the back with a strap. The sentence was executed and they were thrown out of the camp.

A group of men from 10 States, quartered at the Belber-Kaufmann vacant store near Eighth and I Streets SE., established a blacklist of men expelled for violations of regulations. A news account said "most of those expelled were convicted of agitation."

Living conditions, sanitary facilities, and food became increasing problems early in June as the ranks swelled to several thousand, many of whom established camps at Anacostia.

The first big parade and demonstration was staged June 8, after an alleged Red plot "to cause bloodshed by rioting" was aborted by police reinforcements and the main body of the BEF.

District officials spent hours trying to devise ways of getting rid of the uninvited

visitors. An offer of free truck rides out of the city was greeted with laughter and scorn.

By June 14 enough signatures on a discharge petition had been obtained to force a House vote on the bonus bill. "A parade of monster proportion and lavish color," said the Washington Post, lobbied for the measure along Pennsylvania Avenue.

The House passed the bill by a 211-to-176 vote on June 15. Two days later the Senate registered an emphatic "no" by a 62-to-18 vote.

The BEF still vowed it would stay until the bonus was paid. Waters promised the defeat of President Hoover, who said he would veto the measure if it passed. And the Communists renewed their sporadic agitation.

Even the left wing, however, was split factionally. One element, said to number about 700 and led by Roy W. Robertson, refused to be identified with Pace's contingent.

And in the main BEF, Waters and Harold B. Foulkrod, of Philadelphia, chairman of the legislative committee and director of the lobbying campaign, competed for power early in July. Foulkrod quit the BEF July 9 and urged others to return home.

Many followed his example, for Congress had voted a \$100,000 loan for transportation to get the unwieldy force out of the city.

On July 16, Congress adjourned. That same day, the greatest massing of policemen seen in Washington since the race riots . . . entirely isolated the area between the Treasury and War Department Buildings and H Street and Pennsylvania Avenue Northwest, after an attempt by a straggling band of about 50 veterans to picket the White House had been broken up with a brief struggle, according to the Washington Post of July 17.

Picketing the White House became the new tack of Pace's forces. On July 20, Pace, Beckworth E. Johnson, and Walter F. Eicher were jailed on charges of parading without a permit and disorderly conduct.

They were convicted and sentenced to pay \$40 or serve 40 days. When Judge Isaac R. Hitt offered to release them if they would swear not to repeat the offense, both contended that they had committed no offense. The offer was withdrawn, and Defense Counsel Charles E. Ford announced he would appeal.

It was a stroke of fate that Pace should be in jail when the BEF occupation was turned into a rout by Federal troops under General MacArthur, then Chief of Staff, on July 28.

The crisis apparently had been passed. The Washington Post that morning had printed little more than a column about the BEF. For weeks, the story had been running for several columns daily, starting on page 1.

The inconspicuous one-column headline of July 28 blossomed into a two-line, eight-column banner July 29:

"One Slain, 60 Hurt, as Troops Rout BEF With Gas Bombs and Flames."

With dramatic suddenness, the evacuation of buildings on Pennsylvania Avenue NW, near Third and Fourth Streets, exploded into a riot between veterans and police. One veteran was shot and killed and another was fatally wounded. Six policemen were injured, two seriously, by veterans hurling brickbats and wielding axes.

Seven hours later, at 4:22 p. m., President Hoover announced he had ordered out troops to put an end to "rioting and defiance of civil authority."

Mounted cavalymen and infantrymen with fixed bayonets moved down the avenue behind tanks. Flames swept the crude huts and lean-tos where the bedraggled army had camped over a wide area of the Capital.

Most of Pace's men had moved out before the troops reached their camp. He was to be

released from jail several days later, after charges against him were dropped.

The terrified veterans fled in all directions, many with their wives and children. Some 50 suspected Communists were rounded up, only to be released after order was restored.

General MacArthur, the ranking officer of the Army, had accomplished his mission as commander of a force of 800 troops.

Most of the veterans went to Johnstown, Pa., to lick their wounds and reorganize for a future day. But their plan was never realized.

Such was the scene in Washington in the hot, humid, hungry days of July 1932, when the big news elsewhere was prohibition and renomination of Hoover and nomination of Roosevelt, and the Lindbergh kidnapping and the rise of Hitler.

[From the Washington Times-Herald of July 14, 1951]

SECRET TESTIMONY OF COMMIE ON BONUS MARCH MADE PUBLIC—HOUSE INVESTIGATORS REVEAL FACTS SUPPRESSED 21 MONTHS BY DEMOCRATS

The secret testimony in 1949 of a former Communist leader, exposing the Red leadership of the 1932 soldiers' bonus march on Washington, was made public yesterday by the House Committee on Un-American Activities.

The testimony had been suppressed for 21 months when it was published last June 1 by the Times-Herald and Chicago Tribune. Representative VELDE, Republican, of Illinois, a member of the committee, said the testimony had apparently not been published by the Democratic majority of the committee because it contradicted an old smear attack on General MacArthur who cleared the bonus marchers out of the Capital.

LEGION WAS DUPED

The committee recalled John T. Pace, 53, of Centerville, Tenn., former high Communist Party official, as a witness in open session yesterday and then made his suppressed testimony a part of the record.

Commenting on VELDE's charge, Chairman Wood, Democrat, of Georgia, said one committee member (revealed by the Times-Herald as Missouri Democrat MOULDER) had voted against publication of the testimony in 1949 because it disclosed the American Legion as dupes of the Communists in 1932. Legion officials said they, on the contrary, had urged publication of the testimony to instruct veterans' organizations in tricks of the Communist Party.

Pace repeated his testimony that Communist agitators, including himself, fomented the bonus march and would have provoked bloodshed and riots in Washington if MacArthur had not restored order without injury to a single veteran.

ELEANOR HELPED SMEAR

Malicious bonus-march stories have been circulated against MacArthur for nearly 20 years. Left-wingers, including Mrs. Eleanor Roosevelt, helped spread reports that gunfire was ordered by MacArthur. The facts, as outlined by Patrick J. Hurley, then Secretary of War, were that not a shot was fired and not a single veteran was injured in the evacuation.

Asked if the Communist Party should be outlawed, Pace said the time for such action was long past due.

"There is nothing to the argument that such action would drive the party underground," he said. "The real backbone of the leadership of the party has always been underground and always will be until the revolution. Those who operate openly are only fronts for the real leaders."

BALTIMORE WITNESSES DEFY COMMIE QUIZ

Five witnesses from Baltimore refused yesterday to give the House Un-American Activi-

ties Committee any information about Communist activity in the defense area of the city.

All declined to answer questions about communism on the grounds that to do so might incriminate them.

They were Thelma Gerande, a former business-office manager for Marine Shipbuilding Workers Union; William W. Hill, former president of the Baltimore local of the United Electrical and Machine Workers Union; Herbert J. Nichol, a field organizer for U. E.; Milton Self, a shipyard worker; and Irving Winkler, a mechanic.

Self, Winkler, and Nichol were identified as members of the Communist Party in recent testimony by Mrs. Mary Stalcup Markward, one-time undercover agent for the FBI. Each refused to affirm or deny her allegation.

Miss Gerande refused to reply when asked if she were a member of the Communist Party. But she criticized the committee for what she said was its failure to investigate anti-Semitic organizations "indicating you are sympathetic with them."

Representative JACKSON (Republican), of California, told her "anyone who says that lies."

Criticism of Pick-Sloan Plan

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Writer Explains Why Pick-Sloan Plan Won't Work," written by Richard Baumhoff, of the St. Louis Post-Dispatch, and published in the Bismarck (N. Dak.) Leader of July 19, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WRITER EXPLAINS WHY PICK-SLOAN PLAN WON'T WORK

(By Richard Baumhoff)

Three big new dams are being built in the Missouri River in the Dakotas and the water-resource program in the Missouri Basin has been underway for 6 years with expenditures running to about a billion and a quarter dollars—but right now the lower river and some of its main tributaries are suffering from a severe flood.

People are asking why such destructive floods have not been stopped. The fact is that only a limited amount of construction has been accomplished on projects designed to control floods in the lower or eastern end of the basin, reaching to St. Louis. Main projects have been stymied for various reasons, as will be related here.

AGENCY PRINCIPALLY CONCERNED

This discussion deals essentially with the existing interagency program for the Missouri Valley—the expanded Pick-Sloan Plan written into law by Congress late in 1944. The agency principally concerned therein, under the coordinating efforts of the Missouri Interagency Committee, is the Army's Corps of Engineers, which has flood control as a prime civil function.

Advocates of a Missouri Valley Authority have raised the argument that an MVA might do a better job, but as yet there is no MVA nor any physical plan of work an MVA might do, and the perennial bill for an MVA

has not even been introduced in the current session of Congress.

Fort Peck Dam, a huge structure on the Missouri River in Montana, built before World War II, and the three dams now being erected in the Dakotas can exert a certain effect on flood control downstream. But the Army engineers can make no claim that these dams would do more than reduce the flood crest above St. Louis and Kansas City by more than a few feet.

(At the present time downstream areas in Kansas and Missouri are experiencing one of the most disastrous floods in history.)

In North Dakota criticism of the Pick-Sloan plan is directed at the huge cost of the Garrison Dam—which is expected to cost twice as much as originally estimated by the Army engineers. Critics point out that the cost to taxpayers hardly justifies the good-will effect—either in flood control, electric power production, navigation purposes or for irrigation. The Pick-Sloan plan for irrigating large areas in northwestern North Dakota has been proven to be completely unsound, because NDAC scientists point out that soil analysis of the area indicate the land is not the type that can stand irrigation.

Government Controls

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article dealing with the problem of controls and

All in all the Garrison dam project appears to be nothing but a huge "pork barrel" dam that looks impressive but in reality has little real value.

Public Housing Program

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statistical report showing the status of the low-rent public-housing program as of May 1, 1951. From this report it can readily be seen how ill-considered was the action of the House of Representatives on May 4 in reducing the construction during fiscal year 1952 from 50,000 units to 5,000 units:

courage to go all the way and kill the whole OPS political monstrosity built up by Mike DiSalle.

If there were ever any need for the retail mumbo-jumbo of confusion set up by this agency—and even that is open to doubt—it has been completely dispelled by the cooling off of the Korean War, the rise of vast inventories of consumer goods, the tendency toward falling prices, and the report of near-record crops.

There is no emergency today. Certainly, the rearmament program should be kept going at a high rate, and there should be Government authority to channel scarce materials into war goods. But the rate at which the war goods are exhausted is now being cut back by the slowdown of shooting (and possible complete stop) in Korea. We are not on a full-scale war footing, either for men or materials.

NONEXISTENT MENACE

Yet the OPS office is paying thousands of employees for doing nothing effective or of consequence. Nothing could be more absurd than to maintain a large force of Government employees pretending to cope with a menace which has ceased to exist. With most prices below ceiling and every indication that they will continue to slide off, with merchants getting the jitters and having sales, and definite signs of a buyers' strike, why keep all these birds going through the motions?

Even the most ardent advocates of controls admit now that inflation has calmed down. But they contend that it will inevitably start up again, when the war materials plan gets into fuller production.

That has all the earmarks of a plain guess, and a bum one. Sure, there will be more military hardware produced as the contracts, slow up to now, are filled, but if the stores are loaded with consumer goods and people are not buying and not likely to buy unless prices fall, why should there inevitably be an inflation? The war factories are not paying wartime overtime, the consumer goods industries are already cutting back and installment credit is and should remain tighter.

WILL GO ON AND ON

Well, even if inflation doesn't take hold in the fall, it surely will by next spring, they say. That's another guess. Meanwhile, unless something drastic is done to rid the taxpayers of these new salary-drawers, complete with offices, secretaries, Government-paid phones and cars, it will go on and on, just like all bureaucracies. No Federal jobholder ever recommended the abolition of his job. The sensible course is to abolish the whole useless set-up and let next spring take care of itself.

When the wartime OPA was abolished stocks of goods were small and the pipe lines were not full. People had more money than they knew how to spend. It was natural that they bid up prices before production caught up. But the situation is reversed today. There is plenty of stuff to buy. (The purchasing agents will tell you sadly there is too much.) And people are much more reluctant to part with a buck than they were in 1946. They're overcommitted on installments, they are feeling the high cost of living, they have become more tax conscious. And having got sucked into two war scares of buying—last July and last January—they are much more wary now.

Washington reports say Mr. Truman, the control bosses, and the union spokesmen are surprised and discouraged because there has been practically no public response to their hysterical screams for controls. Why should there be? The majority of the public is getting wise to them. It can see through the sham and recognize the program for what it is—just a stacking of new job holders, without any noticeable effect on prices.

OPS written by Philip W. Porter, a well-known writer of keen insight and of great ability, and published in the Cleveland Plain Dealer of July 14, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTER ON CONTROLS—ASKS FOR DEATH OF OPS—PREDICTS PRICE DROP—MORE INFLATION NOT NECESSARILY SO

(By Philip W. Porter)

It looks now as if the House in Washington is going to cut the heart out of the controls extension bill, but it ought to have the

The union bosses are particularly upset, but why they should expect favorable response to their propaganda is also a mystery. The public took their measure last fall and elected a majority of Congressmen who opposed them personally, opposed socialistic "controls" and spoils politics. Why be surprised when these Congressmen vote the way their constituents want? The unions still haven't realized that the voters don't want a union-controlled, socialistic, job-stacking administration. There is even doubt that the Democrats themselves today have a majority within their own party for it. The southern Democrats and the northern Jeffersonians don't want it—that's for sure.

Better Government Forecasts

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, in the current issue of Newsweek, Mr. Henry Hazlitt, an eminent economist, points out that for the fiscal year 1951, the administration made a series of very bad guesses. Under leave to extend my remarks, I am including an interesting article with tables set forth and I commend it to the attention of the Members:

GOVERNMENT PLAN THYSELF

(By Henry Hazlitt)

In its budget estimates for the fiscal year 1951 the administration made a series of bad guesses. The President originally figured that the Government would spend \$42,400,000,000, take in \$37,300,000,000, and end up with a deficit of \$5,100,000,000.

This estimate was made in January 1950. Had Mr. Truman foreseen the outbreak of war in Korea that June his deficit guess would probably have been even larger. Last January, after 6 months of actual fighting and mobilization, he turned in a revised estimate reducing the expected Federal deficit to \$2,700,000,000. Less than 3 months later this was changed to an expected surplus of \$2,900,000,000. When the fiscal year had actually closed on June 30 last, actual Government expenditures had come to \$44,700,000,000, receipts to \$48,000,000,000, and the surplus to \$3,300,000,000.

So, in spite of an unexpected year of war, an estimated deficit of \$5,100,000,000 became an actual surplus of \$3,300,000,000. This was an error of \$8,400,000,000—an amount greater than the total average annual expenditures for all purposes in the Roosevelt administrations prior to the Second World War. This huge error merely comes on top of a record of chronic bad guesses. The table below compares for each year since 1934 the President's estimates (in millions of dollars) of expenditures, receipts, and deficits for the following fiscal year with the realities of that year.

Even if we disregard the five war years, 1942 to 1946, inclusive, and the wartime year 1951, we find that in the remaining 11 peacetime years there was an average error of 20 percent in estimating expenditures, an average error of 13 percent in estimating revenues, and appalling errors and reversals in estimating surpluses and deficits. In short, a government that presumes to plan and forecast for everybody cannot even estimate with reasonable accuracy what its own expenditures, revenues, and surplus or

deficit are going to be. It cannot predict even its own action, and makes errors of a dimension that would bankrupt a private business in no time.

The Chippewa National Forest

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Forestry's Challenge to America," published in the Grand Rapids Herald-Review of July 19, 1951. It refers to the Chippewa National Forest and its management, recently the recipient of an award for most distinguished accomplishment.

There being no objection, the article was ordered to be printed in the Record, as follows:

FORESTRY'S CHALLENGE TO AMERICA

The Chippewa National Forest and its management were recently given an award for most distinguished accomplishment. To those who know the forest and its sincere personnel, the honor is known to be well merited.

In recent years there has been a great change in the forest problem. There has been much discussion of the needs of forestry and how they might be met. There has been a period of agitation, debate, controversy, indecision, uncertainty, and some accomplishment. Today there is no doubt, in the mind of any impartial observer, that forests can be protected, conserved, and developed through an effective cooperation of man with nature.

It has been demonstrated that fires can be controlled if the State and the Nation decree it and make possible the necessary facilities. New chemicals and methods can go far in checking disease and pests. Brush can be cut back. The problem in forestry is largely that of dividing up the soil and the sun. That means thinning of some stands and replanting of others, both expensive processes. Forests should be properly harvested and their products used to the best advantage. All of these things can be done if the means to do them are provided.

The problem of forestry is now one, not only of trees or science, but of money—hard, cold cash. If the people of the State and the Nation wish the proper conservation and development of their forests, all that they need to do is to reach into their own pockets. Foresters are ready. Nature is willing. The forests are waiting. Anything that Americans wish to do for their forests they can accomplish by providing an adequate support for forestry.

Nature has been so lavish that Americans have long thought that they could get all that they wished from the forests for all time. Up to a generation ago the Nation did nothing to forests except cut them. There has been realization in late years that forest conservation and development is not only possible but necessary. At that the States and the Federal Government are now spending an amount for all forest programs which is less than 70 cents a year for each man, woman, and child in the Nation.

To double expenditures for forestry, State and Federal, would require another 70 cents per capita, or an aggregate of about a hundred million dollars. In these days of many dollars, this is a small amount of money. Translated into more understandable terms it may be computed that America's expenditures for forestry may be doubled for the price of an hour's work a year by each wage earner in the Nation. To double forestry expenditures would be the equivalent of but a dollar or two for each thousand feet of lumber or ton of paper produced annually in the United States. A hundred million dollars is one twenty-fifth of 1 percent of the present annual national income.

Though appropriated by legislatures and Congress and collected from the taxpayers, forestry expenditures are not taxation in the ordinary sense. They are, in truth, capital expenditures which, in varying periods of time, will return in some form to the American people.

The friends of forests must not be timid. The cause which they represent is great and the influences which will aid are extensive and strong. The forests have built nearly every home in America since the days of Plymouth Rock. They have built the barns and fenced the farms of the Nation. The forests have furnished the poles which now carry scores of millions of miles of talk-

ing wires. Cedar and pine support the wires for power and light. The steel rails of the Nation rest upon trees from the forests. Forests protect lakes and waters, game and fish, and they provide pleasure and inspiration for every person in the land. Forests help to make the paper for newspapers, magazines, and books, and the publisher and the forester are partners in one of the greatest undertakings in democracy.

With moral, industrial, and spiritual obligations to forests that are beyond measurement, the practical help that forests now so sorely need should come forth readily.

Covenant on Human Rights

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Covenant on Human Rights," published in the *Palladium-Item* and *Sun-Telegram*, of Richmond, Ind., on July 20, 1951. It deals with the problem which I discussed on the floor of the Senate during the past week.

There being no objection, the editorial was ordered to be printed in the *RECORD*, as follows:

COVENANT ON HUMAN RIGHTS

The United Nations covenant on human rights carries a high-sounding name. But the name belies the vicious purpose of this pact.

Senator BRICKER said it should be called the United Nations covenant on human slavery. Why?

Because it jeopardizes certain basic freedoms of the people.

If accepted by the United Nations General Assembly next November and ratified by our Senate, it virtually would repeal the religious and press freedom guarantees of our Constitution.

Senator BRICKER has introduced a resolution which would disapprove the Covenant on Human Rights and would direct our representatives at the United Nations to drop negotiations on it.

The covenant was prepared under the "immediate direction of Mrs. Franklin D. Roosevelt," who was Chairman for 5 years of the United Nations Commission on Human Rights. She resigned as Chairman last April.

The State Department, according to Senator BRICKER, is backing this scheme which would enable it "to stifle all criticism of the so-called Fair Deal."

Senator BRICKER charged that Secretary of State Acheson, who is a constitutional lawyer, "cannot help but know that to ratify the covenant would radically change the meaning of the Constitution. To date Mr. Acheson has been strangely silent in regard to this covenant."

The threat to religious freedom is in article 15 which provides that freedom to manifest one's religion or beliefs shall be subject to such limitations "as are pursuant to law and are reasonably necessary to protect public safety, order, health, or morals, or the fundamental rights and freedoms of others."

Our Constitution guarantees absolute religious liberty. Under the covenant on human rights, a dictator can outlaw a religion by merely ruling that it is inimical to the public safety or the freedoms of others.

In the same way, the Government can control the press in "case of a state of emergency." Senator BRICKER rightly pointed out that President Roosevelt could have applied this control and restriction in any of the emergencies experienced in the days of the New Deal.

The covenant is a smoothly worded instrument by which the press, for instance, could be shut down for criticizing President Truman's Fair Deal and his foreign policies.

Any administration having a majority vote in the Congress could provide such restrictions of freedom of speech or of the press as it deemed needed for the national security or public order.

By declaring an emergency, as set out in the covenant, the President could close all newspapers in the country.

By resorting to the plea of emergency, Peron closed *La Prensa* because he believed it necessary for "the protection of national security."

That is the practice which the covenant would authorize and legalize for the head of any government.

Senator BRICKER performed a public service in citing the dictatorial restrictions in the so-called covenant of human rights.

The Congress should adopt his resolution to disapprove this global pact that will abridge our religious and press freedoms.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. LEHMAN. Mr. President, a distinguished foreign publication, the *London Economist*, which has long and realistically reported America's rise to world leadership, has come forth with its view on how the St. Lawrence seaway project ties in with the full mobilization of America's strength.

I ask unanimous consent to include in the *RECORD* excerpts from an article of April 21, 1951, carried in the *Economist*, entitled "New Hope for the Seaway." I believe it will benefit all of us to read this. It will remove us for a while from the confusion surrounding the discussion of the St. Lawrence question in this country, and expose us to the objectivity and mature judgment of trained and experienced students of world affairs.

There being no objection, the excerpts from the article were ordered to be printed in the *RECORD*, as follows:

For almost half a century Americans, like Canadians, have dreamed of a seaway 2,300 miles long that would join the land-locked Middle West with the salt-water highways of the world via the Great Lakes and the St. Lawrence. Interest has been quickened by the prospect of harnessing, for electricity production, the tremendous water power of the International Rapids section of the river.

The seaway would put directly into world commerce at low cargo rates the immense

agricultural, mineral, and industrial riches of the Midwest. Great inland cities like Chicago, Detroit, and Cleveland would become ocean ports, yet in wartime the ship-line would be secure from prowling submarines. And the American half of the 13,000,000,000 kilowatts of hydroelectricity to be made available each year would help to relieve the serious power shortages in upper New York State and New England.

Although this project fires any disinterested imagination, and is a nonpartisan issue, it is a chronic source of intense conflict for special and sectional interests—between rail and water transport companies, between private coal and electricity concerns and those who want public water power, between ports on the Atlantic Ocean and Gulf of Mexico and those on the Great Lakes, between businesses in the East and in the Middle West, and so on. All the national farm organizations want the seaway as a cheap avenue for grain exports, but industrial interests are sharply divided and the trade unions tend to go along with the industries they serve. Thus, the railroad brotherhoods line up behind the rail carriers, while the longshoremen back the seaports, coal companies, which still oppose the venture have the miners' redoubtable Mr. John L. Lewis in their corner.

The loudest voices in the present controversy, however, are not those of eastern opponents but of midwestern proponents, who have recently recognized that the supply of high-grade iron ore (which comes from the Mesabi Range in the Lake Superior district of Minnesota), is diminishing at an alarming rate, and may be exhausted within a decade. The Secretary of Commerce says the United States will have to import 40,000,000 tons of iron ore by 1960. Here is a long-term threat to the prosperity of Ohio, Indiana, Illinois, and Michigan—perhaps the greatest manufacturing center in the world and one which produces 70 percent of America's steel. The threat is scarcely lessened by new discoveries of limited deposits in Ontario or by plans for utilizing low-grade taconite—still a slow and expensive process. The only real promise of relief is in the discoveries of Labrador and Quebec, north of the Gulf of St. Lawrence port of Seven Islands. This area, which probably contains as much high-grade ore as the Mesabi district, is now being developed by several midwestern steel companies.

For a generation businessmen and industrialists in the Middle West felt that they could ignore the dispute. But they have been taking anxious second looks since they realized the cost handicap their region would suffer if iron ore had to be brought in by way of the Atlantic and expensive rail transit from the coast. * * * As a result, midwestern farm organizations and trade unions which have long pleaded the seaway cause are being reinforced by worried editors, chambers of commerce, steel makers and steel users. Huge concerns like the General Motors Corp. and the Ford Co. are now actively interested. The important Ohio Valley Improvement Association has changed over from opponent to advocate.

In his budget message Mr. Truman asked Congress for \$20,000,000 to launch the seaway and power project, and this time his plea is sharpened by intimations from Ottawa that, if the United States continues to mark time, Canada will next year begin to construct both seaway and power plant on its side of the border. The opposition is still strong and vocal, but there is a growing feeling, in and out of Congress, that an enterprise which makes obvious economic and engineering sense and one which Mr. Herbert Hoover once called the greatest internal improvement yet undertaken on the North American continent will eventually be carried out.

Lesson Available in Yalta Pact

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article by the Alsops, entitled "Lesson Available in Yalta Pact," and appearing in the Chicago Sun-Times of July 22.

Their article clearly brings forth the fact that the attacks on the Yalta agreement have been unwarranted, unjustified, and unfair. It leaves no room for doubt about the attitude at the time of the agreement of one of the administration's most bitter critics, Maj. Gen. Patrick Hurley. Moreover, after reading the article, which is based on facts, one cannot help but conclude that the anti-administration forces presently beating their breasts and tearing their hair over the Yalta agreement are responsible for the present state of the world—not the agreement itself. The article is well worth the time to read carefully and completely:

LESSON AVAILABLE IN YALTA PACT

(By Joseph and Stewart Alsop)

WASHINGTON—This is a pretty good time to think about the Yalta agreement—but not in the idiotically misleading manner that lately has become fashionable. The real point about Yalta is that it was a pretty good deal, if the other parties to the bargain had only kept it. And the bargain might have been kept, too, if it had not been for our own folly.

Speaking particularly of the far-eastern aspect of the Yalta agreement, there are three facts that every one forgets. First, Roosevelt offered Stalin concessions in Manchuria because his chief military advisers wished to buy Russian aid in the conquest of the Japanese Islands, which then officially was estimated likely to cost 2 years and half a million American lives. Second, this offer was made with the practical thought clearly in mind that the Soviet armies in Siberia could and would seize these Manchurian positions in any case.

Third—and this is what is most important—a promise to enter the Japanese war was not Stalin's only part in the bargain. Stalin also recognized the government of Chiang Kai-shek as predominant in China; and he promised to "support" the Chiang regime by every means in his power. Furthermore, he embodied this recognition of Chiang's predominance and his promise of support in his treaty with Chungking, negotiated after Yalta by Dr. T. V. Soong and approved by Chiang himself.

There is no doubt that on its face this was a good deal, as Maj. Gen. Patrick Hurley, among others, frankly stated at the time. The power of the Chinese Nationalists already was declining. The power of the Chinese Communists already was growing. And if Stalin, the master of the Chinese Communists, would help to establish Chiang as the ruler of China, it was the cheapest way out of a messy business.

What is interesting and new is the further fact that Stalin actually did try, for a while, to keep the promises he gave Roosevelt at Yalta and T. V. Soong in Moscow. It is to be hoped that the essential documents to support this addition to history soon will be published in Belgrade.

Meanwhile, it can only be said that one of these correspondents, when in Yugoslavia recently, was given what appeared to be indisputable proof. This came from leading Yugoslavs who had been in touch with members of the politburo of the Chinese Communist Party in the postwar period, when Chinese and Yugoslavs still were linked, of course, by the same faith.

In brief, Stalin ordered Mao Tze-tung and his fellow Chinese Communists to enter a coalition government in China on the terms already laid down by Hurley as President Roosevelt's representative at Chungking. These coalition terms were calculated, or so Hurley then believed, to insure that the Communist members of the proposed coalition would be controlled by Chiang and the Nationalists.

It would seem the Hurley view was justified. At any rate, Mao Tse-tung shared it fully. He flatly refused to obey Stalin's command, declaring that his Communists would win all China in the end and refusing to sacrifice this future victory to a subordinate place in any coalition.

The episode followed exactly the same pattern as that other strange, unrecorded bit of history—Stalin's order to Marshal Tito to bring back King Peter, and to carry out the Stalin-Churchill bargain making Yugoslavia a joint Anglo-Soviet "sphere of influence" on a 50-50 basis.

In both cases, it is now clear, Stalin was acting on a false estimate of the toughness and resolution of the western nations. When Tito defied him, Stalin warned that the British and Americans would land in Yugoslavia to make the 50-50 bargain stick; but Tito knew better. When Mao defied him, Stalin continued to exert pressure for compliance with his order until he was confronted with the spectacle of America's postwar demobilization.

Then, and only then—when Stalin knew that the howls of the same politicians who are now denouncing Yalta had caused America to cast away all her wartime power—did Stalin throw the rather hopeful Yalta bargain out the window. Then, and only then, did the Soviet Union begin to give the Chinese Communists the active support they needed to win their civil war.

There is a lesson in this fragment of the past. At Kaesong, Stalin's representatives are preparing to turn off the Korean war as though it were a leaky water tap which had been keeping people awake. The Moscow chorus already is beginning to sing its extensive repertory of slumber lullabies for silly statesmen.

The known aim is to make the Western Powers halt their rearmament and go to sleep again. For the west to do so will be suicide. But, if the west now learns the lesson of strength that was forgotten after Yalta, there are good reasons to be hopeful about the future.

The Faith of an American

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement entitled "The Faith of an American," by Mr. Edgar Rogle Clark, a Mississippi musician and teacher.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE FAITH OF AN AMERICAN

(By Edgar Rogle Clark)

I was born an American, and by my color, am considered a Negro. I am Caucasian, Mongolian, and Negroid. My ancestry arrived on the *Mayflower* and the *Blackbird*, but even earlier, they had explored the New World with Columbus. My ancestors were pioneers, some immigrants, and others indigenous to American soil. It is difficult to assign me to any caste or race. Even though the bodies of some of my ancestors were chained, their spirits were never enslaved. My status as an American has been made possible by blood, toll, faith, and the underground railroad, all of which led to Lincoln's proclamation giving official recognition to an already accomplished fact.

Fortunately, there are no typical Negro names to add to the already heavy burden of the color stigma. Some minorities have been able to change their names to ease the complication of discrimination, prejudice, and segregation. But among my people names like Cohen, O'Shay, Silvera, Jones, and Zuzuki are often encountered. Even with such names most of my breed comes plainly labeled and we can do little to change our color. The less color, the less discrimination. Yet, I refuse to wrap a towel around my head to pass myself off as a native of some country of the Far East. It seems then that bias is based solely upon color. Is being born with a dark skin a sin against society, and is color alone an enemy? Yet, I am not alarmed at these implications of my race or my color, for surely my shoulders are broad enough to bear up under the considerable avalanche of slander and caricature. I wear my color not as a mourning badge, but as a mark of triumph.

My education has been entirely secular, my name is English, and my cultural heritage compares favorably with that of any white American. The American culture which I enjoy sprang from 2,000 years of Christianity. I am one of the older of America's children, and into my hands is given her priceless heritage. Mine is the whole embittered past, and mine is the shining future. Life is continually weighing me in very sensitive scales, and at other times, repressive machinery seems to be encircling me closer and closer. Basically, I like the democratic structure, and the conceptions of equality and the rights and dignity of man. And I realize that there are many problems that are so ponderous that even the heavy rollers of democracy cannot flatten them down altogether overnight. I believe that this Government though not actually perfect, is the best in the world.

Today, 1951 A. D., the Negro courage has won the most heroic struggle of an enslaved people in the history of mankind. As one American white man put it: "It is astonishing to see how soon the American Negro became civilized." To many of my complexion, this statement might have been offensive. On hearing this testimony my mind ran back to brutal lynchings in this country and the relapse of many good Americans into barbarism.

If we may judge from the Zimbabwe ruins, some African tribes were at one time more civilized than the Europeans. Certainly we know that civilization has nothing to do with geographical boundaries or with the pigmentation of skins. Savages have been misunderstood and have had all sorts of dreadful traits and customs unjustly attributed to them. The man who lived some distance away and minded his own business became—like the "heathen" who originally was only a dweller on the heath—the feared one, an object of terror. And if he had a different colored skin he was per se a "savage." It is

only now that the American Negro is becoming an integral part of the social, economic, and political life in America. But he is also a crusader for freedom, striving to take his place as a first-rate citizen. This country's pattern of segregation, our mob violence, our unequal educational facilities, our physical and moral barriers, the disfranchisement of great groups of native-born citizens all contribute grist to the European mills of anti-Americanism. These evils certainly draw attention to what is weak in our democracy.

The American way of life—the principles of equality and of the dignity of the individual mean much to me. But I resent undemocratic practices which prevent us from achieving these ideals. The Negro today sees two Americas. First, there is democratic America, the ideal of the Constitution of the United States. But there is also the America in reality which falls short of these democratic ideals, the one the Negro must face every day. Some believe that education, not legislation, will solve our problems of racial difference. But education is slow. We have only one life to live. After 87 years of freedom we would like to enjoy some of the rights of a first-class citizen in our time.

To us this land is a promise and an expectation, the real testing ground for the democracy about which we preach so much. Our past, present, and future lie here. Our seeds are planted, our feet have taken root, our ships are burned, and there is no returning. Our joys and sorrows, our sweat and blood have fertilized this land. Together, white and black, we have conquered land, water, disease, and disaster. We built the cabin and the skyscraper. Together we must live.

I am not a "pleader for my people." I am just one of the 12,000,000 voices in 1951 waiting to take his rightful place in a democracy. There are many who will work with me until real democracy is achieved, the democracy that the confused world needs at this very hour. It is only when we have set our own house in order that we can conquer communism. Correction of our own weakness would refute the strongest argument of the Communists about United States racial hypocrisy. Then all Americans can join against the common enemy.

Flood-Control Problems of Ventura County, Calif.

EXTENSION OF REMARKS OF

HON. ERNEST K. BRAMBLETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Robert L. Ryan, engineer-manager, Ventura County Flood-Control District, California, to the Senate Civil Functions Subcommittee:

JULY 1951.

Mr. Chairman and gentlemen, the following information is offered to your subcommittee in order to familiarize you with the flood-control problems of Ventura County and to ask for appropriations as you see fit to start the approved Federal projects.

Ventura County is a coastal county lying adjacent and northerly of Los Angeles County. The terrain is both mountainous and alluvial, combining flood-control problems peculiar to both types of terrain. The valley and plain areas are highly developed, agriculturally with citrus and walnut

ranches—field crops, and a tremendous oil development.

The main stream, the Santa Clara River, runs generally westerly, southwesterly through the county to the Pacific Ocean, thus dividing the county in two. On the south side lies the two great Naval Installations, United States Naval Station, Port Hueneme, where most of the supplies and construction equipment are shipped to the Pacific, as well as a training and embarkation point for construction battalions; the guided missile test center, Point Mugu, which is being enlarged continuously into one of the largest installations of its kind in the United States.

United States Highways No. 101 and No. 101 alternate, join south of the Santa Clara River and continue as one highway across the river, and north to San Francisco. The State route No. 118 from Los Angeles also must cross the Santa Clara River so the protection of the bridges and maintenance of a channel on the lower end of the river is most important for maintaining traffic for military as well as civilian use between both sides of said river.

1. Santa Clara River project, as recommended, consists of two parts; one, a levee on the left bank of the lower section of the river and a channel for the lower end of Santa Paula Creek, a tributary.

The Santa Clara River is a typical California coastal stream, subject to high intensity of rainfall and runoff and with a watershed containing mountains in the upper areas and a flat alluvial plain in the lower reaches.

A few miles above the Pacific Ocean the river emerges from an area fairly well confined by mountains and hills, into a plain where the river has poorly defined banks of sand and gravel. The river is progressively eroding to the southwest in the direction of the prevailing downgrade, although the maintained channel is generally westerly. Floods in recent years have caused considerable damage to highways and property and it is not improbable that a new channel might be formed as a result of a major flood.

United States Highway No. 101 and route No. 118, as well as the main coastline of the Southern Pacific, cross the Santa Clara River in the area of the alluvial plain. These highways serve all traffic between Los Angeles and the north coastal area and between the San Joaquin Valley and the coast in this area. They also serve the two large naval installations, the United States Naval Station at Port Hueneme and the Guided Missile Test Center at Point Mugu.

The loss or damage to bridges and approaches would be disastrous to the operation of the vital naval installations which feature so large in our national defense program. In addition the disruption of traffic on these two highways both from a local as well as an area angle would be very serious.

The construction of 5 miles of levee on the left bank of the river would prevent further possibility of the Santa Clara River eroding a new or enlarged channel south of the present one with consequent damage to industrial and agricultural lands, as well as assuring an uninterrupted flow of highway and rail traffic both to the naval installations in the north and south coastal areas. The proposed levee is the most important part of the entire Santa Clara River project.

Santa Paula Creek is a high-velocity stream, the lower portion of which travels on a debris cone higher than the city of Santa Paula which lies adjacent and westerly of the creek. This creek is crossed in the lower section by the branch of the Southern Pacific Railroad which connects the San Joaquin Valley route with the coast route. It is also crossed by Highway No. 126 which connects United States Highway No. 101 at Ventura with United States Highway No. 99, which latter highway runs from Los Angeles to the San Joaquin Valley.

The improvement of this channel would thus protect the city of Santa Paula and the adjoining agricultural lands from floods as well as providing continuous highway and rail traffic on the branch line of the Southern Pacific and the State highway.

2. Stewart Canyon Debris Basin and Channel is the second project in flood-control work in the Ventura River Basin. The first project, a levee on lower Ventura River, has been constructed with Federal funds and is being maintained by the district.

Stewart Canyon is a steep canyon with a watershed which has a top elevation of about 6,000 feet and drops down to 650 feet in a relatively short distance. It then enters into a fairly flat area and the channel now runs directly to the city of Ojai. It is subject to extremely heavy rainfall of short duration, with consequently high intensity of runoff including large debris flows. The situation was aggravated by a severe fire in 1948 which almost completely denuded the watershed of protective growth. The Corps of Engineers expended emergency funds to construct a debris sump after the fire for the protection of life and property. The district acquired the property on which the work was done, as well as sufficient property for the permanent installation. This project is for the protection of life and property, as well as highways, streets, and the railroad, and is worthy of serious consideration.

This brief report is offered for your consideration, and it is hoped that sufficient funds can be appropriated to at least commence these projects. In any case it is hoped that planning funds can at least be appropriated so that the projects can be constructed in the near future.

I wish to thank you for the opportunity of being able to present these matters to your subcommittee in person.

Respectfully,

ROBERT L. RYAN,

Engineer, Ventura County, Calif.,
Flood Control District.

TABULATION PROPOSED FEDERAL FLOOD-CONTROL PROJECTS

Santa Clara River—Santa Paula Creek project: estimated present cost, \$5,725,000

State water resources board recommendation for a first appropriation \$500,000.

Stewart Canyon project: estimated present cost \$1,312,000.

State water resources board recommendation for first appropriation, \$500,000.

Mission of the Voice of America: Promote Truth, Dissolve Tyranny, Fuse a Meeting of Minds on the Road to Freedom and Strength

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SIEMINSKI. Mr. Speaker, people of the world thirst each day for truth to learn whether the trend is toward freedom or war. America travels the road to freedom, promoting truth, dissolving tyranny, fusing a meeting of minds against man's eternal enemy, tyranny.

Tyranny is despised because it is selfish and cruel, exploits the worker and depresses man. It travels the road to war.

The tyranny of Red regimes, the TNT governments which take and torture, pervert and twist the brain of man, must be dissolved.

We hear the cry, "Arms and the man." In combat, they can destroy the "take and torture" of tyranny, even contain it in peace.

But truth reaches beyond the range of combat, enters the home of friend and foe; quenches their thirst; fuses their minds with a will to travel the road to freedom and strength, dissolving tyranny.

To this mission is the Voice of America dedicated. God grant it success.

Legislative Log Jam Must Not Be Allowed to Pigeonhole Progress on Hoover Commission Recommendations

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. JENISON. Mr. Speaker, I desire to call to the attention of every Member of Congress the warning issued today to President Truman and the Congress by some 30 outstanding citizens. These national leaders have joined in a statement to warn that the current legislative log jam must not be allowed to pigeonhole the Report of the Bipartisan Hoover Commission on Federal Reorganization, Efficiency, and Economy. They are right and their plea should not go unheeded.

Signers of the statement, led by Dr. Robert L. Johnson, national chairman of the Citizens Committee for the Hoover Report, point out that 50 percent of the Hoover Commission's recommendations were enacted by the Eighty-first Congress "with many substantial improvements and economies."

The signers, all prominent members of the citizens committee, observe with dismay that the first 6 months of the Eighty-second Congress have been characterized by a singular lack of legislative activity.

With equal dismay we note that President Truman has submitted only one reorganization plan to the Congress during this session.

The statement said—

This is an unhappy contrast with 1949 and 1950. . . . The Hoover report is above and beyond politics . . . one of the most hopeful signs of our times. It would be bad enough to see this report defeated openly by the forces of bureaucratic indifference and group selfishness. To see it go down through sheer neglect would be a national tragedy.

Besides Dr. Johnson, who is president of Temple University, Philadelphia, the signers include: T. Coleman Andrews, of Richmond, Va.; Rear Adm. Frederick J. Bell, retired, of Baltimore, Md.; former Senator Prentiss M. Brown, of Detroit, Mich.; Francis J. Chesterman, of Phila-

delphia, Pa.; Donald Comer, of Birmingham, Ala.; William E. Cotter, of New York City; Dr. Donald J. Cowling, of Minneapolis, Minn.; John W. Davis, of New York City; Thomas J. Dodd, of Hartford, Conn.; Gen. William J. Donovan, of New York City; Ferdinand Eberstadt, of New York City; former Governor Charles Edison, of West Orange, N. J.; Clarence Francis, of New York City; John M. Hancock, of New York City; Milton E. Kahn, of Portland, Oreg.; Oveta Culp Hobby, of Houston, Tex.; Mrs. Oswald B. Lord, of New York City; Donald V. Lowe, of Ridgefield, N. J.; former Governor Leslie A. Miller, of Cheyenne, Wyo.; Col. Alvin Owsley, of Dallas, Tex.; Fred D. Patterson, of Tuskegee, Ala.; former Secretary of War Robert P. Patterson, of New York City; Neil Petree, of Los Angeles, Calif.; Captain Edward V. Rickenbacker, of New York City; Lessing J. Rosenwald, of Philadelphia, Pa.; Morris Sayre, of New York City; Miss Anna Lord Strauss, of Stepney, Conn.; John Stuart, of Chicago, Ill.; and A. L. M. Wiggins, of Hartsville, S. C.

Under permission granted me by the House, I am including in the RECORD the text of the statement, as follows:

JOINT STATEMENT BY DR. ROBERT L. JOHNSON AND PROMINENT MEMBERS OF THE CITIZENS COMMITTEE FOR THE HOOVER REPORT

Just over 2 years ago the bipartisan Commission on Organization of the Executive Branch of the Government (Hoover Commission) completed its historic report to the Congress which created it. Some 50 percent of the Commission's recommendations were adopted by the Eighty-first Congress in the form of 20 public laws and 26 Presidential reorganization plans. As a result, many substantial improvements and economies have been instituted in important areas of government. This shows what can be done when legislators and officials work together toward goals that transcend politics.

We now note with dismay, however, that the first 6 months of the Eighty-second Congress have been characterized by a singular lack of legislative activity. We recognize that exceptional circumstances prevail. Yet we feel justified in pointing out that a serious legislative log jam is developing.

If the reasons for action on the Hoover report were compelling in 1949-50, they are doubly so today. The unenacted 50 percent of the Hoover Commission's recommendations have profound bearing on all the current problems of government. The need for reorganization of the Department of Agriculture, the Post Office, and the Veterans' Administration is clearly indicated by the Commission's findings which show that these agencies are handicapped by obsolete organization and wasteful practices in their efforts to meet overwhelming workloads. The Commission also sounded a clear call for consolidation of Federal medical services, modernization of Federal personnel procedures, and an end to the wasteful competition for public funds between rival agencies engaged in public works projects.

These and other important recommendations are embodied in a series of 20 bills based on the Hoover report, which have been introduced in the Congress under splendid bipartisan sponsorship. There is thus available to the Congress a program for increasing Federal efficiency and reducing waste which can help mightily to avert further inflation.

To date, however, little action has been taken. The legislative log jam threatens a delay which, if prolonged, might prove fatal

to full adoption of the Hoover Commission report.

This would be a serious loss to the Nation. It would also be a deep disappointment to the many thousands of good citizens of both parties who are working unselfishly in support of the reorganization program through 300 State and local citizens committees from coast to coast.

In fairness to the Congress, it should be pointed out that the administration shares responsibility for adoption of the Hoover report. Under the Reorganization Act of 1949, which the Hoover Commission recommended, the President is authorized to submit reorganization plans for the realignment of agencies in the executive branch. Unless either House rejects such plans within 60 days, they automatically become law. The Reorganization Act of 1949 is by far the strongest instrument of its kind ever authorized by Congress.

With equal dismay, therefore, we note that President Truman has submitted only one reorganization plan to the Congress during this session. This is an unhappy contrast with 1949 and 1950. By June 30, 1949, seven Presidential reorganization plans were before the Congress. At the same time last year, 27 such plans had been presented, and 20 had already received final congressional action.

Fully recognizing the huge new burdens which have fallen upon the administration since the Korean invasion, we feel bound to point out that the Hoover Commission's report is clearly and fundamentally linked to the successful prosecution of the national defense effort. We, therefore, urge the President and the Bureau of the Budget, to which it has assigned the major portion of reorganization responsibility, to act affirmatively in the near future by submitting plans based squarely on the recommendations of the Hoover Commission.

We understand, of course, that many of these measures are controversial. We recognize that every citizen who entertains reservations with respect to some aspect of the report can, and should, express his viewpoint.

But we do insist that anything so valuable as the Hoover report should be made the subject of prompt, frank, open public and congressional discussion, debate—and action, pro or con. The Hoover report is above and beyond politics. It has done much to reawaken the long-dormant interest of the free citizen in the management of his government. It is one of the most hopeful signs of our times.

It would be bad enough to see this report defeated openly by the forces of bureaucratic indifference and group selfishness after due hearing and debate. To see it go down through sheer neglect would be nothing short of a national tragedy.

The Hoover Commission's report must not be pigeonholed. We strongly urge Congress and the administration to move swiftly and vigorously in behalf of Federal reorganization, efficiency, and economy.

Congressmen and Military Secrets

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. YORTY. Mr. Speaker, Congress has vehemently demanded that our classified information be protected by removal from office of persons considered

to be security risks. The security program is based upon recognition of the fact that inestimable damage can result from unauthorized divulgence of the contents of classified documents, particularly those which contain military or diplomatic secrets. Breaches of security can mean war, death, and destruction. Only highly trained personnel can safely be entrusted with the important task of deciding when and under what circumstances classified information may be made public.

A breach of security is just as serious and just as damaging when committed by a Congressman as when committed by anyone else. In fact, it is more serious because it tends to destroy the mutual trust so essential to a satisfactory working relationship between Congress and those executive agencies which handle delicate international matters, the conduct of war, and plans for defense. To legislate intelligently, Congress needs to be fully informed, but to be fully informed Congress must be as trustworthy as the agencies of Government from which it demands full and complete disclosures of secret data.

A member of the Armed Forces who disclosed military secrets would be quickly punished pursuant to laws passed or regulations approved by Congress.

The breach of security discussed in the editorial from the Washington Post, which I should like to insert at the close of my remarks, is unfortunately not the only instance of congressional carelessness in the matter of security, but it is a particularly flagrant one, and unless we take action to prevent a repetition, we will have aided the cause of those who seek to destroy faith in our democratic institutions. The editorial from the Post follows:

SECRETS

A few weeks ago there was hope that with the end of the MacArthur hearings we might have at least a breathing spell in the all-out effort to publish the Nation's secrets. There now comes a report from Capitol Hill that dashes these hopes and testifies to the most wanton irresponsibility on the part of Congress. A pair of Representatives opposed to the Air Force's strategic bombing program forced an Air Force officer testifying before the House Armed Services Committee to reveal secret information on the number of B-36's currently in operation. Despite the fact that the figures were explicitly given on a confidential basis, the Congressmen went out and released the figures.

It so happens—and it is one more index of stupidity—that the information released is almost wholly irrelevant to the case the Congressmen are trying to prove. It also happens, however, that the figures are of inestimable value to the Soviet Union. They represent top secret order of battle information which, except for congressional volubility, would have been almost impossible to secure. On the basis of this information the Soviets can gage production figures and thereby calculate future United States strength at any given moment. Only the reading of codes or the placing of agents in the highest staff conferences—only, that is, the successful accomplishment of the most difficult intelligence activities—could have produced results so satisfactory to the Soviet Union. The time has come when action by censure should be undertaken by Congress against such irresponsible Members.

Massachusetts, Take Stock

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I shall deliver over WMEX, Boston, Mass., Monday, July 23, 1951, 7:45 to 8 p. m.:

Ladies and gentleman of the radio audience, the Committee on the New England Economy, after much painstaking study, has just submitted a revealing report to the President.

It deals with the problem of defense mobilization in the six Northeastern States and with the requirements for long-range regional economic stability and growth.

What it has to say affects every person who works or lives in this area.

The report is so thorough that I shall only attempt to pick out certain highlights about Massachusetts, which is the heart of New England.

It would be well for all of us to realize that change is the law of life. No city or State can be content with what it has, because it would lose ground to its up-and-coming neighbors. Marking time is no way to make progress in a competitive world.

Judged in terms of per capita income and standard of living, Massachusetts is one of the more prosperous States of the Union. It has many assets, including a population with a high level of education and skill. It is a place where many people like to live because of its proximity to the shore, because of its climate, and because of its general social and cultural environment.

On the other hand, it is deficient in many raw materials of modern history. Its transportation costs, power costs, and taxes are higher than those same costs in other States. Much of its plant and equipment is old and needs modernization. These, plus other high-cost factors, are the result of the failure of Massachusetts people to make the most of their assets. This can be traced in part to the inaction, or unwise action by various Government authorities, both local and Federal.

Massachusetts is being forced to adapt its economy to changing conditions resulting from the opening of new frontiers of knowledge, and also the new industrial frontiers of the West and the South. Without turning its back on the past, Massachusetts needs to attain a better balance between the old and the new in the development of enterprise. Upon the skill shown by its leaders in keeping pace with progress will depend the prosperity of the larger population in the next generation.

Suppose we start with the year 1921.

Since then, the Bay State has lost the advantage it held in two of its major industries—textiles and shoes—which were responsible for nearly 40 percent of manufacturing employment. Some of these industries migrated away from the Northwest, while others shifted their operations to Maine, New Hampshire, and Vermont. Furthermore, the factories that remain here, are able to produce goods with fewer employees because of labor-saving machinery.

Between 1919 and 1947, while manufacturing employment in the United States as a whole increased 44 percent, it declined in Massachusetts by 8 percent.

It is probable that losses of employment in the soft goods industries will continue. In

view of the technological revolution going on in textiles. It is the responsibility of business, labor, educational and political leaders in Massachusetts to seek substitute employments.

It should be noted on the hopeful side that the Nation appears to be in the midst of a substantial shift in raw materials sources, particularly in the fields of metals. Since 1945, the imports of aluminum from Canada have been large, and the projected expansion of Canadian production suggests that this source may be very important in the future. The discovery of vast iron-ore deposits in Quebec Province opens up a new opportunity because Massachusetts is located near this supply and could use it to expand its metal-using industries.

The relations of Massachusetts with the Federal Government is another part of the problem. In recent years, the National Government has collected and spent from 20 to 25 percent of the total income produced in the United States. It is in a position to reshape the economy by the manner in which it distributes this revenue. For example, it improves the competitive position of the South and West with public power developments, or through the building of defense plants and their sale to private industry at bargain prices. Likewise, the agricultural price-support program has the effect of increasing the income of farmers in other regions and might result in turning the terms of trade against Massachusetts by increasing the price of foods purchased from these other regions.

In this readjustment, Massachusetts has been compelled to give more than it has received. I do not suggest that we should oppose Federal programs that contribute to the well-being of the country at large merely because they are a drain upon us. In fact, we get some indirect benefits from the development of other regions. The point I want to make is this: As Federal operations continue to expand, we cannot afford to stand on the sidelines and shun Federal aid of all kinds. We ought to get our fair share.

Because Massachusetts has a number of one-industry communities, it is necessary for business leaders, labor leaders, and political leaders on the local level, to get together and work for a program of diversification.

As an older industrial section, Massachusetts has become too conservative as to methods and customs. Its future depends upon a modernization of its older industries and a development of new industries. In too many cases it has become over cautious. Time and again, the Committee on the New England Economy was told of great difficulty in getting new ideas accepted. This inflexibility in thinking and resistance to change have applied to management and labor alike. These attitudes have been particularly serious in certain of the communities committed to the older declining industries such as textiles and shoes, according to the committee's report. In some of these cities and towns, management, labor, and government—each looking at its own problems without due concern for the common interest—have too often been working at cross purposes. The result has been a fragmentation of the community, splitting the unity that is needed to solve the common problem.

The responsibility of Massachusetts is to make its resources and effort available to further the national defense program. Its opportunity is to do so in ways which will further the long-range adjustments that are necessary if we are to go forward with the times.

The committee offers these, among other recommendations, to improve business, employment, and income in Massachusetts.

Since manufacturing is the key everything should be done to encourage a climate that

will foster up-to-date manufactures. This means an overhaul of tax and regulatory laws, community organizations to promote growth, and similar activities.

A census of industries in terms of potentials of the area would reveal what could be manufactured here. It would show us what industries are most likely to develop, and would give us clear goals to shoot for.

The United States Department of Commerce is urged to expand the uses of funds for industrial research and development. This would help to provide technical and managerial services to smaller businessmen who are not financially able to get this modern know-how.

New industries needed to provide adequate and stable employment should be encouraged both in prosperity and in depression.

In communities where one-third or more of industrial employment is dependent upon the shoe or textile industry, local groups should take steps immediately to broaden their industrial bases by encouragement of diversification among other equally suitable products.

To meet potential recessions in industrial employment, each community should itself develop a stockpile of public-works projects. Such stockpiles should be based on estimates of vulnerability to unemployment, availability of facilities and labor, and lack of attractiveness to venture capital.

The committee strongly recommends that, wherever possible, the Federal Government should adopt minimum standards of working conditions and social services. In this way, the States would not be competing with each other, trying to lure away industries by offering lower wage rates, lower unemployment compensation, and lower workmen's compensation benefits. With higher Federal standards, applying to all States, this cheap raiding would be eliminated.

The Bureau of Internal Revenue and the Congress should review the problem of asset depreciation for the purpose of making tax revisions that would encourage the modernization of plant and machinery by older concerns. This would help them to prosper and employ more people.

There should be a reexamination of transportation facilities with respect to Canadian sources. All the New England States should consider the long-run future of the natural resources in Canada and Labrador, and the desirability of improving transportation access to these sources.

The committee recommends further study of power costs, and the possibility of reducing them in connection with such community problems as navigation, flood control, river pollution, and reforestation.

In education, it is urged that the leaders in that field give more attention to the development of regional and community institutions of learning which directly serve the community and the region as well as the Nation.

Business, labor, the State and Federal Governments, should make every effort, in regard to tariff policies, to avoid action which would cause job dislocations before new job opportunities are at hand.

Massachusetts has been challenged by other problems before.

By knuckling down to business, it managed to overcome every threat to its progress. It will do so again.

Our task is no longer one of shifting from agriculture, fisheries, and forestry to manufacturing. Rather, it is one of changing over and streamlining our present industrial set-up. We need to make new products and build a greater variety of business and job opportunities.

A high level of income, education, skill, and responsible leadership, together with

unrealized opportunities for further growth, underlines the fact that the means for the solution of our general problem are at hand.

Massachusetts should look forward to an expanding economy that will provide more employment side by side with rising standards of living. Such a future will not come without effort. It will require the effective cooperation of many individuals and groups, both public and private.

This cooperation is part of our tradition.

But the initiative must come from each individual helping to rekindle enterprise in his home town first, for the State is only the sum total of its communities.

Massachusetts is getting its second wind for the new tomorrow that is its goal.

Share-the-Wealth Plan for Tidelands

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remark, in the RECORD, I include the following editorial from the Forth Worth Star-Telegram:

SHARE-THE-WEALTH PLAN FOR TIDELANDS

The proposal of 11 Members of the United States Senate to divide all future tidelands oil revenues among the 48 States for support of education is bound to have a powerful allure. It is calculated to appeal strongly to those States which, without examining the proposition closely, see themselves as falling heir to an unexpected legacy of oil riches. That is probably the main purpose of the plan—to weaken support of the various States for pending legislation to restore title to offshore lands to the coastal States which held their undisputed possession for many years until the Supreme Court ruled otherwise.

In a reply to an article by Washington columnist Drew Pearson supporting this share-the-wealth program, Texas Attorney General Price Daniel goes beneath the surface of this plan and shows how deceptive is its appeal. He points out how the other States would stand to lose far more than they would gain if this enticing plan is adopted in preference to restoration of the tidelands areas to the States they adjoin.

Every State in the Union, as Mr. Daniel points out, has thousands of acres of submerged lands, the revenues from which are used for public education and other State functions. These valuable, revenue-yielding lands are subject to seizure by the Federal Government under the same theory that the tidelands have been taken—the theory, as expressed by Mr. Pearson, that the navigable water of the United States belong to the Federal Government, not to individual States.

And what would the States get in return for relinquishing these valuable holdings? In the case of Texas, one of the only three States which so far has derived any revenues from leases, royalties or oil production in its tidelands, the total collected from tidelands leases to date has been approximately \$7,000,000. Divided among the States, this would mean only \$148,833 per State, undoubtedly a great deal less than the States have derived from the submerged lands within their borders.

On the 350,000 acres of submerged lands it has leased, Texas has had an average return

of \$20 an acre under its leasing system. The Federal Government receives far less—50 cents an acre from the first applicant. Had the Texas tidelands been under control and management of the Federal Government in the past—the revenues would have amounted to only \$175,000. A similar amount collected in the future, and the lesser rentals and royalties received under Federal management of oil lands, would mean not nearly so rich a windfall for division among the States as might be expected.

There are some among the uninformed or unthinking who might be willing to accept this proposed largess collected by the Federal Government from a few of the States and distributed to all. But their eagerness might be dampened if they understood that such a gift would carry with it the danger, if not the inevitability, of the Federal seizure of all lands beneath navigable waters within State boundaries, the increased encroachment of the Federal Government upon the traditional rights of the States, and the Federal control which inescapably would come with Federal financial support of education.

The governors and attorneys general of 44 States do understand this. That is why they consistently have resisted this educational share-the-wealth scheme—which is not new but first was broached in 1948—and have insisted that title to the offshore lands and lands underlying navigable water within the States be confirmed to the States by clear-cut congressional action.

Noted Editor Discusses Foreign Policy

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. YORTY. Mr. Speaker, permit me to call the attention of the House to an editorial written by Mr. Manchester Boddy, noted editor and publisher of the Los Angeles Daily News:

CURTAIN LIFTED ON STALIN ANTI-UNITED STATES AIM

For the last 2 years or so anyone who wanted to show that he was up on his current reading about world affairs could do so by saying that the United States had no foreign policy; didn't know the score, didn't know what to do and was just playing—and very badly—by ear.

From there he would go on to tell how smart the Russians had been. They knew just what they wanted and how they were going to get it. The United States just was no match for the crafty Stalin and his Communist conspirators. We couldn't beat something with nothing, the Russians had something—a plan—whereas we had nothing.

Well, it is now revealed that one night in July 1947, Josef Stalin met in the Kremlin with an official delegation from Czechoslovakia and calmly outlined at considerable length his plans for confining American power to the Western Hemisphere and extending Soviet power throughout Europe and Asia.

And now, for the first time and in Stalin's own words, the current—July 14—issue of the Saturday Evening Post reports what the Russian ruler said.

STALIN'S OWN WORDS RECORDED

Arnhorst Heldrich, who attended the meeting as secretary general of the Czech Foreign Office, recorded Stalin's talk. His story is told by Stewart Alsop, veteran newspaperman and Post writer.

And what a story. Because the Czechs were in his power, the Russian ruler had no idea his words would ever be repeated, the article states. But Heldrich escaped, has visited the United States, and we now have his exact record.

Josef Stalin, according to the record, based his international strategy on three basic assumptions:

1. That the United States would suffer an economic catastrophe;
2. That this catastrophe "would permit American power to be confined to the Western Hemisphere, leaving Britain and France too weak to resist the pressure"; and
3. That American outer defenses or "positions of power," as Stalin called them—in Europe, the far Pacific, Near and Middle East—could be torn down rather easily and Russia wouldn't need to engage in any action that would serve as a Pearl Harbor and unite the American people.

Those were the basic assumptions upon which Stalin built Russia's foreign policy.

Anyone reading Stewart Alsop's article—and it should be read in its entirety—will be impressed to see how closely Stalin's basic assumptions fit into the pattern of events—initiated by Russia—that have occurred since the cold war began.

UNITED STATES FOREIGN-POLICY CRITICS WRONG

This newspaper has felt for some time that critics of our State Department have been inexcusably wrong in insisting that our foreign policy has failed to take the initiative from the power-mad Communist dictatorship in Moscow, that Russia has had free-wheeling in carrying out her program of aggression.

As the current Post revelation makes clear, Russia actually has been dramatically and, for her, tragically wrong on all three points of her basic assumption. As it says.

1. There has been no American depression.
2. American power has been increasingly committed outside the Western Hemisphere, in direct opposition to action by the Soviet Union.

3. These very—Russian—actions, culminating in the aggression in Korea, have had a cumulative effect on American public opinion very like Pearl Harbor.

In short, each of Stalin's basic assumptions has proved dead wrong.

It is about time, we think, for our State Department critics to admit that our definite foreign policy has been to accomplish just that—and we have done a pretty good job of it at least to date.

There is, however, a grave note of warning in the Post revelation.

ONLY WAR CAN ACHIEVE RED AIMS

"It must now be clear to Stalin," it says, "and to the other men in the Kremlin that their aims cannot be achieved without world war. . . . Heldrich believes that when the Soviet atomic stockpile reaches a decisive size war will probably come."

These sound like logical conclusions, but they may not be as sound as they seem. There exists, for example, the possibility that Russia's dramatically presented peace act on the world stage of the United Nations has been launched to confound, confuse, and defeat the American foreign and domestic policies that have, in fact, been so successful in defeating Russia.

One of the first reactions in Congress to the Korean peace move has been a drive for severe cuts in our economic aid to Europe program. While Congress is working at this,

the Communists in Iran are doing their level best to cut off Western Europe's supply of oil. If Congress and Iran's Reds are successful, at least one of Stalin's main assumptions—to leave "Britain and France too weak to resist the pressure" might yet be realized.

CONGRESS ACTION MAY HELP STALIN AIM

Another direct result of Russia's peace antics has been to encourage Congress to prepare the United States, for a possible economic catastrophe by destroying the whole system of economic controls with which our economy has been harnessed in a united effort to meet the Red challenge in Europe and Asia. If this antiadministration movement is as successful as the coalition opponents are trying to make it, Stalin's second assumption may be saved.

Finally, there is growing evidence that the up-coming political campaign will produce a strong effort to convince the American public that Korea and other Red aggressions in Europe and Asia should not have been allowed to serve as another "Pearl Harbor" in arousing the American will to meet the Red challenge wherever it appears in Europe and Asia. If this sort of political campaigning succeeds, Stalin may yet prove the soundness of all three points in his basic assumption—MANCHESTER BODDY.

JULY 18, 1951

Prayers for Peace

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Tablet, a Brooklyn, N. Y., newspaper, on Saturday, July 21, 1951:

PRAYERS FOR PEACE

Herve J L'Heureux, a wounded veteran of World War I, one of the founders of the American Legion, a veteran American Foreign Service officer, and presently Chief of the Visa Division of the Department of State, is the originator of a Prayers for Peace Movement which merits widespread endorsement, encouragement, and support. Mr. L'Heureux's message is simple. He asks a minimum of 1 minute of prayer daily, at noon, by every man, woman, and child in the United States, each in his own way, and each according to his own faith, to seek divine guidance and assistance in securing world peace.

It is not Mr L'Heureux's intention to form an organization, but rather to build up a custom among the American people to pause for 1 minute in the midst of their daily tasks, at 12 noon each day, to raise their minds and hearts to Almighty God in sincere and earnest prayer, to ask Him to help us adjust our international differences and to enable the nations of the world to secure an equitable and abiding peace. Certainly such a custom would be not only praiseworthy and meritorious, but it would do far more toward achieving the goal of universal peace than hours spent by diplomats in futile discussions at the council table.

Mr. L'Heureux's experience in the foreign service has convinced him that there is abroad a general lack of appreciation of the true character and ideals of the American people. Americans are thought to be es-

entially capitalistic, materialistic, and addicted to luxurious, secularistic living. He believes that a movement such as his will convince the world that Americans are truly a "God-loving, God-fearing, and peace-minded people."

Two thousand four hundred groups and organizations have already endorsed the L'Heureux peace resolution and are carrying out his plan. Mr. L'Heureux suggests that business organizations, labor unions, social, civic, and fraternal as well as religious organizations adopt a resolution calling upon their members to adopt the custom of pausing for 1 minute each day at 12 noon to pray for peace.

Catholics who have been urged again and again by the Holy Father, by their bishops and priests to pray without ceasing for world peace, should certainly give every possible support and encouragement to the establishment of this custom throughout the United States. If it be true that "the family that prays together, stays together," it should be more abundantly true that the Nation that prays together will stand solidly and firmly in the face of all threats of destruction.

The American people need to pray. Insofar as Mr L'Heureux's movement helps in that direction it is most worthy of commendation and encouragement.

U. N. and Press

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "U. N. and Press," written by George E. Sokolsky, and published in the South Bend (Ind.) Tribune of July 16, 1951. The article deals with the problem which I discussed on the floor of the Senate during the past week.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. AND PRESS

(By George E. Sokolsky)

The United Nations gradually, through its various committees, is moving into world government. The country that it uses as its testing ground is the United States. Few Americans are conscious of the activity of the United Nations. Many of those who know what is being done by the various U. N. committees refuse to believe that any of it can have any permanent effect on American institutions.

Yet under the Charter of the United Nations, which in the American political system is a treaty signed by the President and ratified by the Senate, decisions of the United Nations have already been applied to cases in our courts with the full weight of the law.

One of the committees of the United Nations which has concerned itself with questions tremendously important to the United States is the special committee on the draft convention on freedom of information. As the work of this committee is studied it is clear that its interest is not in freedom of information but in the right of governments to limit and suppress information and for the harassment of reporters. This is done under the Aesopian word "responsibility."

Carroll Binder, of the Minneapolis Tribune, the American representative on this committee, has been waging a losing fight trying to educate some of the Europeans about freedom of the press, as practiced in the United States, where the imperfections of man are recognized and often assumed to be natural and therefore unpunishable.

In those other countries the theory is that the great mind alone can determine what the people ought to know and that competent reporters who check their data are spies or irresponsible. Carroll Binder describes their attitude:

"These governments are engaged in a terrifying experiment to condition the minds of hundreds of millions of persons in an attempt to make them respond automatically to the commands of their rulers. In their hands information has been transformed from a means of enlightenment and understanding into a political weapon taking any form or shape required by the situation. It has become a knife to assassinate reputations, a drug to dull the senses, or a poison to instill suspicion and fear.

"Of course, when they have sought support for their view in the United Nations they have been careful to present it in the most disarming disguise. They have maintained that to promote friendly international relations it is first necessary to define what information is and then to suppress the dissemination of anything which does not conform to the definition."

What these countries seek to do in the United States is to make the newspapers and the journalists responsible. They do not recognize that the laws of libel are sufficient, they demand that, by administrative procedure, a government shall be enabled to take action against a newspaper or a reporter who is not responsible. By responsibility, they mean that no reporter should write nor should a newspaper print anything that annoys the politicians of any country. Binder says

"This convention was never, as I understand it, intended to deal primarily or even directly with the work of journalists. I have understood its intent to be the promotion and protection of everyone's right to freedom of information. To distort it into a punitive measure directed at journalists would certainly be a mockery of everything the United Nations has attempted to do in this field. We must realize that undesirable checks placed on journalists would apply equally to artists and teachers, to lawyers and politicians, and in the last analysis to people like ourselves drawn from every walk of life. Even if the grievances against some journalists and newspapers are assumed to be real this is certainly too high a price to pay to settle a few scores."

The State Department has put up a good fight against the Europeans who seek to suppress freedom of the press throughout the world by means of the United Nations. The American position is: "We are convinced that the fundamental principles of freedom of information cannot be the subject of compromise."

The United Nations is, however, a complex and enormous organization in which compromises must be found among 60 nations. Things happen there and the public finds itself faced by a condition from which there is no immediate withdrawal.

It is therefore essential that the American position be strengthened to say not that "freedom of information cannot be the subject of compromise but to say that the 'freedom of the American people are not subject to discussion."

Poem by a Constituent

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. MILLER of California. Mr. Speaker, Mrs. Arthur Glassbrook, of Berkeley, Calif., has sent me the following poem.

I urge you, my colleagues, to read it and catching its rhythm catch the pertinent thought behind it:

HON. GEORGE P. MILLER,
House of Representatives,
Washington, D. C.

DEAR SIR—

I'm glad it's you I'm writing to,
Because what is right to do, you'll do;
I don't hanker for high-priced cars,
Trips to the moon and drinks and cigars;
But I'd like three meals that part-way square,

A peg for my hat I can keep right there;
A chance to have my thinking clear
Without the dread undertone of fear—
Fear for the lack of the wherewithal
That settles down like a cheerless pall.
Working each day for my daily bread
Is something I'm proud to do, instead,
It has turned to a grind on a treadmill track,

Oh, please, please, please, roll the prices back

Please, please, please let's have control
So I can feel that I own my soul

I love the sunsets and fields and sky,
And the mighty trees with their stature high;

I love the creatures of woodland trails,
And the feathered things, and the flow'r-decked vales;

I love the hills with their grassy slopes,
But why must people behave like dopes?
It's a good old earth, can't we keep it so,
Without driving good folks where bad must go?

There's a place somewhere, if not in the sun,
At least in the shade, for ev'ryone.
What the Joneses do, I never care,
For my life's not patterned by their T-square,

But it matters a mighty lot to me
When a price "ain't what it oughter be"
I'll still see the sky though I'm "in the hole,"
If we have a wise, firm price control.

George Washington on Economy

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BUFFETT. Mr. Speaker, in the July 20, 1951, Appendix, I reported a deliberate misrepresentation in Drew Pearson's column on George Washington's views on price control.

A mistake in the typesetting of this extension left a confusing picture regarding this falsification of Washington's views.

Accordingly, I am constrained to restate the facts distorted by Mr. Pearson

in his July 20 column in the Washington Post.

The column in question carries some excerpts from a letter written to James Warren on March 31, 1779, by George Washington.

A part of what Mr. Pearson quoted from Washington's letter is worded inaccurately. More important, his entire excerpt deliberately misrepresents George Washington's views on price controls, as expressed in that letter.

Actually, Washington pronounced price control to be wrong and impossible, and did so in this very letter, but Mr. Pearson chose to omit that passage of the letter to James Warren.

The following is the section of the Pearson column which misrepresents Washington's views:

GEORGE WASHINGTON ON ECONOMY

Here is what George Washington wrote about inflation and price control on March 31, 1779, in a letter to James Warren:

"Is the paltry consideration of a little dirty pelf to individuals to be placed in competition with the essential rights and liberties of the present generation and of millions yet unborn?"

"Shall a few designing men for their own aggrandizement, and to gratify their own avarice, overset the goodly fabric we have been rearing at the expense of so much time, blood, and treasure, and shall we at last become the victims of our own abominable lust for gain?"

"Our cause is noble, it is the cause of mankind, and the danger to it is to be found within ourselves."

Mr. Speaker, now here is what George Washington actually said about price control in that letter to James Warren:

Let vigorous measures be adopted, not to limit the prices of articles, for this I believe is inconsistent with the very nature of things, and impractical in itself, but to punish speculators, forestallers, and extortioners, and above all to sink the money by heavy taxes. To promote public and private economy, encourage manufactures, etc.

The Crozet Superhighway

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article on the proposed Crozet Superhighway, entitled "Highway Would Honor Claudius Crozet," by James Euchner, which was published in the Sunday magazine of the Richmond Times-Dispatch of July 15, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows:

HIGHWAY WOULD HONOR CLAUDIUS CROZET (By James Euchner)

A soldier of Napoleon, who emigrated to the United States when his leader was exiled from France, may have a coast-to-coast highway named in his honor.

Currently awaiting action in the Public Works Committees of both the Senate and House of Representatives is a joint resolution proposing that a transcontinental route from Boston to San Diego be designated as the Crozet Superhighway, in memory of Claudius Crozet, a Frenchman by birth but a Virginian by adoption.

Nothing could be more fitting tribute to the man who, as chief engineer of Virginia during the early nineteenth century, frequently planned in his mind a system of roads extending from the Atlantic to the Pacific. To a certain extent he carried out these plans—eastern sections of United States Routes 40, 50, and 60, which can be followed from the east to the west coast, were originally built under Crozet's supervision. Appropriately, the proposed superhighway would follow portions of all these routes.

A man of exceptional ability, versatility, and vision, Crozet is remembered primarily as a great engineer, but also as an outstanding educator. He was appointed to the first board of visitors of Virginia Military Institute in 1837 and as president of the board was instrumental in setting up a sound program of training. The cadet mess hall at VMI is named in his honor.

Were it not for the political demise of Napoleon Bonaparte, Claudius Crozet probably would have pursued a successful military career in France, instead of coming to this country. A graduate of the Ecole Polytechnique, Paris, he fought as an artillery officer under Napoleon in Germany, Holland, and Russia and was captured by the Russians during the retreat from Moscow. He was later awarded the Cross of the Legion of Honor. In 1816, after Napoleon's fall, Crozet and his wife sailed for America, where his first job was as professor of civil engineering at the United States Military Academy.

Finding himself without textbooks, he translated a three-volume French engineering text and also wrote a book on mathematics. He is also credited with having introduced the use of the blackboard to this country while teaching at West Point.

In 1823, he left the academy to become State engineer of Virginia, which then, of course, included the present State of West Virginia. Among his early projects were surveys of turnpikes from Winchester to Romney, from Staunton to Lewisburg, and from Staunton to Parkersburg. The latter, which crossed nine mountain ridges, is still considered one of his greatest feats.

LEFT VIRGINIA IN 1831

Crozet left Virginia in 1831, largely because of disagreements with bureau of public works officials, who would not go along with his insistence that the State should concern itself more with railroads and less with canals.

After a year as the first State engineer of Louisiana, and three as president of Jefferson College, near Convent, La., he made plans for retiring and returning to France. Instead, he came back to Virginia for another term as State engineer. From 1844 to 1849 he was principal of Richmond Academy and from 1849 to 1857 chief engineer of the Blue Ridge Railroad, now part of the Chesapeake & Ohio. It was during this period that he built the Blue Ridge or Rockfish Gap tunnel, near the present town of Crozet, Albemarle County, named in his honor by the C. & O. Later he helped supervise construction of the Washington aqueduct.

In 1860, at 71, Crozet returned to West Point as a member of a board appointed to revise the Military Academy's program of instruction. He died in 1864 at the Midlothian home of his son-in-law, Dr. C. S.

Mills. His body was originally buried in Shockoe Hill Cemetery, Richmond, but in 1942 was removed for reburial at VMI.

For the most part, the Crozet Superhighway would be new in name only. Most of the the proposed route consists of highways now in existence or under construction. Special new construction has been proposed for the West Virginia section, which would run the entire length of the State, and for the short Virginia segment, which would consist of a few miles crossing the northern tip in the vicinity of Winchester.

Actually, various combinations of new and already existing roads could be used for this section of the superhighway. The West Virginia Legislature has authorized the expenditure of funds for surveys and preliminary engineering work to determine the advisability of building new roads for the Crozet route. Virginia, as yet, has taken no action.

The highway is the idea of a group of West Virginians. The Crozet Superhighway Commission, a volunteer organization with headquarters at Elkins, W. Va., has been contacting highway commissioners, legislators, and civic groups in States through which the route would pass, seeking backing for the project. Thus far, according to D. D. Brown, chairman of the commission, no serious objection has been raised, and Delaware and Maryland have already officially approved the group's plan.

According to the plan, the superhighway would originate at Boston, follow State Route 9, United States Route 20, and State Route 15 through Massachusetts, Connecticut, and New York, and enter New York City on the Merritt Parkway. It would cross the Hudson River on the George Washington Bridge and connect with the New Jersey Turnpike, now under construction. The Delaware Memorial Bridge, also now being built, will connect the southern end of the turnpike with United States Route 40 south of Wilmington, Del. Route 40 would be followed to Baltimore.

Two routes have been proposed to bring the highway from Baltimore to Gore, Va., 14 miles northwest of Winchester. One would follow the present United States Route 1, or a parallel highway now under construction, to Washington, thence up United States Route 50 to Gore. The other would follow Route 40 to Frederick, Md., and improved United States Route 340 to Harper's Ferry, just across the State line in West Virginia. From Harper's Ferry, a new road would be built to Gore, a distance of roughly 40 miles, over a relatively straight line passing just north of Charles Town, W. Va.

From Gore, a new route might be built through West Virginia via Baker, Moorefield, Elkins, Norton, Ellamore, Adrian, Frenchton, Ireland, Charleston, and Huntington. Or the highway could follow existing roads—United States Route 50 from Gore to Junction, W. Va., State Route 4 to Charleston, and United States Route 60 to Huntington.

The superhighway would continue west via Route 60 through Louisville and Paducah, Ky., to Poplar Bluff, Mo., United States Route 67 through Little Rock, Ark., and Texarkana to Dallas, Tex.; United States Route 80 through Fort Worth, Abilene, and El Paso, Tex., Lordsburg, N. Mex., and Phoenix, Ariz., to San Diego.

The resolution proposing approval of the name and route was introduced in Congress by Senator HARLEY M. KILGORE and Representative HARLEY O. STAGGERS, both of West Virginia. Early action on the measure is not expected, but eventual approval seems quite likely. A man like Claudius Crozet has more than mere sectional appeal, although his name may be little known in States other than those in which he worked.

Baccalaureate Address of A. Whitney Griswold, President of Yale University

EXTENSION OF REMARKS OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. AUCHINCLOSS. Mr. Speaker, baccalaureate addresses, filled with advice to the youth of America, are familiar to all of us, and I know from experience that it is difficult to include in such an effort some new thought that will be helpful and encouraging to the young men and women who face the days ahead. This is especially true now when the perplexities are tremendous, the confusion enormous, and there is present the awful threat to our liberty.

However, A. Whitney Griswold, president of Yale University, in his first baccalaureate address after taking office, sounded a call for the reappraisal of the dignity and worth of the individual, and in a brief but impressive way, with thrusts of logic from his penetrating mind, completely devastated the mythical claims of communism. He urged men and women to do their own thinking and reasoning, and condemned the suppression of the individual. He, along with Thomas Jefferson, proclaimed that "morality, compassion, and generosity are innate elements of the human constitution, capable of cultivation in individuals, and capable of transmission to society through individuals." President Griswold expressed in words the thoughts of many of us, and exposed communism for what it is. He brings hope and courage, and he renews our faith in the principles on which our Republic is founded.

I hope that my colleagues will read this truly remarkable and wholly American address to the youth of America. It is full of sound reasoning and good common sense. It follows.

"Ye are the salt of the earth: but if the salt have lost his savour, wherewith shall it be salted?" (Matthew 5:13).

If I divine the mood of you who are leaving Yale this spring, it is one of cheerful resignation. To your cheerfulness in all winds and weathers, in clear skies and at ceiling zero, we who have lived and worked among you are admiring witnesses. We take courage from your courage. But I observe also that you share the prevailing mood of the hour, which in your case consists of 9.0 bargains privately struck with fate—on fate's terms. I observe that you are resigned to a world in which people become numbers on Selective Service and social-security cards; in which lotteries are illegal except when they deal with human life, and in which the individual, sacred to both Christianity and democracy, sometimes seems to exercise about as much control over his own fortunes and those of his fellow men as a baseball in the World Series.

I will say this much for your mood: at least it is healthier than the one which attended my own commencement. We were graduated into the greatest economic depression in history and the origins of the greatest war in history with assurances that

poverty was about to be banished from the earth and that war had been outlawed among the nations. No such disillusionment lies in store for you are awaited us in 1929: come what may you are better prepared for it. But that is all I will say for your mood. As a philosophy of life it is as false in its fatalism as our mood was in its romanticism.

We have not resigned from the human race. Neither science nor technology nor all the deterministic doctrine inspired by them, nor the despotisms that have tried to force that doctrine upon mankind, have succeeded in producing a world that can function without our individual powers of reason, imagination, and conscience. We are not mere sponges or plankton afloat on a tide of causation over which we have no control. We are rational beings, capable of charting the tide, and navigating it, and even diverting and directing it. The salt—to return to the Bible's metaphor—has not lost its savor; and there would be no way of salting the earth if it had. There is no dialectical or technological substitute for the creative individual.

Whence come our doubts and hallucinations to the contrary? Partly from fear, partly from laziness. We are afraid that where, as in Soviet Russia, there is mystery there is also magic; that the Russians have possessed themselves of some supernatural means of enslaving the will of men; that they will blow us all to bits by methods unknown to western science. We have beguiled ourselves with gadgets, with machines that work for us, and think for us, and entertain us, and (as we believe in our folly) educate us, until our God-given individual powers have become atrophied through disuse. In this hypnotic state we have fallen prey to some of the very teachings we profess to abhor, the teachings of those who proclaim the world machine blueprinted in the Kremlin and the atomizing of the human race without the assistance of the bomb.

The last world war and the terrible weapons now in existence give us abundant reason to fear the next; and the ruthless and aggressive tactics of the Kremlin around the world give us every reason to think that the Russians are willing to gamble on it. But there is no reason in the unreasoning dread that exalts them into supermen and credits their doctrine with wonder-working properties, and as for the television sets that take us from our books, the business machines that clatter away under wall mottos reading "Think," the electrical examination-corrector that dispenses with writing, the inner-spring mattresses that end up in bed boards, and the prefabricated knowledge that ends in remedial reading—for all this childish fascination with gadgetry we have only childishness as an excuse. Shall we then offer fear and childishness as proof that the individual has played out his role; that the salt has lost its savor?

No, you will say; but what about science and the industrial revolution now projecting itself into the atomic age? And I will answer you with the fact that whereas the first social interpreters of these phenomena were responsible for the idea of the submergence of the individual, modern scientists are the leaders in repudiating it.

I do not know what it is that makes each generation so sure that its own set of circumstances is unique and yet forms a basis for universal preachments and predictions. The Bible says it is the essential vanity of man. I should say it is his innocence of history—of the cumulative experience of his fellow men. We are forever calculating our prospects on the strength of a mere peep through a knothole at this experience. So early economists who observed the first sensational progress of the industrial revolution deduced their concept of economic man, which the scientific Socialists appropriated and developed into the full-blown doctrine

of economic determination. The whole dialectical process is barely a hundred years old, and the leading figure in it was Karl Marx.

Let us concede that Marx chose an exceptional knothole—the British Museum—that he brought to it an exceptional intellectual apparatus, and that he kept his eye to it (day after day for nearly 35 years) with exceptional perseverance. His range of vision was still exceptionally limited. Man made his debut on the planet in the Pleistocene epoch of the Cenozoic era, about a million years ago. From the time he took up farming in the Neolithic Age, about 7000 B. C., his experiences having been relevant to modern economic society. There is every reason to extend this perspective to 7000 A. D., if not to 1,000,000 A. D. Marx's focal depth included little more than a bookish version of the industrial revolution in England between the years 1820 and 1860, with the preponderance of his evidence drawn from the earlier rather than the later part of that period. That is to say, Marx took as the verification of his hypothesis a static view of conditions in one country, already undergoing change while he wrote, and offered it to the world as both timeless and universal. Nor was his view entirely objective. Marx was a bitter, vindictive, unhappy man, suffering the plagues of Job without Job's faith, tortured by poverty and disease, living in squalor, so proud and thin-skinned, as one of his brilliant biographers tells us, that he made excessive demands on the world and when these were not satisfied (as they nearly always were not) turned in upon himself "in paroxysms of hatred and of rage." Yet it is this static, myopic, misanthropic view of human experience that is offered as the principal foundation for the belief that the machine is all and the individual is nothing, and for the Communist dictatorship that exploits that belief to suit its purposes. It has all the eerie aspects of those prehistoric Siberian mammoths frozen into the ice with hair and flesh intact, with everything, that is, except life and sense.

One would think that the very nature of Marx's vision would make it suspect; that the influence of his own baleful personality contradicted his own thesis; that the direct, personal influence of Lenin on the outcome of the Russian revolution (suppose the German high command had never let him cross Germany in that sealed-up boxcar) contradicted it even more emphatically; and that the fact that the thesis has to be maintained by tyranny and enforced by secret police contradicted it finally and flatly. Still there remains our awe of science and the technology of our own time. What do our own observations tell us?

If we carry them far enough to include the opinions of modern scientists, they will tell us of steadily broadening horizons for the creative individual and of the urgent need for him to press on toward those horizons. "Man has risen, not fallen," writes George Gaylord Simpson in *The Meaning of Evolution*. "He can choose to develop his capacities as the highest animal and try to rise still further, or he can choose otherwise. The choice is his responsibility, and his alone. There is no automatism that will carry him upward without choice or effort and there is no trend solely in the right direction. Evolution has no purpose; man must supply this for himself." To do so, to make the wise choice for himself and his fellow men is the ethical responsibility of man which he must discharge as an individual if he is ever going to realize its benefits as a species.

But, we say, can we not entrust this responsibility to others, to the elaborate teams of specialists that are constantly producing new techniques, new tools and, may we not assume, new visions of wisdom and justice? What do the scientists say to this? I suppose there is no more impressive example of team

work in human history than that which produced the atomic bomb.

Listen to the opinion of one of the world's outstanding scholars in that field, Percy Bridgman, whose researches in nuclear physics won him the Nobel Prize in 1946. So elaborate has the organization, equipment, and administrative detail become, writes Professor Bridgman, that each team of physicists "has to be driven by someone at the head who has the ideas. There is danger here that all the rest of the team will pick the brains of one man, with an ultimate decrease in the number of physicists in the community capable of independent and critical thought." And he goes on to say:

"The participation of the individual is necessary in every process of intelligence, not merely in the processes of science. Intelligence can be given a meaning only in terms of the individual. It seems to me that this has a far-reaching significance not usually appreciated, for I believe that here is to be found perhaps the most compelling justification for democracy. Intelligence is based on the individual. An authoritarian society in which the individual is suppressed cannot, by the nature of intelligence, be characterized by general intelligence."

Gentlemen of the graduating class, this is a truth Christ perceived and most surely intended to communicate to his disciples when he told them they were the salt of the earth for which there was no substitute; and that they were the light of the world, but they must not hide that light under a bushel. This is also the truth that the founders of this Republic perceived and Jefferson proclaimed when he said that morality, compassion, and generosity were innate elements of the human constitution, capable of cultivation in individuals, and capable of transmission to society through individuals. It is for life in this free, Christian society that we have prepared you at Yale. It remains for you, each according to his talents and each as an individual, to embody the degree of wisdom and integrity we may expect for that society.

The Baited Hook

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mrs. BOLTON. Mr. Speaker, on last Monday, July 16, I called the attention of the House to the actual and alarming effect of OPS General Overriding Regulation 15 upon the machine tool industry and our defense effort as a whole.

Under unanimous consent to extend my remarks, I am including an editorial from the *Wall Street Journal* of July 18. This editorial describes in simple, though graphic, language, the serious consequences which will result from this pattern for Government control of profits which is intended to set the pace for further control of all American industry's profits. Mr. Speaker, this represents a serious threat to our entire system of free enterprise.

In addition, I am including letters from Mr. Frederick C. Blackall, Jr., first vice president of the National Machine Tool Builders' Association, and from J. A. Bradner, president of the Lees Bradner Co., of Cleveland.

The above-mentioned follows:

[From the Wall Street Journal of July 18, 1951]

THE BAITED HOOK

The other day the Office of Price Stabilization announced a raise in the ceiling prices for machine tools. It did it with a formula that contains a hidden hook.

Ostensibly the increase was allowed to give relief to machine-tool manufacturers and to spur production as a part of the defense program. But it seems likely that the net effect will be to establish Government profit control over the industry, to set a precedent for profit control over business generally.

The hook is that the OPS has tied its price increase to a company's assets; that is, each company will be permitted to raise its prices enough to give it a fixed, maximum return expressed as a percentage of its assets.

The formula apparently works like this: The machine-tool builder goes back to this 1938-49 earnings experience and arrives at a gross percentage of earnings relative to his assets during those years. Say it comes out that the company has earned 20 percent on its assets. It is now, under the OPS rule, entitled to earn 80 percent of this amount; in other words, it can set its prices to make a return of 16 percent on its assets as of the present time.

The bait in this is that it will help companies with good earning records during the base period; many companies will now have a higher ceiling price for their tools than they would under the general freeze.

It is not so good, of course, for companies that did not do so well during the years 1938-48 but are now "up and coming." More importantly, however, it freezes the earnings of all companies. It puts price control on a profit basis.

For instance, suppose that a given company is entitled by the formula to an overall profit of \$200,000. The company may double its current output by putting on extra shifts, or it may improve production techniques—but it can still make no more than \$200,000 profit unless it has increased its capital investment. At the end of each 12 months it must compute its profits and rebate any excess to its customers.

On the other hand, a company could get lax on efficiency, slack off on production, and yet conceivably raise the price on each machine so that it could make exactly the same dollar profit it made before with less production. This is hardly an incentive for efficiency.

Attempts by the Government to get profit control, to get the power to control not only the prices a company may charge, but also to fix the total profit allowable regardless of volume or efficiency—these are not new. The only difference in this latest attempt, it seems to us, is that it comes with the lure of a well-baited hook.

NATIONAL MACHINE TOOL
BUILDERS' ASSOCIATION,
Cleveland, Ohio, July 20, 1951.

HON. FRANCIS P. BOLTON,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN BOLTON: Last week OPS issued "General Overriding Regulation 15" entitled "Adjustment of Ceiling Prices of Machine Tools," to take effect on Monday of this week. In view of your present concern over the whole problem of extension of controls, we think that the peculiar and alarming nature of this regulation will be of interest to you.

The regulation was issued following a directive from Mr. Wilson, who insisted that clarification of the machine tool price situation was imperative in order that machine tool builders might devote their entire ener-

gies to production, and be provided with genuine incentives.

But when issued, the regulation proved to be one not of price control but one of outright profit control.

Under the regulation, a machine tool company computes its average rate of return on total assets from 1938 to 1948 inclusive and is then permitted to realize 80 percent of this rate when applied to its total assets today. Working backwards from the allowable percent of profit, the manufacturer may fix his prices for 12 months ahead at levels which he estimates will yield the profit allowed. If, however, the profit turns out to be over 5 percent in excess of the rate allowed, the excess must be refunded to customers.

My main purpose in writing you today is to make very clear that the Nation's machine tool builders are not in favor of this so-called price control, which is not price control at all but is a blatantly transparent mechanism for the control of profit. They did not, and do not now approve of the issuance of any such dangerous excursion into socialistic philosophy. Our objections are as follows:

1. The underlying principle behind this regulation is wholly un-American and contrary to the intent of the Congress. The objective of the price control bill was literally to control prices; not to fix arbitrarily, by Federal decree, a stipulated rate of profit. General Overriding Regulation 15 is a clear-cut step in the direction of profit control in this country. It is a new concept wholly foreign to our traditions and institutions.

2. The refund provision is equivalent, in effect, to a 100-percent excess-profits tax administered by OPS.

3. The regulation puts a floor under the earnings of the inefficient and high-cost manufacturer. If his costs increase, he can simply raise his prices, as long as he does not exceed the permissible gross earnings. This procedure might better be termed price setting on a formula of inefficiency-plus. It is an open invitation to the misuse of taxpayers' money.

4. The regulation does not carry out the directive of the Office of Defense Mobilization. It neither stimulates production nor provides incentive.

5. The regulation would tend to limit, rather than to expand the productive efforts of the efficient manufacturer, for it would offer him no incentive to increase operations and output beyond his own convenience. When the dollar profit permitted is geared to total assets instead of to volume of sales, why should a company take on more business than the amount required to yield the maximum rate of profit allowed?

6. There is a sinister implication in the regulation. It could well serve as a pattern to be applied to other industries. Indeed, with this as an entering wedge such a development would be almost inevitable. Is the administration, under the guise of price control, seeking to establish the socialistic principle of profit control in the hope that it may remain in effect after the emergency is over?

The machine-tool industry seeks no subsidies nor guarantees of profit. The OPS knows full well the nature of price controls appropriate to the machine-tool industry. This has been developed through weeks and months of discussion of the subject between OPS officials and the Industry's Advisory Committee. The industry had sought controls based upon prices quoted during the freeze period, plus such allowances for increased costs as OPS considered proper. Controls of such a nature would not put a premium upon inefficiency; they would provide a stimulus to production, and would enable the industry to do what Mr. Wilson considers so imperative—namely, to devote

its entire energies to the speeding up of machine-tool output for the defense program.

Speaking both as an individual machine-tool builder and as vice president of the National Machine Tool Builders' Association, I can assure you that our industry earnestly urges you to give this matter your careful consideration and to institute steps to withdraw this highly dangerous regulation.

Very faithfully yours,

FREDERICK S. BLAKALL, JR.,
First Vice President, National Machine
Tool Builders' Association and Presi-
dent and Treasurer, the Taft Petree
Manufacturing Co.

JULY 19, 1951.

HON. FRANCIS P. BOLTON,
The House Office Building,
Washington, D. C.

MY DEAR MRS. BOLTON: We certainly want to commend you for spotting the Office of Price Stabilization's endeavoring to use its controls authority, not to control prices, but to impose profit controls.

Need, as you know, for an enormous outpouring of machine tools is recognized. Mr. C. E. Wilson on July 9 directed:

"Metalworking tool production must be increased. The necessary measures are. (A) The Office of Price Stabilization shall modify price controls on new metalworking tools to give metalworking tool builders the stimulus to expand their production for essential needs."

The Office of Price Stabilization chose to wrench the effect of this ODM directive into something quite else. In the OPS statement of considerations issued to appear to effect compliance with an explicit order, to the OPS, it is stated that:

"This general overriding regulation permits adjustments in manufacturers' ceiling prices for machine tools and machine tool attachments. These ceiling prices may be adjusted either on an over-all basis or for a particular machine tool or machine tool attachment. On an over-all basis, the manufacturer may secure an adjustment which will enable him to realize 80 percent of his average rate of return during the years 1938 through 1948. For a particular machine tool or machine tool attachment, the manufacturer may secure an adjustment which will enable him to realize his total unit costs, plus a profit of 5½ percent."

Does this, "... give metalworking tool builders the stimulus to expand their production?" Is a miserable 5½ percent profit before taxes either stimulus or price control? This is profit control, certainly not the desire of the legislators when the enabling legislation creating the Office of Price Stabilization was enacted, nor the intent of ODM in issuing the directive in question. Profits and their review are a function of tax and profit legislation, not price laws. Prices, and prices alone, are the function of OPS.

We, machine tool builders, simply cannot produce if we are to be forced to live under strictures such as those envisioned by the Office of Price Stabilization.

A specific illustration of the effect of these regulations if chosen might be interesting to you. About 11 years ago at the request of the Army Ordnance Department, we financed, designed, developed and made available the model 40. The first of these machines was shipped in the early spring of 1940 and in the ensuing 5 defense and war years we built about 1,000 of these tools. In the years that elapsed between 1945 and late 1950, we built six more, for hordes of these tools were readily available, used. No market existed then for new machines. By the way, used 40's now, if available, would today sell for \$5,000 or \$6,000 a piece in usable condition.

Last September, we on our own sensed a coming market for our 40. Now, our capacity to produce is limited. Therefore, we instituted a search, we unearthed subcontractors superlatively well equipped to then undertake building machine tools and after checking prices from various people interested in building the 40, we personally ordered 150 40's, months before any need for the machine became otherwise apparent. Our subcontractor has done a superlatively good job, the first machine is done and 40's are and will be available.

Our Lees Bradner model 40 Thread Miller, as in the case with any machine tool, is expensive and difficult to build, for this is one of the problems indigenous to the production of machine tools. Defense program users—Incidentally the sole users—of the model 40 machine were and are avid to buy the model 40 at prices established competitively months ago. Orders for the model 40 machine have started to materialize, roughly half our original commitment for 150 machines have been spoken for, we have been commended by Ordnance that our 40's are in—for us—big production, and we are assured that at least the remaining half, and probably even more of these machines, are going to be spoken for shortly.

Then came price roll-backs, not price control.

If roll-backs stand, it is going to be necessary for us to deliver 40's at a price of \$6,100.20 net to us per machine.

Our cost is \$7,055 per machine. Can this possibly be what the legislators had in mind when there were enacted the laws that created the OPS?

Yours respectfully,

J. A. BRADNER,
President, The Lees Bradner Co.

3. The farmers received an average of 2 and 3 cents per pound here. How much did the public pay per pound for tomatoes in the North?

4. Why was a 5-percent immaturity law imposed on the east Texas farmers and not on the valley farmers?

5. Why were canneries allowed to pay \$50 to \$65 per ton for ripe tomatoes in the valley and not here?

6. Why during the war were roses and that type of crop declared unessential and a luxury item by the Government, the sweetpotatoes were considered a war crop? Yet in 1950 the rose farmers received Federal aid but we sweetpotato growers did not. Was it because we overplanted? If so, what was our reason? Was it because the Government controlled the cotton acreage to where some of us couldn't raise cotton? Isn't this country seriously short of cotton now?

7. Why are we farmers paying inflation prices for seeds, fertilizer, and equipment and received depression prices for all products produced this year?

Isn't the Government of the people, for the people, and by the people? Or is it for an individual few?

A free-born American.

N. E. DUDLEY.

TROUP, TEX.

[From the Houston Chronicle of
July 16, 1951]

WE DON'T KNOW

Charges by Representative LINDLEY BECKWORTH, of Gladewater, that the Department of Agriculture is urging sweeping policies upon Congress "without having any infor-

mation on which to base those policies" are backed by the Texan with a sheaf of letters from Department officials.

These letters, asking how many farmers are benefiting from such programs as price support, export subsidies and school lunch commodity purchases, are invariably answered with the report that the Department does not know how many growers are receiving specific benefits from the programs.

BECKWORTH asked about a wide variety of agricultural products, including cotton, corn, wheat, soybeans, eggs, dairy products, pears, walnuts, filberts, almonds, apples, oranges, rice, tung nuts, wool mohair, hogs, and blackeyed peas.

To all of these queries the refrain was the same: The Department of Agriculture "feels" that "all growers" are benefiting from the Government's operations, but it can't supply any figures. Secretary Brannan in one instance offered to "make an effort to get" the information covering a few counties.

It seems strange that if the Department can tell every farmer how many acres of cotton he can grow, it can't tell how many farmers are cooperating with or benefiting from the Government's farm policies.

One would have supposed that Washington's army of Federal employees would have all such important information neatly compiled and ready to be tapped for Congress' scrutiny at a moment's notice.

"How in the world can they come up here and ask for big-money programs when they don't know themselves what the result is to the individual farmer?" BECKWORTH asks. He adds that if the Department's reply that it "feels" all growers are benefited satisfies Congress, "then we are pretty easily satisfied—too easily."

Cotton production in the United States by cotton State, by cotton county—for the State of Florida, 1950

Total..... 13,979

If we can be of further service to you, please let us know.

Sincerely yours,

ROY V. PEEL,
Director, Bureau of the Census.

Cotton Production

EXTENSION OF REMARKS OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD a letter which was printed in the Tyler Courier-Times, Tyler, Tex. Also I include an editorial that appeared in the Houston Chronicle July 16 on July 10, I included in the CONGRESSIONAL RECORD certain cotton statistics, I now include some statistics about Florida.

The matter follows:

[From the Tyler (Tex.) Courier-Times]
LETTERS FROM OUR READERS

To the Editor:

I have a few questions I would like answered by the public and especially the East Texas Agricultural Council.

1. Why after we were urged by our county agent and others to take special care of our tomatoes. The valley was 18,000 acres short due to the freeze. Yoakum was damaged by hail. The local crop was damaged by weather conditions. Therefore the outlook was bright for the remainder. Then we were told by an article in the Tyler Morning Telegraph that there would be no aid from the Federal Government because we overplanted.

2. Is it possible to check any 3 years in succession up to 1945 and find out how many carloads of tomatoes were shipped to the Northern markets? How many were shipped this year?

New Atlantic Agreement Needed

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, July 23, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent address entitled "New Atlantic Agreement Needed," which was delivered by the Senator from Iowa [Mr. GILLETTE] at the Atlantic Union Strategy Conference in Washington, D. C., on May 18, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

NEW ATLANTIC AGREEMENT NEEDED

(By Senator GUY M. GILLETTE, member, Senate Foreign Relations Committee)

IN FACE OF DEEPENING WORLD CRISIS, TRADITIONAL DIPLOMACY NO LONGER ADEQUATE FOR SOLIDARITY OF ATLANTIC COMMUNITY

Almost a year ago, I remarked that the Atlantic Union idea was one of the few bright hopes in an otherwise bleak and dreary landscape of cold war.

Today it is no longer a hope; it is a necessity.

It is a necessity because, in spite of the progress toward effective Atlantic unity made in the past year, the world crisis has deepened and broadened so swiftly that traditional diplomacy, traditional government-to-government methods, can no longer cope with it.

Even though General Eisenhower has been appointed commander of the Atlantic defense army; even though a functioning Atlantic defense headquarters, with subordinate production and finance boards, has been established; even though the United States Senate, after long and often confused debate, has approved sending four more American divisions to the European continent; and even though the other Atlantic allies are demonstrating new determination to augment their military strength, there is still a great gap in the picture.

It becomes more painfully evident every day that what we lack most is an adequate democratic institution through which the peoples allied under the Atlantic Pact can exercise civilian political control over this vast international military undertaking.

I can report to you, however, that many of the outstanding leaders of our Atlantic community are aware of this gap and are thinking of how best to remedy this unhappy defect.

They are beginning to realize that efforts to establish an Atlantic military force before setting up an effective and responsible civil authority to direct it, are both a denial of basic democratic processes and an obstacle even to successful military organization.

They are beginning to see that the commander of the military organization has no government from which he can seek political directives vital to his task.

They are beginning to recognize the underlying dilemma: Democracies cannot permit military decisions to be taken without civilian approval and civilian direction, but civilian direction and approval can be obtained under the present 12-headed Atlantic Council only after interminable delay, tireless negotiation for unanimity, and tedious consultation with the ministries of a dozen sovereign states.

They are keenly aware of how the effects of every military decision spill over into

civilian life—raising the specter of inflation, reducing civilian production and standards of living, causing available supplies of raw materials to dwindle and disappear, and, in general, damaging national economies of countries that have just barely emerged from the wreckage left by World War II.

REALITIES FORCE NEW SOLUTION

On a purely practical basis, then, and in response to purely immediate needs, it is now becoming apparent to political and military leaders in all the Atlantic Pact countries that we are going to need some sort of new Atlantic agreement. We are being forced by the realities to seek the creation of some political authority—some executive, legislative, and judicial institutions—for the Atlantic countries that will be responsible to the peoples who are providing the soldiers, paying the taxes, and making the sacrifices to defend the whole community.

What all this means is that the Atlantic community has outgrown the forms suitable to the government of a single nation and adapted to relations between sovereign states. These forms no longer provide means by which the collective will of the great body of citizens in the Atlantic Pact countries can find a channel for regular, effective, and democratic expression. The old forms furnish no workable machinery for harmonizing and satisfying the common needs of the peoples of the Atlantic or for instilling in their leadership a sense of mutual responsibility toward the citizens of all the nations constituting the Atlantic community.

As the Roman republic, after spreading its power around the shores of the Mediterranean, once faced the problem of organizing an empire based on conquest without sacrificing the liberty of its own citizens, so the Atlantic democracies face the problem of organizing a community based on equality without sacrificing the liberty of the citizens of any of the constituent nations. Rome failed in her attempt, chiefly for lack of adequate instruments and concepts of government. We will not have this excuse; the necessary concepts and instruments—federal union—are staring us in the face, waiting to be put to use.

Since last January, I have been in correspondence with the heads of all the political parties (except the Communists) in the countries which originally sponsored the Atlantic Pact. I have found the reactions among leaders in the Atlantic parliaments almost unanimously favorable to our proposal for an Atlantic federal convention. I do not mean by this that they have all necessarily endorsed any particular plan or formula or structure. But they have expressed eagerness to work out some better way of strengthening the North Atlantic community.

Our Atlantic allies are showing themselves more and more anxious to find a basis for closer union with us. The unanimous passage of a resolution by the Consultative Assembly of the Council of Europe at Strasbourg recently, inviting observers from the American Congress to the fall sessions of the Assembly and asking for public discussion on problems of common interest between delegations of the two Houses of Congress and of the European Assembly, is the most recent and most striking evidence of how urgently our friends abroad desire a closer union between Western Europe and North America. They are only waiting for America to make the first concrete move.

In that connection, let me quote a paragraph from the letter I received from the distinguished Prime Minister of Canada, Mr. Louis St. Laurent:

"Since the success of the proposal contained in your resolution would clearly depend on the initiative being taken by the United States Government, it would, I feel, be premature for our administration to take

any initiative until a decision had been reached in principle in Washington."

The view of Mr. St. Laurent, I believe, reflects that of the other countries concerned. If we are to move forward, the American people are going to have to shoulder the larger share of the responsibility for creating this union. Once the United States makes up its mind to proceed in this direction, there is little doubt that our allies will meet us on the same road.

This being so, the work of the members of the Atlantic Union Committee now becomes even more vital than before. In taking part in this effort, they are making the crucial contribution. Not even the first steps toward the goal will be taken unless the American people believe in it, want it, and demand it of Congress. Whatever my colleagues and I may do to heighten interest and stimulate support abroad for Atlantic union will amount to nothing if the people of this country are not behind us, pressing the Congress as a whole to take action.

In recent years—and this is worth remarking—we have grown accustomed to using the term "Atlantic community." We use the term to mean more than a geographic region. We use it in the sense of a society of nations or peoples with certain common characteristics, common aims, and common needs. Does the phrase "Atlantic community" describe something real? Or is it a convenient fiction or a propaganda slogan? Is it a vision for the future, or does it now exist? In a word, what is it?

Here, around this great oceanic lake, live several hundred million people who, over the centuries, have constructed a civilization based on a common heritage. They are people who share the political inheritance of the civilized west, the glorious hopes and ideals with which Greece and Rome enriched the world. They are people who have created a society centered on the rights and dignity of individual human beings, a society designed for individuals to live in as brothers.

The differences that separate those who live in the Atlantic world are fewer, and the similarities they share with each other are more numerous than the differences and similarities between them and peoples living anywhere else. This is a human and historical fact. Let us not deny this fact. Let us welcome it and build upon it.

We who live around the Atlantic ocean already know each other better than we know any other peoples. We are the sons of the same ancestors.

In spite of distance, in spite of barriers set up by governments, in spite of the natural tendency of people to cultivate their own gardens, we of the Atlantic world maintain an infinite number of personal relationships with each other.

To take a homely example, I have been struck by the fact that last year the American people sent to people they knew in Western Europe three times as much mail—personal and business letters, periodicals, newspapers, parcel post packages—as they sent to people in Latin America, and six times as much as to the Pacific. The figures are revealing: In 1950, we mailed more than 147,000,000 pounds—not pieces but pounds—of mail to Western Europe, compared with some 52,000,000 pounds to Latin America and only some 24,000,000 pounds to the Pacific. This is one simple index of the interrelation among the peoples who are joined by the Atlantic waterway and the air above it.

All of us in this Atlantic community share a common set of interests and needs. We do not all have identical ways of living or identical social systems. We do have ways of living that are outgrowths—in different directions and at varying stages of development—of the same Greek and Roman society that lies at the root of western civilization.

Even in certain European countries where development seems almost to have stopped since feudal days, we can see the image of the past out of which the rest of the Atlantic countries have grown. Try as we will, we cannot find this image of our own past in other parts of the world.

We are a community in the sense of sharing a similar political tradition of representative government whatever the differing forms or constitutions may be. All of us set the law above any man. All of us seek to protect by law the individual liberty of every man.

We are a community in the sense of sharing common defense needs. Our independence, our institutions, our ways of living are all threatened by an aggressive, imperialistic dictatorship from which we must defend ourselves. Our recognition of this has led to the North Atlantic Treaty, to the military assistance programs, and to the present efforts to create an unprecedented international army for Atlantic defense.

We are a community in the sense of having common economic needs. Not only for protection but for prosperity, the economies of Western Europe and North America are interdependent. Together they form the greatest market on earth. Among themselves the Atlantic countries carry on the largest exchange of goods and services of any international trade in the world. We can only speculate how much greater this exchange would be if the barriers now erected by governments were gradually dismantled.

The union could put an end to the currency problem, the dollar gap, the balance of payments issue that plagues the countries of the Atlantic. By providing one big market twice or three times as large as the United States market, the benefits of mass production for mass distribution could be immensely expanded. Lower living costs and higher purchasing power would extend to all the people in the union.

Certainly one of the most fabulous eras of prosperity ever known would open before us when the people of this community could trade and migrate freely among each other without unnecessary restrictions, quotas, customs, and tariffs.

Since the end of World War II, the Atlantic community has taken some long strides toward integration. The Marshall plan is the longest economic step toward integration, the Atlantic Pact the longest military step.

Yet we have taken no comparable political steps. In spite of all our efforts to realize economic and military integration, the Atlantic community is without a government. It is as if the American Colonies after the Revolutionary War had remained friendly and cooperative allies but had retained their sovereignties as individual countries and had never moved even so far as adopting the Articles of Confederation, let alone ratifying the Constitution.

Address of Drew Pearson

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. MILLER of California. Mr. Speaker, on July 1, 1951, Mr. Drew Pearson, the eminent columnist and radio commentator, was invited to deliver his weekly broadcast from historic Independence Hall in Philadelphia.

Mr. Pearson made a masterful statement that should be read by all who failed to hear him.

It is included here so that all may read it:

Good evening, ladies and gentlemen, this is Drew Pearson. I have been invited by Governor Fine, of Pennsylvania, to broadcast today from the most hallowed and historic spot in America, the east room of Independence Hall. I have the great honor to be seated in the historic chair of George Washington, at the desk where was signed that great Declaration which gave birth to a new nation. In this room there also met the Provincial Assembly, the Superior Court. Later the Second Continental Congress. Here also George Washington delivered his Farewell Address, and Abraham Lincoln lay in state following his death. With me in this room today are Mayor Bernard Samuel, of Philadelphia, who has done so much for the Friendship Train, the Mercier Train, and the Tide of Toys; Judge Edwin Lewis; Arthur Greenfield, President Conone, of the homecoming committee; George Jessel; and other distinguished visitors, celebrating the one hundred and seventy-fifth anniversary of the signing of the Declaration which set forth what was then a bold and revolutionary doctrine that all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness.

For 175 years, free men throughout the world have been marching into battle to champion the ideas scratched on a piece of parchment in this room at this table. Now before giving you the news of the day, I would like to compare some of the problems faced by the founding fathers with those we face today. When Thomas Jefferson rented a room in the home of a German bricklayer just across the street and for 18 days worked on drafting this famed Declaration, democracy was considered as deplorable as slavery and a lot more dangerous. Men at that time were by no means equal, and the right to vote was held only by the property-owning few. The signers of the Declaration, therefore, were considered radicals, and they sometimes received angry glances in the streets of Philadelphia when they passed. Furthermore, there was no rejoicing when the Declaration was signed, no mobs stormed the doors of this room clamoring for a decision. The Liberty Bell did not ring out until July 8, 4 days later. It was a grim, grave decision to take, this American Revolution. And every man, as he stepped up to sign, knew that he would be hanged by his neck until dead if the British ever caught him. Yet despite uncertainty and opposition and the fact that equality of man was then unheard of, the 56 founding fathers after 3 days of continuous debate, did sign this great human document the most far-reaching since the days of Christ. The men who signed this parchment were young. Their average age was 44. Some of our foremost leaders today are about 70. Like us today, these young men also had to cope with the problem of inflation. But they were tougher about it than we. America's first price ceiling was not issued by Mike DiSalle but by the Continental Congress in 1776, and carried this stern warning:

"Assorted vultures who are preying on the vitals of their country in time of common distress by selling above prices set by this price chart shall be exposed by name to public view."

Today, we call them price gougers, but the founding fathers had a better name—vultures. Today Attorney General McGrath is sitting on 1,100 price violations sent him for prosecution. However, he has done nothing except to keep the names secret. The found-

ing fathers on the other hand, exposed vultures by name to public view. The founding fathers also had their problem of rivalry between the planters and farmers, many of whom favored England and the merchants and city population, which did not. The fathers would be disappointed, however, at our own congressional debate of last week which showed that we had made even less progress than they in getting the cattlemen and cotton growers of the South and West and the city consumers of the North and East to realize that this is one country, and every section is interdependent upon the other. They would have been shocked at the greed, the selfishness, the bitterness of debate, and would have felt that we were a long way from taking Benjamin Franklin's advice: "Gentlemen, we must all hang together, or assuredly we shall hang separately."

The founding fathers also would have been sick at heart at the hatemongers that today are abusing the freedom they fought and died for. The Gerald L. K. Smiths, the Merwin K. Harts, the Joe Kamps, and the Joe McCarthys. On the other hand, here are some things the signers would be happy about, if they looked down on their country today.

1. We have kept alive their championship of the equality of man, and have gone to the rescue of a weak and distant country across the Pacific, and have rallied other nations in a common drive to prevent aggression. For we have found as they did, that freedom does not come easily. It has to be fought for.

2. We have retained civilian control of government, including the removal of a popular military figure when he challenged civilian rule. For the founding fathers feared military power more than they feared death, and George Washington was quick to turn his powers back to Congress.

They would have been glad also that we have retained the Revolutionary spirit, and are still striving for social welfare, better education. And they would regret that we had not gone further to improve life, liberty, and pursuit of happiness. For the Declaration of Independence is not something that we can let lie dormant, it's something that we have to reaffirm again and again. And so from this setting, here is some up-to-the-minute news in the battle of the free world against communism.

Small Mine Operators Classed as Speculators, Advised They Are Out of Defense Picture, and Told They Might Just as Well Play Roulette or Bet on the Races as Try To Produce Strategic Minerals

EXTENSION OF REMARKS OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. WOOD of Idaho. Mr. Speaker, last year the small-mine operators were enthusiastic about the part they would play in the production of strategic minerals for the defense effort.

Enthusiastically they went into the hills, opening old mines, seeking new ones—lead, copper, zinc, antimony, tungsten, manganese, uranium, and other strategic minerals—and then

waited anxiously for the help and co-operation they had been led to believe would be forthcoming from the Defense Minerals Administration. But in most instances it never came. Instead of assisting our small domestic miners, we are importing 25 percent of our copper, 30 percent of our lead and zinc, and other strategic metals at prices above those paid to domestic producers.

Last week, according to the appended article from the Salt Lake Tribune of Salt Lake City, Utah, they were told by a representative of the DMA that "the small miners are speculators, are out of the picture—they might just as well go to Las Vegas—play roulette or bet on the races."

That is what has happened to our once great mining industry which contributed so much to the building of the West. Small wonder that 80 percent of our metal mines are closed, while we finance foreign mines employing slave labor and buy their production at prices higher than are paid to domestic producers.

If the American metal mining industry is to be revived, it must stop begging for crumbs from the king's table, organize and demand sound monetary and fiscal policies, the remonetization of silver, a return to bimetallism, and the restoration of the protective tariff; and call a halt to global boondoggling.

The article from the Salt Lake Tribune and a letter from the vice president of the Idaho Small Mine Operators Association follow:

DMA AID RECOMMENDS ROULETTE TO SMALL MINERS

(By Observer)

The transcript records of some defense meetings sometimes reveal astonishing statements made by representatives of Government agencies.

Last Tuesday's tungsten conference in Denver was a striking example.

Although the tungsten situation has been discussed to great length in the press, the Denver development justifies additional light on the official attitude toward the small miners of the West.

CONFERENCE INVITATIONAL

Invitational in nature, the Denver conference apparently was intended for processors rather than producers of tungsten. A few producers, quite a few processors, Defense Minerals Administration officials, and representatives of the Office of Price Stabilization, the General Supply Administration, and the Bureau of the Budget attended the meeting.

Witnesses for the producers were unanimous in their testimony to the effect that the present Government program which requires a 60-percent tungsten concentrate renders a great majority of independent and small producers helpless to contribute to desperately needed ore tonnages.

ECONOMICS DISCUSSED

In addition, so well known an organization as the Vanadium Corp. of America notified the DMA that it could not furnish the milling facilities for the formerly productive Boulder County area of Colorado because of the economics of the Government program. On top of this, the HMS tungsten mill of Salt Lake City informed the DMA that it was withdrawing its plant from participation in the program because the program has not and cannot provide even break-even prices for the many small tungsten miners in the West.

The record of the meeting reveals some heated discussion, a discouraging and astonishing attitude on the part of one DMA official, an interesting description of the current tungsten program, and a word of hope for tungsten miners expressed by a representative of the Bureau of the Budget.

INDEPENDENT REPORTS

An independent tungsten miner declared, in estimating the tungsten program, "You cannot help agriculture by promoting the production of fruit cake." That, of course, referred to the 60-percent tungsten concentrate requirement.

Representatives of the General Supply Administration indicated scant interest in how tungsten is produced and centered their interest in the purchase thereof after it is produced.

But it remained for G. B. Holderer, Washington, D. C., representative of the tungsten division of DMA to astonish the meeting and create speculation as to whether his remarks were or would be authorized by the top DMA officials. The stenographic record of the meeting contains his answer to the exposition of the plight of the small producer, his spendings to date and the problem of future spending. He said.

GAMBLING SUGGESTED

"The small miners are speculators, are out of the picture—they might just as well go to Las Vegas—play roulette or bet on the races."

The one word of hope for a revising of the tungsten program was expressed by M. T. Bunger, of the Bureau of the Budget. This official frankly admitted that the small miners were justified in their stand and expressed some hope that all the facts might bring about a change to ore stockpiling as originally intended.

IDAHO SMALL MINE

OPERATORS ASSOCIATION,

Mackay, Idaho, July 18, 1951.

Hon JOHN T WOOD,

House of Representatives,

Washington, D. C.

DEAR MR. WOOD I have been watching and waiting for the DMA in Washington to get down to business and act in some manner that will show that they know what they are doing.

They have been put on the carpet for not having tungsten on hand, but don't seem to know there is plenty of it, if they will put out a little effort to get it.

I know of two good prospects close to the railroad, and during the end of the last war shipped a test lot of 4 tons or so that assayed at 3.38 WO, and got paid \$71 per ton net for it by the Government agent in Salt Lake City, Utah. Tungsten was \$24 a unit then.

I had built a road to the deposit, put in an ore bin, and made ready to produce as was requested by the Government. But—just as I had gotten things ready, I was notified that the Salt Lake mill was closing down and that they were not buying any more ore. The war was over. I was left holding an empty sack and out considerable money.

In 1915, I went all-out to mine tungsten in Nederland, Colo. Tungsten was quoted at as high as \$105 per unit (20 pounds 60 percent WO, contained), but there was a shipload received from South America and the price dropped to \$9 per unit. I had to walk out of town, and in debt.

Now, Congress has passed a bill that says \$63 for 5 years or until so much tungsten is received by the Government. Who is going to put up \$100,000 to build a mill under such uncertainties?

So, under the conditions that are laid down by the Government and DMA, maybe Mr. G. B. Holderer, DMA aide, is right in saying at the tungsten conference in Denver,

Colo., the other day that the small miners are speculators, are out of the picture, and that they might as well go to Las Vegas, play roulette, or bet on the races. I am thinking he is right because I believe I would have as much chance getting my money back on a horse race as I would trying to guess what to depend on what will happen next through the actions of the DMA.

I cannot understand what Mr. Holderer thinks he or his organization can gain or how he or they expect to get the cooperation of the people or the miners with whom they must deal to make a success of their organization.

I have authority from the DMA to mine, mill, process, or whatever I can to produce 60 percent tungsten concentrates for 5 years at \$63 per unit WO, provided they don't get a certain amount before the 5 years expire.

They sent me instructions, and the places where it might be possible to get my ore milled. I tried them all within Idaho State and Utah.

Under certain circumstances these places do not have to take custom ore for processing, that is, if they were working at full capacity, which they were.

The DMA doesn't seem to know that each deposit of tungsten probably will be different in character, relative to impurities, and takes a different treatment and that a mill for custom work must be built accordingly.

The \$63 offered by the Government for processed tungsten is just the reason why the DMA hasn't been able to get any stock for stock piling. Why sell for \$63, when you can get more after it is processed and you have to process it anyway in order to market it?

The Government is going to have to pay more money to get tungsten, so why not pay more by processing the ore? Two or three hundred thousand dollars will install a plant centrally located. I am sure every miner would be willing to pay two or three dollars a ton extra, until the Government gets their money back. I would gladly pay \$5 continuously provided the Government will show me where I can depend on selling my ore for a few years without any if's, or so many provisions attached to their contracts.

This is one chance where the Government can help without going into direct competition with big companies, because the larger companies are refusing to accept custom ores owing to the economics of the Government program.

Of course, the whole thing depends on whether the Government needs tungsten. If they are willing to put out some taxpayers' money where it is needed, or whether we small miners shall have to join up with Costello and play the races and other gambling devices where we will have at least one chance out of a hundred.

Very truly yours,

F. D. SHERRY, Sr.,
Vice President, Idaho Small
Mine Operators Association.

**Secretary of the Treasury Snyder Says
the Dollar Has Not Shrunk**

**EXTENSION OF REMARKS
OF**

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. PHILLIPS. Mr. Speaker, I am sorry to say I missed the newspaper report of the speech made by Secretary Snyder, evidently a 4th of July verbal skyrocket, in which he proclaimed that

there is no inflation and that the dollar has increased in value. It was called to my attention by an editorial in the Santa Ana Register, a daily newspaper published in Orange County, in my district. Evidently other editors and economists failed to understand the economics on which this remarkable statement was based, and asked for an explanation. I now rise to ask the Secretary of the Treasury if he will be kind enough to explain the explanation. The editorial, which contains excerpts from the original speech and from the first explanation, follows:

TREASURY HEAD SAYS DOLLAR HASN'T SHRUNK

Everybody can quit worrying about inflation. We make this announcement on the authority of no less a financial expert than Secretary of the Treasury Snyder. According to Mr. Snyder, there is no inflation—except in regard to food, that is. In a Fourth of July sputter the Secretary said the American dollar not only hasn't depreciated but has increased in value. The AP quoted him as explaining:

"I don't feel sorry for the American dollar. The dollar is worth 40 percent more today, per capita, than it was in 1939, taking into consideration the adjustments in taxes and wages."

He added that, with the exception of groceries, Americans get more for their money now than in 1939, and they get more value for the money they spend.

We thought we had heard everything in the way of financial gibberish from New Deal mouthpieces, but we hadn't. It remained for Mr. Snyder to outshine all the other bureaucratic spouters of nonsense and outright falsehoods concerning money matters under the New Deal regime.

RANK MISSTATEMENT

Such a rank misstatement didn't go unchallenged. Editors and some politicians promptly wanted to know what the head of the Treasury Department was getting at by telling the people that today's pewee dollar is worth 40 percent more per capita, than it was in 1939.

For instance, a standard make suit of men's clothing purchased today for \$75 could be bought in 1939 for \$37.50. The price of a home today is anywhere from two to three times the price in 1939, etc.

Mr. Snyder, unable to back up his statements about the value of today's dollar, said he had not been properly understood. So he came out with this explanation:

"The per capita purchasing power of the American people has improved by about 40 percent since 1939 after making full allowance for the increases and price changes."

There you have a working example of the new-deal method of meeting a challenge. This method is to put out completely false propaganda and then to explain it by resorting to gibberish that nobody can make head or tail of.

The nearest approach to meaning we can get out of Mr. Snyder's explanation of his original phony statements is that after paying your staggering Federal income tax, old-age security tax, the hundreds of hidden taxes, your increased State and local taxes, the dollars you have left will buy 40 percent more commodities at current inflated prices than the dollars you had for spending in 1939.

FUNNY EXPLANATION

Since Mr. Snyder exempted groceries in his original words of wisdom and didn't change the exemption in his funny explanation, it's to be presumed that this 40 percent

greater buying power he says you now have doesn't apply to the food you buy.

Why is that?

Is this weird commentator on financial matters implying that the Nation's food producers, processors, and retailers have an inside track in the race for riches? If we're able, as Mr. Snyder maintains, to buy 40 percent more in the way of clothing, housing, automobiles, gadgets, entertainment, and those mysterious articles called sundries, why aren't we able to buy 40 percent more food?

We want the Secretary of the Treasury to explain this food business since he seems to have an explanation handy for the rest of the financial mess into which the bureaucrats have flung us.

But what's the use? There's far too much worthless talk coming out of Washington now. Mr. Snyder would probably tell us that the answer to the food situation is to get out of Michael DiSalle's road.

Unjust Indictment

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Dothan Eagle, Dothan, Ala., for July 20, 1951. Recently the wiregrass section of Alabama was the subject of severe criticism regarding inadequate housing facilities for military personnel stationed at Camp Rucker. Early during World War II the Public Housing Administration erected 100 dwelling units of brick and brick-tile with concrete floors. These housing units were constructed at Daleville, Ala., a small town within 2 or 3 miles of Camp Rucker. At the close of World War II Camp Rucker was placed on a stand-by basis by the military authorities. Soon after the close of the war the housing units were sold for practically nothing—although Camp Rucker remained on a stand-by basis. I begged and pleaded with the housing authorities to leave the housing units intact until the military made a final disposition of Camp Rucker. My efforts were futile and the housing units were torn down. The following editorial points out that it was the Government—not the people of the Wiregrass—that tore down a 100-unit apartment house in the very front gate of Camp Rucker within 1 year after World War II ended. I, too, would like to voice my objection for placing the blame on the people of that section for a situation over which they had absolutely no control.

The editorial follows:

UNJUST INDICTMENT

Seldom has a region been so unjustly maligned and tarred with distortions as the Wiregrass, which was accorded such treatment in a Senate subcommittee's report painting this section as a land where families of military personnel at Camp Rucker are

victimized wholesale by landlords and compelled to live in miserable quarters.

The people of the Wiregrass, to put it mildly, are stunned and shocked that such a picture of them would be presented to the Nation by a committee that should be responsible for its actions. Their resentment is not born of sensitivity to outside criticism, nor does it stem from inherent pride of their community.

Rather, it derives from the obvious fact that the committee's investigators—whoever they are—seized on a few isolated cases and represented them as a general picture of the entire region, thus indicating a whole section and its people as profiteers cashing in on an emergency.

They also are resentful that the committee's report took no cognizance of what the people of this section have done, on their own, to accommodate military persons who are temporary residents of the area.

Of course, there is a housing shortage in the Wiregrass. There always is when a military camp is established temporarily and, so long as the camp remains temporary, the shortage will continue to exist. And we doubt not that there have been cases of excessive rentals, human nature being what it is.

It is puzzling, though, that even with an acute shortage apartments in Dothan are advertised for rent every day. It is also puzzling, in view of this, that the Dothan housing authority has apartments vacant in the Henry Green apartments, as well as in the new Negro development, and will rent them to military personnel eligible by reason of income and dependency.

Instances of military personnel living in "hovels" are so rare that for a committee to portray them as an average and regional condition is nothing short of fantastic. In fact, there is considerable difference of opinion on what constitutes a "hovel." As for high rents, admittedly some are high.

But, over-all, there is much reasonableness in rental charges. The 90 percent (estimated by Mayor Douglas Brown of Ozark) who are maintaining reasonable rents are uncredited with fairness and are being blamed for the unreasonableness of the 10 percent who are greedy, an affliction not exclusive to any region.

Let it be emphasized here that we hold no brief for rent gougers who are taking advantage of the emergency. They cannot be criticized too bitterly. But we do hold a brief for the Wiregrass and are aware that the majority of the people of this section want and strive to treat the military personnel fairly.

We resent the committee's painting of the entire Wiregrass with such a black brush, not only because a false picture is being presented to the Nation but because the committee's findings are distorted, exaggerated, and misapplied. Whether deliberately intended or not, the results are the same.

The Wiregrass should not be blamed for a shortage in housing.

But so far as the lack of accommodations for Rucker personnel is concerned, the Government itself cannot escape responsibility.

It was the Government—not the Wiregrass—that tore down a 100-unit apartment house at the very front gate of Camp Rucker within a year after World War II ended. This building, containing 1, 2 and 3-bedroom apartments, was built for servicemen and it was razed so that the Government could sell the plumbing.

That was done by the Government even though Rucker was continued as a stand-by camp.

If there was any future need for Rucker envisioned, why wasn't the need for housing envisioned? Instead, the Government lev-

eled to the bare ground 100 apartments that were hardly 3 years old and requiring absolutely no maintenance because they were of masonry and concrete construction.

This was not mentioned in the subcommittee's report.

Nor did the report mention how many families in the Wiregrass, responding to civic pleas, converted homes into apartments and built extra rooms. They spent considerable money in the process and, while not expecting to accumulate fortunes, are entitled to a reasonable compensation for their occupancy. Why was this ignored?

Maj. Gen. Walter D. Luplow, commanding officer at the post, believes the committee's report generalized on isolated cases and questioned that the "conditions are as black" as painted. He had sympathy for this section's problem in providing temporary housing and commendation for assistance from the Wiregrass communities.

Maj. Gen. Norman E. Hedrickson, commanding officer of the Forty-seventh Division, pointed out that the servicemen make their own arrangements for housing and of their own free will, and added that the men of his division were advised of the shortage of accommodations before they came to Rucker.

It is significant that these two officers have not spoken out in the tone of the committee. Since they look after their men you may be sure they would have voiced complaints if they had felt them justified.

The Wiregrass has been taken for an unjust ride, indicted as a region and a people for a handful of unpleasant instances and for the byproducts of an emergency over which it has no control. It is the same emergency that has called its own sons into service.

William Oatis

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BEAMER. Mr. Speaker, under unanimous leave I include a letter that is typical of the many being received since I introduced House Resolution 332 in behalf of William Oatis, now imprisoned in Czechoslovakia:

DELCO-REMY DIVISION,
GENERAL MOTORS CORP.,
Anderson, Ind., July 18, 1951.
Representative JOHN BEAMER,
House Office Building,
Washington, D. C.

DEAR JOHN: Just in case you haven't yet received a copy of today's Indianapolis Times I am enclosing a tear sheet. I thought you would be particularly interested because the Oatis case seems to monopolize almost the entire front page, and your resolution in the House is prominently mentioned.

I also want to say that I hope you give them both barrels on this. I have talked to a number of people, and I know they are thoroughly in accord with your resolution. Certainly the Oatis case to date is one of the blackest marks on the pages of our diplomatic history as far as American nationals are concerned. Having worked a few years on newspapers myself, it makes my blood boil to know that the foreign Com-mies government can get away with something like this.

If there is anything at all that I can do down this way that would be of help to you, please advise me, for I would certainly welcome the opportunity to aid in marshaling public opinion behind your efforts in Oatis' behalf.

Best regards to Mrs. Beamer, and again let me know if we can be of any help.

Sincerely yours,

CHARLES F. HARDY.

Canada Willing To Build St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. VAN ZANDT. Mr. Speaker, during these trying days when the American taxpayer is bowed down with the heavy tax burden, the Dominion of Canada indicates that it is ready to finance, furnish material and manpower, and start construction of the proposed St. Lawrence seaway.

As a relief to the American taxpayer and to the strain the St. Lawrence seaway would make on our national economy Canada should be encouraged to proceed with its plan to build the international ditch. If Canada finances and builds the St. Lawrence seaway, it will collect, no doubt, toll charges from all ships using the seaway, as a means of recovering its investment. Thus the American people will not have to stand the burden of increased taxes to provide an international waterway with no guaranty of recovering the cost due to our well-known attitude of being against toll charges.

If Canada finances and builds the St. Lawrence project, it will be the first major project financed without financial aid from the United States.

The following editorial appearing in the July 22, 1951, New York Times tells of Canada's willingness to build the St. Lawrence seaway without any help on our part.

The editorial follows:

CANADA CONSIDERS NEW SEAWAY PLAN—
DOMINION MAY PUSH SHIP ROUTE ALONE,
AND LEAVE POWER TO LATER JOINT APPROVAL
(By P. J. Phillip)

OTTAWA, July 21.—If the Public Works Committee of the House of Representatives finally rejects all proposals for joint construction of the St. Lawrence seaway, it is considered certain here that Canada will make a new approach to the problem and seek international approval for the power project, but build the seaway canal on the Dominion's side of the river and operate it nationally.

The need for power is so urgent, both in Ontario and upper New York State, that it is believed, or at least hoped, that Washington will put its stamp of approval on the power scheme as a separate project in view of the attitude of Congress toward the seaway.

In such an event it would be possible for Canada to go ahead alone on construction

of the seaway without affecting the water levels in any way.

BUILDING NEEDS EVALUATED

Studies have already been made of the availability of labor and materials for the construction of the enhanced navigation route and the feeling is that what is necessary can be obtained.

Parliamentary approval for the scheme also is believed to be assured on the ground that enlarged navigational facilities between the ocean lanes and the Great Lakes is essential for national defense as well as for the economic expansion of the Dominion.

Behind the new determination to go ahead with the seaway lies a strong belief that the immense iron-ore discoveries in Quebec and Labrador, and the development of the oil fields in Alberta and contiguous regions promise a tremendous new era of development for Canada if only low-cost transport can be assured. Not only the Dominion but the whole of North America stands to benefit from this development, it is argued. It is not in any selfish spirit that the Canadians are working to assure, independently, what the House of Representatives seems to wish to reject.

CHAPMAN'S VIEWS NOTED

Attention has been accorded here to the statement by Oscar Chapman, Secretary of the Interior, calling for the joint development of the Far North regions by the United States and Canada, but to most observers in the Dominion it seems that it would be more reasonable to begin by the development of the more habitable parts of the country before efforts are made to push the frontier closer to the frozen regions where, whatever the natural wealth, living conditions are so harsh that it always would be difficult to get people to settle and make permanent homes.

On the score of continental defense it is maintained that the easy haul of iron ore from Ungava, by water, to central continental steel plants and the adequate supply of hydroelectric power to Ontario and New York State are much more important and urgent than hypothetical plans for the protection of distant places. These remote wastes, such military expeditions as Musk Ox and Sweetbriar already have shown, are adequately protected by nature.

State Department Trading With Communist Areas a Public Scandal

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. REED of New York. Mr. Speaker, the American people are carrying the fight for decent treatment of our citizens by Communist countries while our so-called diplomats turn their backs and pretend not to notice. The Oatis case has become highly important, not only because of the outrageous treatment of one American citizen, but because it has become a symbol of what we are to expect continually unless some lily-livered Rhodes schoolboys are booted out of strategic posts in our State Department.

Under leave to extend my remarks, I am inserting an article which appeared in the Sunday Star on July 22, 1951. This article capably points out that the

invoking of trade sanctions against Communist Czechoslovakia would be a simple matter and that it would vitally affect that country. It shows that the recent act directing the President to withdraw most-favored nation treatment from Communist areas is being ignored—once again the striped-pants boys are thumbing their elevated noses at Congress and the American people.

How long will the citizens of this country tolerate them?

The article follows:

END OF CZECH TRADE BENEFITS URGED IN RETALIATION ON OATIS

(By Edwin G. Martin)

As public resentment mounts against Czechoslovakia's false imprisonment of William Oatis, more and more people are wondering why the United States does not promptly impose trade sanctions. The Congress directed last month that this be done as soon as practicable but, as yet, the administration has not acted.

Although no reason has been given for the lack of action, it is a fair assumption that legal problems are involved. Just what are these problems and how can they be met?

First, it should be clearly understood that under our domestic law the President has ample authority to act at any time. The original Trade Agreements Act of 1934 provides that the President may at any time terminate any such proclamation (of reduced tariffs) in whole or in part. Accordingly, the only possible legal problems are international.

These legal problems arise from the general agreement on tariffs and trade negotiated by the United States with a free Czechoslovakia and a number of other countries in 1947. The various countries exchanged tariff concessions—reductions or bindings of tariff rates

CONCESSIONS STILL IN FORCE

The rates agreed on by the United States were about 50 percent below our statutory levels. These concessions are still in force and are a great benefit to Czechoslovakia's exports to this country. Possibly Czechoslovakia's tariff concessions are still nominally in force, but they have lost all their significance because, under Communist rule, all foreign trade is conducted by Government monopolies whose transactions are based on political, rather than commercial, factors.

Accordingly, the principal consideration for our concessions to the Czechs has failed. Yet the State Department apparently feels we now have a legal obligation to keep our concessions in force.

The writer believes the legal difficulties are not too hard to surmount and that our Government could do this in about 2 months if it takes a firm stand promptly and presses for action vigorously. Furthermore, the United States would not need to withdraw wholly from the general agreement which is the sole cause of the legal difficulties.

It should be borne in mind that we are not here considering termination of the reduced rates for all countries. We are considering withdrawing them only from the Communists. Increasing the rates on Czech products would be of real significance. It would make it much more difficult for the Czechs to sell in our markets. It would reduce the profits of their exports. It would reduce their favorable balance of trade with the United States.

Under the existing regime of general agreement, Czechoslovakia seems to have a legal right to the reduced rates and also a right to the same rates as those we assess on British, French or other goods. The only way speci-

fied for taking away these rights requires a vote of the contracting parties to the agreement as a group.

NO PROVISION FOR OUSTERS

GATT does not contain any explicit provision for expelling a defaulting party from the agreement, but it might well be argued that the contracting parties as a group necessarily have implied powers of expulsion. In this connection, a parallel might be drawn from our own history. The United States Constitution empowers the President to appoint Government officers but says nothing about their removal except by impeachment. The Supreme Court has held that the power to appoint necessarily included the power to remove. Why should not the power of the contracting parties to admit countries as the general agreement also embraces power to expel them?

Since becoming a member of the agreement in 1948, Czechoslovakia has not acted to carry out the spirit of the agreement. She has, without cause, accused the United States of illegal actions on several occasions. She has suppressed individual freedom and enterprise on which the expansion of international trade was supposed to be based. She has blacked out the sources of information on which one could judge her performance. It is a safe bet that she has ignored and violated the principles established in the agreement for the conduct of state-trading enterprises.

The United States would be entirely justified in moving for the expulsion of Czechoslovakia from the agreement. Such action could be taken at the next regular session of the contracting parties at Geneva on September 18, or a special meeting could be called prior to that date. The important thing is to decide promptly what we want to do and then do it. The majority of the other contracting parties will support any reasonable proposal we make.

OTHER PROVISIONS AVAILABLE

But if it should be decided not to move for prompt expulsion, there are two provisions of the agreement which would permit prompt implementation of Congress' direction to withdraw existing benefits. These are articles 23 and 25.

Article 23 deals with the subject of Nullification or Impairment. It provides that the contracting parties (as a group) may authorize one or more individual parties to withdraw concessions from an offending country. A country is an offender if its actions result in nullifying or impairing any benefit of the agreement or in impeding any objective of the agreement. Decisions in such cases are taken by a simple majority of the votes cast, each party being entitled to one vote.

Article 25 provides that "In exceptional circumstances not elsewhere provided for in this agreement" the contracting parties (as a group) may waive any obligation of a country under the agreement. Such waivers may be granted only by two-thirds majority vote.

By proceeding under either article 23 or 25 the United States might be relieved of its legal obligations to Czechoslovakia. This means it could increase its tariffs on all Czech goods without any suspicion of violation of an international agreement.

Ample grounds (pointed out above) exist for our invocation of the nullification clause, even if we limit our approach to matters dealing strictly with trade.

NEGOTIATIONS SEEN USELESS

However, there is no need of so limiting our approach. The whole course of conduct of Czechoslovakia in the last 3 years has been such as to convince many people that it is useless to try to deal with them. Their per-

verted concept of moral standards is simply beyond the pale.

How can we expect honest dealing from the country that perpetrated the Oatis case in the face of its own constitutional guaranty of freedom of the press?

Broadly speaking, the situation in Czechoslovakia today is basically the same as in 1939. The fact that the Communists permit a nominal Czech Government to carry on, while the Nazis simply absorbed the country, makes little difference. The country is just as much under foreign control and is not de facto carrying out the trade agreement as it was intended at the time of negotiation.

When the Nazis took over Czechoslovakia in 1939 the President acted promptly, terminating the existing tariff reductions because Czechoslovakia could not carry out its side of the bargain. The President still has the same power. Although we have taken insult and injury from the Czech Communists these last 3 years, let us hope that effective retaliation may be taken by our side in the not-too-distant future.

Installment Credit

**EXTENSION OF REMARKS
OF**

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. GATHINGS Mr. Speaker, the Federal Reserve Board put into operation an order known as regulation W. The intention of this order was to curb consumer credit by increasing the amount of down payment required to be made in the purchase of automobiles, appliances, and durable goods. The regulation also provided that the article purchased should be paid for in a shorter length of time. As a result of regulation W, many salaried people and others of small means were deprived the privilege of purchasing merchandise that was so greatly needed by them. The wealthy and well-to-do were not affected by the Federal Reserve Board order. They could purchase any piece of merchandise desired. To buy an automobile, the purchaser had to pay one-third down and agree to pay the remaining balance within 15 months. Previously, he could buy a car by paying 25 percent down and liquidate the balance in 21 months. The poor people find it difficult to make the down payment on an automobile and prohibitive to meet the large installments that would be required to be made in order that the remaining indebtedness be paid in full within the period of 15 months.

It was the intention of the directive to curb inflationary pressures on the economy. The Board felt that this regulation was needed in view of the expanded production required in the preparedness program. Regulation W falls flat as a means of controlling inflation. Inflation is caused by an abundance of money competing in the channels of trade for scarce commodities. If the situation existed in this country where the great masses of the population had billions of dollars in buying power with which

to purchase goods that were in short supply, the regulation W would occupy a needed role. The purchase of scarce commodities would then be minimized and stabilized. The situation today is quite different. The people have little cash with which to buy such articles and the warehouses are swollen with every conceivable type of automotive vehicle, furniture, fixtures, and household appliances. Because of these excess stocks, the consumer is benefited by reason of lower prices. The manufacturer is worried because he does not know where he will get a market for the product of his manufacture. The retailer is alarmed because he cannot move the inventories he has in stock. The consumer is in the position of needing a refrigerator, a stove, a washing machine, or a car, but he is unable to buy because of regulation W and its stringent requirements.

I have just left the floor of the House where amendments to the Defense Production Act have been adopted which greatly relaxed the provisions of regulation W. I supported the amendments which would make it easier for the American people to purchase this merchandise. The bill presented to the House had provided for an 18-month maximum period in the payment of automobile notes. I supported an amendment which extended this 18-month period to 21 months. An amendment was agreed to which would reduce the amount of down payment required in making time payment purchases. Should the emergency become more severe and a much larger percent of the productive effort of the country go into strict defense production, tighter controls could and should be put into effect. Under present conditions regulation W is not needed.

Panic a Bomb Hazard

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jonesboro (Ark.) Evening Sun of July 16, 1951:

PANIC A BOMB HAZARD

Civilian defense now being emphasized for the Nation has as its principal purpose safety of the populace in case of an attack by bombs. Ever since Hiroshima there has been fear that the principal cities of this country might suffer similar attacks by bombs more devastating than those dropped on the Japanese. The military has been frank in saying some enemy bombers would get through the best aerial defense.

For that reason civilian-defense measures have been aimed at advising citizens what to do in such cases, together with organizing for fire and other results which would follow.

Great secrecy has surrounded atomic experimentation in recent months. There has been a general conclusion, however, that panic would cause more casualties than the

explosions themselves. The incredible congestion of traffic which would follow a bomb attack in any large city is the factor which is causing the greatest concern to those entrusted with organizing for civilian defense.

The people have been oversold on the dangers of bomb attacks, and the hazards will subside when the facts become known. But the panic which would result because the people have been made hysterical by constant fear of bomb attacks can hardly be prevented without long and persistent education.

Godfrey Should Be Wiser as Well as Sadder Man

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SHAFER. Mr. Speaker, when a professional radio and television entertainer steps out of character and assumes the role of political lobbyist, both he and his sponsors can expect a vigorous public protest. No one knows that better today than Mr. Arthur Godfrey, who is a sadder and should be a wiser man, since his excursion into politics bootlegged under the radio and TV billing of entertainment.

If Mr. Godfrey is not yet convinced of the wisdom of the old adage about the shoemaker sticking to his last, the Federal Communications Commission should add to his enlightenment and that of his sponsors. Equal time should be afforded by the sponsors and the networks for presentation of views in rebuttal of those advanced by Lobbyist Godfrey.

Under permission to extend my remarks, I include two editorials from the Washington Times-Herald of July 18 and 19, 1951:

[From the Washington Times-Herald of July 18, 1951]

"STATESMAN" GODFREY

Arthur Godfrey returned to television Monday night after a visit with General Eisenhower in Paris. But it was not as Godfrey the entertainer; it was Godfrey the "statesman."

Godfrey demanded that his audience campaign for all-out shipment of American troops and supplies to Europe.

One biographer has estimated that Godfrey, a graduate Washington disc jockey, earns \$1,000,000 a year. He makes this princely sum because the public listens to and watches his radio and television programs.

Yet Godfrey has no qualms about using his public. Eisenhower crooks a finger and Godfrey, accompanied by Bernard Baruch, rushes off to Europe. Now he returns to try and sell the American public a bill of goods prepared by Eisenhower.

If Godfrey is so interested in advancing the cause of European nations that are too corrupt to join in their own defense, let him send abroad some of his own tremendous earnings. The American people have had enough of this wasting of blood, bullets and bullion on decaying European battlegrounds.

Godfrey's performance demonstrates once more the method by which the American public is chased up and down the street by the politicians in power. Why stand for it?

[From the Washington Times-Herald of July 19, 1951]

TENDERIZED HAM

Yesterday morning, Mr. Arthur Godfrey's sensitive artistic temperament suffered a shock. Godfrey has just returned from Europe. There, he was elegantly entertained, coached, and trained in the art of political salesmanship by none other than Gen. Ike Eisenhower.

It was clever of Eisenhower to pick Godfrey for this honor. Godfrey has made millions beguiling vast radio and television audiences in the virtues of merchandise and he is a pleasure to hear when he is doing that.

But it is no pleasure to a responsible-minded citizen concerned for grown-up political thinking in America to hear Godfrey prattling to his innocent audience about international affairs. It is nauseous.

OBNOXIOUS DECEPTION

That's not what the crowd gathered around to hear. Godfrey is doing himself and everybody else wrong when he switches his pitch to politics.

And so it was that yesterday the Times-Herald called his hand and Godfrey, who is so used to being petted, praised, and paid for his efforts, suffered the said shock.

He fouled up the air at considerable length, yesterday, to let his listeners in on his anguished alibi.

Too bad, Arthur. You asked for it. When you put down your ukulele and try to pose as a statesman, you are out of character. Furthermore, you are entering an arena of controversy in which those who try to dish it out have to be man enough to take it.

Quit blubbering. If you think you can become a politician without consequences, you have some interesting experiences ahead.

Know Your Waterways

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. LARCADE. Mr. Speaker, under previous leave to insert my remarks in the Appendix to the RECORD, I wish to submit copy of an article by the Marine News, of New York, published in the Washington Post of even date, as follows:

KNOW YOUR WATERWAYS—REASON FOR ACTION

It seems incredible that Kansas, Missouri, and Oklahoma could suffer an estimated loss of \$750,000,000 in flood damage in so short a time; a tragic demonstration of what rivers running wild can do. Costly disruption of industry and transportation will continue for months. Years will be required to restore a large part of the tremendous loss. Fertile land and crops have been heavily damaged. Farmers have suffered. Until preventive measures are taken such disaster looms constantly, not only in Kansas and Missouri but in many other areas throughout the Nation.

The Sandy Hook Pilots Association is directing attention to the inadequacy and danger of the New York and New Jersey channels, serving the Nation's largest port; too shallow, too narrow, too tortuous, the Association stresses. Other important channels are equally inadequate. But when civic organizations initiate flood protection works or needed harbor and channel improvements in their regions, and when Congress, after extended surveys and examinations have

been made, and public hearings held, authorizes certain such improvements, the cry immediately goes up that these important measures of safety and aids to commerce are pork-barrel projects. While multibillions are being spent around the world for various purposes and there is much talk about the billions that can be saved through some reorganization of the Federal Government, the spending of a relatively small amount annually for the betterment of our own country is derided by some as extravagance and waste, or pork-barreling and logrolling.

All thoughtful Americans are for economy, we are sure, but not for the kind that neglects desperately needed flood-protection works and important waterway improvements so helpful to defense, commerce, and industry. The building of America is not yet complete; America is still growing and developing. A large part of this growth, development, and added strength depends upon the continued building of flood-protection works and the further improvement and construction of harbors and channels.

MARINE NEWS,
GEORGE H. PALMER,
President and Publisher.

The Yellowstone News—Montana's Newest Newspaper

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD two statements by my old friend, Fred J. Martin, publisher of Montana's newest newspaper, the Yellowstone News. They are titled "So You May Know" and "Why the Yellowstone News?"

Fred Martin has had a long and distinguished career in the newspaper field in Montana. To him and his associates in his latest venture I wish the greatest possible success in the years ahead, and to Billings and its surrounding territory, I extend my congratulations on this new addition in its progressive growth.

The statements follow:

So You May Know

Why the Yellowstone News? Who is the new publisher? What will be the policy of the new paper?

You readers are entitled to answers to the above questions. Because this will be a personal-opinion page it seems fitting that you should have the complete background of the editor and publisher. Next week, as indicated in another column, we will tell you about the individuals who comprise our editorial staff.

The reason for a personal autobiography is that family background, experience, and education constitute the basic roots of a personal philosopher. The latter, in the case of your editor, forms the foundation of an editorial policy of the newspaper.

My mother was born in Sweden. She came to Minneapolis when she was 14. My father, who died in 1948, was born in Michigan. He was a member of the Butte fire department for 50 years, 32 years as fire chief. I was born in Butte. An older sister (who incidentally is the mother of eight children) lives in New York and a younger brother (a fireman in Missoula) who a year ago was

recalled from civilian life to serve as a pharmacist's mate in the United States Navy.

My first job was when I was 10. It was as errand boy and janitor in a drug store. The hours during the summer were from 8 a. m. to 10 p. m. and the pay \$25 a month. After that came jobs as a newspaper carrier. During World War I, there was a summer on an extra gang. While attending the University of Montana I was employed as a cub reporter on the Missoulian and the Sentinel at Missoula, as well as the usual run of jobs college students get. However, my parents scraped up plenty for me. During my junior year at the university I was elected president of my class. I was a member of Phi Sigma Kappa, social fraternity; Sigma Delta Chi, honorary journalism fraternity, and Silent Sentinel, senior honorary society.

After receiving by bachelor of arts in journalism in 1925 I was a cub reporter on the Butte Post (where I had worked the summer previously). During another summer vacation while in college I was employed by the Old Yellowstone Trail Association as its representative to dispense travel information. After 3 years in Butte, the lure of a big city took me to San Francisco, where I had hoped to get into an advertising agency. That door seemed blocked because of a lack of selling experience so I decided to turn salesman. The job was selling radios direct and subsequently my job was manager of a crew of 50 or more salesmen. However, along about October 1929, radios started coming in the back door at a speed greatly in excess of those sold via the front, so the business folded its tent.

GLAD TO COME BACK

Montana seemed like a good spot to come back to, even though jobs were scarce. Finally, there came a chance to work during the vacation period in 1930 on the Great Falls Tribune. That paved the way for a chance to serve as publicity man and campaign secretary for the late Senator T. J. Walsh. This was a great experience. For 60 days I was his constant companion on a tour which took him to every county seat in the State at a time when the State's agricultural economy was at a very low ebb. Montana began to mean something more than Butte, Billings, Great Falls, and Missoula. Without question, the character, personality, and philosophy of Senator Walsh made a definite impression on my thinking. What would have happened had he lived to serve as attorney general of the United States during the first term of the late Franklin D. Roosevelt?

In November, 1930, my wife (a graduate nurse) and I were married, despite the fact that there was only a promise of a job as secretary of the Montana State fair at Helena. We did get the job though. The fair, financed jointly by the State and Lewis and Clark county, was noted mainly for horse racing. Thanks to the late Dr. W. J. Butler, State veterinarian, and Dick Richards, then livestock specialist of the Montana Extension service, I had a part in an important 4-H development. The fair paid the freight, as well as premiums, for 4-H calves and we induced the late Walter Hanson of the Hanson Packing Co., of Butte, to pay \$5 a pound for the champion (which paid off the mortgage on the farm of the boy's dad); \$3 a pound for the reserve and \$2 a pound for the third ranking steer. Dr. Butler and Richards were of the opinion that such a program would do more to emphasize the importance of quality, the value of feeding to the economy and give an impetus to the 4-H program. In that year the fair spent as much on the 4-H program as it did for horse race prizes. The fair died for want of an appropriation in 1933.

\$19.86 A WEEK

However, we had our belongings packed to go back to Washington in March of 1933

when, instead, we read in the newspapers Senator Walsh, for whom we intended to work, had died. After a couple of months came a chance for a temporary job on a Helena newspaper at \$19.86 a week. The world got brighter with another permanent job as a reporter in Helena. About a year later came the chance to go to work in Great Falls where we lived from 1934 to 1943.

Joseph Kinsey Howard (author of Montana, High Wide and Handsome) and I organized a unit of the American Newspaper Guild in Great Falls. Subsequently, I was named to the executive board of the Cascade Trades and Labor Assembly. This was during the time the Workers Alliance, an organization which was infiltrated with Communists, was a potent force and had considerable success in organizing the unemployed and those on relief. Relief agencies were considered at that time as places for political patronage. The bungling administration provided ammunition for the Communist-inspired disturbances, which political demagogues approved from the public platform. Convinced that the great majority of unemployed were not to blame, lots of folks did everything possible to help them. Once, while on a trip to protest political bungling of the State welfare administration, I was named vice chairman of the first merit examining committee of the Montana Department of Public Welfare, a group designed to assist in the selection of employees on the basis of merit, rather than patronage. In 1937, I was named vice chairman of the Great Falls Housing Authority. The latter was organized as a means of trying to find a solution to the problem of finding jobs for building craftsmen in Great Falls. When several hundred Great Falls smeltermen were laid off because of a power shortage, a move was initiated to provide for power development at Fort Peck. I was sent to Washington and authorized to speak for the Montana State Public Service Commission, the city of Great Falls, as well as Great Falls civic, farm, and labor groups.

When a controversy developed between the Great Falls city administration and the Cascade County commissioners as to who to appoint as the fifth member of the city-county airport commission, I was named and participated in the program of development of facilities which was the foundation of the air-base development.

LABOR TROUBLES

I lost favor with the Communists when I refused to join the party and with the labor politicians when I endeavored to get the labor assembly to adopt a resolution that no one could be elected to an assembly office who held a political job. At the time the president was WPA administrator; the vice president was manager of the State liquor store; the secretary was a WPA foreman, and the treasurer was an employee of the State employment service.

About that time I was given the job as associate editor of the Montana Farmer and in that capacity had the opportunity to study the agricultural and livestock economy of the State. In July of 1941, I was drafted by William H. Bartley, then collector of customs for Montana and executive director of the Montana Defense Savings program, to be his assistant in the job of organizing the defense (war bond) organization in the State. We did set up committees in every county in Montana, conducted a bond-selling anti-inflation program in November of 1941, and Montana set the pace for the Nation in December 1941 after Pearl Harbor. That record was maintained during World War II. With the exception of about a year and a half spent in the United States Marine Corps as a first lieutenant assigned most of the time as liaison officer with the State selective board, I remained on the war-bond job until March of 1946.

TO LIVINGSTON IN 1946

With a college pal, Dr. Stanley T. Dohrman, Great Falls orthodontist, I purchased the Park County News and Hammond Printing Co. at Livingston on March 17, 1946. By that time, it didn't seem to me that there was any point in continuing on the United States Treasury Department payroll. The people of Park County were unusually helpful and within a relatively short time the number of subscriptions practically doubled. It was hard but enjoyable work. I have served as a member of the executive board of the National Trout Derby, held annually on the second Sunday in August, and as president of the Livingston Chamber of Commerce. During one of the hectic periods of the State highway administration a State-wide group named me as chairman of a so-called citizens committee. For a time, I served as a member of the board of directors of the Montana Chamber of Commerce.

In Great Falls and at Livingston I was named to the vestry of the Episcopal churches in those cities. I am president of the Livingston Shrine Club and vice president of the Livingston Rotary Club.

Our son, Fred, Jr., just completed his freshman year at Denver University, although he worked throughout the school term in the promotion and editorial departments of the Denver Post. He is working there this summer. Our daughter, Pat, will be a junior in high school this fall.

As indicated last week, my coming to Billings was by invitation, not through personal solicitation. The present arrangement was with the approval of the two former publishers, L. M. Prill of the Midland Review and Chester K. Shore of the Herald.

Here's what I told the Park County News readers last week in my editorial about the new newspaper in Billings:

"Just as a father has to be close at hand when a new member of the family arrives, so we want to be in Billings at the time of publication of a new newspaper's first edition. But, we do not intend to neglect our eldest child. We might temporarily give the youngest more attention, but that isn't a true sign of our feelings.

"Had it not been for you folks in Park County, there never would have been the opportunity in Billings. We know your loyalty will not falter."

But, even though we intend to divide our time to some extent, we do intend to live in Billings. We have a place to live.

F. J. M.

WHY THE YELLOWSTONE NEWS?

The Yellowstone News definitely wants to be a spoke in the wheel of progress rumbling on for a greater Billings, a greater Yellowstone County, a greater Montana, and a greater America. There are no false illusions that such a position can be achieved by magic.

Foundation stones are honesty, integrity, cooperation, and understanding. Then comes teamwork between capital, which provides the facilities, and labor, which makes them produce an acceptable product to the public, which has to pay the bill.

The end product of a newspaper is news. The Yellowstone News does not intend to deal in sensationalism or to dispense propaganda. Definitely, it does not have the facilities to print all the news, but its staff will endeavor to high light the significance to you, the readers, of news developments as they effect you. To accomplish this, the News has recruited a news staff which we confidently believe will develop into a team which will have few equals in Montana. Next week we'll tell you more about them.

Our plan is to develop a new style for a weekly paper. Of course, it is the same basis as that adopted by any paper, but we have

copied some ideas from the weekly news magazines. Each week there will be significant articles on business and industry, agriculture, government, church, home, school, leisure, people, medicine, society, and editorial opinion. Those will be planned with the definite purpose of providing something of interest for everyone. The material will be gathered from authoritative sources, here or elsewhere.

The Yellowstone News does not start from scratch. It has the advantage of a firm foundation of the readers of the Midland Review and the Herald. In the years to come we hope by teamwork and effort to retain the old and make many, many more friends.

However, we would be derelict if we neglected to express our sincere thanks for the many, many new subscribers, the support of old and new advertisers, and the understanding of all, including the editorial, advertising, and mechanical staff, during this hectic reorganization period. But we are on our way. Thanks everyone.

F. J. M.

Address by Hon. Frank Carlson, of Kansas, July 23, at Chautauqua Institution, Chautauqua, N. Y.

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. REED of New York. Mr. Speaker, the citizens of the Forty-fifth Congressional District, which I have been privileged and proud to represent, have been honored by the appearance of Senator FRANK CARLSON, of the State of Kansas, on the program of the Chautauqua Institution at Chautauqua, N. Y., on July 23, 1951. The Senator delivered a notable address entitled "Current Problems and How They Affect Our Daily Lives."

The true spirit of Americanism runs through the warp and woof of this great address, so characteristic of the spiritual and patriotic fervor of Senator CARLSON in his private and public life. He has served his great State with marked distinction in the House of Representatives; then as Governor of the State of Kansas, and now as United States Senator from his State.

Under leave to extend, I am inserting excerpts from the address of Senator CARLSON delivered July 23 at Chautauqua, N. Y.:

When we consider how fortunate we are to live in the ways of democracy—instead of the ways of dictatorship, we can see that this is indeed a time to count our blessings, to assess our heritage, and to chart our course for the future. Thomas Jefferson might have written today the letter he wrote to James Monroe from Paris in 1785. His trip to Europe made him—as it has so many people since—acutely aware of the beauties of his own country, "its soul, its climate, its equality, liberty, laws, people, and manners. My God, how little do my countrymen know what precious blessings they are in possession of, and which no other people on earth enjoy."

Our heritage comes from many sources. Through the centuries men have fought for the basic philosophy embodied in great documents: in the Magna Carta, the Bill of

Rights, the Declaration of Independence, and the Constitution of the United States.

Running through these documents is insistence upon the idea that men can defend themselves against arbitrary power and tyranny if they have a government of laws and not of men.

It seems to me that too few people stop to count their blessings and ask why they should be favored over other people with the most comforts and the highest standard of living in the world.

Let me again remind you, the American people with less than one-fifteenth of the world's population and residing on about 6 percent of the world's land area produce 50 percent of the wealth, consume 50 percent of the goods, and own 50 percent of the gold.

When we look closely at the ingredients of American greatness, we might ask ourselves whether it came as the result of the abundant resources placed by God within our boundaries; but then again we are reminded that Russia has even more resources than we, and it hasn't made them a great nation.

We might credit our greatness with our land and our climate, our private enterprise system, our system of general education, or our great inventions, but other nations have these.

All of these things help to make America a great nation and give us a high standard of living, but it took one more ingredient which is more or less peculiar to America—that is a willingness to work. Our national philosophy, which has glorified production, plus the willingness to work, plus a system that lets the individual apply his best talents and energies to the resources at hand and reap the rewards of his ingenuity have made America.

Totalitarian governments are opposed to our idea of life. They not only ridicule but seek to obliterate the basic truths of religion. And yet, today the whole world needs a total mobilization of all its moral forces. Moral rearmament would go much further to save the world than military might, much as the latter seems needed now as a police force to keep the peace.

Certain it is that if we are to preserve and save our sacred freedoms we must have a strong, courageous, and God-fearing people.

More than vast resources, rich mines, fertile fields, and immense industries—more than these are needed to make a great nation. The real worth and wealth of a nation rests in its people, and in the loyalty, patriotism, and righteousness of the people. The greatest resource of our Nation is an educated people who can play an intelligent part in giving their consent to be governed. They need to know what is going on in the world today so that they can do something about it. Time and again we have found that the broad base of education in a democracy is the real reservoir upon which we can draw our leadership.

The most distinguishing feature of our problems is that when they are discussed in general terms they seem to sound like so many words unless they are specifically spelled out in their concrete effects upon the individual. Most of our problems—be they national or international—are occurring in the context of the conflict between democracy and communism. It is often the case that discussions of this subject are philosophical and to the man on the street the language probably sounds "high falutin." He is far away from the places where decisions are made, and it is some time before these decisions begin to be felt in terms of his daily living.

We must have a clear conception of the nature of democracy, of the nature of communism, and of the issues involved in their conflict. If we have a pretty clear picture

of the total situation and of the underlying philosophy and probable consequences of certain actions it will be possible for us to use better judgment in making our decisions. Instead of dealing with each event as if it were isolated, and instead of dealing with each one in a piecemeal fashion—so that the right hand does not know what the left hand is doing—we shall be able to place each problem as it arises in a setting which will permit us to hue to a straight line toward our goal.

Now this is a case where you as an individual are going to be affected whether you do something about Soviet expansion or you sit still and do nothing. If you do nothing, ultimately you will lose your freedoms which have been won during centuries of struggle. If you just sit still and take no action, the day will come when you cannot speak, cannot read, cannot write, and cannot print what you believe in. You will be watched by spies, your social life will be regimented, and you will not be able to work where you want at the job you want—you will not even be able to move freely around the country. You will either fit into a regimented pattern dictated by the state, or you will be liquidated.

This alternative has been decisively rejected by the free men of the western world. Reluctantly at first, because we tried—and are still trying—to cooperate for world peace through the United Nations, but finally with firm conviction, we took up arms against a sea of troubles. We decided that the only way to meet Soviet pressure was by vigorous counterpressure.

The greatest mistake the Kremlin made was in 1945 when a small group of the Communist Party refused to take the hand the United Nations held out in friendship. It would have been to their advantage ultimately to adopt a philosophy of coexistence in the world instead of stubbornly adhering to an ideology which does not solve the problems of mankind but only reduces men to slaves of the state. For democracy can never die. The desire for freedom is too innate a characteristic of man to be obliterated from his make-up. The idea that every man's soul counts is a Christian concept upon which religion is based; and the idea that every man's vote counts in having his say as to how he shall be governed is a democratic concept. We may have to fight again for these ideas, and it may be dismaying that we have to do this instead of spending all of our time and energy upon constructive activities; but we need never fear that the ultimate victory will be on our side.

We are faced with the problem of properly dividing our efforts between production for defense and for our normal civilian needs. Our defense program, now taking 10 percent of our total production, is expected to consume 20 percent. Orders for defense production have been placed for \$42,000,000,000, but only \$10,000,000,000 have been delivered thus far. By June 1952, it is estimated that the rate of delivered orders will be about \$4,000,000,000 a month.

Prices rose, and suddenly we were faced with the problems of inflation and of controls. People are concerned about the rising prices for food and they wonder how they are going to pay their grocery bills. One thing is certain—we cannot blame the farmer for this situation. Instead of being overpaid, as some people contend, farmers are actually earning less for labor, investment, and their management ability than other groups in our Nation. If you work an hour in a factory, you may not be able to buy as much of certain items as you did in the past, but you can buy more food. I suppose the reason we notice the increased prices more than ever is because we are eating more and better food than ever before. It is interesting to note, however, that you

pay as much to get the food marketed and distributed as you do to the farmer who produces it.

There is so much discussion on the high cost of living and it seems as though the farmer is being made the scapegoat for all the ills that beset the consumer.

Let's look at the record taken from the Bureau of Labor Statistics and see what is happening to the farmer's income.

In 1947 the farmers of this Nation received \$17,800,000,000 out of a total national income of \$198,700,000,000. In 1948 they received \$16,500,000,000 out of a total national income of \$223,500,000,000. In 1949 they received \$14,100,000,000 out of a total national income of \$216,800,000,000, and in 1950 they received \$13,000,000,000 out of a total national income of \$235,600,000,000.

In other words, the income of the farmers in this Nation has not kept pace with the continuing rise and increase in national income, but is decreasing year by year.

The income of farm people, based on an hourly wage dropped from 94 cents an hour in 1947 to 69 cents in 1950. This despite the fact that we have a fixed minimum wage of 75 cents per hour in the Nation.

During that same period retail trade workers averaged \$1.17 an hour, manufacturing workers \$1.46, and building construction workers \$2.03.

The farmers of this Nation receive an average return of 5 percent on investments in plant and equipment, which is less than one-third of the return that corporations realized on their capital in 1950.

Farmers are engaged in war production when they turn out food and fiber for our troops and our allies, just as surely as any business that has a defense contract with the Government. And it costs more to get above normal production from a businessman or wage earner.

Will a truce in Korea mean that we can sit back and forget the problems of inflation and taxation that are before us? Can we assume that communism has been contained and that we can go our separate paths in peace? I do not think so. The events in Korea are not the first with which we have had to deal; neither will they be the last. Aid to Greece, the Berlin airlift, and the Marshall plan were steps taken prior to the Korean aggression. To meet what might happen hereafter, we must have strength and stability so that the men in the Kremlin will understand—and correctly estimate—our determination to defend the entire periphery of the free world.

When the Communists criticize, it is for the purpose of tearing down. When we criticize conditions which have developed and created problems, it is for the purpose of improving our Government.

If we investigate crime, racketeering, and dope, it is not because we want to tear down our governmental structure—it is because we wish to see the problem clearly, and determine what part of the Congress can play by passing laws which will solve or mitigate the problem.

We are always working to improve and strengthen our democracy.

When we investigate crime and its connection with government, it is not with the idea of tearing down the basic structure of our society. Our motive in holding hearings on the possibility of establishing a Commission on Ethics in the Federal Government is to define conditions which will result in an improvement of personnel. The newspapers often tend to overemphasize the sensational or bad aspects of the news they are reporting, and this, too, may have an effect upon your psychology—upon your confidence in the Government.

It is, therefore, necessary for us as individuals to keep in mind that just as a farmer has to spray for certain insect pests and watch his crop carefully in order

to bring in a good harvest—so in every other sphere of human activities, we have to prevent locusts, boll weevils, borers, and blight from affecting our human resources.

Many people become mentally ill because they have fears. And our world is now so geared that we seem to have more and more things for people to be afraid of. The fear of atomic bombs, and now the fear of the even deadlier hydrogen bomb has set people all over the country to building bomb-proof shelters.

Insofar as possible, by preventive steps, people must be kept from living their lives in fear. The answer to our problems is not to escape or to get scared. People must have a faith and a determination which will make them strong to meet any situation which arises.

It is not enough to go to school while you are young and then to stop learning about what is going on in the world. Your opinion will not mean much unless it is based upon knowledge and unless you use that knowledge to bring about desirable results. As citizens it is your responsibility to give your consent to be governed by voting wisely, and by keeping in touch with the lawmakers who are formulating policies to guide our future actions. You should be informed as to what our policies are after they are decided upon. You must strengthen democracy by vigorous participation in all its functions. You have to play an active part in extending democracy and perfecting it both at home and abroad.

In these days when we are being tested, we must keep faith with our Christian heritage which gives us belief in the human personality and the possibility of developing a society based upon the brotherhood of man, equal justice under law, and peace under God.

Natural Gas Decision

REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. ZABLOCKI. Mr. Speaker, I wish to call to the attention of my colleagues the recent decision of the Federal Power Commission rejecting and disclaiming jurisdiction in rates for natural gas at the source. In the recent Phillips Petroleum Co., of Bartlesville, Okla., decision, the Commission may well be setting a precedent whereby the Commission would claim lack of jurisdiction over many producers and gatherers of natural gas. The effect such a precedent may have on the cost of natural gas to the consumers demands our immediate attention.

For 3 weeks this august body was deliberating on ways and means to curb inflation and the steady rise of the cost of living. Could it be that this body will turn its back on a flagrant omission of effort by the Federal Power Commission to do its just share in controlling wellhead rates? Are we going to allow special interests, during these critical times of defense and economic strife to enter into inequitable profits through the back door, opened wide by a body of five men directly answerable to this Congress.

In the Eighty-first Congress the natural-gas profiteers by Presidential veto were denied the special legislation which would make possible an unjust share at the expense of the natural gas consuming public. What the President of the United States and Congress would not allow to be railroaded into law against the public interest, the Commission has accomplished by its recent decision.

Mr. Speaker, the following editorial from the Milwaukee Journal very pointedly and effectively reviews the natural gas issue and the shocking gas decision, which I recommend to my colleagues:

A SHOCKING GAS DECISION

The Federal Power Commission has now declared the so-called independent natural gas producers the winners in a fight that those same producers had already lost in the White House, in Congress, in the courts, and in the minds of the FPC's own staff.

The losers are the Nation's 40,000,000 natural gas consumers—including those in Milwaukee and Wisconsin.

In ruling that it has no jurisdiction over the wellhead rates charged by the Phillips Petroleum Co. to the Michigan-Wisconsin Pipeline Co., the FPC has made a shambles of gas-rate controls.

Rates to the consumer are now controlled by State public service commissions. Rates from pipeline firms to distribution companies are controlled by the FPC. Refusal by the FPC to control wellhead rates to pipelines makes the pipeline and consumer rate controls meaningless. As we pointed out previously, it makes the FPC and the State public service commissions responsible for a horse that has already started to run away.

The FPC apparently voted 4 to 1 not to take jurisdiction in the Phillips case. Commissioner Thomas C. Buchanan, who has fought for protection of natural-gas consumers, dissented. Mon C. Wallgren, chairman, led in the scuttling of controls. In effect, he violated the policy of President Truman, his friend and the man who appointed him to office.

A year ago Congress passed the Kerr bill which would have removed independent producers, who control 85 percent of the Nation's natural-gas reserves, from FPC control. President Truman vetoed the bill and Congress failed to override the veto. In his veto message President Truman warned that FPC control must be maintained over wellhead rates "to prevent unreasonable and excessive prices which would give large windfall profits to the gas producers at the expense of the consumers."

Wallgren and his three fellow commissioners have agreed to give the producers those windfall profits.

The shocking FPC decision was forecast by the attitudes of Wallgren and his fellow commissioners when Wisconsin and Milwaukee officials were arguing the Phillips case before them. Repeatedly Wallgren bitterly attacked the Wisconsin public service commission. He criticized the FPC's own staff members when they argued against the Phillips company and for consumers.

A year ago both Wallgren and Commissioner Claude Draper seemed opposed to the Kerr bill and its surrender to the gas interests. What has happened to change their minds? Why have they lost interest in protecting the consumers of natural gas?

Incidentally, Wallgren's vote is particularly interesting in view of a statement he made in a letter to Governor Kohler of Wisconsin. In that he cited a supreme court decision which, he said, indicated that the FPC did have power to control wellhead rates. He voted against that decision.

Wisconsin and Milwaukee must, of course, appeal the FPC decision to the courts. To fail to do so would be to throw in the sponge in a fight that is important to every natural gas user in the country. To fail to appeal would be to hand the gas producers their greatest victory and open the way for them to raise gas prices—and their already fabulous profits—as much as the traffic will bear.

Another Chance To Rescue Our Failing German Policy

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville (Ky.) Courier-Journal of July 11, 1951:

ANOTHER CHANCE TO RESCUE OUR FAILING GERMAN POLICY

Our Government has taken the only sensible course in proposing an end to the state of war with Germany. We need not expect, however, that the action will greatly improve our relations with the German people or make it much easier to enlist their support in a united defense against Soviet power. We are merely making the best of a pretty poor situation.

The Soviets long since adopted the technique which Hitler found so successful in dealing with German opinion. They have made a strong emotional appeal to the instincts of the race, with no regard for honesty or consistency. Thus Stalin, whose policies have resulted in splitting Germany in half, has constantly posed as the champion of German unity—on his own terms. Those terms would make it impossible for Germany to operate as a democratic nation. But millions of Germans, used to long years of totalitarian rule, feel little reluctance about buying unity at the price of liberty.

The western nations, on the other hand, have fallen into all sorts of awkward positions in trying to pursue an honest course. The dominant occupying power has naturally been the United States. It is also the power with the least experience in dealing with the subtle problems of an occupation. We started out with a stern rule against fraternization. Then we veered all the way over to a policy of trusting friendship, before the German people had had a chance to work their way back to our respect.

Our greatest successes in Germany have been based on shows of strength. Biggest of all was the airlift. Citizens of Berlin have just dedicated a memorial arch to Allied airmen who lost their lives in this awesome demonstration of power, determination, and technical skill.

Our worst failures have developed in those areas in which we have followed democratic practices that the Germans neither understand nor appreciate. They have felt only contempt for the slow, tortuous process of American justice, which has kept Nazi war criminals alive through an endless series of appeals. Every German knows that American planes destroyed whole districts of Berlin, Hamburg, and Frankfurt. Hardly a German realizes that the American taxpayer has spent over \$4,000,000,000 since the war to restore his country.

We have handled most ineptly the question of rearmament, letting the Germans

feel that we must have their help and will sell our allies down the river to obtain it. Millions of Germans are genuinely burned out and disillusioned by the experiences of World War II. It is natural for them to take an attitude of deep cynicism toward any move to integrate Germany with the west, the mood of "ohne mich" (don't count on me). Many other Germans of the old Nazi turn of mind are deliberately using this national spirit of defeatism as a means of extracting the maximum price from America for rearmament. Their final objective is to get German units, under German command, equipped at American expense. Hitler's victims in western Europe are passionately opposed to this little game of blackmail.

It is still not too late to gain something from revising our policies in Germany. Our objective there is not to win fulsome friendship from people who so lately were slaughtering our troops. Our objective is to win the respect of the Germans by a policy of coolness, intelligence, fairness, and dignity. Only such qualities can achieve any useful cooperation from a people who so recently suffered from the corrupting disease of nazism.

The Lesson Sergeant Ingman Has Taught Us

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech:

THE LESSON SERGEANT INGMAN HAS TAUGHT US—SPEECH MADE BEFORE CELEBRATION HONORING KOREAN HERO, SGT. EINAR INGMAN, WINNER OF CONGRESSIONAL MEDAL OF HONOR, HELD AT PRIDE ATHLETIC PARK, JULY 15, 1951, AT TOMAHAWK, WIS.

(By D. C. Everest)

Mr. John F. O'Mella, Sgt. Einar Ingman, Col. Joe Foss, Pvt. Clayton Slack, distinguished guests, ladies and gentlemen, as one who has been a student of American history from early boyhood, I have developed what might be called a hero-worship complex. Washington, Jefferson, Lincoln, or any of the others who I thought contributed to the greatness of this country were among my heroes, and I didn't overlook Horatio Alger. Hero worship ties in closely with love of country.

This country would not be in the mess it is today if more people had developed a similar complex. I have always looked up to men of action; people who have the know-how, the guts to carry on, and the willingness to accept responsibility. I never thought I would have the honor and opportunity to pay homage to a young man from my neighborhood, and two others from other localities who today are members of the most exclusive club in this country. Living members of the Congressional Medal of Honor Club are mighty few among 153,000,000 people.

What they have done to win this most-coveted honor has been through their own efforts. No pull, no political preferment, no shenanigan of any kind, nothing but their commanding officers' factual report of what they did by their own effort in defense of their country or in the aid of those in their military unit has won them the highest honor awarded anyone for any service.

To Sgt. Einar Ingman I would say, "I salute you and extend the felicitations and congratulations not only of industry, but of every red-blooded American on the recognition of your service through congressional action and the presentation of the Congressional Medal of Honor by the President of the United States. Few have that distinction, and few have lived to personally receive the greatest award in the gift of the Congress of the United States.

"You must get a great thrill in returning to your home community with such a magnificent record and just recognition of your efforts. It must also impress you with the fact we are living in a rapidly changing world.

"Three years ago when you entered the military forces you were Einar Ingman's boy; today Einar Ingman, Sr., is just the father of Sgt. Einar Ingman, winner of the Congressional Medal of Honor. My guess is he loves it. I know I would under similar circumstances."

The old saying, "The boy is father of the man," is again exemplified in this instance. But how did the boy accomplish it? He grabbed opportunity by the tail, he used his head, he assumed responsibility, with his reorganized outfit he fought off a horde of the most despicable enemy we have ever encountered, he accomplished his mission, and through the recommendation of his commanding officer has now received the highest award in the gift of the Nation.

We cannot all do that, but we can use the same basis of thinking regardless of what we are doing. Speaking for industry, which is the backbone of the country both in peace and war, I say now that industry and every other peaceful pursuit, including agriculture, needs men of the caliber and resourcefulness of Sgt. Einar Ingman, Col. Joe Foss, and Private Slack.

People who are willing to do things above and beyond the call of duty, people who recognize opportunity and have the fortitude to accept responsibility and thus continue to build up a productive nation which, by its own stature, may not be forced to continuously engage in military operations. Concurrent with that, our Government should never again allow the criminal procedure of reducing the military forces, as was done in 1945-46, to a mere skeleton. While there is nothing we desire more than peace, we must still deal with an international situation and no one can guarantee the mental or moral stability of those who control all the countries on earth. We must be able to protect ourselves against any aggression.

Again, Sergeant Ingman, I extend my sincere congratulations. When you have finally been discharged from service and you have a desire to become associated with industry, if you do not find what you want in your home town, come and see me.

Cotton

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. LARCADE. Mr. Speaker, under unanimous consent request to extend my remarks in the RECORD, I wish to say that I have the privilege to represent one of the largest cotton-producing sections of Louisiana; as a matter of fact, my home parish—county—is sometimes first in

the production of cotton in Louisiana; therefore I am sure that you realize my interest in and obligation to the cotton farmers of my district.

Mr. Speaker, on yesterday one of the largest cotton farmers in my parish telephoned me to say that in about 2 weeks the cotton crop would begin to come to the market and that the farmers were not satisfied with the present price and the prospects of obtaining a fair price commensurate with the cost of production.

I was told that seed, fertilizer, insecticides, wages, farm machinery, and everything in connection with the cost of producing cotton has cost the cotton farmers more than ever before in the history of the industry.

This farmer told me that he was speaking for the majority of the producers in the area and that, while they have responded patriotically to the call of the Government in increasing the planting to the maximum of their land, utilizing every worker available to help meet the Government goal, they feel that they will not receive the proper protection in the marketing of the crop and that it will be the same old story—the price will be low, even to the point of being below the cost of production, when the cotton is marketed and that, after the cotton has been taken from the producer, the price will then skyrocket and instead of the farmer obtaining a price commensurate with the value and world market price the speculator and middleman will be the one to reap the rewards of their labor.

Mr. Speaker, I have discussed the situation with my colleague, the gentleman from North Carolina [Mr. COOLEY], who is chairman of the House Committee on Agriculture, and while he is fully aware of the support and loan programs of the Government naturally he stated that while he is sympathetic to the problem that there was nothing further that could be done under the law except for the farmers to hold their cotton until they were able to receive a price which they thought they should receive.

Of course, Mr. Speaker, this is probably all that could be said about the situation; however, it must be remembered that the majority of the farmers have to borrow money to make the crop and that just as soon as the crop is ready for the market they have to sell the cotton in order to immediately pay back the money they have borrowed to make the crop.

Mr. Speaker, I thought I would call the attention of the Congress to this situation, as I think that the cotton producer should have all the consideration that all of the other industries have.

In connection with the subject, Mr. Speaker, I include in this statement a copy of a release from the Louisiana Agricultural Extension Service in regard to the 1951 cotton crop, as follows:

[From the Opelousas Daily World of July 19, 1951]

IN 1951—A GREAT COTTON PRODUCTION

(EDITOR'S NOTE.—This is another in the series of editorials prepared by the editorial staff of the Louisiana Agricultural Extension Service for publication in the State

press on farming in its relation to national issues.)

The latest USDA crop forecast indicates that cotton growers have responded generously to the Government's request for greater production this year. Plantings this spring are estimated at 29,510,000 acres, which, allowing for the normal abandonment of acreage, would mean a crop of about 29,000,000 acres as compared to only 18,600,000 acres in 1950.

If weather and insect conditions are normal, growers may harvest 18,000,000 bales as compared to only 10,000,000 bales last year and a 1951 goal of 16,000,000.

Indications are that the growers, in turn, will be rewarded for their effort in planting a bumper crop. Demand probably will be good, whether the war in Korea is settled or not. The trade recently has been bidding about 35 cents a pound for the new crop and it is expected that Government price supports will be between 32 cents and 35 cents. If the harvest totals as much as 18,000,000 bales the crop may be worth \$3,000,000,000, an all-time record, compared to \$2,000,000,000 last year.

In this emergency, as in many others, the farmer has come through. Barring catastrophic weather and insect conditions, the cotton growers will produce enough to assure the free world that there will be no shortage of its most important fiber.

And there is no indication so far that the production of food and other vital crops will suffer because of the big increase in cotton. It represents an added effort on the part of cotton growers.

Food and fiber are as important to the national defense as bullets. The ability of American farmers to meet record needs with record production is one of the greatest sources of American strength.

Is the Gamble With Spain Worth the Risk to Us?

EXTENSION OF REMARKS OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville (Ky.) Courier-Journal of July 19, 1951:

IS THE GAMBLE WITH SPAIN WORTH THE RISK TO US?

What do we hope to get out of Franco that will offset the hostility of all our North Atlantic partners to any open alliance with dictator-ridden Spain? The answers to this question cover a wide range. There are those who believe that to be anti-Communist is enough, and that Franco's record on this score alone entitles him to our warm friendship and to billions for armaments, food, and reconstruction. This has never been the view of Europeans who have seen fascism in action more plainly than we have, and it is a view which finds no sympathy outside the few hidebound rightists in all countries.

The prevailing excuse for an American deal with Franco, however, lacks even the distorted idealism of the fanatic anti-Communists. It admits that Franco is a tyrant, that Spain is an oppressed and near-bankrupt nation. But we need his army, his bases, and ports, and the natural bastion of the Pyrenees on our side even if it costs us some sniping from our friends and a lot of

money that will need to be diverted from free Europe. This is the military man's viewpoint and it is fairly obvious that the last few months have made it—however reluctantly—the view of the State Department as well. Thus official sanction is given the visit of Admiral Sherman to Madrid, and both Britain and France are moved to express their open disapproval of the possible bilateral deal in the making.

Opportunism must certainly be the keynote of any United States-Spanish agreement and it is an opportunism that every Communist agitator in Europe can use against us. It is difficult to justify politically, moreover, since even the nations which have most to lose in another world war openly regret an alliance with Franco at the risk of antagonizing us.

Morally the agreement we seem to be approaching is indefensible. How about its military value, our principal talking point? In the opinion of all reliable observers we should be required to spend billions on the crumbling ports, the scattered and inadequate airfields, the ill-equipped and corrupt armies of Spain. Since even our resources are not inexhaustible, will these billions come from sums that might equip our real allies? And suppose the world is wise and fortunate beyond its deserts, and war can be avoided for that decade that George F. Kennan thinks so all-important: What will Spain do with its equipment, its revitalized army, its planes and tanks? Every accession of strength or importance by Franco in the past 10 years has brought an outburst of bluster and threats and an increase of terror at home. It is only reasonable to suppose that any strength we give or lend to Franco will be used first of all to repress the Spanish people and to strengthen the hold of dictatorship, and secondly to meddle and threaten in every delicate situation where jackal tactics might strengthen Spanish power or make possible a Spanish threat.

There is no natural friendship between the American and the Spanish Governments. There is only a possibility of a temporary tolerance for mutual gain. We would gamble on our possible gain; Franco would be strengthened and enriched. We would gamble on weakening alliances based on real mutual interest, with no certainty of winning thereby even one convinced friend. And in the long run we would betray the wretched Spanish people for the sake of a corrupt regime which now holds them down by force and which would use our aid to strengthen that force. When all the considerations are weighed, what can we gain from Spain that can compare with what we risk losing?

After Having Achieved Innumerable Victories and Honors for the 347 Missions and 1,500 Combat Hours He Flew in World War II, Col. "Pop" Polifka, United States Air Force Aerial Expert and One of America's Most Beloved and Popular Airmen, Has Made the Supreme Sacrifice in the Skies Over Korea

EXTENSION OF REMARKS
OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. ANDERSON of California. Mr. Speaker, it distressed me greatly to learn

that Col. Karl C. "Pop" Polifka, one of the most courageous and distinguished Air Force pilots ever to fly the heavens, made the supreme sacrifice last week in Korea.

Karl Polifka died as Karl Polifka would want to die—in aerial battle and in defense of the flag and country he loved so well. Not alone will the people of Watsonville and elsewhere in my district mourn his passing—but Americans everywhere who knew him will pay tribute to his untimely passing.

As an airman, he was unsurpassed. Probably the greatest reconnaissance flier in the history of military aviation, there are few whose achievements in the air equal those of this great aerial expert who, in World War II, flew 347 missions in the Pacific alone.

It was Colonel Polifka who sought out and spotted the Japanese fleet at Rabaul, and it was information furnished by this intrepid United States Air Force flier which enabled the Navy to mass its fleet in order to engage the Japanese in the Battle of the Coral Seas.

Karl Polifka was equally at home in all parts of the world. Born at Raton, N. Mex., he spent considerable of his life in Colorado, then moved to California, and for 4 years attended the university of that State.

Upon graduation from flying school on June 16, 1938, he was appointed second lieutenant in the Air Reserve, and on October 1, 1938, was appointed second lieutenant in the Regular Army Air Corps. He was graduated from the Air Command and Staff School in 1947, and from the Air War College in 1950.

As commanding officer of the Mediterranean Allied Photographic Reconnaissance Command and the Ninetieth Reconnaissance Wing, he pioneered new techniques of bomb-strike and bomb-damage-assessment photography. This was accomplished with a forward-facing oblique camera, and his method thereafter established the operational accuracy of fighter-bomber units engaged in bombing attacks as well as furnishing immediate targets for planning further attack.

Additionally thereto, extensive low-altitude enemy line communications as well as visual and photographic reconnaissance was performed in penetrating the Rhone Valley to a depth of 200 miles, and furnishing information vital to the landing-force commander.

Colonel Polifka received many honors, including the following military decorations: Distinguished Service Cross; Silver Star; Legion of Merit, Distinguished Flying Cross; Air Medal with one oak-leaf cluster; Army Commendation Ribbon; Papuan Campaign Ribbons, with citation for Nineteenth Bomb Group; Distinguished Unit Citation, Eighth Photo Squadron; Croix de Guerre with gold star and palm.

Karl Polifka was a true American. He was warm-hearted, friendly, congenial, helpful, a gentleman respected alike by his brother officers and enlisted men.

All who knew him, loved him. Any-one hearing the name "Pop" in the Air Force, immediately thought of Polifka.

"He was a grand fellow." He was "friendly," he was "a nice guy," and "the greatest photo reconnaissance man in the Air Force"—"far from a military martinet, but he really knew his trade." There are but a few of the things that were spoken of him.

Mr. Speaker, Karl Polifka hated war and he hated destruction. I know that he freely sacrificed his life for the principles which he cherished and that, in fighting in Korea under the flag of his native America and the United Nations, he felt in his heart that he was fighting a war to end war.

Mr. Speaker, I ask the indulgence of the membership of this House to extend my remarks, and include therein the Associated Press dispatch, date-lined Tokyo, July 8, telling of the passing of this brave son of America:

COLONEL POLIFKA KILLED IN KOREA; AERIAL EXPERT—RECONNAISSANCE PIONEER FLEW 347 MISSIONS IN PACIFIC IN WORLD WAR II

Tokyo, July 8—Col. Karl C. Polifka, of Watsonville, Calif., a pioneer and key figure in military aerial reconnaissance, has been killed in action in Korea, the United States Far East Air Forces announced Sunday.

Colonel Polifka's plane was hit by enemy small-arms fire from the ground and crashed in hostile territory. His body was recovered by an Air Force helicopter under heavy enemy fire.

An airman who witnessed the incident from another plane said Colonel Polifka maneuvered his craft back to within a few miles of friendly lines after it was hit. He bailed out, the witness said, but his parachute caught on the tail of his plane.

Colonel Polifka commanded the Sixty-seventh Tactical Reconnaissance Wing. In World War II he commanded the First Photo Reconnaissance Unit in the Southwest Pacific. He flew 347 combat missions in that war and won many decorations.

IN FIRST PLANE OVER TRUK

Colonel Polifka was in the first American aircraft to fly over the Japanese stronghold of Truk in May 1942. He earlier had spotted the Japanese fleet at Rabaul, enabling the United States Navy to mass for the Battle of the Coral Sea.

Assigned to the Mediterranean theater, he led his reconnaissance unit in photographing Cassino, the Anzio landing and ferreting out the enemy's secrets from the Balkans and France all the way to Poland.

The last Lightnings and Mosquitoes used in reconnaissance could photograph a 7-by-400-mile strip of territory, and in 1 month alone in 1944 the unit turned out 1,250,000 prints. In 8 months, the unit flew thousands of sorties to map 163,000 square miles.

At one time, Army officers estimated that the unit was operating the biggest photographing, processing and printing plant in the world, one which in civilian life would represent a \$100,000,000 business in terms of personnel and equipment.

Ogden Press Reverses Itself

EXTENSION OF REMARKS
OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. RAMSAY. Mr. Speaker, at the conclusion of these remarks, I append an editorial from the Times-West Virginian,

of Fairmont, W. Va., from its issue dated July 22, 1951. This editorial quotes at length from the News, of Parkersburg, W. Va. Both of these newspapers are members of the Ogden chain. It is noteworthy that the Ogden chain at long last sees the value of the St. Lawrence seaway, and its favorable influence on the economy of our State, particularly the northern section of our State. It is noteworthy that this chain at long last sees how this and related projects will expedite the marketing of our West Virginia coal, the best in the world, for use in the production of steel.

In April 1933, in my maiden speech on the floor of the House of Representatives, I announced myself as in favor of this project on the major premise that it would help materially the entire economy of West Virginia. In subsequent elections the Ogden press spearheaded the opposition against me, and one of the grounds was my support of this project. I am especially pleased, therefore, to see that this newspaper chain has at long last seen the light.

The editorial follows:

THE SEAWAY

Opposition to the St. Lawrence seaway, which has been powerful for more than three decades, may now find new forces working to bring about conclusion of this great project which would bring oceangoing vessels from the Atlantic to the Great Lakes.

According to the Washington Star, the M. A. Hanna Co., of Cleveland, has enlisted five "little steel" companies to assist in its development of iron ore in Labrador. The steel industry must turn to new sources of ore, for the vast deposits of the famed Mesabi Range are no longer vast. If similar demands were made on the Mesabi Range as were made during World War II, this source of supply would not be sufficient to keep the blast furnaces going.

Editor Herman Everett Gleske, of the Parkersburg News, refers to this new interest in the St. Lawrence seaway because of Labrador iron ore, and says:

"How the picture has changed relative to steel mills in the Ohio Valley does not seem to be generally realized, in connection with the long-projected St. Lawrence seaway. Could the seaway be built in time, the Lake Erie ore unloading facilities could still be used, without economic necessity forcing steel mills to make an exodus from the valley in order to get nearer the Atlantic or Gulf seaboard."

The Parkersburg editor then quotes the Washington newspaper and finally concludes:

"If in addition to the seaway, a Lake-to-the-Ohio-River canal could be built, our position vis-à-vis the steel industry in our valley would be superb. There would be an all-water haul from Labrador to Wheeling, Parkersburg, Marietta, New Martinsville, Weirton, Moundsville, St. Marys, Sistersville, Ravenswood, Pomeroy, and Point Pleasant. Furthermore, this route would be highly defensible in time of war, whereas the ocean routes from both Venezuela and Labrador would be highly vulnerable."

"It seems strange that anyone, considering the dangers which now beset our country, would want to go against this project. Our four upper valley Senators, Taft, BRICKER, KILGORE, and NEELY ought to be urged to take a lead in favoring the seaway, and our Members of the House, as well. Our relations with Canada should be considered, too."

Think what this might mean to Fairmont if the Ohio to the Lakes canal could be achieved in addition to the St. Lawrence

seaway. Fairmont now is the head of navigation on the Monongahela River and the future will bring improvement of the locks to permit larger vessels to come all the way to Fairmont. With an Ohio to the Lakes canal and the seaway, Fairmont coal could be shipped by boat all the way to the sea and to Atlantic ports anywhere.

The prospect of being able to travel by water from Fairmont to any great port in the world has fascinating overtones.

Catastrophe Lies in Wake of Uncontrolled Inflation

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SCUDDER. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include an editorial from the Humboldt Standard, published at Eureka, Calif., under the date of July 11, 1951. This editorial, entitled "Inflation—Problem of the Day," is very timely, and I desire to call it to the attention of the conference committee which is now considering the price-control bills passed by the House and Senate.

There are provisions in both bills which need modifying and need to be considered in the light of our American free-enterprise system. The context of this editorial, I believe, is in line with the thinking of our people who are well-informed and vitally concerned with the problems and dangers that accompany the inflationary trend.

This well-thought-out editorial, Inflation—Problem of the Day is as follows:

INFLATION—PROBLEM OF THE DAY

Principal issue before Congress at the moment, and before the public for that matter, is the question of what to do about controlling inflation or if, indeed, anything can be done toward keeping prices under control. And even as the public watches, the weekly and monthly reports from agencies that keep tab on price trends continue to show the climb in the cost-of-living that has hampered the purchasing power of the dollar to the lowest point in our history.

Can controls do the job? The administration thinks so, and they are joined in that belief by a great many other persons, in both public and private life.

But controls, of any kind, are foreign to our American way of doing things, and they are at best a palliative, not a permanent cure. Ranged against the opinion of the administration are a good many economists, producers and, likewise, private citizens.

One thing we do know—that during the World War II period, controls did serve to keep prices on most commodities at reasonable levels; it was not until after the war that the real rise in prices began. And we may recall, also, that producers, at the time controls were removed, promised the public that the lifting of the ceilings actually would tend to lower rather than to boost prices. But this promise has not materialized to date.

But another we also know—that controls tend to drive commodities out of the open market and bring about the situation we know as the black market, with the evil

of under-the-counter dealing whereby anyone can buy anything if he has the cash to meet the price.

Somewhere between these two opinions, perhaps, lies the solution. The problem is to find it and to apply it before inflation destroys the economy of both the average person and the Nation at large.

Where and when did inflation begin? There again, answer to the question is somewhat elusive. But there is slight question that it actually had its inception in the financial policies that have been pursued by the Federal Government during the last two decades. The reckless spending of the Government, which began in 1933 as a means of alleviating the depression of that era, started off the entire cycle by giving people generally a false conception of money and credit. Through the years this policy has continued to run counter to sound economic principles through public hand-outs of tax money, padding of the public pay rolls, a "cheap money" practice which has made higher prices and depreciated currency inevitable, through subsidies that guarantee the producer a profit even when the producer is a marginal operator with no business in the field in the first place.

At the source of the evil is the vast maze of Federal lending agencies which together make the Federal Government the greatest source of so-called private credit, coupled with loan policies that also stimulate inflation. Another contributor is the diversion of American products, particularly foodstuffs, to other parts of the world. The Government itself, through its practice of subsidies and purchases of surpluses, has sought to curb the working of the natural laws of supply and demand by attempting to insure high prices to producers and restrict production that in itself creates a supply that will be reflected in lowered costs and prices. Somewhere along the line the private citizen, the so-called little man, has been forgotten.

Admitting that we have inflation with us at the present time, we must also know that we have not yet experienced the full catastrophe that full inflation brings in its wake. We trust that we never shall. But, by the same token, if the inflationary trend should reach its peak, then the Communists will have won the cold war without a shot, for we shall be a wrecked nation.

One thing is clear, controls or no, we must head off this prospect. Similarly, if we do not have controls, then let us have an end to subsidies, the diversions, the innumerable other artificial curbs and governmental extravagance that defeat the principles and the action of natural economic laws.

Confusing the Real Issue Behind Tidelands Oil Controversy

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SCUDDER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Enterprise-Record, published at Chico, Calif., under the date of July 9, 1951, in connection with H. R. 4484, which would confirm and establish the titles of States to lands beneath navigable waters within State boundaries and to the natural resources within such lands and waters.

The editorial criticizes an attempt by Columnist Drew Pearson in his column published in this newspaper on July 9, 1951, to cloud the real issue at stake in this controversy. Mr. Pearson would make it appear that the oil companies and three States in particular—California, Texas, and Louisiana—are striving to selfishly retain their titles to submerged oil lands along their borders, to the detriment of the educational institutions of the United States. He would make it appear that scheming and wealthy oil companies and States with selfish interests are attempting to fatten their own larders at the expense of innocent children who must do without the benefits of a free and adequate education.

This is not a fight between oil companies and the Federal Government, it is a righteous attempt on the part of the States to retain what is theirs. The royalties collected by the State of California from the operating oil companies are much greater than royalties collected by the United States Government from similar fields. Our royalties are used for the purchase and maintenance of parks and beaches, and benefit a large segment of our population—as well as the thousands of visitors to our State.

Congress should take action to clear up this controversy by reversing the unfair ruling of the Court and release the impounded fees to the States.

The editorial referred to above, entitled "Oil and Politics," is as follows:

OIL AND POLITICS

Once again Drew Pearson beclouds an issue in search of a villain for his column in today's issue of the Enterprise-Record.

Pearson makes it appear that the tidelands oil controversy is between the Federal Government and the oil companies. However, according to our understanding, the quarrel is a matter of States' rights.

Historically the States have collected royalties from the oil companies for all oil produced from tidelands on their boundaries. The oil companies must pay the royalties either to the States or the Federal Government, depending on who has title to the tidelands.

In recent years the Truman administration preempted title to the States' tidelands and the administration-controlled Supreme Court backed them up. Congress has been trying to prevent this power grab and return control of the tidelands to the States, where they belong. There does not seem to be any earthly reason why California should not control and receive the benefits from her tidelands as she has for the last 100 years.

Pearson would make it appear that anyone who opposes this administration grab is an enemy of education. No one denies that more money is needed to support our educational institutions. However, the worthiness of the cause does not justify the stealing from a few States to support educational institutions in all of the States. Robin Hood reportedly stole from the rich to give to the poor, which made him some kind of a legendary hero, but such practices are frowned upon by modern jurisprudence.

California and the oil companies are doing their share in support of our educational system. When you buy an oil product, taxes represent a far larger proportion of the selling price than is generally realized.

The oil industry is one of the most heavily taxed of all enterprises—as a whole it represents 3 percent of the national income and pays 7 percent of the Federal, State, and local taxes.

Oil actually pays about 200 different kind of taxes, including severance taxes, pipeline taxes, privilege taxes, pump taxes, and so on, which are levied by 180,000 separate taxing jurisdictions throughout the Nation. In 1950, it is estimated, the industry's total tax payments came to \$3,500,000,000.

In that same year, the value of domestic crude oil production at the well was \$5,000,000,000 and the wholesale value of all refined petroleum products was about \$8,000,000,000. Consequently, oil's 1950 tax bill was equivalent to 70 percent of the original value of the basic product, crude, and to 44 percent of the wholesale value of the products resulting from the crude.

This is something to keep in mind when someone tries to make rogues out of our basic industries which have contributed greatly toward making California the great State which it is today.

Taxpayers Pay for Social Security

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a pertinent editorial from the Janesville Gazette, Janesville, Wis., entitled "Social Security From No Rich Uncle." This is an interesting editorial, and the writer certainly points out very clearly that there is no rich uncle except the taxpayers of the United States:

SOCIAL SECURITY FROM NO RICH UNCLE

Duping the public into believing that Uncle Sam is a "rich uncle" whose gold-lined pockets are bottomless has become common practice since 1932. The New Deal and Fair Deal have done their best to persuade citizens to "let Uncle Sam take care of you."

The inference is that Uncle Sam can and will do anything for you that free enterprise can't or won't. The idea is you are to get all you can from Uncle Sam instead of earning your own security. It follows that the social-security checks, conservation checks, unemployment checks, and all the other payments which millions of Americans are getting every month are gifts from Uncle Sam and that the citizen has a right to them, whether or not he does anything for them.

This fraud has gone so far that some unscrupulous businessmen are doing the same thing—telling prospective customers that Uncle Sam has saved up a hoard of gold at Fort Knox or elsewhere which is theirs.

One of these, a Madison insurance company, writes to a Janesville prospect thus:

"Did you ever wish you had a rich uncle who would leave you a fortune? Well, you have—your Uncle Sam. He is the richest uncle in the world, and he has accumulated for you and your family a small fortune—\$12,000, \$18,000, or more—in your social security benefits, if you get full benefit from this act."

The letter then suggests that the company will "make suggestions on guaranteeing that you receive it."

What are the facts?

First, there is no rich Uncle Sam. Any accumulation comes out of the pockets of the worker and his employer, in taxes. No one gives any one anything. The worker and his boss pay hard cash, for years.

Second, the small fortune, it is true, is available if the worker works 40 years, earns

maximum pay 40 years, lives a long life and if his wife, too, lives a long life.

No one, regardless who he is, should be allowed to create the impression that a rich uncle has a fortune to dump into our laps or that they can guarantee it. Such sales talk is pure poppycock, nay unto fraud.

Government has nothing and gives nothing. What it has it takes from the citizens and what it passes out is only what it has taken away. Let's not be fooled.

Booker T. Washington Birthplace Memorial

EXTENSION OF REMARKS

OF

HON. O. K. ARMSTRONG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. ARMSTRONG. Mr. Speaker, more than 70 years ago Booker T. Washington, America's greatest Negro leader, worked out plans by which the masses of Negroes, with the cooperation of their fellow Americans, could earn for themselves a respected place in the life of the Nation. These plans included such everyday virtues as honesty, efficiency, thrift, cleanliness, truthfulness, racial harmony, and industrial training.

Booker T. Washington lived long enough to prove the soundness of his ideals and teachings which earned for him a place in the Hall of Fame. He did not, however, live long enough to get his teachings sufficiently widespread among his people to achieve the ends he hoped to achieve, that is to have them earn sufficient economic security to stand on their own feet and bear their share of local, State, and national responsibilities to the end that they might merit the Nation's respect.

Six years ago the plantation on which Booker T. Washington was born, a 216-acre tract in Franklin County, Va., was put up for sale. It was purchased by a group of people who believed that the ideals and teachings of Booker T. Washington can help to solve many of today's problems, both for the Negro and the Nation, if put into widespread use. The group secured a charter from the Commonwealth of Virginia under the name of the "Booker T. Washington Birthplace Memorial." The expressed objective of the organization is "to perpetuate the ideals and teachings of Booker T. Washington." The group is headed by S. J. Phillips, a graduate of the school which Booker T. Washington founded. Associated with him are outstanding men and women of both races. Just how well the memorial has advanced can be judged by the amount of service it renders today to thousands of Negroes of low-educational status.

Following are some of the projects and aims of the organization, which I heartily commend to my colleagues in the House, and to American citizens of good will everywhere:

AIMS AND ACHIEVEMENTS OF THE BOOKER T. WASHINGTON BIRTHPLACE MEMORIAL

The plantation on which Booker T. Washington was born has been converted into a

center of unselfish service where conscientious Negro men and women work night and day to help in the development of activities and plans designed to help the Negro to stand on his own feet. From this center has been developed a field service which is carrying help and guidance to thousands of Negroes who stand gravely in need of this help. The birthplace of Booker T. Washington has been dedicated as a national shrine by the Governor of the Commonwealth of Virginia. The Virginia General Assembly appropriated the first \$15,000 toward its establishment. The memorial is located on Highway 122 in Franklin County. It may be reached by leaving United States Highway No. 220 at Rocky Mount and traveling 16 miles on State Highway 122, or by leaving United States Highway 460 at Bedford, Va., and traveling 24 miles on State Highway 122. National headquarters includes the following:

1. A replica of the slave cabin in which Booker T. Washington was born. This building was constructed by funds appropriated by the Virginia General Assembly and is built on the exact spot where the original cabin stood. It is visited by thousands of people annually.

2. Walter L. Hopkins Hall: A permanent 40 by 60 two-story structure named in honor of the late Attorney Walter L. Hopkins, a member of the Virginia General Assembly, who was the first white man to accept membership on the memorial's board of trustees. This building houses "opportunity students" and makes possible recreational and assembly rooms.

3. Thomas G. Burch Memorial Building: A two-story building, 30 by 60, named in honor of the late Senator Thomas G. Burch who introduced the bill which made possible the coinage of the Booker T. Washington memorial half dollar. This building (under construction) is to replace the administration building and post office which was destroyed by fire during December of 1950.

4. Booker Washington birthplace, Virginia: To have a community named for the noted educator is a great tribute. The center of this community is a second-class United States post office through which millions of pieces of mail pass annually. With each piece carrying the postmark, the public is reminded of a memorial to a great American.

5. Virginia cottage: A modern two and one-half story building which is used for quarters of the president and several workers. This was once a two-room frame building but now it contains twelve rooms with all modern conveniences and a central heating plant.

6. Tuck Hall: Named in honor of Ex-Gov. William M. Tuck, who gave splendid cooperation to the memorial's program. This is a renovated barn which has been preserved in its original exterior form for historical reasons. This houses teachers and workers and provides dining room space.

7. Poultry and farm equipment: Poultry houses, a farm set-up, including modern machinery, thoroughbred animals, and a 30-acre orchard. This serves as a guidance center for thousands of Negro farmers and farm families through the number of meetings, classes, and other activities that are conducted at the birthplace.

8. The memorial driveway: Constructed a two-lane driveway a quarter of a mile long leading into the memorial.

9. Additional land acquired: Acquired 350 acres of land adjoining the birthplace of Booker T. Washington, making a total of 566 acres.

10. Renovations and constructions: Renovated three farm dwellings and barns and constructed fences around the 566 acres of land.

11. Improvements: Installed electric lights and made provisions for sewage-disposal system for all buildings.

12. The Old Burroughs Home: This was the "big house" of plantation days. It was a story and a half frame building which had been renovated to serve as administration building for the memorial. It housed the post office and thousands of dollars' worth of equipment. This building was destroyed by fire in December of 1950. The memorial sustained a loss of \$150,000. The contents of the building were only partially covered by insurance.

EXTENSION SERVICES OF THE BOOKER T. WASHINGTON BIRTHPLACE MEMORIAL

1. The Booker T. Washington Memorial Trade School: Located in Roanoke, Va., 22 miles from Booker Washington Birthplace, Va., the Roanoke branch of the Booker T. Washington Memorial Trade School is one of the Memorial's largest field units. It was established in September of 1948 to offer trade and industrial training opportunities to adult Negroes who did not have such opportunities in their earlier years. It offers courses in auto mechanics, bricklaying, carpentry, beauty culture, radio repair, shorthand, typing, office practice and bookkeeping. Courses for domestic and hotel workers, shoe repair and sewing were also included in its plans. These three latter courses, because of the few registrants, have been temporarily suspended.

The school has graduated more than 200 skilled workers who are at present earning decent livings for themselves and their families. It has a present enrollment of 400 students. The Booker T. Washington Memorial Trade School is the only private school ever to be approved by the State approval agency for the training of veterans according to a statement made by the agency. It is classed as one of the best trade schools in the State.

2. The Booker T. Washington good will hour: America is nothing more or less than the joys and sorrows, the hopes and dreams, the loves and hates, the progress, peace and contentment of its people. Thinking men have established tools through which the thoughts of these people can be guided, influenced for good, and channeled along lines that strengthen the invincibility of the Nation. Chief among these tools is the radio. In keeping with Booker T. Washington's ideals of "letting no man drag him so low as to make him hate his fellowman," the Booker T. Washington Birthplace Memorial, early in its history, thought in terms of building better relationship among Americans of different races and creeds.

To this end the memorial labeled one of the main phases of its four-point program, Inter-Racial Goodwill. Throughout every activity that it sponsors it constantly attempts to get men to work together for their mutual welfare; to understand and look for the best in each other; and to practice goodwill and Christian tolerance toward all men. One of the main tools that it uses to give widespread publicity to this phase of its work is the radio. In 1948 a radio commission was established. It included a number of prominent people. For the past 5 years the Booker T. Washington Birthplace Memorial has maintained year-round good will building radio broadcasts. These are presented each Sunday morning at 9:30 under the caption, "The Booker T. Washington Goodwill Hour." Each broadcast usually includes heart-warming Negro spirituals sung by talented, and in some instances, famous Negro groups from various areas. Well prepared scripts attempt to sell the idea that good will is necessary to the invincibility of our Nation and that the Golden Rule, to be effective, must be practiced toward all mankind, regardless of race or creed.

In addition to the Booker T. Washington Goodwill Hour, which is broadcast regularly as a public service over Station WROV in Roanoke, Va., and WSFA in Montgomery, Ala., the memorial, from time to time, has presented its program over hundreds of broadcasting stations and over the networks.

3. The Booker T. Washington community service clubs: The world is in a process of change. Groups of people everywhere are trying to better their conditions, to make larger contributions to human welfare, to measure up to higher standards, to help themselves to grow in keeping with the times in which they live.

The Negro, like all other racial groups, must think in terms of what he can do to help himself. He needs to look about him in his own community to see what he can do to improve his own condition; to make his contribution to community welfare. The Booker T. Washington Birthplace Memorial knows that no better tool can be found to help the Negro to help himself than the sane, fundamental teachings of Booker T. Washington applied to daily living.

The Booker T. Washington community service club is designed to carry these teachings to Negroes in areas where they show signs of being needed most. They are self-help clubs, through which members work to improve conditions in their own communities. Each is a link in what is hoped will be a Nation-wide movement through national respect, which will in turn result in a higher type of citizenship.

"There is no defense or security for any of us except in the highest intelligence and development of all." (Booker T. Washington)

4. The Booker T. Washington birthplace demonstration farm and the Macon County farm project: Agriculture furnishes the bulk of employment engaged in by the majority of the 10,000,000 Negroes who live in the South. These are for the most part small farmers whose knowledge of modern farm practices is very limited. Macon County, Ala., and Franklin County, Va., were selected as typical southern rural communities that needed help and guidance in soil building and conservation; plant and seed selection; crop rotation, marketing, and general farm management. In keeping with Booker T. Washington's ideals and ideas of taking help to the worker on the job, the memorial, through a well laid out cropping system, for more than 3 years has sought to show the farmers of these areas how they could make their efforts pay.

The president of the memorial is himself an experienced agriculturist, having served as farm demonstration agent for the States of Alabama and Arkansas and manager of Tuskegee Institute's 2,000-acre farm as well as junior soil conservationist for the Federal Government, gives personal guidance to the manager of this particular project. Just how well these farms are producing may be estimated by a few figures taken from its production sheet during the past 3 years: 6,000,000 plants of certified sweetpotatoes, 1,000,000 pounds of cabbage, 40,000 pounds of poultry products, 10,000 pounds of farm cured meat, 3,000 bushels of sweetpotatoes, 200 tons of hay, 3,000 bushels of wheat, 115 bales of cotton, 3,000 bushels of corn, 2,500 bushels of oats.

This project is equipped with tractors and other modern farm machinery. It is staffed by an efficient farm manager and a force of farm workers who have caught the vision of what the memorial is trying to do to help the farmers of the South. They work with a will to help make a success of the undertaking. Booker T. Washington's admonition to "Cast down your bucket where you are" is being stressed for the benefit of the

farmers who live in Macon County, Ala., and in Franklin County, Va. This particular project is representative of the type of work being carried on through the memorial's agricultural program.

5. The Negro Agricultural Service Center of Georgia: According to recent statistics 10,000 Negro farmers live in the State of Georgia. Like most southern farmers, these farm families need help and guidance if they are to succeed sufficiently to make the standards of American home life and to provide education for their children. As a means of securing such aid for this large group the Booker T. Washington Birthplace Memorial secured the cooperation of the Georgia State Board of Education and a number of outstanding citizens of both races to work together to establish a Negro Agricultural Service Center for the State of Georgia. It is hoped that a center will be established that will be a credit to the spirit of interracial good will that motivated the undertaking, a source of help to the Negro farmers of the area, and an economic asset to the entire area.

6. The George Washington Carver National Monument Foundation: Possibly one of the finest examples of the Booker T. Washington Birthplace Memorial's operations as a "Center of Unselfish Service" is evidenced in the establishment of the George Washington Carver National Monument Foundation at the birthplace of George Washington Carver in Diamond, Mo. The program of the new organization is as follows:

(1) To help underprivileged Negro youth through opportunity scholarships

(2) To conduct demonstration and research in the field of agriculture and to make surveys on rural life.

(3) To establish George Washington Carver community service clubs.

(4) To promote a program of racial understanding and greater good will, based on the philosophy of Dr. Carver and Booker T. Washington, and to assist other nonprofit Negro educational institutions.

7. Better worker institutes: By way of encouraging right work attitudes and pride in work well done, the Booker T. Washington Birthplace Memorial, during the courses of the year, holds several "Better Worker's Institutes." These are short inspirational courses that consist of demonstrations; informative discussions and helpful addresses that point out the value of efficiency, punctuality, regularity, and dependability; round-table discussions and forums. Certificates of merit are awarded to workers and leaders who stand out because of the contributions they have made to job efficiency or to community welfare.

8. The Burning Bush: The Cavalcade of America, a radio feature of the du Pont Co. last year broadcast a story on the life of Booker T. Washington under the caption "The Burning Bush." By way of cooperation with the program of the Booker T. Washington Birthplace Memorial, the du Pont Co. had transcriptions made of this broadcast and turned them over to the memorial. A well-equipped sound truck has carried this story to thousands of Negro school children in southern areas.

9. The life of Booker T. Washington in motion pictures and drama. The memorial has presented From Slave Cabin to Hall of Fame in dramatic form in several areas. These presentations dealt with the life of Booker T. Washington. They received city-wide acclaim and had the support of such outstanding individuals and organizations as mayors of cities, city boards of education, etc. The memorial has also aroused a national interest in the presentation of a full-length movie on the life of Booker T. Washington. Schools, churches, women's clubs, and representatives of the general public have en-

thusiastically endorsed the idea of such a movie.

10. Helpfulness toward others: The motivating theme of Booker T. Washington's life was helpfulness toward others. In keeping with this theme, the memorial has sought to render unselfish service in the following ways:

(a) It has shared the premiums on the sale of the Booker T. Washington commemorative half dollar with churches, schools, and organizations to help further their programs.

(b) It has cooperated by making its facilities available in various community programs such as making surveys on tuberculosis, blood-bank donations, Red Cross, and community fund projects, etc.

ADDITIONAL ACHIEVEMENTS THAT WILL BE MADE POSSIBLE THROUGH FUNDS REALIZED FROM THE SALE OF THE BOOKER T. WASHINGTON COMMEMORATIVE HALF DOLLAR WHICH WILL BE MINTED UNDER HOUSE AMENDMENT 3176 AND SENATE AMENDMENT 1047

1. The fight against communism: The vast majority of Negroes always have been, and it is our honest opinion, always will be loyal Americans. Because, however, Negroes have been and are targets of constant relentless Communist propaganda as brought out in hearings before the Committee on Un-American Activities of the House of Representatives of the Eighty-first Congress—the board of trustees of the Booker T. Washington birthplace memorial included a fight against the spread of communism in its 1951 program. The main objectives of the fight being to educate Negroes on the evils of communism, to explain its insidious methods of approach; to put them on their guard against Communist agents and propaganda which comes in the disguise of friends to help their cause.

2. A reaffirmation of faith in the ideals and principles of democracy. Concerted, continuous efforts to teach the masses of Negroes the concept upon which our Nation was founded, to hold up the opportunities and advantages which the laws of our land make possible, to the end that there shall be developed among them an unswerving faith in the principles and ideals of our Government as set forth in the Declaration of Independence, the Bill of Rights, and the Constitution of the United States.

Wisconsin Call to Action

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of the Wisconsin Call to Action, as well as several editorials which appeared in Wisconsin newspapers supporting this movement.

The Call to Action is a bipartisan movement, originated early this year in my State with the intent of impressing the people of Wisconsin and, indirectly, the people of the entire Nation, with the desirability and practical necessity of strengthening the United Nations organization. Dr. J. Martin Klotzsche, president of the Milwaukee State Teachers College; Mr. Francis A. Henson, educational director, International Union UAW-A. F. of L.; Mrs. Norbert Klein, in-

ternational relations chairman, Federated Women's Clubs; Mr. Roy Matson, editor, Wisconsin State Journal; Mr. S. F. Shattuck, former member of the board of directors, Kimberly-Clark; and Dr. Merrill Abbey, pastor, First University Methodist Church, Madison, were the members of the original sponsoring committee.

I am fully in agreement with the basic intentions and principles of the Wisconsin Call to Action, for I sincerely believe that the United Nations organization offers the best hope for future peace in the world. I realize that there are certain imperfections in the U. N. Charter and that at present there is a need for stronger unity among its members. Nevertheless, the achievements of the United Nations in the years of its infancy have been notable, and the improvements in its organization have been encouraging. The Acheson plan exemplifies the progressive developments which have occurred in the United Nations.

It is my belief that our strong support of the United Nations and of the North Atlantic Treaty, set up under its Charter, will give added strength to this organization and, with continued progressive revision of the Charter, will lead to the development of the UNO into a workable organization capable of coping with international problems and difficulties.

The Wisconsin Call to Action, I may mention, received wide and enthusiastic support throughout our State. It was embodied in these words:

WISCONSIN CALL TO ACTION

Our country and the entire world stand on the knife edge of disaster.

The U. N., because of Charter limitations, has been unable to prevent aggression or to unite the world in the face of aggression. We are now called upon to choose whether to discard the U. N. because of its limitations or to keep the U. N. and remove its limitations. To discard the U. N. is to resign ourselves to war as the final arbiter of world disputes. It is surely the better part of wisdom to keep the U. N. and endow it with the power it must have to halt aggression and preserve the peace.

Therefore, we, the undersigned citizens of Wisconsin, urge President Truman, in cooperation with the leaders of Congress, to press for immediate adoption within the U. N. of the following proposals:

1. Establishment of a U. N. armed services committee under the jurisdiction of the General Assembly. A civilian leader of worldwide stature should head the committee and act as commander in chief of the U. N. armed forces. To insure full and proportionate sharing by each nation in the burdens of defense, the committee must be empowered to integrate and direct the armed forces of the participating nations. The military powers of the various U. N. members would then be united to meet aggression anywhere in the world as the armed forces of the Atlantic nations are now being united to meet any aggression in Europe.

2. Revision of the U. N. Charter to include these carefully limited powers necessary to compel settlement of international disputes by means other than war: (a) The right to make enforceable laws to control armaments; (b) the right to apply those laws through U. N. courts to individual offenders rather than entire nations, thus stopping aggression

at its source; (c) the right to maintain effective, tyrannyproof armed forces to meet aggression; (d) the right to raise dependable revenue.

The necessary revisions might well be drafted by a Charter review commission appointed under article 22 of the Charter. The revision must include a more adequate method of U. N. representation than the present system of one nation one vote.

The U. N. should be established on the basis of the revised, veto-free Charter as soon as a majority of the nations ratify, even though the Soviet Union or others may refuse. A strong U. N. government, preserving to the nations full jurisdiction over domestic affairs, is the only sure protection against recurring wars.

The cataclysm of war may still be prevented should our Nation follow this policy immediately and vigorously. If full-scale war does again overtake us, this course of action will unite the free world and conclude the conflict with the enduring peace which alone can redeem the terrible cost of victory.

Mr. Speaker, this document was signed by an unusually broad cross section of leaders of public opinion in the State of Wisconsin. In addition, by signing the enclosed Editors' Affirmation of Wisconsin call to action, the editors of numerous newspapers lent their support and greatly contributed to the success of this movement:

EDITORS' AFFIRMATION OF WISCONSIN CALL TO ACTION

We, the undersigned editors of Wisconsin, reaffirm the principles set forth in the Wisconsin call to action. Our news tickers, which rest on the pulse of the world and bring to us events even as they are happening in the most remote places, tell us by that very fact that—

(a) Man can no longer live unto himself in a world knit together as ours is by science and technology.

(b) Neither can man live within the world society without committing suicide unless basic armaments of modern warfare are under the jurisdiction of a common authority, which in turn is controlled by its members.

(c) Such an authority must be so limited in its powers as to reserve to each nation its full domestic sovereignty, else peace would not long exist.

In our opinion, the Wisconsin call to action fully recognizes the above conditions. It sets forth a greatly needed plan for developing the United Nations into an institution that can give man freedom from the tyranny of war and from the despotism of the conqueror.

There is one additional point with respect to the call to action which, in my estimation, should be borne in mind by the membership of this august body. That is that the call to action originated in the State of Wisconsin, which State, in the minds of many persons throughout this Nation, is frequently, although often undeservedly, associated with the idea of very strong political isolationism. The Wisconsin call to action should serve to rectify that erroneous impression.

In conclusion, I wish to commend the sponsoring committee, the editors, and the other prominent citizens of the State of Wisconsin who originated and supported the call to action. I believe that the call merits immediate and earnest consideration of the President of the United States, of Congress, and of all of

the citizens of our great Nation, for it is, in the words of the editors of the Milwaukee Journal "an earnest and courageous expression from thinking people who realize that 'our country and the entire world stand on the knife edge of disaster'."

I wish to commend the following editorial comments on the Wisconsin call to action, which appeared in our State newspapers, to the careful attention of the membership of this body:

[From the Milwaukee Journal of May 31, 1951]

THE CALL TO ACTION

The most heartening thing about the Wisconsin call to action is that it comes out of Wisconsin.

The name of Wisconsin is synonymous with that of blind political isolationism in many parts of the country. The reputation is undeserved, but we are stuck with it nevertheless.

The call to action is a serious, well thought out plea to President Truman and to Congress to put this country back of a program for a stronger United Nations. It is signed by 72 of Wisconsin's prominent citizens from almost every section of the State and representative of most fields of endeavor.

These citizens urge American leadership toward revision of the U. N. Charter so that the world organization can maintain effective armed forces, make enforceable laws to control armaments, raise dependable revenue, and move effectively to compel settlement of international disputes by means other than war. They declare that a strong U. N. government, preserving to member nations full jurisdiction over domestic affairs, is the only sure protection against recurring wars.

One does not have to agree with every detail or underwrite every comma of the Wisconsin call to action in welcoming it as a commendable contribution to the great American debate that is in progress today. It deserves the attention of the President and Congress, and of the U. N. It is an earnest and courageous expression from thinking people of this great Midwestern State, people who realize, as their call says, that "our country and the entire world stand on the knife-edge of disaster."

[From the Appleton Post-Crescent of May 30, 1951]

WISCONSIN CALL TO ACTION

A representative group of Wisconsin citizens has sponsored a petition to the President to press for immediate adoption within the United Nations of certain amendatory proposals to the Charter.

This group has been actuated by the conviction that our country and the entire world stand on the knife-edge of disaster. They then set forth that the United Nations because of charter limitations has failed of its great purpose to halt aggression as well as to unite the world against aggression. Either we must resign ourselves to war, say these gentlemen, or we must keep the United Nations and improve it. In short, clipped sentences, the shortcomings of the United Nations are indicated together with the proposals to cure existing weaknesses. It is suggested that the United Nations might be created into a potent weapon for peace by the establishment of an Armed Services Committee under the jurisdiction of the General Assembly and headed by a civilian leader who would act as the commander in chief of the United Nations Armed Forces. The necessity of a full and proportionate sharing by each nation of the burdens of defense is recognized and, it is said, "the committee must be empowered to

integrate and direct the armed forces of the participating nations."

It is acknowledged, of course, that the United Nations Charter would have to be revised if settlement of international disputes by means other than war is obtainable. Such a revision would include the following powers, carefully hedged about and limited against abuse:

(a) The right to make enforceable laws to control armaments.

(b) The right to apply those laws through United Nations courts to individual offenders rather than entire nations, thus stopping aggression at its source.

(c) The right to maintain effective, tyrannyproof, armed forces to meet aggression.

(d) The right to raise dependable revenue.

Manifestly no one but a lunatic wants war. Manifestly, then, the free world stretches out its arms for a messiah, someone capable of making the beautiful words used by the sponsors stand up and walk. But there is only one thing worse than being a confirmed pessimist in relation to this question and that is to be an optimist without steering lights or rudder.

It demands a great deal of courage to try to set up in confidence a practical and workable system that will insure full and proportionate sharing by each nation in the burdens of defense, in the face of the present war in Korea in which 40 nations belonging to the United Nations have spurned their duty, and done so dishonorably.

Consider what would happen if the United Nations were to try "to raise dependable revenue." Reflect, also, upon what would happen in this world were the United Nations "to make enforceable laws to control armaments," and then really tried to enforce them. Would we not find ourselves immediately upon the battlefield? Do we not know in advance that every honest and genuine effort at peace would be denounced by the despotic governments as a treacherous plot to trap and destroy communism?

The call to action declares that the United Nations should be reestablished on the basis of the proposed "veto-free charter when a majority of the nations ratify and even though the Communist countries do not." In this respect we think we see a practical feature in the proposal that may make it worth its weight in gold. We would then have the rest of the world united but of course the tyrants would be united against us, even as they are now.

We must not forget that with us belong such men as Peron and such countries as Bolivia and Paraguay and quite a number of other men and countries that will never do their share unless they are first beaten to their knees. Also in our group we will find many of the most bitter and cursed prejudices and envies. Several free nations do not want to see the people of Japan or Germany get to their feet. Others carry prejudices against Spain and Portugal. Envy of this kind seldom wear their real purposes on their sleeves.

The idea is titanic but it should be tried. There is nothing to lose in the effort. There is a possible gain in the more tightly cementing together the free nations, some of which are weak and vacillating.

In 1917 we went to war to make a peaceful world. That was absurd. In 1941 we repeated the blunder. That was doubly absurd. There is a possibility that we may accomplish something practical by trying to preserve peace before all peace is lost.

[From the Kiel Tri-County Record of May 31, 1951]

WISCONSIN CALL TO ACTION

"Our country and the entire world stand on the knife edge of disaster."

"The U. N., because of Charter limitations, has been unable to prevent aggression or to unite the world in the face of aggression. We are now called upon to choose whether to discard the U. N. because of its limitations, or to keep the U. N. and remove its limitations. To discard the U. N. is to resign ourselves to war as the final arbiter of world disputes. It is surely the better part of wisdom to keep the U. N. and endow it with the power it must have to halt aggression and preserve the peace.

"Therefore, we, the undersigned citizens of Wisconsin, urge President Truman, in cooperation with the leaders of Congress, to press for immediate adoption within the U. N. of the following proposals:

"1 Establishment of a U. N. Armed Services Committee under the jurisdiction of the General Assembly. A civilian leader of world-wide stature should head the committee and act as commander in chief of the U. N. armed forces. To insure full and proportionate sharing by each nation in the burdens of defense, the committee must be empowered to integrate and direct the armed forces of the participating nations. The military powers of the various U. N. members would then be united to meet aggression anywhere in the world as the armed forces of the Atlantic nations are now being united to meet any aggression in Europe.

"2. Revision of the U. N. Charter to include these carefully limited powers necessary to compel settlement of international disputes by means other than war.

"(a) The right to make enforceable laws to control armaments, (b) The right to apply those laws through U. N. courts to individual offenders rather than entire nations, thus stopping aggression at its source; (c) The right to remain effective, tyrannyproof, armed forces to meet aggression; (d) The right to raise dependable revenue.

"The necessary revisions might well be drafted by a Charter Review Commission appointed under article 22 of the Charter. The revision must include a more adequate method of U. N. representation than the present system of one nation—one vote.

"The U. N. should be established on the basis of the revised, veto-free Charter as soon as a majority of the nations ratify, even though the Soviet Union or others may refuse. A strong U. N. government, preserving to the nations full jurisdiction over domestic affairs, is the only sure protection against recurring wars.

"The cataclysm of war may still be prevented, should our Nation follow this policy immediately and vigorously. If full-scale war does again overtake us, this course of action will unite the free world and conclude the conflict with the enduring peace which alone can redeem the terrible cost of victory."

The above statement was originally prepared by a group of interested citizens of the State, headed by Dr. J. Martin Klotsche, president of Milwaukee State Teachers College.

Editors of the State are now backing the program in a strong manner, and the Record editor, along with many others in the State, has signed the following affirmation.

"We, the undersigned editors of Wisconsin, reaffirm the principles set forth in the Wisconsin Call to Action. Our news tickers, which rest on the pulse of the world and bring to us events even as they are happening in the most remote places, tell us by that very fact that (a) man can no longer live unto himself in a world knit together as ours is by science and technology; (b) neither can man live within the world society without committing suicide unless basic armaments of modern warfare are under the jurisdiction of a common authority, which in turn is controlled by its members; (c) such an authority must be so limited in its powers as to reserve to each nation its full domestic sovereignty, else peace would not long exist."

In our opinion, the Wisconsin Call to Action fully recognizes the above conditions. It sets forth a greatly needed plan for developing the United Nations into an institution that can give man freedom from the tyranny of war and from the despotism of the conqueror.

[From the Waukesha Freeman of June 13, 1951]

SENTIMENT IN FAVOR OF STRENGTHENING U. N. GROWS

Thirty-five Wisconsin editors to date have given their support to the call for a strong United Nations, made recently by a number of Wisconsin citizens, led by Dr. Martin Klotsche, of the Milwaukee State Teachers College. This has special significance only because these men, whose task is to make day-to-day and year-to-year appraisals of community, State, National, and international problems, have shown interest in improving the effectiveness of this world organization. The call to action sets forth an urgently needed plan for developing the U. N. into an institution that can give man "freedom from the tyranny of war and from the despotism of the conqueror." The call urges American leadership to work toward a revision of the U. N. Charter so that it can make enforceable laws to control armaments, apply those laws to individual offenders rather than nations, raise dependable revenue, and maintain effective armed forces. This, it is claimed, would enable the U. N. to "compel settlements of international disputes by means other than war," and stop aggression at its source.

There is a growing realization that if the U. N. is to survive as an effective world agency for peace, it will have to be strengthened to meet the challenge. This can be done in various ways. Wisconsin's recommendations, which are now underwritten by many responsible citizens, suggest the following means:

1. Establishment of a U. N. Armed Services Committee under the jurisdiction of the general assembly. A civilian leader of world-wide stature should head the Committee and act as commander-in-chief of the U. N. armed forces. To insure full and proportionate sharing by each nation in the burdens of defense, the Committee must be empowered to integrate and direct the armed forces of the participating nations. The military powers of the various U. N. members would then be united to meet aggression anywhere in the world as the armed forces of the Atlantic nations are now being united to meet any aggression in Europe.

2 Revision of the U. N. charter to include these carefully limited powers necessary to compel settlement of international disputes by means other than war:

(a) The right to make enforceable laws to control armaments.

(b) The right to apply those laws through U. N. courts to individual offenders rather than entire nations, thus stopping aggression at its source.

(c) The right to maintain effective, tyrannyproof, armed forces to meet aggression.

(d) The right to raise dependable revenue. It is hoped these proposals will be given the earnest attention of congressional leaders and the President and that together they will press for their immediate adoption by United Nations signatories. Experience in meeting the threat of aggression, gained since the U. N. Charter was originally drawn and adopted, dictates the need for these revisions.

[From the Green Bay Press Gazette of May 30, 1951]

WISCONSIN CALL TO ACTION

A representative group of Wisconsin citizens has sponsored a petition to the Presi-

dent to press for immediate adoption within the United Nations of certain amendatory proposals.

This group has been actuated by the conviction that our country and the entire world stand on the knife edge of disaster. They then set forth that the United Nations because of Charter limitations has failed of its great purpose to halt aggression as well as to unite the world against aggression. Either we must resign ourselves to war, say these gentlemen, or we must keep the United Nations and improve it. In short clipped sentences the shortcomings of the United Nations are indicated together with the proposals to cure existing weaknesses. It is suggested that the United Nations might be created into a potent weapon for peace by the establishment of an Armed Services Committee under the jurisdiction of the General Assembly and headed by a civilian leader who would act as the Commander in Chief of the United Nations Armed Forces. The necessity of a full and proportionate sharing by each nation of the burdens of defense is recognized and, it is said, the committee must be empowered to integrate and direct the armed forces of the participating nations.

It is acknowledged, of course, that the United Nations Charter would have to be revised if settlement of international disputes by means other than war is obtainable. Such a revision would include the following powers, carefully hedged about and limited against abuse:

(a) The right to make enforceable laws to control armaments.

(b) The right to apply those laws through United Nations courts to individual offenders rather than entire nations, thus stopping aggression at its source.

(c) The right to maintain effective, tyrannyproof, armed forces to meet aggression.

(d) The right to raise dependable revenue.

Manifestly no one but a lunatic wants war. Manifestly, then, the free world stretches out its arms for a messiah, someone capable of making the beautiful words used by the sponsors stand up and walk. But there is only one thing worse than being a confirmed pessimist in relation to this question and that is to be an optimist without steering lights or rudder.

It demands a great deal of courage to try to set up in confidence a practical and workable system that will "insure full and proportionate sharing by each nation in the burdens of defense," in the face of the present war in Korea in which 40 nations belonging to the United Nations have spurned their duty, and done so dishonorably.

Consider what would happen if the United Nations were to try "to raise dependable revenue." Reflect, also, upon what would happen in this world were the United Nations "to make enforceable laws to control armaments," and then really tried to enforce them. Would we not find ourselves immediately upon the battlefield? Do we not know in advance that every honest and genuine effort at peace would be denounced by the despotic governments as a treacherous plot to trap and destroy communism?

The call to action declares that the United Nations should be reestablished on the basis of the proposed "veto-free charter when a majority of the nations ratify and even though the Communist countries do not." In this respect we think we see a practical feature in the proposal that may make it worth its weight in gold. We would then have the rest of the world united but of course the tyrants would be united against us, even as they are now.

We must not forget that with us belong such men as Peron and such countries as Bolivia and Paraguay and quite a number of other men and countries that will never do their share unless they are first beaten to their knees. Also in our group we will find

many of the most bitter and cursed prejudices and envies. Several free nations do not want to see the people of Japan or Germany get to their feet. Others carry prejudices against Spain and Portugal. Envy of this kind seldom wear their real purposes on their sleeves.

The idea is titanic but it should be tried. There is nothing to lose in the effort. There is a possible gain in more tightly cementing together the free nations, some of which are weak and vacillating.

In 1917 we went to war to make a peaceful world. That was absurd. In 1941 we repeated the blunder. That was doubly absurd. There is a possibility that we may accomplish something practical by trying to preserve peace before all peace is lost.

[From the Sheboygan Press of June 6, 1951]

WISCONSIN'S CALL TO ACTION

A few weeks ago 72 Wisconsin residents, including 7 from Sheboygan, issued a call to action in which they urged President Truman and Congress to press for immediate adoption of changes in the United Nations Charter.

The Wisconsin call to action asserts that because of Charter limitation, the UN has not been able to prevent aggression or to unite the world in the face of aggression. A choice has to be made, either to discard the U. N. because of its limitations, or to keep the U. N. and remove its limitations. The signers of the call contend that to discard the U. N. is to resign ourselves to war as the final arbiter of world disputes. These signers believe it is the better part of wisdom to keep the U. N. and endow it with the power it must have to halt aggression and preserve the peace.

Here are the proposals contained in the Wisconsin call to action:

1. Establishment of a U. N. armed services committee under the jurisdiction of the General Assembly. A civilian leader of world-wide stature should head the committee and act as commander in chief of the U. N. armed forces. To insure full and proportionate sharing by each nation in the burdens of defense, the committee must be empowered to integrate and direct the armed forces of the participating nations. The military powers of the various U. N. members would then be united to meet aggression anywhere in the world as the armed forces of the Atlantic nations are now being united to meet any aggression Europe.

2. Revision of the U. N. charter to include these carefully limited powers necessary to compel settlement of international disputes by means other than war:

- (a) The right to make enforceable laws to control armaments.

- (b) The right to apply those laws through U. N. courts to individual offenders rather than entire nations, thus stopping aggression at its source.

- (c) The right to maintain effective, tyranny-proof, armed forces to meet aggression.

- (d) The right to raise dependable revenue.

These proposals are drastic, but we must recognize that the times call for drastic action. It takes courage to break with tradition, but following tradition means one war after another. Who among us can recall when there was no fighting going on in the world or when no countries were setting the stage for a new conflict?

We are not too far today from a U. N. armed force as proposed by the Wisconsin group. Troops of a number of nations are fighting the aggressor in Korea and they are under a single command. The problem is to set up a program under which each nation would provide its proportionate share to the burdens of defense so that an integrated U. N. force would be prepared to act at any time.

Once such a force is established, the control of armaments would become a comparatively minor problem.

Granting the right to U. N. courts to seize individual offenders is vital to world peace. When that is done, there will be no new Hitler. The offender would be seized and brought to trial before he could start a war. If such a course had been possible 12 or 15 years ago, there would not have been a Second World War. Hitler would have been stopped in his tracks. You may object to giving such powers to an international authority, but isn't that preferable to sending your sons to war? It's one or the other.

Granting the right to raise dependable revenue should not bother any of us. We contribute to support of the United Nations now. Once the U. N. has the power to maintain peace, it will not need large sums for armaments and will not need a large military force. A fraction of the amount we now spend each year for defense purposes would take care of our share of U. N. requirements.

Since the call to action was issued, a number of newspapers have commented favorably. There should be much more comment, both in the press and by organizations and individuals so that the Members of Congress will come to the realization that the people want action. The people of Wisconsin have the opportunity of taking a leading position in a practical and comprehensive movement for world peace. There is no easy way to maintain peace. We must work for it constantly.

Low Pay of Postal Workers Destroys Morale and Lowers Standard of Service

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the St. Louis (Mo.) Globe-Democrat of July 19, 1951, entitled "Postal Wage Raise":

POSTAL WAGE RAISE

The pay scale for post office workers is much too low. This situation is destroying morale of employees throughout the system, causing a startling personnel turn-over, and as a consequence, steadily lowering standards of service. Postal employees have asked Congress for a 17-percent increase in wages.

It is true that postal workers were granted a pay rise of \$120 a year in November 1949. But even if they get the 17 percent now asked they would not be receiving enough to compensate for increased costs of living, according to the Bureau of Labor Statistics.

Carriers and clerks start now at \$2,670 a year and get \$100 more each year until they reach a maximum of \$3,670 annually. This is not enough to attract and keep competent employees. Three out of five postal jobholders have to supplement their wages by doing outside work or having wives or children work. They are quitting in droves for better-pay jobs. In St. Louis the system lost 600 last year.

These employees are replaced with temporaries, who take no examination, often have no interest in the service, and use their jobs only as a stopgap until better opportunity is found. Capable, experienced men in the service are discouraged and going into debt.

The House Post Office and Civil Service Committee this week is holding hearings on the postal wage bill. A Senate committee has recommended an amended measure, with an 8.8 percent increase. Pay of postal employees is among the lowest in Federal service. A 17 percent wage boost is justified. These Federal employees are worthy of their hire, contrary to thousands whose services could be dispensed with at no Government loss.

The Pennsylvania Department, Veterans of Foreign Wars of the United States, Demand Unconditional Release of William N. Oatis

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. VAN ZANDT. Mr. Speaker, the voice of over a quarter of a million veterans and their wives in Pennsylvania join the chorus of countless millions of American citizens who are outraged over the imprisonment of William N. Oatis by the Government of Czechoslovakia.

In a letter addressed to Secretary of State Dean Acheson, James J. Davis, department commander of Pennsylvania's VFW, calls upon the State Department to launch a "get-tough" policy to bring about the immediate and unconditional release of Associated Press correspondent, William N. Oatis, now in prison on false charges of espionage in Czechoslovakia.

Commander Davis' letter follows:

DEPARTMENT OF PENNSYLVANIA,
VETERANS OF FOREIGN WARS,
Harrisburg, Pa., July 20 1951.

Hon. DEAN ACHESON,
Secretary of State of the United States,
Department of State,
Washington, D. C.

SIR: The arrest, the solitary confinement, conviction, sentencing, and finally false imprisonment of William Oatis, chief of the Prague bureau of the Associated Press, by the Czechoslovak Communist regime because of his objective reporting outraged war veterans.

What representations have been made so far, beginning with Mr. Oatis' arrest, do not seem to parallel our time-honored policy of protecting Americans in foreign countries. The measures have been wholly inadequate. We demand Mr. Oatis' immediate, unconditional release.

Mr. Oatis' arrest was preceded by that of Consul General Angus Ward in Mukden and by Mr. Vogeler's in Hungary, to mention only recent outstanding instances elsewhere, have become too recurring to be allowed to continue and simultaneously expect the United States to maintain its international self-respect or for Americans abroad to retain the dignity that was theirs by virtue of their citizenship.

We firmly believe it is time for our Government, through your Department to make unmistakably clear to the Communist and Communist-dominated countries that false arrest of an American national will no longer be tolerated without punitive action; that we are as through bribing as we were with the Barbary pirates in 1804. In world-wide piracy, present-day Communists are comparable to the Barbary exploiters in ran-

som and in every conceivable crime against civilized mankind, including genocide.

If objective reporting by American correspondents abroad is to be the basis of allegations eventually twisted into charges of espionage, then it should follow as a retaliatory measure and to end propaganda originating openly in our country, that we appropriately punish correspondents of Communist newspapers for twisting out of all semblance of truth the ideals, the aims, the purposes and the general cross-section of American public opinion, in addition to distorting the policies of our Government.

An instant case in point is that of the Tass correspondent of Moscow's Pravda, dated New York, July 18, as reported July 19 by Eddy Gilmore of the Associated Press from Moscow, who quoted a piece of Pravda, in Pravda:

"It is impossible not to notice the growing horror among the imperialist bosses of the United States of America at the thought of peace."

Certainly our Government has the means at its disposal to prevent the continuance of this sort of unobjective, from our viewpoint, reporting especially when we are spending millions of tax dollars monthly on the Voice and other projects, that are completely nullified by the "accurate, objective" reporting of the Tass correspondent. American correspondents in Poland were expelled for infinitely less.

Most seriously, this correspondent of Pravda should be immediately expelled from our country and never again permitted to return. The same treatment should be meted out to any other correspondent who in the past, or in the future, deliberately falsifies the truth about our country.

We cannot conceive that our freedom of the press, which must remain inviolate, should be extended to those whose objective is to destroy us. To knowingly permit them to carry on their wicked, iniquitous work under our noses is sheer national stupidity and a source of unrestrained joy to our enemies.

We have been sufficiently humiliated as a nation at the United Nations by unpreventable Communist denunciations. We have retaliated there.

We were originally excluded, for reasons unknown to us, but Communists correspondents were included, at the Kaesong so-called truce parley. We are making progress there.

It is time now, as we finally did with the sentencing of Internal Communists, for us to do something equally as effective about those in our midst who foment and maintain unrest by their reports to foreign newspapers, if only through the cancellation of their passports and immediate expulsion.

Such action should be a part of the "get tough" policy every thinking American approves and anxiously looks forward to implementation. Through it Americans could find renewed confidence that their Government will protect them and their interests, both here and abroad, in the tradition to which we were accustomed.

Pussyfooting with Communists has gotten us nowhere except deeper involvement.

We ask, in the name of our freedom and international self-respect, and fervently hope you will initiate now, strong positive steps demanding the immediate unconditional release of Mr. Oatis, so as to reassure puzzled, despairing Americans everywhere who believe our national dignity has suffered abroad through failure to follow the positive attitude we have traditionally asserted worldwide during the 175 years of our independence.

Very truly yours,

JAMES J. DAVIS,
Department Commander.

XCVII—App.—290

College of the Pacific Enters Second Century of Service

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I include an article printed in the Stockton Record concerning the one hundredth anniversary of the founding of the College of the Pacific. On July 11, 1951, it started on its second century of service.

This college has had a very interesting development. In 1924 the college was moved to Stockton from San Jose, Calif. Before that time it found itself cramped for space and the area from which it received most of its students already contained several richly endowed private college and public institutions of higher learning. Consequently, it was determined that if COP was to grow it had to find another location.

Mr. J. C. Smith, of Stockton, donated the initial 40 acres for a campus and later gave another 10 acres. The campus was called the Harriet M. Smith Memorial Campus in honor of the donor's mother. Later, Mr. and Mrs. Amos Alonzo Stagg donated 21 acres to the college so the campus now contains 71 acres.

The people of Stockton and the surrounding area raised \$1,600,000 to relocate COP at Stockton. The \$1,600,000 was used to erect buildings on the Harriet M. Smith Memorial Campus. I can think of no more worthwhile investment by a group of people than the investment of this money in the College of the Pacific. When the college was relocated at Stockton it then had within a short distance of its campus a larger high school population than was found around any other college in the entire country. In other words, the Sacramento-San Joaquin Valley, in the center of which is Stockton and COP, contained a larger high school population than any similar-sized area in the United States that was unserved by a 4-year college.

The college brought many interesting and talented people to our city. Dr. Tully C. Knoles was the president of the college at the time it came to Stockton. I doubt if any man in California, and perhaps in the entire country, has had a more profound influence on students than has Tully Knoles. For 48 years he has been a teacher and lecturer. The influence he has exerted on the students who attended his classes at the University of Southern California and at COP is almost fantastic. I have met them in all walks of life and in all parts of the country and have yet to find one who did not tell me what a profound influence Dr. Knoles had on the particular individual. Several years ago Dr. Knoles retired as president of COP and the trustees of the college appointed him chancellor.

Another remarkable personality of the faculty of COP, known to every sports

writer in the country, is Amos Alonzo Stagg, who became the college's football coach in 1933 and was its coach until 1947. Mr. Stagg has told me and I am sure he must have told others that the reason he came to Stockton in place of some other city where he might have had a position with a larger school at a much larger salary was because the program COP was developing appealed to him and he was much impressed with Dr. Tully Knoles, its president. Mr. Stagg's influence on the youth of America is impossible to measure. As a coach he is a genius. I believe he started more innovations in football than any other coach. I doubt if there is any coach in the country who has had a greater moral influence on his athletes than has Mr. Stagg. I have met men who served under him as athletes, either in football, baseball, or track, in all parts of the country. Never have I met one who did not practically worship Mr. Stagg and whose influence was indelibly impressed upon the particular individual.

There have been many other interesting personalities and remarkable individuals on the staff of the college of the Pacific but the two I have mentioned here are the ones who have outstanding national reputations.

COP has made a fine record in athletics since locating in Stockton. Its most spectacular football team was the team of 1949, sparked by that great little quarterback, Eddie LeBaron, now serving in the trenches of Korea with the United States Marines. It seems incredible but the football team of this small college was selected in 1949 by a poll of Associated Press sports writers as the tenth best team in the entire Nation. It is my opinion that the 1949 COP football team could have scored on any team in the country and I bar none. They may not have had enough power in depth to win but I believe they had a punch that would have scored on any team pitted against them. In 1943 when the Marines and Navy were training men at the college Mr. Stagg was the coach and had one of the best teams in the Nation. In that year he was voted "coach of the year."

Following the retirement of Dr. Tully Knoles as president, the trustees appointed Robert E. Burns to that position. He is typical of the new type of college and university president. Mr. Burns is an excellent administrator and, while not a scholar in the technical sense, has a fine scholastic record as a student and teacher. He has the knack of making friends and getting along with people and making contacts beneficial to the college. He has a broad view of the contribution which COP should make in the field of higher learning. This means not only training students for skills in special fields of endeavor but also the broadening and advancing the field of knowledge. I believe Mr. Burns shows great promise and will measure up to the challenge that the presidency of his college presents to him. If he is a symbol of what we may expect of COP in its second century I believe we have every reason to think the second century of the college's progress will be as fruitful

and constructive as the accomplishments of the first. The alumni, the faculty, and the students of COP can be proud of the record made in its first century and look forward with confidence to an even better record in the second century. The college has carried out a wonderful program of education and has enhanced the moral tone and the cultural atmosphere of the city of Stockton and the surrounding area. In its first century the college has made a remarkable record and a distinct contribution in the educational and cultural fields and its board of trustees is now laying plans to make the college an even greater force in the coming century.

I am very proud of the fact that my wife has a degree from the College of the Pacific, which she obtained in 1935—18 years after she began her college work at the University of California. She was busy taking care of our home and our children between the time I married her in her junior year at the university and the time when she enrolled at the College of the Pacific in the early 1930's. But in 1935 she got her degree from COP, of which she and I are very proud.

Following is the article from the Stockton Record:

ONE HUNDRED YEARS AGO TODAY THE COP RECEIVED FIRST CALIFORNIA CHARTER—CONVOCA-TION CEREMONIES COMMEMORATE THE COLLEGE THAT ALMOST WAS FOLDED

One hundred years ago today, July 10, 1851, the first Supreme Court of California, during the first year of statehood, issued the first charter for a college in the Golden State.

The institution thus founded is today the College of the Pacific in Stockton.

Tonight at 8 o'clock in Pacific Auditorium the California educational landmark will be observed with appropriate convocation ceremonies. Among those participating will be Gov. Earl Warren, Chief Justice Phil S. Gibson and five other members of the State supreme court, and Dr. Willard E. Givens, executive secretary of the National Education Association.

FOUNDING FATHERS

The principal founding fathers of the pioneer school were vigorous young Methodist leaders who came to California in 1849 and 1850 along with the gold hunters. Isaac Owen, William Taylor, and Edward Bannister reached California, respectively, in a covered wagon via the Overland Trail, in a clipper ship around Cape Horn, and on a steamship after a crossing of the Isthmus of Panama.

Owen was the promoter and financial agent, a presiding elder of the church who rode up and down hundreds of miles of primitive and bridgeless California trails, and everywhere plugged for the idea of a college in California.

Taylor was the vivid San Francisco waterfront street preacher of the early fifties who is credited later with sending from Australia the seeds which fostered the original eucalyptus plantings in California.

Bannister, who became the first president of the college, sailed into San Francisco Bay on the historic steamer *Oregon* on October 18, 1850. The ship was flying a pennant with the words "California is admitted," thus bringing to the State the first news that President Millard Fillmore had signed the bill making it the thirty-first State in the Union.

BOARD ORGANIZED

Before the new State was a year old these far-seeing lovers of education had organized a board of trustees, raised \$27,500 for endow-

ment, held a series of conferences in San Jose and San Francisco which determined upon founding an institution of the grade of university, selected a site in Santa Clara, and moved to apply for a charter.

California legislative machinery, to provide for much action, was incomplete. Hence, the supreme court was authorized, ad interim, to act in the matter, and thus it was that it was the court and not the State legislature which in legal fact founded Pacific with State approval and sanction—a process said to be unique in legal annals.

The first charter was drawn in the name of California Wesleyan College, in imitation of several earlier Methodist related colleges in America. The name was never popular and within a year it was legally changed to University of the Pacific. In 1911 it was made officially College of the Pacific.

Pacific's first 30 years were in Santa Clara. Here the school had two divisions, the male department and the female institute. But even with this careful segregation of the sexes, Pacific was a pioneer of coeducation for those times. The first degrees were conferred in 1858 to five men and five women—at separate commencement exercises.

STAY IN SAN JOSE

In 1871 Pacific occupied the College Park campus at San Jose where it stayed until 1924, and where it enjoyed the golden era of its nineteenth century history. The move there was seemingly prophetic of Pacific's present destiny, for the San Jose campus was on a tract of land recorded as the Stockton Rancho.

Pacific pioneered many areas of study in the West. It established the first medical school in California, opening this branch in San Francisco in 1859. The first catalog of the school asserts that the bay city is an ideal location for medical studies because the high incidence of deaths from poisoning and violence makes material for dissection abundant and cheap. The medical department eventually became the Cooper Medical School and later the medical school of Stanford University.

Pacific had troubles and struggles as well as triumphs, and after the turn of the century found itself outdistanced by richly endowed private schools and big tax supported institutions which grew up around it. It was a period and a trend which accounted for the demise of no less than eight other private colleges in northern California.

But Pacific, the first, persisted, and there was never a spring when a group of students had not completed their work and received their degrees.

TULLY KNOLES ERA

After World War I, Tully Knoles came from the chairmanship of the department of history at University of Southern California to the presidency of Pacific in 1919. It was a trouble shooting assignment, expected to result in the best plan to liquidate the assets of the old school, but instead it was the beginning of the greatest era in the history of the college.

After careful study of the California picture it was Dr. Knoles who led Pacific into a significant new era of service in the San Joaquin Valley, which in 1920 was shown to have the greatest population in America of high school students not served by a college in their own area. Other cities were interested, but Stockton came through with the biggest welcome for the venerable college and Pacific occupied the new campus here in 1924.

A quick index to the expansion of the school here is seen in the fact that by 1936, Dr. Knoles had conferred more degrees on Pacific graduates than had all the presidents who preceded him since 1851. Now Pacific has granted a total of more than 5,000 degrees.

WIDE CURRICULA

Pacific begins its second century on a 72-acre campus, with buildings and equipment valued at more than \$4,000,000. Academically it offers the widest area of studies and major curricula among the private institutions in California, excepting only Stanford and USC.

Under the presidency of Robert E. Burns since 1946, Pacific has continued to pioneer new fields, even as it did in its nineteenth century years.

Illegal Sale of Narcotics in the United States

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BURDICK. Mr. Speaker, the sale of narcotics to people of this country—especially to the youth of the country—has broken out in most alarming reports. These facts seem well established:

First. That the illegal sale of narcotics in the United States is increasing.

Second. That the principal victims are usually young people.

Third. The drug addicts are here in numbers which call for action.

What is the matter with our enforcement of laws against the smuggling and sale of narcotics? Is the law inadequate, or is the fault to be entirely lodged with the criminal division of the enforcement of the narcotics drug laws of this country? These questions the people are asking from one end of the country to the other.

My considered opinion is that we have every law required. If not, such laws as are needed could be obtained from Congress by unanimous consent. The trouble lies, then, with the enforcement of the laws we have. It isn't a question of our officials not wanting to enforce the law, or of any interest that they may have in not enforcing the law, but I think our enforcement officials have given more time to the antics of the United Nations attempt to build a world enforcement organization than they have in attending to our own laws and enforcing them. Why do we have to connive with other nations in order to enforce the law here? Why do we have to confer jurisdiction on the United Nations to handle a matter which we are abundantly capable of handling ourselves? Apparently many of our enforcement officials are more concerned with making our law subservient to the conventions and protocols of the United Nations, thus destroying our own sovereign power, than they are in retaining our own sovereignty and standing on our own feet and handling our own problems as a sovereign nation should.

This United Nations seems to be feverishly working overtime on every conceivable phase of human life to confer upon a world organization the com-

plete jurisdiction of the laws, morals, and aspirations of freedom-loving countries. Is this United Nations, heralded as an instrument to spread freedom, actually an institution designed to destroy freedom? It is an organization ostensibly designed to bring peace and prevent wars, but operates as an actual instrument to foment wars.

I think the people of this country should watch the machinations of this organization. They should be alerted to what is going on in this body, and be prepared to prevent it from taking over this country completely, and making of this great Republic merely a member of a superior world government.

I think our failure to enforce the narcotics law of the United States is due to the secret protocols that are outstanding and which will finally be written into conventions and presented to the Senate of the United States for approval. We have already seen how the approval of the Charter of the United Nations has set aside the laws of one State and annulled them because they conflicted with a convention—or law—of the United Nations.

If all these protocols on narcotics—which are merely agreements among nations as a basis for obtaining a convention from the United Nations, some of which have been unconstitutionally signed by representatives of this Government—are finally drafted into one general law and passed by the United Nations, it does not take a wizard to understand that exceptions here and exceptions there to appease one nation, or several nations, will result in an instrument which, if approved by the Senate, will present conflicts with our own laws. In such case the convention will become another supreme law of the land, and our own laws of enforcement of the narcotics law will be annulled. I am sure the people of the United States do not want this situation to develop. Shall we have to admit to the world that this great powerful Nation is incapable of enforcing its own criminal laws?

Vast Difference in Way United States Treats Reporters From the Iron Curtain Countries and the Way They Treat Our Newsmen

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. PRICE. Mr. Speaker, shortly after the trial of the Associated Press reporter, William N. Oatis, in Prague, Czechoslovakia, I made a statement which the Voice of America beamed to the iron curtain countries. I invite my colleagues' attention to my statement which follows herewith:

The arrest and imprisonment of William Oatis, the Associated Press news correspond-

ent in Prague, Czechoslovakia, points out the basic difference between a free nation and a nation dominated by a dictatorship. It points out the difference between the freedoms enjoyed in a true democracy and the restrictions experienced in countries under Communist domination.

William Oatis was a newspaperman. It was his duty to report to the people of the world the news as he found it in the country where he was assigned. In a free nation this sort of newspaper work is not only permitted but is welcome—it is expected.

Here in America, newspapermen from all the nations of the world are permitted freedom of action; freedom to report news as they find it, whether it reflects favorably or unfavorably upon our own country. There is no censorship, because here we have no fear of the truth.

In the Communist-dominated nations of the world freedom of the press does not exist, and until there is such freedom there can be no freedom for the individual.

Freedom of the press is important. Freedom of the radio is important. Freedom of speech is important. Freedom of religion is important.

The individual must be free if a nation is to be free.

No Time for Strict Controls Under the National Production Act of 1950

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including my personal observations on the subject of the price controls act which we are now debating. The theory of controls as advocated in the pending measure will actually result in a permanent regimentation of our economy.

Mr. Speaker, it is my understanding that the purpose of price controls is to protect the consuming public against high prices when there is a scarcity of consumers commodities. I do not quite understand the necessity for the present controls program in view of the large inventories that exist. There may be an exception in the case of steel and several industrial items but the decision does not pertain directly to those essential items for the consuming public. Mr. J. A. Livingston, a business analyst, points out that business firms have heavy inventories on hand and to such an extent that there has been a noticeable slowdown in retail sales. At the end of May, retail stocks of 96 large department stores throughout the United States approached \$1,200,000,000, the year before that they were \$300,000,000 less. Mr. Livingston points out that this 33-percent increase in inventories more than offsets the 12-percent rise in prices. The important thing is that dollar sales are not up. In spite of the big inventories in May and June, sales were 3 percent above 1950. A 3-percent rise in sales does not square with a 33-percent rise in inventories.

This authority also points out that department stores had inventories on

hand and commodities equal to a 4.4 months' supply of goods; before Korea they had only 3.5 months'. In the meantime many department stores and retailers generally have stepped up advertising and have organized to cut prices in an effort to reduce stocks. In spite of all this activity to sell goods, the merchants are not getting the results they anticipate. The public is obviously not responding.

Labor organizations such as the A. F. of L. and the CIO are backing Truman and DiSalle, asserting that if prices are not kept under control, wage stabilization will collapse, but farmers oppose ceilings on agricultural prices and this presents a cleavage between the farmers and the workers and of course in many instances this embarrasses some Congressmen. No doubt Members of Congress are confronted with a delicate problem and the question is, "Will inflationary forces regain ascendancy in the fall as the administration contends?" At the moment the tendency is the other way. Since March, wholesale prices have declined about 2 percent. This drop does not fully reflect the important sharper drop in raw materials prices. The Bureau of Labor Statistics Index of 28 essential commodities is off 14 percent from the high of the year in February. The decrease in the drop of some commodities has been fairly spectacular. Rubber, tin, and wool are off 4 percent from their high earlier in the year. Print cloth is off 28 percent. Cotton has dropped sharply on announcement that almost 30,000,000 acres that were planted will yield 60 percent more than last year. This would mean a crop of 16,000,000 bales, whereas domestic consumption is around 10,000,000 bales.

Mr. Livingston concludes his analysis by stating:

The pace of rearmament will determine the trend of prices and business. After a cease-fire in Korea, if realized, a diplomatic settlement must still be reached. Meanwhile suspense and indecision in the administration, in Congress, among businessmen, and in America's many markets, stocks, commodities, wholesale, and retail prevails.

In view of this situation it would seem that this is not time to be imposing stricter controls upon the American people.

Radar Equipped for Finding and Attacking Enemy Bombers, Regardless of Fog or Darkness, Air Force F-94's Will Play an Important Part When 210,000 Volunteers Report for a 2-Day Rehearsal and Defense Test Next Saturday

EXTENSION OF REMARKS
OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. HOWELL. Mr. Speaker, I wonder just how many of my fellow Americans realize how completely the highly

coordinated Administration of Civilian Defense and the United States Air Force are working together and what they have already accomplished in anticipation of a sudden attack by way of the air—against our country.

It is really uncanny to think that an Air Force fighter pilot can now fly in one of our modern jet high-speed planes and, regardless of fog, clouds, or Stygian darkness, discover, take after, and shoot down enemy aircraft that are approaching our shores. Moreover, he can do this stretched out in a cockpit of an all-weather aircraft traveling at a speed of 750 miles an hour, more or less.

Mr. Speaker, I have just come upon a news article from the New York Herald Tribune, June 18, written by Ansel E. Talbert, reporting on the proposed rehearsal of the civilian-defense exercise scheduled to be held next week end.

This article by Mr. Talbert, feature writer of the Tribune, is so replete with material that is of such great interest to my colleagues that I am asking unanimous consent to extend my remarks and to include the same in the records of today's proceedings.

Mr. Talbert's article reads as follows:

JETS AT JERSEY BASE REHEARSE FOR 2-DAY CIVIL DEFENSE TEST
(By Ansel E. Talbert)

WRIGHTSTOWN, N. J., June 17.—Air Force F-94 jet fighters with rocket-like afterburners for creating terrific bursts of speed streaked for the upper atmosphere from the runways of McGuire Field here today during a rehearsal for the Nation's civilian defense exercise next week end.

The F-94's, which are radar-equipped for finding and attacking enemy bombers in darkness or any kind of overcast weather, operate from bases on both coasts and in Alaska. McGuire Field, their home in this area, adjoins Fort Dix and is about 70 miles south of New York City.

The fast planes are the first jet all-weather interceptors assigned to operational duty with America's air defense squadrons and are in readiness for action 24 hours a day.

TWO-DAY DRILL PLANNED

When the Air Defense Command of the Air Force calls to duty next Saturday more than 210,000 civilian volunteer members of the United States ground observer corps in the northeast, Great Lakes, and west coast regions for a 2-day aircraft detection test, the F-94's will play an important role.

For the first time in 2 years civilian ground observers will be on duty night and day for the entire period of the exercise. Their aircraft-flash reports, after being filtered and passed to the Air Force ground control intercept units, will be one of the chief sources on which the take-off orders to see-in-the-dark F-94 fighters will be based.

In an effort to gain a first-hand impression of the most important links in the Nation's defense chain, this correspondent visited the headquarters of the Fifty-second Fighter All-Weather Wing commanded by Col. Ernest H. Veverly, a veteran pilot holding the Distinguished Flying Cross, and flew in the radar operator's cockpit of one of the new two-place F-94 jets.

The all-weather aircraft was piloted by Maj. John L. Elser, who occupied the forward seat in the cockpit. The take-off did not differ greatly from those in scores of different plane types in which I have flown—aside from the lack of vibration of the type created by all piston-engine types—until Major Elser cut in the afterburner. This is a tubular attachment behind the plane's

jet engine of 5,400 pounds power thrust, into which a spray of fuel can be shot.

BLAST MULTIPLIES THRUST

The fuel mixes with the stream of hot air that is being forced out of the tail-pipe of the jet engine and causes a resulting blast which gives the plane several times the ordinary power thrust for short periods.

The rapid acceleration from afterburner use is extremely noticeable. It causes sensations akin to those experienced during high-speed catapult take-offs from aircraft carriers and creates a mental impression of riding a skyrocket.

Through employment of its afterburner the F-94 can climb to 40,000 feet much faster than comparable jet planes designed to intercept enemy bombers at high altitude have hitherto been able to do. The plane's speed can be increased to nearly 700 miles an hour when it is pursuing enemy bombers.

After climbing high over New Jersey, Major Elser leveled off his fast climb and, upon shutting off the plane's afterburner, headed for the New York area on a course which would have intercepted enemy bombers coming down from the north.

Changes of direction were given to Major Elser from the ground in accord with information obtained by the ground control intercept station by radar and other means. In actual combat a pilot would be directed to the general area of his target and then his own radar operator would take over and guide him directly to a position from which he could open fire.

SUITS INFLATED

Suits worn by F-94 and other jet pilots in combat inflate automatically during tight turns and other aerial maneuvers over vital spots on the body. This automatic action prevents the blood from flowing to the lower extremities with resulting black-outs.

The return to base was made in a manner so as to conserve as much fuel as possible by eliminating all superfluous actions and the actual landing from a position over McGuire Field was somewhat suggestive of a dive-bomber attack. All of the final approach was monitored by radar, however, and the pilot kept informed of how well he was doing.

How We Lost One War and Got Into Another

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the fifth and last of a series of articles written by me for the Scripps-Howard newspapers.

WASHINGTON, June 1951.—No American policy toward Asia has a chance of achieving peace or security for this country unless it looks forward to the liberation of China from the Communist yoke.

The liberators of China should be the Chinese themselves, because an east-west racial war is precisely what we must avoid.

But the Chinese, and other Asians, should be assured that whenever they wish to take arms up against their conquerors, we stand ready and willing to aid them.

This must be so, not because of our historic friendship for the Chinese people, but for the sake of our own security.

Twice in the past 10 years we have been involved in wars originating in Asia. We did not get into World War II until Japan attacked us. We are now involved in what is probably world war III because of an attack against our ward—South Korea.

We Americans have dangerously neglected our Asian geography.

Hitler knew, and said, that his plan to conquer the world would never succeed until he had gained the raw materials and manpower of the undeveloped areas. Those resources are mostly in Asia. That was why he first made an alliance with Stalin and then attacked his partner.

With our aid Stalin defeated his former comrade, Hitler, and then seized for himself the choicest prize of Asia—China.

All of the wars of the past 25 years have been essentially wars for the conquest of China. That was the goal of Japan in her 1931 invasion of Manchuria and in her 1937 strike for the rest of China. The war in Korea is an attempt to consolidate and extend the victory in China. Communism is dedicated to just one aim: the complete conquest of Asia. With all of Asia Communist, the Kremlin knows that Europe will have to fall because there will be no materials for the factories.

On December 2, 1945, William Z. Foster, head of the Communist conspiracy in this country, wrote in the Daily Worker: "The war in China is the key of all problems on the international front." For that reason, he added, "The key task is to stop American intervention in China." By American intervention, Foster, and his master Stalin, meant "effective American assistance to the Government of Free China."

America is a two-ocean country. Neither ocean is more or less important than the other. On our west, American security has always lain in having a free and independent China. China has a fifth of the world's population and a third more is around her borders. The Asian populations now hold the balance of world power.

We have been dangerously asleep to the risk to our own security in permitting the Asian part of the world to come under the Kremlin.

When a relatively minor effort in China would have established the free Nationalist Government, which had resisted the naval imperialism of powers like Britain and could have stopped the land assault from Russia, we found excuses for not acting.

Our idea was that we were protecting the lives of American boys. Now American boys are dying anyway in Asia. British colonialism, which was always hostile to Chinese independence, preferring a disunited China which she could penetrate with her commerce, is attempting to obscure our vital security interests in Asia.

But if and when the Communist influence is extended to Indochina, Malaya, and Hong Kong, Britain necessarily will be on our side and whether we or they like it or not, American and British troops in large numbers will be committed to land warfare in Asia.

It's inevitable; the workshop of Europe is useless without the raw materials of Asia.

I have always held that we should try to forestall that eventually.

We still may be able to forestall it if we will build a backfire against communism in Asia.

When I was a boy, we had two big fires in our part of the prairie. Each was stopped by plowing a single furrow and starting a backfire. A single furrow would not in itself halt a prairie fire. But it is a line from which you can start a backfire that will halt the big fire.

It is much cheaper and easier to start that backfire, even now in China, than to wait and try to fight all the little fires that will break out along China's borders if we accept the Communist conquest of China as an

accomplished fact, as an irreversible trend of history.

Trends of history are invented by the rapacious to intimidate their opposition, and by the timid to justify their failure to be firm.

Courage and foresight for our leaders at this moment in history would consist in offering materials and advice to the Free Chinese on Formosa for whatever liberating activities they feel able to undertake against the Communist armies on the mainland.

A half million Chinese on Formosa are willing to fight for the freedom of their country. Our aid does not have to be confined to them. We should find ways of getting arms to the guerrillas on the mainland of China and offer help to potential defectors among the Communists themselves.

Such a policy would be an economy for the United States. It would be taking a page from the book of the Kremlin, fighting communism with one of communism's most effective techniques. And beginning the policy in China, would take the pressure off all the areas around China.

If you will look at a map, you will see that China is the palm of Asia and that Korea, Japan, Indonesia, and southeast Asia are the fingers. Without the palm the fingers are useless. That is why Russia chose to take China first.

Russia now counts on her control of China to wipe out American influence in Japan. She knows we cannot continue the occupation indefinitely, that sometime the United States will get weary of supporting Japan as a compensation for Japan's loss of her China trade. When that happens, Japan will go under.

And when Japan goes under, or long before that, the United States will be in a full-scale war with communism. We fought World War II in the Pacific to prevent a union of Japan and China under fascism; we cannot tolerate such a union under fascism's twin, communism.

Make no mistake. It will be the worst war in our history. At Pearl Harbor, Japan, an Asian nation, administered to the United States the most humiliating defeat in our 175 years as a Republic. If we continue to drift as we are now doing, within our lifetime there will be an outbreak of Soviet Pearl Harbors all the way from the Philippines and Alaska to Hawaii and perhaps on our own west coast.

There are some who say that Europe is more important to us than Asia. In a battle no part of the line is more important than any other point. A weakness at one point is an invitation to disaster at all points.

There are some who reply: But if we are firm in Asia, we may lose the support of our allies in Europe.

Such a conclusion is not in accord with human nature. Anybody who says this is being blinded by Communist propaganda. In this world nothing is so admired as strength—moral and physical. Among nations who have a common interest, as we and our allies have, strength in one will inspire strength in the others.

The task of our statesmen is to inspire strength.

St. Lawrence Seaway

**EXTENSION OF REMARKS
OF**

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix to the RECORD, I wish to submit an article by Mr. Richard B. Frost, published in the *Detroit Board of Commerce* on July 2, 1951, as follows:

CANADIAN VISION MAY SOLVE UNITED STATES PROBLEM

(By Richard B. Frost)

On page 4 in this issue of the *Detroit* is a digest of an address by the Canadian Minister of Transport, the Honorable Lionel Chevrier. He points to the vital need for early construction of the St. Lawrence waterway.

Canadians have threatened to construct this vital waterway themselves if our Congress won't grant approval for United States participation this year. Canadians are impatient, as are all those interested in the progress and security of our two great nations.

For a few generations our friends in Canada have patiently waited for our United States to join them as partners in this project, vital to the economic and military welfare of our two countries. They have waited while short-sighted interests have blocked the various bills presented over past decades to Congress for approval. These bills have been stymied with old and tattered arguments, used in opposing the Panama and Suez Canals, the establishment of a trucking industry, airways, and other manifestations of progress that have always, when secured, benefited manifold those that represented the most bitter opposition.

We in the United States owe a debt of gratitude to Canada for her forbearance. Nowhere else in the world could this happen. Waterways of Europe and Asia have always been objects of envy. They have been subjects of numerous wars, both hot and cold. For centuries nations have sought to exploit and control vital communication routes for their own advantage.

We, as a nation, have taken an active part in these European and Asian battles. Today we are rendering aid, both diplomatically and economically, in order to secure such waterways as the Bosphorus and the Suez Canal.

Canada, on the other hand, has sacrificed her own progress and great need for power in the interest of her friendship with the United States. Who can blame our friends to the north if their patience has reached the limit of endurance.

How long will unpatriotic groups prohibit our United States from partaking in the development and control of an economic advantage that is rightfully ours?

The Rains Descended, and the Flood Came

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the RECORD, I wish to include an article from the *Sunday Washington Star*, entitled "The Rains Descended, and the Flood Came," as follows:

THE RAINS DESCENDED, AND THE FLOOD CAME

It began with April showers—nothing more sinister than that. The winter and early spring had been fairly dry. All Kansas was glad to see the rains come drifting across the land.

Soon the broad valleys, lifting westward into the foothills of the Rockies, were green with corn, grass, and winter wheat—maturing rapidly in the low-lying eastern part of the State, more slowly on the high prairie 400 miles to the west. There were the usual thunderstorms, concentrated largely in the humid eastern section. Rapid changes in temperature, occasional hailstorms and minor tornadoes—all this was to be expected. The flatlands and undulating plains drank up the water.

By the end of May, they were not so thirsty. In the east-central part of the State, the wide valleys of the Kansas River—known locally as the Kaw—received at least twice their normal precipitation for the month. Along the Arkansas River, further to the west and south, it was the same story. Rainfall for the whole State ran 60 percent above average.

At first, the western prairies remained relatively dry. Late in May, however, these were hit by pouring rains around the Colorado border, where they reach an altitude of some 4,000 feet. From the high wheatlands, down through the Arkansas and the mountain-born tributaries of the Kansas, there rolled a tidal freshet, modest harbinger of things to come.

SOAKING THE LAND

By early June, rain and wet soil was hampering farm work in eastern Kansas. Water seeped over the saturated lowland fields. Weeds began to sprout. And that month proved the wettest June in 65 years. There were 12 to 18 days of heavy rains over much of the State.

By the Fourth of July the situation was serious. Corn and wheat fields were choking with weeds, which even invaded the pasture lands. Still, the rains came. The Kansas River was overflowing its banks near Topeka. Upstream—but too far upstream—on the Kansas' Smoky Hill tributary, dams at Kanapolis and Cedar Bluff were holding the swirling upland waters in check. So was the Harlem County Dam, on the Republican River, near the Nebraska border. The trouble was that the storms had given the country its heaviest drenching below the dams.

At Kanapolis, where the \$12,000,000 dam is backed by a reservoir covering 3,550 acres, officials ordered the emergency flooding of a supplementary area of 13,900 acres which, in normal seasons, is leased to farmers. Still the water rose downstream. At Topeka, on the morning of July 10, it was approaching 30 feet above low-water level.

On that crucial morning, when the heavens opened up and unleashed disaster, the soil of Kansas—from the prairie sod of the west to the garden farmland of the east—was one vast sodden sponge. It could absorb no more. Shallow lagoons lay over the fields. Every ditch, creek, and stream bed was full to overflowing.

Thus was the stage set for the most destructive flood in the Nation's history.

THE DELUGE

It is 600 miles from eastern Kansas to the Gulf of Mexico. It is more than 3,600 miles from eastern Kansas to the Gulf of Alaska. Yet in these two distant areas, at the beginning of July, there was set in motion a giant conspiracy of the elements which was to touch off the climax of the natural drama building up along the Kaw.

In the Northwest Pacific, off the southern coast of Alaska, the formation of an unusually strong high-pressure area was reported by many sources. The news came in from ships on weather stations or commercial runs, from shore stations in the Aleutians, Alaska, and the Canadian Northwest, from airplanes on the northern route to the Far East and from Air Force Superforts on polar patrol out of Fairbanks. To them it was strictly routine.

But this mass of cold, dense air piled up to a height of nearly 8 miles. Moving clockwise around it, winds began to pour the chill toward the southeast. It spread itself like a blob of molasses over the Canadian coast, into our Central Plains. Its vanguard headed straight for Kansas.

From the Gulf of Mexico, meanwhile, another air mass was rolling north. This one was hot and moist. It crossed Louisiana and Texas, Arkansas and Oklahoma. Near the eastern end of the borders of Oklahoma and Kansas, the two opposing forces met.

The air from the Arctic hugged the ground with bulldog obstinacy, the tapered edge of its forward wall pushing several miles under the northbound mass before coming to a halt. The hot air, being lighter, was lifted in the collision, riding up over the dense layer beneath. The effect is a familiar one to meteorologists. They call it a cold front.

The hot air, laden with the waters of the Gulf, cooled rapidly as it climbed. The higher it rose, the closer was the condensation point approached. Somewhere in the atmosphere over Kansas, the moment came when the air from the south could hold its moisture no longer. At that moment, on July 10, nature let go and the deluge began.

It was the same kind of torrential rain which frequently develops in Asia, Africa, and the Philippines, when hot air masses are forced up over mountain ranges. It is this sort of a situation which waters the Nile, pouring a steady stream through the rainless desert without benefit of tributaries. But the Kansas River, which had to carry this burden, is not the Nile, and the country around it had been anything but rainless. And so the flood came.

STATIONARY COLD FRONT

Cold fronts, customarily, move either forward or back, depending on the relative push of the two air masses involved. For four long days, however, this one stood still.

In the first 24 hours several points in the Kansas River basin were drowned under 8 inches of rain—about twice the average Washington rainfall for the entire month of July. It was not that bad everywhere, and by July 14 the worst had passed. By then, however, an average of 8 inches had fallen over the entire river basin. The downpour was concentrated principally in eastern Kansas, although Missouri and adjoining sections of Nebraska and Oklahoma also were hit.

The Kaw and its tributaries rose up as one unit under this final, overwhelming blow. The normal river flow was multiplied, overnight, some 50 to 75 times. The usual flood crests, neatly plotted on the scientists' charts, were lost in the general inundation. All rivers in the area were affected—the Arkansas, Neosho, and other lesser streams flooded to record stages, causing damage and driving people from their homes in scores of cities and towns. But the water that really mattered was the water boiling down the Kansas basin, past Topeka, to a meeting with the Missouri at Kansas City.

THE FLOOD

The Kaw behaved as no white man ever saw it behave before. The Indians, however, had shown early settlers in the region high-water marks of one flood or even greater proportions.

This occurred, they said, in 1844—the year of the great waters. That was 2 years after Col. John C. Fremont blazed a trail westward to Oregon and California, while Kansas was still Indian territory. Early engineers checked the Indians' points of reference with official markers on the river. There seemed little doubt that the flood stage in June 1844 had reached 38 feet above low-water level—2 feet above the peak recorded this time.

That, however, was too far back to worry about. The twin Kansas Citys had based

their flood defenses on remembered experience in the intermediate record-high year of 1903. The yardstick proved inadequate. This time the water smashed over 22-foot dikes protecting the famed industrial sections. It buried railway yards, packing plants and stockyards under 14 feet of current. It spread its relentless blanket over over 1,384 blocks in the two cities which, for all it knew or cared, might as well not have been there.

As barrier after barrier went down before the advancing tide, men even tried to plug the gaps with their bodies until sandbags could be brought up. Thirst, ironically, became a part of the plague with flooding of the pumping station which supplies Kansas City, Mo., with two-thirds of its piped water. The water which coursed through the streets was unfit for consumption, without boiling and chemical treatment. And then, with the water, came fire. Runaway oil and gasoline storage tanks, ignited by high-tension wires, exploded and burned for days. Seven city blocks were razed by the flames.

Through it all, on high ground beyond reach of the water, 90 percent of the cities' residential area remained relatively unaffected. But from the edge of the downtown section at the foot of the bluffs on the Missouri side, clear across to the central business section of Kansas City, Kans., there stretched one watery wilderness of wreckage. Pyres of black smoke rose from the ruins.

DOWN THE MISSOURI

The long crest, disgorged by the Kaw, rolled into the Missouri. In midweek, around Kansas City, the water began to recede. The picture improved—but not much. The water left tons of mud behind it—heavy, slimy, 6 inches deep on any level surface the flood had reached. Weary victims turned to the job of digging themselves out.

City dwellers were not the only victims. By Monday, the experts figured, at least 850,000 acres of farmland had been flooded in Kansas, Missouri, and Oklahoma.

The skies were clear over Kansas by then, and so were they downstream along the Missouri to St. Louis. All along the line people prayed for them to stay that way. For, barring more rain, the effect of the flood would become less and less severe as more and more unaffected streams diluted it with the volume of their normal flow. The bigger the stream bed became, the more capable it became of absorbing the excess tonnage of water—just as the branches of a tree become stronger as they join together in approaching the trunk.

The Missouri, the first branch to lend its strength to supporting the runoff from Kansas, mercifully was some 10 feet lower than normal for the time of year at Kansas City. But Big Muddy, big as it is, could not handle the weight of water which hit it there. All along the river flood warnings were flashed. On Tuesday, at 30 miles a day, the crest pushed through Waverly and Lexington, Mo., eclipsing a century of records. On Wednesday night it battered its way into Jefferson City, inundating more than a score of blocks. The great surge poured by at 600,000 cubic feet a second, as compared with the normal July flow of 75,000 cubic feet. Its power was unimaginable—too much for the dikes. Between Kansas City and St. Charles, an estimated 1,500,000 acres of cropland were under water. The river in places was 5 miles wide.

The next great target was St. Louis, which waited fairly confidently, relying on its long experience in handling floods, and on the fact that the mighty Mississippi would add its weight there to the side of natural law and order. The city knew the flood would probably set a record, but expected little damage. Most of its area is on high ground.

And so the Kansas waters moved back toward the Gulf of Mexico from which they

had come. The prospect is that when the crest passes the mouth of the Ohio this week it will no longer be dangerous. It will leave behind it, however, the first billion-dollar flood in the Nation's history.

THE LESSON

Could it have been prevented? The question was on everybody's lips. Can this sort of thing be avoided in the future?

The debate is many-sided, but one point, to begin with, seems fairly clear: This was one flood disaster for which man himself could hardly be blamed—insofar, at least, as his sins of commission were concerned. Man did not cause this flood by plowing the land and cutting down trees. No soil-conservation program, alone, could have prevented it.

The plains of Kansas have never been really forested. And 107 years ago, when the area experienced the only flood known to have surpassed this one, no plow had touched the land.

This does not mean that soil conservation is unimportant. Erosion of the land contributes to floods just as, in the vicious cycle, floods contribute to the erosion of the land. But the fact remains that this particular flood would have hit, and hit hard, even if the land had been nurtured with as much pains as it has been abused.

The question, then, is whether soil conservation, in combination with other flood-control measures, could have prevented what happened in the Missouri Valley during the past week, and could prevent it happening again.

Maj. Gen. Lewis A. Pick, Chief of Army engineers, had a positive answer: "If all the upstream reservoirs now either authorized by Congress or planned were in operation, we could have passed all this with no damages to the Kansas Citys."

The Kanapolis and Cedar Bluff Dams, mentioned above, are part of a long-range plan for the whole Missouri Basin, approved by Congress in 1944. Congress has yet to appropriate funds for the bulk of the projects, planned jointly by the Army engineers and the Interior Department's Bureau of Reclamation.

PICK-SLOAN PLAN

General Pick is one of the formulators of this Missouri Valley flood-control plan, and he gave it a half of its name. The other half came from W. G. Sloan, a former Regional Director of the Reclamation Bureau. The Pick-Sloan plan is a sort of informal compromise between the views of two schools. The Army originally thought the flood-control problem should be attacked by building big dams and levees along main streams. The Bureau, on the other hand, stressed the importance of controlling the water flow in upper tributaries, not only by storage dams, but also by replenishing the soil.

For the Kansas River Basin alone, under the plan, some 13 new projects involving the storage and channeling of the waters have been recommended. General Pick has estimated that completing this local program would cost, at 1951 prices, about \$300,000,000—far less, he points out, than the direct cost of the flood, not to mention intangibles like soil erosion and loss of time.

The over-all plan, however, embraces projects in 10 States—Kansas, Missouri, Nebraska, Colorado, Montana, Iowa, Minnesota, Wyoming, and the Dakotas. The original idea was that this work probably would cost in the neighborhood of \$1,500,000,000 to \$2,000,000,000. In the light of present costs, these figures obviously are far out of date.

The general principles embodied in such plans as that of Messrs. Pick and Sloan have won rather wide acceptance. Yet there are those who doubt that they prove effective in the long run. There is an intensely practical school of thought which holds that reservoirs designed to relieve the pressure of flood-

waters eventually will become choked with the masses of silt carried by the floods—the same stuff now coating Kansas City.

There is another school—more theoretical, perhaps, but no less earnest—which contends that the present approach to the whole problem of flood control, particularly in the Missouri Valley, is administratively unsound and therefore can lead only to failure. These critics do not object to presently contemplated projects; they object to their piecemeal direction. The problem cannot be solved, they contend, until it is attacked from every quarter, under unified direction.

The model, of course, is the Tennessee Valley Authority, which succeeded in harnessing and controlling the Tennessee River to the great benefit of that entire, once-depressed area. The leading champion of a Missouri Valley Authority is Senator MURRAY, Democrat, of Montana. Similar authorities have been proposed for other river basins, notably the Columbia Basin.

All of the proposed new river valley authorities face stiff opposition—on the ground that they are socializing influences which violate States' rights over local waters, and which are subsidized by Federal taxes unfairly imposed on other, uninterested areas.

BIGGER THAN KANSAS

In surveying the waterlogged wreckage of the great flood of 1951, then, and looking ahead to the chances of making good on an oath of never again, the Nation is finding itself up against a situation which might be summarized in this way.

Yes, the Kansas River almost certainly can be made safe against a recurrence of this year's flood. The cost is great, and floods like this one are once-in-a-lifetime affairs. Yet all floods are expensive. In the Kansas River were made proof against them, mankind would have scored an indisputable economic and social gain.

But the Kansas River is only one of many rivers, and the cost of making them all safe would be very great indeed. For after all, who knows where, next time, the rains may decide to descend, and the floods to come?

Meet Acheson Issue Head-on

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SHAFER. Mr. Speaker, any proposal to hit back at Secretary of State Acheson by the devious device of striking the funds for his salary from the State Department appropriation ought to be abandoned.

I want to see Mr. Acheson out. But there is serious question as to the constitutionality of any move to refuse to appropriate his salary.

Furthermore, in my opinion such a move would not force his resignation. Certainly a man of his financial position, particularly one who has been associated with a law firm which has a record of huge retainers for services to foreign government clients doing business with the State Department, would not be persuaded to relinquish his office and its prestige and power by loss of his salary. I am sure he would be willing to remain in office as a dollar-a-year man.

Mr. Acheson's complete unfitness for the office of Secretary of State, particularly as reflected in the official foreign policy of prevarication regarding Formosa, which he has admitted, calls for meeting the issue head-on, not by ineffectual and devious back-door attack.

The Silver Situation

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Rear Adm. Donald J. Ramsey, United States Navy, retired, treasurer, Silver Users Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY REAR ADM. DONALD J. RAMSEY, BEFORE THE MIRROR MANUFACTURERS' ASSOCIATION, MARK HOPKINS HOTEL, SAN FRANCISCO, CALIF., JULY 12, 1951

It is my privilege to again address you on the silver situation. When I last appeared before you in late October 1950, the price of silver was 80 cents per ounce. At that time I explained to you how the producing interests control and manipulate the silver market.

My remarks along this line reached the director of the Bank of Mexico, who stated that Mexico does not take into account the criticisms the foreigner makes for having forced, indirectly, the rise in the price of silver in the international markets; and then went on to explain Mexico's silver policy. He stated that Mexico is actively interested in the silver price as there are great mining resources where exploitation would have to cease if that metal does not have an adequate price. On the other hand, he states they are interested that the silver market remain stable and they would make efforts to equalize its quotations, because an excessive price would encourage the countries and particular individuals who have hoarded this metal in great quantities, and would create dangerous fluctuations in the internal market. In other words the price must not be too high, nor too low—for Mexico. He stated that the declaration of the consumers of silver in the United States has caused great surprise in Mexico, inasmuch as they have accused his country of being the cause of the recent price rise of silver. He also stated that my remarks could only be attributed to the lack of adequate information. Perhaps it is too much information.

Now, let us return to the silver market. In October 1950, the price of silver advanced from 72¾ cents per ounce to 80 cents per ounce. The explanation given in New York for this rise, was that the Bank of Mexico had withdrawn as a seller of silver in the United States, although from Mexico City we received the explanation that the rise in the price of silver was due to an increased demand rather than a withholding of Mexican sales. A Mexican newspaper, however, reported that local silver sales were suspended while a new export tax was studied. They couldn't get together on their explanations, which I am sure caused some

embarrassment to the gentleman in Mexico. The results of the rumors that the Bank of Mexico was withdrawing as a seller last October were twofold: First, it induced some "scare" buying by consumers, and second, it gave the producing interests in this country an excuse to raise the price, and thus we had the price established at 80 cents per ounce. The interesting part about this whole business is that there was plenty of silver available at the time of the price rise. And so we went along for a few weeks until on Friday, December 29, 1950. On that date there appeared a small article, tucked away in the New York Times, to the effect that the Bank of Mexico had retired all silver available to the world market, and that the move was expected to raise the price of silver. The same old familiar pattern. This little tip-off was either planted deliberately or it leaked out—possibly to the embarrassment of the Mexicans. In any event, on January 5, 1 week later, the producing interests withdrew from the New York silver market. Three days later they came back but the price of silver was now 90 16 cents per ounce. Was this price rise as a result of supply and demand? Oh, no. There was plenty of silver both before and after the price rise. The producing interests simply decided to get another 10 cents per ounce for silver.

Perhaps you will wonder why they picked the price of 90 16 cents per ounce. To the quoted price should be added 0.25 cent handling charge, which makes it 90.41 cents per ounce. This, however, is for silver which is 0.999 pure, so that the price for pure silver would be 90½ cents per ounce, which is the price the Treasury must pay for domestic silver when it is offered by the producers.

In other words, the New York market price and the Treasury price for domestic silver are one and the same. This fact prompted the president of the Sunshine Mining Co., one of the few remaining companies producing silver primarily in any quantity to make a statement to his stockholders as follows:

"Domestic supplies of silver have dwindled and imports of foreign silver have increased, so that the silver price in the domestic market has risen until it is now equal to that offered by the Treasury for newly mined domestic silver. This situation emphasizes the pointlessness of the perennial attacks upon the Silver Purchase Act and it is to be hoped that the public will be given a rest from the campaign of misleading propaganda that has been waged against the producers of this highly important metal."

The president of the Sunshine Mining Co. talks of misleading propaganda yet he does not hesitate to mislead his stockholders in making the statement that the Treasury offers any price for domestic silver. It does no such thing—the law requires the Treasury to receive such silver when offered by the producers. It might also be of interest to his stockholders to know that the Treasury Department, when asked by the chairman of the Banking and Currency Committee in the Senate to comment on a bill to repeal the silver purchase laws, made the following comment:

"The Treasury Department would not be disposed to object to the enactment of such legislation."

The Board of Governors of the Federal Reserve System made the following comment:

"The Board believes that enactment of S 2829 (which provides for the repeal of silver purchase laws) would be in the public interest."

At this point I would like to comment on another bit of misleading propaganda which frequently comes from the silver-producing interests—the latest coming from Representative BERING, of Nevada, in which he states:

"Every ounce the silver miner sells to the Treasury at ninety-odd cents becomes worth \$1.29 when coined into dollars, thus making the general public a profit of 39 cents at the expense of the miner," and that "The silver miners will not be satisfied until they get the full monetary price of \$1.29 an ounce to which they are entitled."

He further stated:

"In the case of silver, we have a curious and perhaps unparalleled situation where the silver miner is subsidizing the Treasury (hence the average citizen) rather than getting subsidies from the Government."

An editorial in the Morning Register, Des Moines, Iowa, answered these statements, probably more effectively than I can, when it said, "Phony silver claim if we've heard one," and then ended up by saying, "Let's not be ridiculous, Congressman BARKING."

It is true that the Treasury makes a profit on domestic silver turned into the Treasury, but here is how it is done. The domestic producer gets 90½ cents for each ounce he turns into the Treasury. Sixty-three cents' worth of this silver is set aside to back the paper printed by the Treasury to pay for this ounce. The other 27 cents' worth is considered profit. Then, by law, which requires the Treasury to value the monetized silver at the rate of \$1.29 per ounce, the 63 cents' worth of silver miraculously becomes worth 90½ cents, and is so carried on the books of the Treasury. The joker in this transaction is that no one in the world will give you 90½ cents for 63 cents' worth of silver. In other words, the 27-cent profit is made as a result of a fictitious valuation of the silver set aside to back our paper money. It is the most insidious of all subsidies. No money is taken from the taxpayer to pay for the subsidy. * * * It is paid for through the reduction in the amount of backing for every dollar in your pocket. So you can understand why the Des Moines paper calls this a phony claim. Wouldn't it be wonderful if the mirror manufacturers could get a law passed to permit them to handle their accounts in this fashion, and yet you are just as much entitled to it as the silver producers.

Last September, Mr. Francis R. Brownell, former chairman of the American Smelting & Refining Co., distributed a little pamphlet entitled "The Problem Posed by the Silver Users Association in 1950," in which he attempts to defend the position of the producers. Mr. Brownell makes no mention of the effect of our present silver legislation on the monetary system of our country, nor how it permits the producing interests to manipulate and control the silver market. I can assure Mr. Brownell, Congressman BARKING, and the president of the Sunshine Mining Co., that the silver users will pose a problem to them as long as the present silver situation exists and that there will be no cessation of the perennial attacks upon the Silver Purchase Act.

There was a little by-play in the silver picture last month which is interesting to note. On the 7th of June the price of foreign silver in the New York market dropped from 90 16 cents per ounce to 87¾ cents per ounce. The decline was attributed to the falling-off of demand and the accumulation of foreign silver. This drop in price was rather interesting because it appears that the Mexicans were not aware of the fact that the price was to be dropped. Those of us who watch the silver market were interested to know why the Mexicans did not step in and buy up the so-called surplus in order to stabilize the market. The price remained at 87¾ cents for about 3 weeks during which time the demand was light. Everyone who follows the silver market knows that some of the silver consumers shut down during July, and that there would be very little demand during this period for silver, even

at a reduced price. It is curious to note, however, that what little demand there was was probably in excess of the offered supply. On June 28 the old familiar pattern again appeared. Mexico announced that they were withdrawing from the silver market—this time for the rest of the year. It was further reported that the Mexican Government was buying all of her current production of the country. Following this announcement the price of silver went back to 90.16 cents per ounce. You will remember when I spoke to you last I made reference to the fact that the price of silver remained steady for nearly 6 months, regardless of supply and demand. It would be interesting to know whether or not this drop in price for 3 weeks was perhaps not planned in order to give the impression that the market does sometimes react to supply and demand. The circumstances would tend to indicate that such was the case.

Now, let us take a look at the silver-supply picture. According to reports, the Mexicans intend to absorb their own production for the rest of the year. In other words, Mexico's new production will not be exported to the New York market. If this be true, the supply picture is still not too serious. According to the Bureau of the Census, silver imports for 1950 amounted to 140,000,000 ounces. Consumption estimates were 120,000,000 for the same period. This means that we started the year with a 20,000,000-ounce surplus. Imports for 1951 through June 13 amounted to approximately 72,000,000 ounces. This gives us a total available for 1951 of approximately 92,000,000 ounces. Even if Mexico does not export any silver during the rest of 1951, there will be silver coming in from other countries. If we assume consumption to be as high as it was last year, we will need to import but 28,000,000 ounces during the rest of the year to give us 120,000,000 ounces. There has, in the past, always been more silver available than figures would indicate. In discussing the supply so far, no mention has been made of domestic silver which would become available at a slightly higher price of, say, 96½ cents per ounce; also, at about this figure, the "free" silver in the Treasury would become available to industry. Thus, it would appear that the silver supplies will be adequate to meet demands for some time to come. This does not mean, however, that the users of silver need have no fears for the future. We must be eternally vigilant to insure that supplies remain available.

The reason given for Mexico's absorption of its own production is that they have coinage commitments requiring considerable amounts of silver. It is reported that they have a coinage order for Saudi Arabia involving some 17,000,000 ounces of silver. It is also reported that they are negotiating with Pakistan for an order involving 10,000,000 ounces. In addition, they are reported to have entered into a barter arrangement with Western Germany for approximately 7,000,000 ounces. This makes a total of approximately 34,000,000 ounces. It is not known over what period of time these orders extend and the Pakistan order does not appear to be firm as yet.

The necessity for obtaining our own domestic production in a free and open market is more than ever apparent. Last year some 42,000,000 ounces of silver went into the Treasury, which does not need it. We must continue our efforts to acquaint the people of this country with the true silver picture. We must work to carry out our objectives of a free flow of silver in commerce, both foreign and domestic, at prices governed by competition operating under the ordinary laws of supply and demand. This can only be accomplished through the repeal of our silver-purchase laws.

Farm Prices Not Cause of High Food Cost

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. BURDICK. Mr. Speaker, the price received by farmers for their produce from 1948, the peak year, to the present, conclusively shows that the prices of these products have not caused the rise in the cost of living. The table which is herewith inserted tells the whole story:

Specified commodities; average price received by farmers, North Dakota, designated dates

Commodity and unit	Highest price postwar		Jan. 15, 1951
	Date	Price	
Wheat, bushel.....	January 1948.....	\$2.03	\$2.11
Rye, bushel.....	March 1947.....	2.88	1.44
Corn, bushel.....	January 1948.....	2.40	1.38
Oats, bushel.....	January 1948.....	1.20	.73
Barley, bushel.....	January 1948.....	2.23	1.31
Flaxseed, bushel.....	March 1947.....	8.20	4.20
Potatoes, bushel.....	April 1946.....	1.90	.85
Hogs, hundred-weight.....	January 1948.....	25.90	19.20
Feef cattle, hundredweight.....	April 1951.....	28.50	21.40
Veal calves, hundredweight.....	April and June 1951.....	32.00	29.00
Sheep, hundred-weight.....	February and March 1951.....	18.00	14.20
Lambs, hundred-weight.....	March 1951.....	35.00	30.00
Butterfat, pound.....	December 1946 and January 1948.....	.88	.72
Milk, wholesale, hundredweight.....	January 1948.....	4.50	4.00
Chickens, live, pound.....	August 1948.....	.260	.183
Turkeys, live, pound.....	December 1948.....	.480	.34
Eggs, dozen.....	November and December 1948.....	.460	.283

Statistics, Bureau of Agriculture

Examine each and every item. Wheat, for example, has dropped 82 cents per bushel while bread has risen from 10 cents per loaf to 17 cents. Rye dropped \$1.44 per bushel, but rye products increased 75 percent. Hogs dropped from \$25.90 per hundred to \$19.20, but in the markets porks went right on up. Beef sold for \$28.50 per hundred, live weight, dropping \$4.10 per hundred, but beef products went up so high to the consumer that many millions of people could not buy at all.

Milk, chickens, turkeys, eggs, and butterfat declined, some of these items drastically, but prices to consumers went up.

While the farmers' income has been declining gradually since 1948, pay to labor in industries went up from \$1.30 per hour to \$1.58 per hour. Corporate profits rose from \$32,500,000,000 in 1948 to \$51,000,000,000 in 1951.

The consumers of the East seem determined that the farmers are the villains in the high cost of living, and representatives of the large eastern centers like New York lost no time in sniping away at the farmers. I told them on the floor of Congress that what they

needed as much as a 5-cent cigar was another real depression like we had in 1932. Farmers were broke and were being driven off their farms—their buying power was gone—manufacturers could not sell their products, factories closed, and labor roamed the streets until 15,000,000 men and women registered in the army of the unemployed.

The same thing can happen again. The farmers' income is dwindling. And soon the farm belt will have no buying power. Factories will close again and labor will walk the streets.

In other words, if this trend keeps up we will not be bothered with inflation, but a period of deflation will grip the country. Unless this buying power of the farmers is maintained, there will be a period of deflation and unemployment just as surely as we stand here today.

Is it not about time the East woke up and considered the farmers as a part of our national economy?

America's Public Employees

EXTENSION OF REMARKS OF

HON. REVA BECK BOSONE

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mrs. BOSONE. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to make a statement about America's public employees—the few we hear about and the many we do not, and about ourselves whose zeal in forgetting the loyal and honest thousand is equaled only by our zest in remembering the disloyal and dishonest one.

It was with mixed emotions that I read an item in the paper the other day detailing how an employee of the Department of Commerce had been rewarded for honesty. Why, I asked myself, was it necessary to publicize the honesty of an employee of the Department of Commerce or the honesty of the employee of any other governmental unit, in or out of Washington? Surely not because cases of honesty are so rare in our Government that when an upright employee is found her name should be emblazoned on the pages of a big daily newspaper. Surely not because honesty in Government has reached the "man bites dog" stage in the eyes of the hard-boiled journalist, when honesty becomes a matter of news.

No, that was not the reason. No thinking person will say that all the employees of the Government are dishonest, just because an infinitesimal percentage have been found dishonest. No one will deny that hundreds of thousands of our people, your friends and mine, and the friends of John Jones and Jim Smith, work for the Government day after day,

year after year, sometimes for a whole adult lifetime, and not in any minute of that long service have they done anything dishonest or been a party to any effort to defraud the Government.

But since honesty in Government is not an oddity, why is honesty given space in the daily press? Why did the news men take time away from their more sensational stories and give the lady a pat on the back for turning down an offer of a bribe from a New York export firm and getting enough evidence to prosecute the firm? Again I turn to the man-bites-dog idea. Was it printed because it is so rare that a man not in Government attempts a crime? Was the fact that a non-Government individual had been caught red-handed the element of news? Surely not, for I know from my many years on the bench that a great many people not in Government commit crimes. In fact, I cannot recall more than a handful of public employees who stood before the bar of justice in my court, but I can certainly say that there were many thousand non-public employees there—and many of them were guilty as charged.

Why then the story? Frankly, I do not know, but I am glad it was there. I was glad it was there because I am sick of hearing some of the Washington character assassins accuse Government employees in such broad and harsh terms that they make it appear the whole Government is interlaced with graft.

I think it is one of the sad commentaries of our times that so many speeches have been made and so many columns written over such a relatively small percentage of acts which could be called illegal or, in some instances, unethical.

I know that every Member of this House of Representatives deeply deplores the fact that any employee or official of the Federal Government has proven himself venal or dishonest in any way. I am sure there is wholehearted agreement that such a person has no right in Government service, but I think every fair-minded legislator will agree that it takes more than a repetition of unsupported charges to make a person guilty and that all are not black who are painted black.

If the newspapers of this Nation were to play up the acts of honesty performed by the public servants, there would not be enough paper in the country to print the editions. If every honest person got a hike in pay for his honesty some of the loudest critics of this administration would break blood vessels when the appropriation bills came up to pay for the increases.

Now, ladies and gentlemen of the House of Representatives, Mrs. Helen Mathieson is not the exception; she is the rule. The story does not typify the unusual but the usual. Her story is not appreciated because her act was unique, but because it was just an opportunity to point up what we all know, but which many have been hoodwinked into forgetting—that the American public servant is honest, sincere, and a credit to this great Nation.

Defense of the Dollar

EXTENSION OF REMARKS OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

DEFENSE OF THE DOLLAR

JULY 7, 1951.

1. Defense of the dollar is the paramount problem. The critical front is on the Potomac, not the Yalu or the Elbe. Stalin is as keenly aware of this fact as is the President, and the latter goes the limit when he says: "If inflation got away from us and wrecked our savings and ruined our economy, that would be the easiest victory the Kremlin could ask for. Communist Russia could win the whole world to totalitarianism without firing a shot."

2. What does he mean? Not merely that the vested capital of the country will be wiped out, including the worth of pensions, of life insurance policies and of mortgages. He means the destruction of the American system, in terms of politics as well as economics. He means just what he says, namely, that the alternative to a sound dollar is the acceptance of Stalinism.

3. History cannot be mocked. The traditional recourse of the dictator in his quest of power is seizure of the public purse. All other authority follows that. On this account the founding fathers gave the control of money to the Congress and kept it from the executive. Solvency for years past, prior to 1933, has been anchored to a natural standard—gold—a rock against which the waves of extravagance could make no headway.

4. That control has been lost. It is no longer a barrier to the whims of the executive and Congress. Nothing other than a temporary agreement among a few officials restrains the Government from printing money in whatever amount it wishes. It need not go to the public for funds, for it can pour its promises to pay into the banking system whenever these officials, or others to follow them, decide again to have the Federal Reserve System support the bond market.

5. Such dollars have a backing so long as they are receivable for taxes, but they are fiat money just the same. They produce the inflationary gap. They are the life-blood of extravagance.

6. They are "flat" for this reason. Just as they are created by decree of the Government, just so their value can be utterly destroyed by another decree. It is only common sense to realize that a single election can, directly or indirectly, repudiate the public debt in its entirety. It can do by electing a Congress pledged to appropriate no funds for interest payments. It can do so by boosting expenditures higher and higher to the point where paper money will be of value only to museums. After that, the concentration camps.

7. The States are in imminent danger. They cannot print money. They must use whatever currency the Federal Government foists upon them. Already their tax sources have been invaded. Malignant inflation can deprive them entirely of usable funds. More and more they look now to Washington for what is called, with the illusion of language, "Federal aid." They get but a part of what has been taken from them. They cannot, even now, sustain their normal and historic

functions without begging from the Federal capital the means to keep alive. Inflation hastens attenuation of the idea of federation. Tomorrow there may be provinces instead of States, ruled by satraps dispatched from Washington. Constitutions cannot prevail against the power of the purse.

8. All of the foregoing the present Government, directly and by implication, admits. So, it cries: "Inflation must be stopped." But who creates inflation and at what paps does it nurse? They who cry "wolf" are the wolves. The theory seems to be that it takes a thief to catch a thief. And what cure is offered? Give us more money. The taxes, already confiscatory, are not enough. The ideal position, says the Government, in effect, is when virtually all profits flow into its coffers, when the people cannot pay high prices because they have not the means to buy more than a modicum even of essentials.

9. Nationalization of profits is the worst form of socialism. When a government nationalizes industries it must at least manage them and be concerned with profits or losses. When it seizes the profits of private industry it absolves itself of risk. Call it cowardice or identify it as a subtle method of accomplishing by indirection what Stalin at least has the nerve to do openly and violently.

10. "How long," asks a Senator, "can American business go on paying from 60 percent to 70 percent of its income in taxes, and survive?" The answer of an official is that, barring a general war, reductions may be permissible after 1955. But taxes then will inevitably be higher, not lower. If inflation has not been stopped in its tracks. And how much longer can the middle classes, the salaried people and the annuitants, survive under present and proposed taxation? The kulaks need not be liquidated, as was the Russian method, by cutting off their heads. "You take my life when you do take the means whereby I live."

11. Confiscatory taxation is inflation. To put \$17,000,000,000 of additional taxes on the economy is to add even more billions to the cost of doing business. Taxes, like wages, are a cost figure. Somewhere, somehow, the high rates that are prescribed to stop inflation actually bring it about. Listen to the President on that point. He says (not with entire correctness) that the entire \$4,000,000,000 of new taxes levied last fall paid for not a single gun because the inflation meantime had raised the cost of defense purchases by \$7,000,000,000. Consider that—\$4,000,000,000 added to the tax load at a net loss of \$3,000,000,000 to the Treasury. Stalin laughs; we cry.

12. In the shadows of that picture, it is maintained that there is only one answer, namely, to give the Government more power. It wants to put ceilings on prices and to license business. To fortify its demand, officials with one accord, from the President down, keep telling the country that an even more devastating inflation is just ahead. It is an invitation to everybody to rush into the marts and buy, at any price. It is a repetition of the warning from the White House itself, last summer, to use dollars quickly because they were certain to depreciate.

13. "We propose," say officials, in effect, "so to expand the facilities of the country that, within a year or two, production will be in such huge volume as to assure competition in the marketplace; we can and will have butter and guns." There is considerable merit in that argument. The American economy, in all truth, is an economy of surpluses. That was true before Korea, and the potentiality grows with the days.

14. But political error can be the snake even in such a promised Paradise. Will the

private economy expand under the burden of confiscatory taxation, combined with price and allocation controls? Already, there are signs that management is becoming cautious. Who is going to buy a production so vast that it would swamp domestic markets? It may not be practicable to subsidize exports interminably. It may be that point 4, whatever its merits, will not be a powerful force in the world economy until decades hence.

15. An expanding economy is a desirable economy, but not if the expansion is at an explosive rate. Not if the assets of the generations to come are sequestered in advance, not moderately but extravagantly. Ours is a mansion already filled with good things. We have, as Charles Kettering has noted, with 6 percent of the world's land area and 7 percent of its population, 58 percent of the telephones, 76 percent of its automobiles, and 34 percent of its radio and television sets. That is an establishment worth looting, and the doors are left unlocked for any demagog to enter when Federal expenditure is unlimited.

16. This enormous accomplishment has been achieved under our American system of free enterprise, which is quite a different thing from the feudal Capitalism which in other places is under attack and we are called on to protect. The Nation can live a long time on its fat unless that fat be squandered.

17. The authorities, with support from both political parties, offer only one solution—higher taxes and more controls. Every proposal from the White House is for heavier expenditure. There must be, its propaganda insists, no slowdown of its welfare projects. It wants to increase them and it uses the necessity of defense as justification for projects that would be of debatable propriety even in normal times. But the more revenue Washington gets the more it is certain to spend. It refuses to recognize that the barrel has a bottom.

18. There has been built up an opinion that it is reasonable to question the practicability of a White House program. Experts in public relations are summoned to Washington to advise the Office of Defense Mobilization how to coordinate the activities of all the multiple public relations officers of the Government to carry a single message to the public, and sell the idea that not only is the policy of the Government perfect and unassailable, but also that its methods of mobilization are beyond criticism.

19. How close are we even now to the one-party system in our Government? It is wise to have partisanship end at the border and to present a united front abroad. But that is quite a different thing from outlawing debate in the formulation of the policy, whatever it may be. Therein lies the fallacy of a bipartisan foreign policy. It is sheer madness to foreclose on discussion. A country under parliamentary forms is in a sorry status if it lacks a loyal opposition. Diplomacy ought not to be deceptive of our own people.

20. The peril is far too great to permit major decisions to be made in secret chambers, even though members of both political parties participate. It is known now that the present danger is largely the consequence of fatal errors made at Yalta and at Potsdam. In the first case, a Chief Executive sick unto death, with his principal consultant in a similar condition, made concessions that poured strength into Stalin's veins. He did this as Commander in Chief, without consultation with Congress and without reference to the people. That was embezzlement of power. Who can assure that it would not happen again, or that another victory in another war might not be bartered away by a well-meaning but incompetent authority?

It is the abuse of our own institutions that makes necessary a defense of the dollar.

21. The people are confused because the danger to the country has not been explained to them with vivid clearness. They have been bombarded with a series of generalities, some of which would tax the credulity of infants. "The only thing we have to fear is fear itself," said Roosevelt, but the Washington bureaucracy, including the generals, has again and again, in public testimony, indicated a dread lest a gesture here or an action there annoy the Politburo.

22. It might be supposed that Russia was the giant and this country the pigmy. It may be doubted if the Politburo is more cunning than America in its programming. It is altogether unlikely that its production equals America's in volume or parallels it in quality, over all.

23. Extravagance in Government can be moderated, and without impairment of defense. The so-called Marshall shield calls for mobilization of our collective production facilities and an arrangement whereby they may move into maximum output by pressing a button. Most of this capacity already exists. After the last war the Government retained 440 of its War II plants as a reserve of industrial capacity. More than half of these—278—are now producing defense items, and another 66 are being reactivated. Defense has already arranged for \$6,000,000,000 additional in plant expansion and tooling, mostly for the production of aircraft. Private capacities have enormously expanded since War II. Atomic warheads, artillery shells and guided missiles are well advanced, as is the use of atomic power for submarines. Together there exists already with rapidly increasing potentiality, a Marshall shield.

24. Defense is the one great area in which economy can be practiced. Let us confine its actual production to usable hardware. Let there be no such overproduction, say, of tanks, as to overwhelm our storage facilities. This would serve a double purpose, since it would also tend to minimize obsolescence.

25. Let it be observed, too, that possibly the very hugeness of the appropriations is intended to frighten Stalin, with no present idea of actual use of the amounts in full. Yet defense will always be tempted to spend whatever is authorized. The Watchdog Committee of the Senate can be of incalculable service to the Nation by keeping its tender fingers in touch with this situation.

26. Inflation has already gone so far that possibly some form of price control is essential, but to be used only if necessary and with great caution. Let there be denial of appropriations for projects that safely can be postponed. Let the Congress wait, at least until fall, before imposing any new taxes whatever. Let aided foreign nations also show restraint in spending their and our money on welfare or postponable projects. Let a spirit of devotion to the public weal be substituted for the extravagant atmosphere that prevails in Washington. In a word, let the bureaucracy become patriotic.

27. The thing that is inflated is the Government. Big Government costs big money. Inflation is conceived and born in Washington. Only the Federal Government can spend in unlimited amounts. It alone determines the value of money and the extent of credit because it alone is legally empowered so to do. The administration already has controls adequate to stop the inflation dead in its tracks. It can stabilize the whole economy by utilizing its present powers. It can do so by putting ceilings on expenditures. It can barricade the American system against disaster by itself practicing that economy which it so belligerently calls on the mass public to endure. Congress should insist that it do so.

Could the Recent Flood on the Missouri River Have Been Prevented?—Collingwood Says "Yes"

EXTENSION OF REMARKS
OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the Record, I am inserting a broadcast delivered over the Columbia Broadcasting System last Sunday by Mr. Charles Collingwood, one of the Nation's outstanding news commentators. While I do not happen to live in the Missouri River Basin, I think the observations made by Mr. Collingwood apply to any of our river basins and natural drainage systems. This broadcast in a few words covers pretty much the whole problem of flood control in the Missouri River Basin and in my humble opinion it is worthy of the special consideration of the Members of Congress coming from that area as well as the consideration of the Congress as a whole having the welfare of our country at heart.

One day last week this reporter witnessed one of the great modern disasters. Like most disasters it need never have happened.

I was with a group of reporters who flew with President Truman over the flooded areas of Kansas, Missouri, and Oklahoma. Hour after hour we cruised along over the muddy, swollen rivers, looking down on the roofs of houses sticking out of the water, the flooded factories, the broken bridges, the rows of freight cars floated out of line like so many toy boats in a bathtub. We flew over close to a thousand miles of rivers in flood—up to the Mississippi from St. Louis to Kansas City, along the Kansas River to Fort Riley, over the Big Blue, the Republican, the Smoky Hill, down the Neosho, past Emporia into Oklahoma. Looking down, you could trace the river beds by the line of trees and the bridges—not very big rivers, most of them you could throw a rock across when they're in their courses, today they spread over the farm lands and towns 3, 4, 5 miles wide. We saw close to a thousand miles of rivers out of their banks, and we didn't see it all. Two million acres of land were flooded. Gen. Lewis Pick, of the Army engineers, calls it the billion dollar flood, and that's as good an estimate of the damage as any.

It was a shocking spectacle but the most tragic part of the whole thing is that it needn't have happened at all. We didn't have to have this flood. We know how to control rivers. In particular we know how to control the Missouri River. Experts have been making studies of it since the 1830's and all the elements of a plan that would not only prevent floods but would transform the Missouri Basin into a stable and fruitful area are at hand. The story of why we had this flood is a story of private selfishness, bureaucratic rivalry, false economy, and politics. Some of its outlines are worth considering as the great flood of 1951 rolls on toward the sea, leaving a billion dollars worth of damage in its wake.

The principal character in the story is the Missouri itself—the Big Muddy—big, muddy, and unpredictable. It is the longest river

in the United States. It runs for 2,500 miles from its source on the Continental Divide in Yellowstone Park to St. Louis. The Missouri Basin includes all or part of 10 States, from Wyoming, Montana, and the Dakotas in the North to Kansas, Missouri, and Iowa. Now, this is important, because everyone agrees that if you're going to do anything about a river, you've got to consider the whole river and its whole watershed.

We're concerned with floods on the Missouri River now, but flooding is only one of the problems in the Missouri Basin. In the Missouri Basin, it would seem, it's either a feast or a famine. If it isn't flood, it's drought. All of us remember the dust storms and droughts of the 1930's. That was in the Missouri Basin. Streams ran dry, springs failed, the crops withered, and when the winds came the dust obscured the sun. In 1938 nearly 9,000,000 acres were blowing. Thousands of people went bankrupt. In the 1930's 300,000 people moved out of the Missouri Valley. Those were the dry years. And then in the 40's the rains came again (there's a definite rainfall cycle in the Missouri basin), and when the rains came the waters raced down the slopes that had been overplowed, overgrazed, poorly cared for, carrying the mud of the plains into the creeks, into the streams, down the tributaries into the Missouri. And there were floods. There were record flood stages on the Missouri in 1942, 1943, 1944, 1945, 1947, and now 1951. All the signs point to a recurrence of the dry cycle soon, and then the coin will be reversed and the problems of the Missouri Basin will come from not enough water instead of too much.

Obviously, the Missouri basin is in trouble—bad trouble—of which the present floods are only a symptom.

When there is trouble, people want to do something about it. The Missouri basin is no exception. The difficulty is that everyone wants to do something different. The various plans for the Missouri basin have provided one of the great running controversies within the Government in recent years. To begin with there are the Army engineers. They love to build dams, and they worked out an ambitious program of dams and reservoirs on the main stream and the main tributaries. The engineers General Pick says that if these dams had been built there would be no flood disaster now. The Army engineers are principally interested in flood control and navigation. But the Department of the Interior's Bureau of Reclamation loves to build dams too, so it worked out another, equally ambitious program. But the Reclamation Bureau is especially interested in things like power and irrigation, and their program called for different kinds of dams in different places. Many epic battles were waged between the two, until they finally reached a compromise called the Pick-Sloan plan which includes most of the projects of both. Congress authorized this in spite of widespread criticism that many of the projects were self-defeating—but the Pick-Sloan plan has never really got going partly because of economy-minded Congresses, partly because of local opposition. If you build a dam, the water backs up, and some areas are flooded. Nobody likes to be flooded, so everywhere a dam was to be built, the people rose up and said, "Build it somewhere else." The result was that when the present flood hit there weren't enough dams to impound the water. The Army engineers say bitterly that \$300,000,000 worth of dams which they had asked for would have saved Manhattan, Kansas, Kansas City, and other ravaged areas.

But the Pick-Sloan plan is not the only one in the field. The Department of Agriculture has a plan, too. Its experts say that all the dams and levees in the world aren't

enough unless you get at the source of the problem. The source, says the Department of Agriculture, is in the watershed—the area which drains into the river. You've got to manage that watershed, see to it that the water stays on the ground instead of pouring into the streams. To do this, they have devised a huge program of land management, involving crop planting, grazing methods, and forest management. The critics of this plan say it's all very well, but it's not enough—there were floods on the Missouri before the first farmer came into the basin, so even if you restored the land to its virgin state, you still wouldn't stop the floods.

So the arguments go, while floods and droughts continue to plague the Missouri Valley, and the whole economic and social life of the area is rendered precarious. It's quite obvious that each plan has merit. It's equally obvious that no one of them alone is adequate to solve the manifold problems of the Missouri basin. What is needed is a unified approach, beginning far back in the watershed, extending to big projects on the lower reaches of the river—an approach which will take into account, not only flood control, but irrigation, navigation, power, recreation, land management, all the rest. We have the tools to do such a job. We know how to do each part, but we haven't put them all together. And what is true of the Missouri is just as true of the Ohio, the Connecticut, the Potomac, and others of the great rivers of our country. If the floods on the Missouri can drive this lesson home, untold benefits for the Nation may grow out of this terrible tragedy.

Is the Army Wasting Reserve Manpower?

EXTENSION OF REMARKS
OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. JOHNSON. Mr. Speaker, I recently received a very interesting letter from a man whom I have known for over 25 years and in whose judgment I have great confidence. This gentleman served in both the First and Second World Wars. Between these wars he was in the Army Reserves. Knowing him as I do, I have not the slightest doubt that his information about Reserves called to active duty is correct. The cases he cites may be isolated ones, but I wonder if they are not typical of the use of reserves recalled by the Army.

I do not wish to indulge in any unfair criticism of the Army. However, I hear so many similar things from individual Reserves regarding their own experiences and assignments that it makes me apprehensive. Men who have served in one war should not, if it can be avoided, be required to serve in an active duty status unless it is absolutely essential to our national security.

This outlines my reason for obtaining unanimous consent to include the following letter as part of my remarks:

July 18, 1951.

HON. LEROY JOHNSON,
House Office Building,
Washington, D. C.

DEAR ROY: Thanks a lot for your letter of June 25, 1951. I must say that the Colonel's

letter to you contains about as much information as most reports.

The future well-being of the Reserve Corps of the United States will be seriously affected by the current attitudes adopted by the armed services. It is going to be difficult indeed to induce young businessmen, the natural leaders of younger people, to remain in the Reserve Corps if the Armed Forces are going to take the attitude that they can call them to active duty without their consent and then give them piddling jobs which require only 5 or 10 hours a week. I think that all young Americans, particularly those who are in the Reserve Corps, are willing to make any sacrifice necessary for their country, but it must be difficult for young people whose lives are disrupted for the second time (having served their country in World War II and now being called back on what is supposed to be another emergency) to understand why the Government summarily directs them, without their consent, to leave their business where they are just commencing to get a foothold after the last war and rushes them back into uniform only to assign them to duties which take only 5 or 10 hours a week. It doesn't make any sense and the result is bound to be that young men who are leaders will hesitate to remain in the Reserve Corps, not because they are unmindful of the importance of being available for service if they are needed, but because they are fearful that the leaders of the country will be so wanton in their disregard of the importance of a civilian individual's time as to order them back into the Armed Forces whether they are needed or not.

I know of no single factor that would do more damage to the preparedness of this country or its morale than to continue to put men on active duty without their consent under circumstances which even a child would recognize as a wanton waste of the ablest manpower of our younger generation.

Now I've blown off steam and I feel better, and it must be difficult for you fellows in Congress to get this type of letter but in this case I feel justified because there is something that really needs to be done about it.

A good example came to my attention just a few days ago where a young doctor has 6 months more in residence at the Los Angeles County Hospital to qualify as an ophthalmologist. He served as an ensign in World War II in the Navy and was offered a Reserve commission which, on his father's recommendation, he declined. His draft board placed him in 1-A. The local medical board refused to delay his induction to permit him to complete the 6 months' training that would make him a specialist. The armed services, under their rules, could not commission him and delay his call to active duty so that he could complete his residence and qualify for his specialty. All of this adds up to a loss to the United States. The young man for the second time will be required to enter the armed services and, maybe when he gets out next time, will be unable to resume or to secure the opportunity to resume and complete the 6 months residence needed to make him a specialist.

Another case that has come to my attention is a young law student with 6 months to go to complete his legal education. He could not secure a delay to permit him to do so. He was inducted and placed in a camp within 50 miles of the law school. During most of the time that he would have been engaged in completing his legal education, he was assigned to kitchen police.

These are just a few samples of the waste of our young manpower that are taking place in this country today. While everyone does and should appreciate the importance of having young men serve under emergency conditions, the building up of our Armed Forces should be accomplished with due regard for the necessity of those who are not professional soldiers carrying forward their

lives after they have completed their service and in instances where young men have already served in World War II, every opportunity should be given to them to complete their education or their qualification for their life work and they should not be again returned to the Armed Forces without their consent except in extreme emergency, and those who have been returned should be given an early release.

Well, this second blow-off of steam ought to really wind me up for the day. Anyway, Roy, I thought you might find these comments interesting and maybe helpful in the effort I know you are making to assist our armed services in arriving at the right decisions in these difficult times.

With kindest personal regards.

Sincerely,

Wisconsin Educator Retires After 35 Years of Service

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, if there is any one group of people who can take just pride in their contributions to the American way of life, it is the teaching profession. From the little red schoolhouse to the great colleges and universities spread across this country, men and women have been going forth to teach the young people of this country so that they might be fitted to meet conditions later in life. Especially proud should be those men and women who have engaged in teaching youngsters in our rural schools and those educators who have in turn prepared those teachers for this important work. Today we know that the rural school youngster is receiving a basic education comparable to that of a city youngster.

Mr. Speaker, in Racine County, Wis., an outstanding educator has just retired from 50 years of teaching. His name is A. J. Smith and for 35 years he served as principal of the Racine-Kenosha Rural Normal School at Union Grove, Wis.

Mr. Smith was recently honored by the Normal School Alumni Association, and this was a fitting climax to his many years of service to Racine and Kenosha Counties. I am including as part of my remarks an article that appeared in the public press in my district relative to the work of this outstanding educator. The people of Racine and Kenosha Counties, Wis., will miss the valued leadership of Mr. Smith and the good wishes of these communities go with him in the days ahead.

The article follows:

NORMAL SCHOOL LEADER TO RETIRE

Arthur J. Smith, principal of the Kenosha-Racine Rural Normal School at Union Grove, this week announced his retirement effective July 31. Smith has been principal of the school since its organization in 1916, prior to which he was principal of Wilmet High School for 3 years.

Smith began his teaching career in Door County in 1901 at the age of 17. After com-

pleting a course at the State normal school in Oshkosh, he became principal of the Reedsville school in Manitowoc County and later served as Door County superintendent of schools for 4 years.

Smith's first activities as principal of the normal school included the canvassing of Kenosha and Racine Counties to obtain the required number of students.

The educator has since seen the normal school progress from temporary rooms in the Union Grove high and graded schools to the present structure which was built in 1919. Storms Hall, the women's dormitory, was added in 1922. Enrollment has climbed to 80.

Conditions at Bodega Bay Should Be Recognized

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial entitled "Is Bodega Bay Simply a Recreational Harbor With Local Benefits?" from the Press-Democrat, published at Santa Rosa, Calif., under the date of July 16, 1951.

Bodega Bay is far from being a recreational harbor, with benefits purely of a local nature. It is one of the vital harbors in northern California, a link in the extensive fishing industry of California, which alone exceeds in volume the fish production of all New England States combined. In addition to a locally owned fishing fleet valued at \$290,000, Bodega Bay shelters between 400 and 600 outside vessels during the peak of the fishing season. Last year, despite a disappointing salmon run, the six commercial fisheries located at Bodega Bay handled over 2,000,000 pounds of fish—valued at \$352,000.

A resolution, adopted by the Sonoma County Board of Supervisors, requesting Federal funds in dredging this vital harbor which is silting in at a rapid rate, gained little headway here in Washington, D. C., because it is evidently regarded as a recreational harbor with a small volume of general commerce. Yet, fishermen operating out of Bodega Bay contribute largely toward meeting the food requirements of the civilian population of the Nation, as well as that of the Armed Forces.

Along the two-hundred-odd miles of coast line from San Francisco north to Humboldt Harbor, only Bodega Bay and Noyo Harbor can be used safely for fishing-boat moorings—and Noyo Harbor's entrance is virtually unprotected from the heavy seas. Furthermore, this coast line is considered by the Federal meteorological studies to include North America's stormiest stretch of coast.

The editorial in reference above is as follows:

IS BODEGA BAY SIMPLY A RECREATIONAL HARBOR WITH LOCAL BENEFITS?

If anything could be more indicative of the lack of understanding in Washington,

D. C., about the importance of north coast harbor projects, it is the letter which the Sonoma County Board of Supervisors received Friday from the Corps of Engineers' deputy chief of civil works for rivers and harbors.

The corps recognizes the need for some maintenance of Bodega Bay against silting. Col. W. D. Milne wrote in response to a resolution urging that the bay be dredged.

But, he added, "maintenance of navigation facilities for recreational craft, where the benefits are of a local nature or for small volumes of general commerce, under present conditions must be deferred."

"Recreational craft."

"Small volumes of general commerce."

Is this a fitting description of a key harbor for the west coast fishing industry, which in California alone exceeds in volume the fish production of all New England States combined?

Is it a fitting description of a harbor which shelters between 400 and 600 outside fishing vessels during the peak of the fishing season, in addition to a locally owned fishing fleet valued at \$290,000?

Is it a fitting description of a harbor whose six commercial fisheries dealers last year handled 2,153,000 pounds of salmon, albacore, crabs, bottom fish and shark liver valued at \$352,000, despite a disappointing salmon run?

"Benefits of a local nature"

Does this describe the fishing industry, which harvests and processes food for millions of American civilians and fighting men overseas?

We suppose a resident of the east coast—even a Corps of Engineers colonel—might comment that after all, if silt closes Bodega Bay, the fishing boats can go elsewhere.

And, except for the \$250,000 fisheries investment and the food production which thereby be lost, this comment is understandable, coming from someone thinking exclusively in terms of the east coast.

Geologically, the east coast is sinking. Valleys which ran down to the ocean ages ago are now submerged and form protected harbors which can be kept open with a minimum of dredging. A map of the east coast is like a piece of paper torn across the grain. Countless inlets and harbors offer protection for small craft and good locations for fish-processing firms.

If the colonel would then look at the map of the west coast he would find long straight stretches, interspersed only infrequently by inlets and harbors, characteristic of a geologically rising coast line.

A drive along Highway 1 from San Francisco to the Oregon border would convince him of the map's accuracy.

Along two-hundred-odd miles of coastline between San Francisco and Humboldt Harbor, only Bodega Bay and Noyo Harbor can be used safely for fishing boat moorings, and Noyo Harbor's unprotected entrance is frequently pounded by heavy waves.

Furthermore, according to Federal meteorological studies, this coastline includes North America's stormiest stretch of coast.

The total wreck of the drag boat *Del Monte* as it attempted the Noyo Harbor jetty mouth last November, and the half dozen other fishing vessels which have been lost along the coast in the past few years are evidence of the perilous fishing conditions.

Harbors like Bodega Bay and Noyo are vitally important not only as havens for fishing craft; they also extend the field of fishing operations, just as tankers and supply ships extend the range of a Navy task force.

A fishing boat obviously operates from either a permanent or temporary base. It goes out to sea, catches a load of fish, sometimes in a matter of hours, and returns to its base to unload. The major portion of a heavy salmon run off Bodega Bay would be

lost if the 400 to 600 boats were based in San Francisco Bay or Noyo Harbor.

Let Bodega Bay, Noyo Harbor, or both, silt in, and the Nation loses a source of essential food just as surely as if farmers plowed under thousands of acres of ripening wheat.

Although a few recreational boats are moored in Bodega Bay among the preponderance fishing vessels, it is not by any odds a recreational harbor. Nor is it an unimportant harbor, with small volumes of general commerce and benefits of a local nature.

No one acquainted with this area could term it such.

State Department Replies to Statement What Should Our Message Be?

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. HOWELL. Mr. Speaker, for some time I have felt that a positive statement of the ideological goals of democracy was essential for our own people, for our friends and potential friends abroad, and for effective psychological warfare against Soviet propaganda.

Recently there was called to my attention an unpublished statement entitled "What Should Our Message Be?" that was written by several leading social scientists engaged in research into human behavior.

I inserted this statement into the CONGRESSIONAL RECORD on May 2, 1951, hoping that it would satisfy a real need for those interested in our information programs. It was, and still is, my hope that the statement will also refute some of the outspoken critics of our Voice of America who claim that it is useless to invest money in ideological warfare.

Knowing the importance that this statement *What Should Our Message Be?* can have to our policymakers, I have sent the statement to a number of Government officials, including the President and the Secretary of State. Both the President and the Secretary have written to me to tell me how highly they approve of this important document.

I also sent this statement to Assistant Secretary of State Edward Barrett, who is the man directly in charge of our information programs. Today I received a letter from Mr. Barrett outlining just what the State Department has done and is doing to improve our present program. I hope that every Member of Congress will read Mr. Barrett's letter as well as the statement *What Should Our Message Be?* copies of which can be procured from my office.

Mr. Barrett's letter follows:

JULY 24, 1951.

HON. CHARLES R. HOWELL,
House of Representatives.

DEAR MR. HOWELL: I was very glad to receive your letter dated July 16, 1951, and I want to thank you for sending me a reprint of the extremely thoughtful article *What Should Our Message Be?* which you inserted in the CONGRESSIONAL RECORD on May 2, 1951.

You are quite right about the article having been called to our attention previously.

In fact, some of those responsible for the article have been working closely with us. We agree that the paper contains an excellent statement of the necessity for a program such as ours, the problems we face in insuring its proper operation as well as many concrete suggestions for strengthening the program. The credo at the end of the paper is particularly impressive, and it is one of the best summaries to date of the message we are carrying to people throughout the world.

You have asked for my reaction to pages 5 and 6, or that portion of the paper under the heading, "What we ought to remember." I would like to assure you of my agreement on the points which the authors have made in this section, and in doing so I would like to restate what I consider to be six very specific objectives of our program. They are:

1. To expose the vicious nature of Soviet communism.
2. To place psychological obstacles in the path of Soviet Communist aggression.
3. To instill in people of free nations the desire to cooperate with America.
4. To build a spirit of unity, determination and confidence in all nations of the free world.
5. To promote a better understanding of the United States among the peoples of the world.
6. To strengthen cooperative international relations.

There are our objectives, and our plan for achieving them is to reach the people of the world by every means at our disposal. We are in daily communication with millions of people in many countries throughout the world by means of radio broadcasts, motion pictures, and press material. Our exchange of persons program and the maintenance of United States information centers abroad provide still further means for Americans to meet and talk to people of other lands and for persons in other countries to visit the United States and to see American democracy in action.

I would like to turn now to the specific points raised under the heading "What we ought to remember." The first statement says, "We must make it clear that we do not want to impose; we do not want to destroy." I agree wholeheartedly with this statement and assure you that we believe we have no more right to impose our way of life on people in other countries than the Soviet Union has to impose communism on the rest of the world. In this connection, please refer back to two of the six objectives I have outlined above, namely, that we want to expose the vicious nature of Soviet communism and we want to instill in people of free nations the desire to cooperate with America. This is certainly not to say that we want to actively impose on other nations a new way of political or economic life, or that we are trying to save any particular form of society at the expense of mankind in any part of the world. We recognize that evolution and change are inherent rules of nature, but we also recognize that evolution and change should be the result of peaceful means rather than force. We intend, therefore, that our message shall be one of freedom designed to insure a condition whereby human dignity will be maintained, and the individual will be able to enjoy the freedoms to which the authors of this article have referred in their credo—I, e., freedom from want, freedom from fear, freedom to choose, and freedom to help shape his own destiny.

We do not want to make the mistake of regarding democracy as an end in itself. Instead, we believe democracy as we know it in the United States is a means to an end whereby the maximum benefits of life are experienced because of the freedom we enjoy under our democratic way of life. This ties in with the fifth objective I have

listed, namely, that we want to promote a better understanding of the United States among the peoples of the world. With a better understanding of our way of life, we believe they will want to emulate in their own countries the conditions which have made America the free and abundant country that it is today.

The authors of the article are quite right in stating that only failure would result if we were to offer to the people of Europe liberalism and democracy wrapped in an optimistic package. We are fully aware of the historical disappointments experienced by certain European countries and can well understand the skepticism of many European people. We do not try to exploit these conditions by offering false promises of a better world. It would avail us nothing to counter the false promises of the Soviets with more false promises of our own, and so we confine ourselves to a hard-hitting campaign of truth which encourages individuals to exercise their basic right and freedom to choose the system under which they will live.

In reaching people in Asia by our point 4 program, our aim is to help them to help themselves. We realize that an attitude of superiority will not win us friends, and that consequently, the aid we send them and the manner in which that aid will be used, must be decided with the full participation and initiative of the recipient. Our task is not to recreate the world in our own image. We are engaged, instead, in an effort to strengthen our ties with other countries as a means of further securing the integrity and well-being of the free world. Economic strength, in which point 4 plays a vital role, is one of the fundamental conditions we desire to establish. In the information program every effort is made to interpret point 4 aid and to relate it to a situation in which people are making a determined attempt to create a better life for themselves by using their natural and human resources more fully and effectively. Our treatment of the point 4 programs stresses the idea of co-operation and joint action toward mutually desirable goals. We also stress the fact that the United States is not engaged in drafting master blueprints to govern the economic development of all countries. We are, however, prepared to consult with and to assist friendly countries in working out their plans for economic stability and development.

You have inquired how the article entitled "What Shall Our Message Be?" has been, or will be, put to productive use in the Department, and in answering this question I would like to refer to the seven suggestions the authors have made under the final heading of "Strategy notes." First, they have suggested that we concentrate on the people of the world whose minds are not already in "iron molds." The very extensiveness of our program will show that we have been doing this since its inception. I am listing below the countries throughout the world in which various phases of our programs were in operation during fiscal year 1951, since I believe such a list will dispell all doubt that we are directing our programs toward any one limited area:

Aden, Afghanistan, Algeria, Argentina, Austria, Belgium, Brazil, Burma, Ceylon, Chile, China, Cuba, Czechoslovakia, Denmark, Egypt, Elre, Ethiopia, Finland, France, Free China, Greece, Guatemala, Hungary, Iceland, India, Indochina, Indonesia, Iran, Iraq, Israel, Italy, Jordan, Lebanon, Libya, Luxemburg, Malaya, Mexico, Morocco, Nigeria, Norway, North Korea, Pakistan, Panama, Philippines, Poland, Portugal, Rumania, Russia, Saudi Arabia, South Korea, Spain, Sweden, Switzerland, Syria, Thailand, The Netherlands, Trieste, Tunisia, Turkey, Union of South Africa, United Kingdom, Venezuela, Yugoslavia.

In addition to the work we have been doing in these countries, you will be interested in knowing that by the end of fiscal year 1951, the Voice of America programs were being broadcast in 45 languages.

Secondly, the authors have pointed out the need for a clear message, one which is unambiguous, simple, pointed, plausible, and not easily distorted. We believe that our programs, which are dedicated to relaying the message of human freedom to people throughout the world, carry such a message.

The third suggestion is that by means of pretests on small samples of a population we determine in advance what the particular context of our information and educational exchange programs will be, thereby insuring plausibility and effectiveness. In this connection we have used scientific research organizations where available and we have received this type of guidance from our own officers in the field who are in daily communication with the people in countries to which they are assigned, and are, consequently, in a position to keep us informed of the information requirements of the people and to evaluate the effect of our programs. This suggestion goes on to say we should benefit by information to be obtained from defectors, and I must assure you this has been done from the beginning. From numerous interviews of this type, our officers in the field have obtained information regarding the number of people who are reached by our programs and the effect of our programs on these people. They have also obtained many extremely worthwhile suggestions regarding program content.

I would also like to refer to the fourth and fifth suggestions regarding the technique of irony and the use of slogans. Many of our broadcasts have used in the past, and continue to use, irony, satire, and ridicule in getting their point across, and our press and publications program has made wide use of cartoons, posters, and slogans during the last year.

The sixth suggestion is that we avoid words spoiled by the Soviets. I would like to assure you that we are constantly on the offensive with our programs and it is only in the belief that it is our duty not to let Russian lies about America go unanswered that we have occasion to use any of the Soviet terms at all. Even then our reference to their terms is confined to refuting the big lies, ridiculing the lesser ones, and ignoring the rest of them.

Suggestion No. 7 is concerned with "... a Voice for America at home." The people in the United States have shown considerable interest in our broadcasts and in the other phases of our programs. We, in turn, have been glad to receive their questions, criticisms, and suggestions and have answered them in every instance. It may be that we will be permitted to adopt a suggestion for having a 15- to 20-minute weekly report to the people about our program. We would welcome an opportunity to tell the people of America not only about our Voice of America broadcasts, but also about the other phases of our work.

I regret that it is not possible to go into all of the interesting points in the article at this time, but there is something I would like to discuss here, and that is the authors' statement on page 4 that "We must constantly emphasize our interest in the Russian people and the people of the satellite countries, clearly and constantly distinguishing between the Soviet regime and the dictatorships in satellite countries on the one hand, and the people who live in those areas and their national symbols on the other hand." This is a theme which has received a great deal of consideration and has been used in our broadcasts since 1947 when we initiated the Voice of America programs to the Soviet Union. It has been further

developed and reemphasized since that time, and one of the most recent expressions thereof is found in our radio and press coverage of the McMahon-Ribicoff resolution regarding the abiding friendship of the American people for all other peoples, including the peoples of the Soviet Union.

In conducting the International Information and Educational Exchange programs, we give full cognizance to the different political, economic, and social conditions in the many countries where the programs are in operation. Full consideration is being given, and has been given in the past, to the various points which the authors have indicated we should remember about Europe and Asia.

We appreciate the fact that, in planning our broadcasts, or our press and motion-picture output, the problem of judging the recipient's reaction to our programs is a very basic one if we are to avoid losing sight of our listeners' desires and interests, by thinking of our listeners in American terms rather than in their own terms. The USIE staff, both domestic and overseas, consists of many trained radio, press, and film specialists as well as experienced people working on the exchange of persons programs and the maintenance of USIE overseas missions and libraries and reading rooms. We believe that by having this staff work together with area specialists in the Department and Foreign Service, we are able to take advantage of skills possessed by people in many lines of endeavor. We also believe it is the interweaving of the experience and skill of the USIE staff and the area specialists, which gives us an unbeatable combination for insuring the effectiveness of our programs.

I am sure you know how much I appreciate the continued interest you have shown in our programs, and the support which you have given us. Thank you again for forwarding the article. I am very glad to have this opportunity of discussing it with you.

Sincerely yours,

EDWARD W. BARRETT,
Assistant Secretary.

Flood Control

EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mrs. BOLTON. Mr. Speaker, the tragic results of the floods in the very heart of our country bring dramatically to our attention the carelessness with which we have despoiled our forests and laid bare our fields.

Naturally there is a hue and cry for dams and reservoirs, for man-made methods of flood control costing millions if not billions of dollars. Little is being said of the need to replace the trees by which nature holds floods in control and spreads her rains more widely and so more safely across her lands.

Much of this can be done by one-family farmers and landholders, as well as by mine owners and others who cut over great tracts of forest lands, leaving them bare instead of replanting them with trees which in due course would, of themselves, give fair return in dollars, even while they held the soil and served nature in her need for rain control.

The States would do well to emulate my great State of Ohio, which passed a law in the twenties, introduced by my husband, Chester C. Bolton, who, before his service in this House, introduced a bill into the Ohio Legislature to exempt from taxation such land as shall have been planted with trees.

This was in great contrast to the action of one of the more Northern States which put a tax on such planting, so discouraging the mine owners who had cut over the land to get out the ore and who wanted to replace the needed trees. The tax could well have been placed upon the lumber that would have been available for cutting several decades later.

The Missouri floods have destroyed vast acres of farm land. Topsoil will fill the reservoirs built to control the raging waters and much will be carried down to form more deltas in the Gulf of Mexico. So it was in Egypt many centuries ago. Let us learn our lesson; let us plant unlimited numbers of trees; let us learn contour plowing; let us work with nature, not against her; and let us hope it is not too late to stem the tide of waste and destruction that we are responsible for.

Mr. Speaker, I am including in my remarks an editorial from the Washington Post of July 18, 1951—although I do not agree with it in detail—because it points up many matters that are vital to the future of this country:

AFTER THE FLOOD

As the dirty work of mopping up begins in Kansas and Missouri after the disastrous flood, some serious long-range thought needs to be given to the lesson of the calamity. In the judgment of the Chief of Engineers, Maj. Gen. Lewis A. Pick, that lesson seemingly is a call to build more dams and storage reservoirs. But the real lesson, it seems to us, is a great deal more fundamental. It points to the compelling need for river valley conservation and development, not on the present hit-or-miss basis, but according to an integrated plan.

This newspaper observed the other day that "although field terracing, grasslands, and proper forest management will not of themselves prevent all floods, they are essential ingredients of flood control." The trouble is that many of these ingredients are being neglected in the concentration on one or two aspects of flood control. No one could deny that dams and reservoirs are necessary to deal with present conditions after years of abuse of the land. But the most effective of all dams is the earth itself with its natural cover.

It is this factor which has received insufficient attention, for example, in the grandiose program for the Missouri River embodied in the Pick-Sloan plan. This plan has been described as an arrangement of convenience between the Army engineers and the Bureau of Reclamation to let each proceed its separate way. There are some good things in it, along with what in our opinion is an expensive boondoggle in the plan to extend navigation up the Missouri. But it makes little allowance for the work on individual farms, the reforestation of denuded hillsides, the restoration of the water table, and the attempt to regain a natural balance—all parts of a rounded program. Indeed, there are many who believe that the vast dams and reservoirs flooding thousands of acres will become useless because of silting without comparable work where the water falls.

It is possible that too much emphasis has been placed upon the controversial electric-power aspects of valley development, whereas the conservation benefits have not been stressed enough. Integrated treatment of natural resources can be accomplished in two ways—by integrating the agencies concerned with conservation and development into a Department of Natural Resources with a single unified program, an end which seems as far away as ever—or by a separate valley development authority. The latter seems to us the more attainable. It does not matter what the authority is called or whether it is patterned on the Tennessee Valley Authority or upon some different scheme with more popular participation. The important thing is to obtain more understanding of the sobering fact that none of the advertised depletion of minerals or other resources poses as serious a threat to the country as the continued washing away of its topsoil.

Mystery of the Missing Beef

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks two editorials which are pertinent to the present controversy over the high prices of meat and call special attention to the editorial entitled "Mystery," which indicates that 30 percent of available beef is not reaching local meat markets, because of OPS regulations. I am including both editorials which appeared in the Chicago Daily Drovers Journal on July 18, 1951:

MYSTERY?

Last week the country's 12 leading livestock markets received 39 percent more cattle than the preceding week, and within 3 percent as many as the same week last year. But during the week, the 95 leading beef-producing plants were able to buy under OPS compliance ceiling prices only about 70 percent of cattle they bought during the same week last year.

"For the sixth straight week," says the American Meat Institute, "these 95 plants have been forced to work at reduced production rates, ranging between 30 to 47 percent down from corresponding weeks of a year earlier, because of their inability to buy sufficient cattle without running the risk of breaking OPS regulations carrying penalties of heavy fines and jail sentences for violations. A serious and disturbing situation is developing, too, because of the fact that these leading plants are those upon which pharmaceutical manufacturers rely for vital byproducts, such as glands, from which to prepare many medicines important to the medical profession for saving life, relieving pain, and the treatment of serious diseases and physical ailments. Many of the plants surveyed have been unable to supply normal quantities of beef to their retailer customers for availability to the public. In some areas, especially those distant from points to production, retail stores have been sold out of certain popular cuts, when they had them at all, early in the day. This has been especially true of such cuts as round steak and sirloin."

Where did the cattle go that the 95 leading beef-producing plants were unable to

buy? They are no longer standing around the 12 leading livestock markets.

THOSE CHEAPER CUTS

Folks who think their meat bills are too high might try using some of the cheaper cuts for a change. Home economics and nutrition specialists toss out that thought. Using moist heat at low temperatures, cuts like chuck, brisket and plate of beef, hock and butt of pork, and rolled shoulder and shoulder chops of lamb can, in the hands of a good cook, produce delectable dishes at considerable less cost than the steaks and roasts which most housewives seem to prefer. But there is the rub. Housewives not only prefer beef over pork, and the more expensive cuts over the cheaper ones, but most of them seem to have the funds to buy what they want. Correcting that situation would appear to be beyond the power of Government.

Loss of Admiral Sherman Great Blow

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Boston Traveler of July 23, 1951:

TODAY IN WASHINGTON

(By David Lawrence)

LOSS OF ADMIRAL SHERMAN GREAT BLOW

WASHINGTON, July 23.—Loss of Admiral Sherman is a tragedy for the United States at a critical time in its history, for he was the "brains" of our global strategy and one of the most brilliant military leaders this country has produced.

It was not only that Admiral Sherman, as chief of staff to Admiral Nimitz, planned the strategy and worked out the over-all operations in the sweep of American forces across the Pacific in World War II, but he became, in the postwar years, a great asset to top planning through his intimate experience as commander of our fleet in the Mediterranean. He was the only high official on active duty here who had participated in command of Army, Navy, and Air forces in the last war.

Admiral Sherman's entry into the Joint Chiefs of Staff as Chief of Naval Operations when Admiral Denfeld was removed helped slowly, but surely, to solve a very difficult situation as between the armed services. He recognized that morale had been sagging in the Navy, due to interservice friction. He knew, also, the importance of reconciling differences in discussions with the heads of other services.

When the legislation designed to bring about integration of the armed services in 1947, Admiral Sherman, at the suggestion of the late Secretary of Defense, James Forrestal, took over the task of harmonizing differences. When he was called to become Chief of Naval Operations in November 1949, there were some Navy men who thought he would become a "political stooge" of the administration and would not stand for the traditional policies of the Navy. He soon dispelled that idea, and only last week, this correspondent heard high Navy officers who had been critical of Sherman in the early stages, singing his praises as having done the best job that anyone could have done for the Navy.

Forrest Sherman will be remembered for his thoroughness and fidelity of his assignments. He will be remembered for his efficient manner of presenting the needs of the Navy to other officials in the executive branch of the Government and to the committees of Congress. He will be remembered by Navy men for his independence and his steadfastness. For at a time when Secretary of the Navy Matthews attempted to punish Arleigh Burke, a Pacific war hero, and prevent him from being promoted to the rank of admiral, the simple, straightforward presentation of the case which Admiral Sherman made personally to the President won Mr. Truman's approval, and Burke got the promotion.

Time and again as Admiral Sherman in recent months discussed with this writer the events in Korea and the MacArthur hearings and various matters of vital concern in world strategy, there was always the clear-cut devotion to the best interests of the United States and an unwillingness to let political considerations in a domestic sense ever affect his judgment of what ought to be done in a military sense. The Nation may well mourn the death of Admiral Sherman. He was a great American.

It will be a hard job for the President to designate someone now to succeed Admiral Sherman who will have the same confidence that the entire Navy had in their deceased Chief. It will not be easy to find a naval officer who matches his knowledge of strategy and his statesmanship.

What is particularly tragic is that Admiral Sherman, who had been entrusted with the delicate mission of bringing Spain into military alliance with the United States, did not have time to report to the Joint Chiefs. He alone carried in his head all the background of the conferences with General Franco and other officials—and now that task probably will have to be done over again. Who can do it? Maybe Admiral Robert Carney, now our commander in the Mediterranean and a former Deputy Chief of Naval Operations. As for a successor here in the post of Chief of Naval Operations, Admiral A. W. Radford, commander in chief of the fleet in the Pacific, is by all odds the logical choice from the standpoint of ability and experience.

The William Oatis Case

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose a news letter by the Honorable WILLIAM BRAY, of the Indiana Seventh District, in which he so ably expresses the hope that prompt and positive action be taken in the William Oatis case:

A CONGRESSMAN REPORTS, No. 24

International kidnapping is nothing new. Precedents have been established as to the best method for dealing with foreign thugs who kidnap American citizens, but they are not being followed today.

In 1904, an American merchant named Perdicaris was kidnaped and held for ransom by a Moroccan bandit called Raisuli. President Theodore Roosevelt, who had a knack for making the importance of the United States known abroad, did not wait to act. He told his Secretary of State John Hay to cable the United States consul this blunt statement. "Perdicaris alive or Raisuli dead."

His verbal arrow hit the target. Perdicaris was released unharmed, and the incident was over.

Times have certainly changed since the days of Teddy Roosevelt. When an American businessman, Robert Voegler, was imprisoned in Hungary on trumped-up charges, the President took no action. Voegler wasted away in jail for 17 months while the State Department made a deal for his release. We had to bargain with hoodlums.

Now the State Department policy of "wait until the dust settles" is being applied to the imprisonment of a Hoosier newspaperman.

William Oatis, an Associated Press correspondent from Marion, Ind., has been sent to jail by the Communist Government of Czechoslovakia. He is charged with being a United States spy, but his only "crime" was his attempt to report fairly and honestly the news from behind the iron curtain.

Representative JOHN V. BEAMER, Republican, of Indiana, has introduced a resolution calling for a halt to all trade with Czechoslovakia. (Our imports from that country totaled more than \$7,000,000 during the first 3 months of this year. In addition to helping the Communists, we are hurting American labor.)

BEAMER also favors a complete break in diplomatic relations if the Czechs do not free Oatis.

I support his resolution 100 percent.

Other Congressmen have suggested that we deport all Soviet reporters now in this country. It was also recommended that if the State Department cannot guarantee the safety of our citizens behind the iron curtain they should all be brought home. We should not have to bargain with "hooligans."

Certainly some drastic action is necessary to stop this shameful treatment of our countrymen. When foreign governments perpetrate such outrages on our citizens, it is evidence of the failure of our State Department to maintain the prestige abroad which the United States had enjoyed since the War of 1812.

Conviction of William N. Oatis

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include an editorial from the Clarksdale Press-Register, of Clarksdale, Miss., July 19, 1951. Affirmative action by our Government in the case of William Oatis is necessary in this Communist war against the free press:

THE IRON CURTAIN—NO FREE PRESS

The iron curtain countries have totally destroyed anything even remotely resembling a free press within their own borders. Now they are trying to make certain that no news concerning them, save for official government hand-outs, reaches the rest of the world.

That is about the only logical deduction that can be drawn from Czechoslovakia's conviction of William N. Oatis, an American and an Associated Press correspondent, on charges of spying out state secrets and reporting slanders and lies, and his sentencing to 10 years in prison.

So far as can be ascertained, Mr. Oatis' crime consisted of trying to do his job properly. He did what every good reporter in every free country does every day—that is, he sought and reported the news. As is customary with every press service, his super-

riors in the AP organization gave him assignments and he did his best to carry them out. These assignments were in no way unusual, and none of them could be considered "spying" as that word is understood in the Western World. But in the Communist world spying means anything which displeases the heads of state. The laws are so drawn that anyone, citizen or foreigner, can be severely punished for saying and writing things which wouldn't cause an eyebrow to be lifted elsewhere.

Mr. Oatis' ordeal followed the usual pattern. He was held incommunicado for 70 days. He was not allowed to contact his friends or American officials. The State Department has formally charged that his so-called confession was prepared by the Czech secret police, and that he rehearsed it under police direction. This confession, the State Department added, was only the admission of an American reporter that in the high traditions of his profession he was attempting under the most unfavorable conditions to report a true picture of conditions and events in Czechoslovakia as he saw them. It said further that Oatis' conviction shows that the present regime in Czechoslovakia fears truth, hates liberty, and knows no justice.

The Western World has learned something about how confessions of this character are obtained. The victim is subjected to merciless questioning. He is given little food. He is kept awake for days and nights on end. He is alternately threatened and cajoled. He is beaten. The whole idea is to break down the will—to bring the man to a point of mental and physical exhaustion and despair where nothing matters except that he sign and agree to anything. This happened to Robert Vogeler and others. It undoubtedly happened to Oatis.

What can the Government do to protect our newsmen in the Communist nations? Alexander Jones, President of the American Society of Newspaper Editors, has suggested that, in reprisal for the treatment of Oatis, the trade privileges now given Czechoslovakia in the American zone of Germany be withdrawn. Others think we should go much further. As an example, the Portland Oregonian said editorially, "If the United States does not get its back up soon, these kidnappings, pseudo trials, extorted confessions, and imprisonment of Americans will become chronic. Our Government should give immediate study, with a view of action, of the possible effects of making the iron curtain a two-way barrier; that is, the withdrawal from outlaw nations of all American nationals and the complete severance of diplomatic relations, plus an airtight ban on all commercial transactions between these countries and the United States." This may seem to be an extreme policy. But, in dealing with communism, it may prove to be the only feasible one.

Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. IVES. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address entitled "No War—No Peace," which I made before a luncheon plenary session of the Colgate University conference on American foreign policy, on Sunday, July 22, at Hamilton, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to appear on this program today. Ever since your first annual conference on American foreign policy, I have desired to be present at one of your sessions. This is the first time I have been able to do so.

Furthermore, the theme of this particular session is not a new one to me. Last April in New York City I spoke on the same subject. Although I shall not repeat that speech on this occasion, I would bring to your attention a number of points which I emphasized at that time. They are as pertinent and as true today as they were then, and public reaction to them has increased their relative importance.

Let us not be deluded by the so-called truce or agenda connected with it or by any cease-fire resulting from it, which may occur in Korea. Let us remember that this action will have taken place as a result of the suggestion of a spokesman of Soviet Russia. Let us remember, also, that the negotiations between our forces and the Chinese Reds and North Koreans were initially carried on according to their terms, at their stipulated time, at their picked location, and in their prescribed fashion.

Indeed, let us not forget that, ever since the close of World War II, the very idea of peace in the world has been in a major sense illusory. To the extent that Soviet Russia has not yet made a direct attack upon us or our allies, to the extent that a state of war has not actually been declared by us, by any of our allies, or by Soviet Russia, we have been at peace but all of us know that in reality a condition of war has existed ever since June 25, 1950, when the Soviet-inspired attack by the North Koreans violated the thirty-eighth parallel.

In the European theater, to be sure, Soviet strategy thus far has not called for a hot war, but the difference between a cold war and a hot war is merely a difference of degree and severity. The motive, the intent, the purpose, and the objective in both types of war are identical.

The very fact that, during the period since the close of World War II, Soviet Russia has been devoting her chief effort to the production of armament and the raising of armies, while the free world has been disarming and struggling to rehabilitate its peoples and to restore its economies as preliminary steps to the restoration of peace and freedom everywhere, is indicative of the sinister purpose of the Soviets. The very fact that, during this same period, through intrigue and subterfuge and infiltration, Soviet Russia has been pursuing a course of aggression and conquest among her neighbors, provides further conclusive evidence of her diabolical intent. The very fact that, by obstructive tactics, Soviet Russia has conspired with her satellites to make the United Nations virtually impotent and to frustrate its every effort to preserve peace and to establish security against aggression and attack for every nation on earth, offers undeniable proof of Soviet Russia's intent to conquer the world and to destroy all freedom and to this end to employ every effective device at her command.

Alarmed by these facts, the free nations of the world have taken collective action for the sake of self-preservation. Progress in these efforts toward collective security has been marked especially by the Rio Treaty, the Greek-Turkish aid program, the Marshall plan, the North Atlantic Treaty, and the mutual defense program. And now, under the terms of that treaty and as a part of the defense program, the United States is in the process of sending additional Armed Forces to Europe.

It is unfortunate, indeed, if there are those in our Government who seek to gain par-

tisan advantage by playing politics with the question of national security. Although neither one of them should be thus accused of base motive, some weeks ago the London Times made the amusing suggestion that a debate between former President Hoover and General MacArthur would be very instructive. According to the Times, "General MacArthur wants much more war than does the administration and Mr. Hoover wants much less, while the right wing of the Republican Party agrees 100 percent with both of them."

To the everlasting credit of General MacArthur, his appearance before the Senate Foreign Relations and Armed Services Committees, as well as the ensuing hearings held by these committees, have done much to clear an atmosphere which had become murky with individual ambitions and charged with politics. Most significantly all of our top military commanders have been in agreement that the menace of Soviet imperialism is global and that the conflict against communism calls for global strategy.

It is most distressing to observe, however, that so many Americans do not yet seem to be aware of the deadly peril now confronting our country. At the same time, it is even more distressing to observe that so many other Americans, apparently aware of this peril, seem to be indifferent to it.

I sometimes wonder if these phenomena are indicative of decadence to which, it has been alleged, our American society is succumbing. At any rate, such a condition would seem to be in line with ideas concerning us which have been and are being broadcast by the Soviets.

As long as there remains in the world an aggressor as powerful and ruthless as is Soviet Russia, there can be no peace. Periods of comparative calm, when there is little or no fighting, must not delude us and our allies into thinking that peace has come. Indeed, such a delusion can be our greatest danger as we proceed with preparations for defense. This delusion can be the Achilles' heel of the Western World. More than anything else, it can cause our ultimate downfall and destruction.

As pertinent to these observations, I noted with much interest General Bradley's recent comment to the effect that a cease-fire in Korea might increase, rather than diminish, the danger of Soviet attack elsewhere. In fact, it seems to be generally recognized that Russia has not been happy about the Korean situation, that United Nations' resistance there was unexpected and caught her off balance, and that she would prefer to call it a day and open up on some other front—or perhaps try to lull us to sleep by playing possum.

So it is that this year and the years immediately ahead may be for America among the most trying years in our whole history. Our approximately 80,000 war casualties in Korea, including almost 25,000 dead and missing in action, have made an impression upon many Americans, which can be erased only by the final defeat of Communist aggression as a menace to our free society. The question naturally arises: Have the American people the courage, the fortitude, indeed the character, to meet and overcome the Communist challenge?

Pious pronouncements and congressional compromises will never suffice for this purpose. They can only befuddle issues and confuse the public.

If we are to meet the challenge head-on, we must not only undertake, but complete, an adequate preparedness program. This undertaking is truly global in scope.

It means American manpower in the Armed Forces and on the production line. If it is to be effective, it will cause scarcities in some important and essential consumer goods; it will stimulate anew the inflation spiral; it will require at least the amount of

controls over prices, wages, credit, critical materials, and distribution generally, which were put in effect under the Defense Production Act of 1950 and have received so much criticism as presently to threaten their continuation.

It means American-aid programs in those countries which have not yet had sufficient economic recovery to assure their ability to exist independently. It means the contribution of American assistance and know-how to those areas of the world which, unless rescued by the blessings of freedom and independence, are likely to become victims of Soviet scheming and treachery. It means that, as expounders of freedom and equality, we Americans are called upon to exercise the courage of our convictions right here at home.

It is tragic that so many of our fellow countrymen are unconvinced of the truth in what I state. And yet, their suspicions are not without some justification.

The fact of the matter is that a substantial number of the American people do not wish to entrust Mr. Truman with the powers which are essential to the Presidency if our preparedness program is to be completed properly and on time. It is most disturbing that so many Americans appear to be more interested in disparaging and discrediting Mr. Truman than in licking communism and in dealing appropriately with the dangerous problems which beset us. The reasons for this extraordinary attitude are, nevertheless, apparent.

Lack of a definite foreign policy—in fact, a most dubious foreign policy, if any at all until very recently—in the Far East and unsavory disclosures concerning State Department personnel and activities have occasioned a public distrust which borders on outright hostility toward many of those responsible for our foreign affairs. (At this point, I would mention one of the brighter aspects of a generally grime setting and pay tribute to my former colleague in the United States Senate and our distinguished Ambassador at Large, John Foster Dulles, for his extraordinary contribution to peace in so successfully directing the formulation of the pending Treaty of Peace with Japan.) The confusion, incompetence, and questionable practices, which so patently exists in certain administrative agencies, have reduced public confidence in the administration and in Government generally. The utter lack of leadership on the part of the President himself and his personal shortcomings, including his unfortunate displays of temper, have still further aggravated the situation. Perhaps, most of all, the abominable manner in which he removed General MacArthur from his Far East commands has contributed substantially to the ever-increasing public indignation toward Mr. Truman.

Recognizing as I do and critical as I am of the faults and weaknesses of the President and his administration, I would be blindly bigoted if I were to condone the prejudiced criticism and fault-finding of those who condemn everything which Mr. Truman does, solely because he is the chief apostle of the New or Fair Deal. I admit that it is difficult to obtain national unity when so large a proportion of the American people are without confidence in their Chief Executive. But the fact remains that Mr. Truman is our Chief Executive and, if the Lord permits, he will remain our Chief Executive for no less than another year and a half; the American people decided this question in 1948. The further fact remains that partisanship and animosity toward Mr. Truman can never justify the divided Nation which they are producing or the aid and comfort to the Kremlin which they are providing.

It is regrettable that the President has so defied the Congress and been so contemptuous of its legitimate prerogatives that considerable ill-feeling toward him has arisen

among its Members. This condition, however, can never excuse the Congress for failing to do its share in its relationship toward him. Angry as many of us may be because of overt acts by the President, we cannot afford to lose our perspective. Only through reason and common sense and rationality can the Nation, in the present circumstances, prepare to meet whatever the future may hold for us.

Call present conditions what we will—peace or war—we must prepare for the worst. And we must have the courage and faith and conviction to continue in this preparation and defense as long as we and the free world are threatened by powerful forces of aggression. Upon our capacity, temporarily at least, to endure genuine privation and sacrifice depends our ultimate survival as a free people.

Never has American character been put to greater test. Never have Americans more needed the help of Almighty God to do the job that must be done.

Duty of Eligible Citizens To Vote in National and Off-Year Elections

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. LANGER. Mr. President, I have in my hand an address on the subject of the duty of eligible citizens to cast their votes in national and off-year elections, delivered by Harry L. Brumond, chairman of the Citizens National Affairs Committee, at the meeting of the executive committee, held at the Waldorf-Astoria Hotel, New York City, on July 23, 1951. It is one of the very finest speeches I have heard on this subject. I ask unanimous consent that I may have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As chairman of the Citizens National Affairs Committee, I wish to outline to you the purposes of the committee and its program for the millions of white-collar and medium-income citizens of this Nation.

First, of prime importance, is to get the average citizen to fulfill his obligations to his Nation, his community, his family, and himself: To exercise his right to vote. Good citizenship means good government. The citizen of today must accept his responsibility to help elect to public office men and women of proven ability, courage, and integrity.

Only 40 to 50 percent of the eligible citizens cast their votes in national and off-year elections. We must stimulate political interest and activity among these millions and make them vote-conscious. People must be stirred to understand they will lose their very freedom if they do not exercise their right to vote.

Good government, economic stability, social security, and well being are made possible only when we, the voters, take time out to do our duty and vote for men and women who are willing to serve as true public servants for the public interest.

The days of the horse car and stagecoach, together with boss-controlled politics, have seen their day. Political racketeer-controlled organizations are on their way to oblivion. Because of the findings of the Senate Crime

Investigating Committee, proving a definite tie between racketeers and politicians, public sentiment throughout the Nation has been aroused—and rightfully so.

What shall the voter do to assist in the election to public office of capable, honest, and efficient public servants?

We, the voters, who are interested in a clean, efficient, progressive Government administration must sacrifice a few minutes of leisure time to study the experience and integrity of candidates seeking public office.

We of the Citizens National Affairs Committee are interested in candidates, regardless of party label, and officials in public office, who pledge themselves to support legislation for a people's program that will benefit the white-collar and medium-income groups, their community, and the Nation as a whole.

This program will include legislation in the public interest for the development of the national defense, food and rent controls, social-security and housing programs, veterans' needs, economic reconstruction and development, foreign policy, appropriate national budget and taxes.

Our most important responsibility is to select candidates who will best carry out our program.

Republicans are not the only ones who can build schools. Democrats are not the only ones who can build hospitals, and Independent-Progressives are not the only ones who can build housing. Any Republican, Democrat, or Independent-Progressive can build all three well only because of his proven qualifications and not because of his party label.

Being willing to accept and support candidates for public office regardless of party label affords a somewhat wider range of selection, but even this, under our present party system, in most parts of the country, limits our selection, because county and State committees of all major parties still select most of the candidates. The best we can hope for at the present time is to select the candidate designated who comes nearest to our expectations regarding fitness, integrity, and courage of conviction to serve all the people for the public good.

The Citizens National Affairs Committee is against the old, antiquated, boss-dominated party designation of candidates because it does not represent the will of the people as to who is a competent and qualified candidate.

In most cases under the present system, a candidate to be eligible for designation must have been a loyal party member and worker and known to his political organization leader as one, not too smart to become independent of party support, and not too illiterate as not to appreciate the choice of the party organization by accepting its dictates regarding patronage and special favors.

Unfortunately this is the type of individual who is willing, anxious, and greedy for public office, to serve you and me, the taxpayer.

In most cases these very individuals are the only ones who will accept the moderate pay, with the hope of being a part of graft and corruption by which they can raise their regular income several times over.

Why do you suppose a candidate running for public office that pays \$5,000 a year will spend \$20,000 to get it? Why do you suppose this candidate will accept campaign contributions ranging from \$500 to \$5,000 from bosses and racketeers, all of whom have some good ideas as to what the cash benefits will be.

It is this very system that keeps qualified, business and professional men and women from entering politics. It is this very thing that keeps politics in the racket class. Under the present system the politician goes to the racketeer for big money to carry on his campaign. If elected, the candidate is subser-

vient to the racketeers and does their bidding at every back and call.

Through the report of the Senate Crime Investigating Committee we know of existing tie-ins with sinister forces all over the Nation. The big question is What are we going to do to correct this system?

It will not be an easy task. But a step forward in the right direction is the following:

Let us adopt the preferential primary system of choosing qualified candidates—a system whereby every American citizen as qualified by law is eligible to seek public office without party selection. The voter alone, on election day, selects the candidate of his choice. This will put an end to the party primary system.

The preferential primary system if adopted by Nation-wide legislation would be a severe blow to all organized, racketeer-controlled politics.

Every man and woman of high moral character, with honesty of purpose and strong courage of conviction could feel free to enter politics with the view of rendering real public service, without being under the domination of organized or corrupt party leadership.

For the voters to hope for this kind of change from a time-worn system means some concentrated effort on the part of each and every one of us—we must give some time and interest to local, State, and National politics, if we are sincere with ourselves that we seek a change.

We must, and this is all-important, select and enthusiastically support those candidates that we feel are interested in our demands for change—we must know how to differentiate between a sincere candidate seeking public office who is in sympathy with our program and principles and who pledges his fearless and honest support, and a boss-controlled organization politician who, like a parrot, quotes the founding fathers and the fundamental principles of our democracy at election time, but after election cynically tears up his campaign speeches and promptly forgets all promises.

There can be no reform until all of us stand firm behind nonpartisan representatives of citizen's interests.

If we desire honest and efficient government we must vote for men and women of high principles, regardless of party label.

Our plan of action is a simple one. It is 100 percent American and it is 100 percent right.

The Citizens National Affairs Committee will recommend for support qualified candidates with high concept of service to the public, responsible to all people, not to any special interest. It will support honest men and women, with minds and hearts rooted in a deep sense of loyalty to the fundamental principles of our democratic society.

The first safeguard of our liberty is the individual American who cares enough about his or her community to give time, thought and energy to being a good citizen. The first duty of a good citizen is to vote.

The Citizens National Affairs Committee pledges, with the enthusiastic support of its many members, to carry on a national campaign to get the American citizen to accept his most important civic responsibility: to exercise his right to vote.

The greatest power in the Nation to make possible good, honest, fearless administration in Government is your vote.

The democratic right to vote is yours, and yours alone—to benefit you and your family.

Vote on election day—vote for the candidate of your choice.

The candidate that may serve you and your country best may be a Republican, a Democrat, an Independent-Progressive, but first, last, and always he will be an honest, capable, and fearless American.

Suspension of Certain Individuals in Loyalty Cases

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated July 16, 1951, from Hiram Bingham, Chairman of the Loyalty Review Board.

I may say that the purpose of inserting this letter in the RECORD at this time is that I wrote the Chairman of the Civil Service Commission some time ago, at the time two State Department employees had been suspended. At that time the Secretary of State said that those two employees were suspended because it was mandatory under the law. I wrote to Chairman Bingham and asked him, if that were true, why there had not been suspensions in other cases in which charges had been filed—specifically in the cases of John Carter Vincent and some 29 others.

In the Chairman's reply he points out that the Secretary of State was mistaken when he said that under the law he—Bingham—was bound to suspend the two men referred to. The Chairman of the Loyalty Review Board rightly points out that the Chairman has no power whatsoever to suspend these individuals, and that only the Secretary of State can do so. It is entirely within his discretion.

For fear that the insertion of my letter to Mr. Bingham may raise a question as to whether or not Mr. Bingham is empowered to take such action, I think his reply should be inserted in the RECORD at this time.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., July 16, 1951.
HON. JOSEPH R. McCARTHY,

United States Senate

DEAR SENATOR McCARTHY: I have your letter of July 13, 1951, wherein you inquire regarding the suspension of individuals who have loyalty cases pending before the State Department's Loyalty Board.

With regard to your specific question inquiring of the Loyalty Review Board why certain individuals whose cases are pending before the Loyalty Security Board of the Department of State have not been suspended, I would like to call your attention to part II, section 4, of Executive Order No. 9835, wherein it states "the head of the employing department or agency may suspend any officer or employee at any time pending a determination with respect to loyalty," and to the provisions of Public Law 733 which state "the Secretary of State . . . may, in his absolute discretion and when deemed necessary in the interest of national security, suspend, without pay, any civilian officer or employee of the Department of State (including the Foreign Service of the United States)" In connection with the provisions of Public Law 733, I wish to call

your attention to part VI, section 3, of Executive Order No. 9835, wherein it is stated "The provisions of this order (Executive Order No. 9835) shall not be applicable to persons summarily removed under the provisions of . . . any . . . statute conferring the power of summary removal."

Article II, section 2, of the Constitution of the United States provides "the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments." Congress has from time to time vested the power of appointment of inferior officers in the heads of departments and agencies. The courts have construed that the power to discharge, which necessarily includes the right to suspend, is inherent in the right of appointment.

Growing out of this constitutional provision, it has always been held, traditionally, that the head of the department is the only person who may suspend or remove a permanent employee from the Federal service. Undoubtedly, the President, by the use of the language set forth in Executive Order No. 9835 as quoted above, and Congress, in giving the agency head authority to suspend under Public Law 733, in his absolute discretion, recognized this traditional principle, which stems from the Constitution.

The regulations and directives of the Loyalty Review Board must recognize that the agency head has exclusive power to suspend an employee. Therefore, the Board has not reserved unto itself the authority to direct the agency head to suspend employees, but has left the matter to his discretion.

Since the Constitution of the United States, Public Law 733, Executive Order No. 9835 and the regulations and directives of the Loyalty Review Board all point to a noninterference with the right of the agency head to suspend in his absolute discretion the Loyalty Review Board cannot answer your specific questions as to why certain persons have not been suspended even though their cases are pending before the Loyalty Security Board of the Department of State.

A copy of Public Law 733 and a copy of Executive Order No. 9835, are attached hereto for your ready reference.

Cordially yours,

HIRAM BINGHAM,
Chairman, Loyalty Review Board

Containment Is Far From Enough

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an unusually interesting article entitled "Containment Is Far From Enough," by Barbara Ward, formerly associate editor of the *London Economist*. By common consent Miss Ward has long been recognized as one of the most thoughtful and objective writers on current economic and political subjects. This latest article merits careful heading and thought by Members of the Senate and the public generally.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTAINMENT IS FAR FROM ENOUGH—CONSTANT TALK OF DEFENSE CAN DEFEAT EVEN OUR MOST LIMITED OBJECTIVES IN THE EAST-WEST STRUGGLE

(By Barbara Ward)

Of one thing can the Western World be perfectly sure. With or without settlement in Korea the hostility of the Soviet world will continue, and will need to be countered and contained. Local settlement, however satisfactory, does not alter the fact of general hostility. A western victory in Greece did not decrease Soviet pressure on Tito. The triumph of the Berlin airlift did not end the machinations of the Communist Party in Western Germany. The sweeping successes of the Marshall plan have not disarmed a single Soviet soldier. Just as British armies in the nineteenth century defended India's northwest frontier through a succession of minor wars and incidents, so the new frontiers of the free world have to be defended through all the major and minor provocations of Soviet power.

It is the essence of containment to recognize—stubbornly and patiently—this extremely unpalatable fact. Yet the supply of patience available to free, outspoken, volatile societies tends to run short—particularly before elections. It is clear that the basic principles of containment are likely to receive some very rough treatment in the months to come. Already leaders in the United States fear a let-down in popular opinion and a revolt against the austerities of a strong defense program. Already in Britain mischievous men of the left are pretending that Britain should draw apart from America lest containment should lead to war. It is difficult to imagine a time when it could be more important to reaffirm unity and staying power in carrying on the policy of containment of Soviet Russia.

The difficulty is that containment has very little to commend it directly. The two chief human instincts today are undoubtedly the hunger for peace and the hope of a better material life. Communist propaganda harps incessantly on both themes. It makes no difference that in Soviet Russia and its satellites, millions of men are under arms and that the whole industrial system is weighted toward the heavy industry needed for armaments and away from consumer goods. Behind the iron curtain the blanket of propaganda covers such facts, and at home and abroad every ruse of diplomacy is used by the Communists to fasten the blame for rearmaments on the imperialist leaders of the west.

"Believe us," say the Communists, "trust us, accept our little Picasso peace dove and you can have peace and rising living standards."

Reason in the western democracies rejects the bait. Reason, remembering the lesson of Munich, accepts the fact that appeasement and capitulation lead not to peace but to war at the worst possible moment.

But the electors are not all reason. They fear war passionately, with its intimations of ever more ghastly weapons. They dislike high prices and shorter supplies. They resent the drafting of young men and the growth of national armies. This is a powerful accumulation of emotional and instinctive distaste. Fears of inflation, a generation under arms, the overhanging threat of destruction—are these the real implications of containment? If so, is reason strong enough to silence the protest of feeling and instinct not only today and tomorrow but for the years during which—if war is to be avoided—the Western World must continue to make containment work?

Here the difficulty is that statesmen today are practically compelled to speak more of defense and armaments than of any other purpose simply because it is in the field of armaments that the Soviet Union has contrived—by the simple expedient of not disarming after 1945—to leave other nations behind. With the single vital exception of atomic warfare the Soviets still hold the initiative in arms. Until the disparity is made good, rearmament must dominate western policy.

Need it, however, so dominate the presentation of western policy? Through long debates in the United States Congress, first on the dispatch of troops to Europe and then over the dismissal of MacArthur, strategy seemed to crowd out everything else. The peaceful purposes of containment and the really new and revolutionary changes in world cooperation which it is bringing about fell into the background.

What the ordinary man and woman today need to feel—in Naples or London, in New York or Hamburg—is that an effective system of defense can be made not much more hampering to the general expansion of western society than the existence of a trained and efficient police force in civilian life, and that the real aims of western society far transcend the negative duty of self-defense. In physical terms, such an affirmation rests on an all-out effort in the next years to expand the whole economic basis of the Western World—to multiply the Nation's capacity to produce, to extend their industrial equipment, to develop their sources of supply, and increase on every side the flood of production.

Such a process of expansion would in itself go some way to meet the claims of less developed areas to have a share in the west's growing economic resources. The physical demands of armed strength cannot be met wholly from existing supplies and sources. The opening up of new materials and new markets in South America for instance, or southeast Asia would draw up under privileged nations in the wake of western advance. Indeed this process is already coming about.

But so much is only the physical foundation. The greater task is to interpret western purposes in political and moral terms by which the mass of people can be captured and inspired. A vast expansion of production cannot be secured without the intimate cooperation of management and labor. Still less can it be achieved without unified strategy between the free nations for the use and development of raw materials, and the use of productive capacity. Thus in two areas of past conflict, western policy is fundamentally committed to unity, cooperation, and mutual respect.

That this is more than words, has already been proved by the fantastic success of the Marshall plan, by the entirely new spirit created in such organizations as the Anglo-American Productivity Council, and by the welcome given by the world to America's point 4 programs or the British Commonwealth's Colombo plan. It is proved all over again each day by every act which substitutes understanding and joint effort between governments for old-style imperialism and exploitation—now virtually to be found only in the Soviet camp.

Yet, this wider vision has slipped out of statesmen's speeches. The man in the street hears every day of the 15 percent of his effort which represents arms. The vision of the other 85 percent that is creating, unnoticed and inarticulate, new relations between men and nations has been allowed to vanish from his mind.

It is true that not everyone in the west is prepared to accept this wider vision of western society. There are, for instance, those who either by impatience or by some funda-

mental lack of confidence in western staying power, deny the possibility of defeating communism peacefully first by ending the disequilibrium in armament and then by building a western society of infinitely greater wealth, scope, and vision than Russia can ever emulate. They argue instead that Russia must be crushed and communism violently destroyed if the west is to survive.

They are few, however. Not many raise their voices for preventive war. Most people are restrained by the prospect of atomic destruction and the doubt whether an atom-devastated world could be the framework of a free and ordered society. The more serious and dangerous critics, therefore, are those who believe that the creation of a great and dynamic international society under American leadership, strong enough to discourage attack and attractive enough to undermine Communist pretensions, is simply beyond the power of the United States and its allies to achieve.

Basically, such men—whether in the United States or in Europe or in India—advocate retreat and withdrawal. In America, it is called isolationism, in Europe, defeatism, in Asia, neutrality.

It is at this point that western weakness in face of Communist ambition seems most naked and pitiful. Whoever heard the men in the Kremlin doubt their capacity to recreate the face of the earth? When did a Communist leader petulantly declare: "This task is beyond our capacity." What local satellite has hinted that he would like to expand or intervene or lead or manage but unhappily his resources do not run to it?

Yet, resources are as nothing compared with the will to use them. In 1939, the west's resources infinitely outmatched Hitler's, but the dictator had his own crazy view of a Nazi world order, and in spite of all the west's potential power, came within an ace of achieving it. To believe a task is impossible, is the first step toward making it so. The isolationists, the neutralists, and the defeatists are all, in fact, saying: "Stalin can do the job but we cannot." This surely is the ultimate betrayal.

It is one of the ironies of history that this attitude of incapacity should have appeared at all in the United States, a nation which is above all geared to the achievement of the impossible. It is not a wild-eyed idealist but a man of sober judgment and a great industrialist, Defense Mobilizer Charles E. Wilson, who recently told the American people that within a short space of time production of steel and aluminum could be expanded so that the supplies available for the civilian economy would be as great as in 1950, a year of peak production. His judgment is simply based on experience—the experience of America's miracle of production when, between 1940 and 1944, it doubled the size of its economy, and again, between 1947 and 1950, when it increased Western Europe's war-devastated economy to a level 148 percent higher than it was in 1938.

These are not dreams, but facts. The trouble in the free world today is that its facts and its resources tend to be greater than its vision and its dream. It would be a most extraordinary paradox in this crisis of western history if vision were, in fact, to fall short of capacity. If one thing is more true than anything else of the men who created and built up the Atlantic community it is that hitherto their vision has always determined the use they have made of their resources—often very narrow resources.

The handful of men who crossed the Atlantic to New England, the settlers who conquered a continent in their covered wagons, the men who fought and died in two great wars to prevent the extinction of freedom, the statesmen who evolved and the men and women who supported such tremendous

ventures as the Marshall plan—for all these generations, faith has grown with responsibility and then the resources have been found for the work.

Today, the challenge is beyond the continental scale. It is world-wide and it covers every aspect of man's relations with his fellow men. By the mercy of providence, it comes at a time when the grasp of the Western Powers under American leadership, of technical procedures, productive processes and scientific advance have developed so tremendously that a world-wide responsibility is not beyond their physical capacity. The only doubt is whether they have the necessary political and moral stature.

This is the real issue before western statesmanship today. If the task of the Western World is pitched too low, if the talk is all of defense and not of production, of containment and not of creation, of armies and not of a peaceful dynamic world, the limited task of containment itself cannot succeed. But if passivity, neutralism and retreatism are left behind, and the aims of expansion, production, unity and brotherhood are affirmed in their place, western resources will, as they always have, suffice. Today's crisis is not at heart a crisis of physical strength. Fundamentally, it is a crisis of vision and of faith.

Anti-Semitism in the Soviet Union

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Anti-Semitism in the Soviet Union," by Victor Lasky, published in the National Jewish Monthly for June 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANTI-SEMITISM IN THE SOVIET UNION—STALIN USES JEWS AS SCAPEGOATS TO DIVERT WEALTH FROM HIS REGIME

(By Victor Lasky)

Suppose for the sake of argument, that Congress suddenly passed legislation forbidding American Jews to write to relatives in other lands. Suppose, also, that the FBI began arresting Zionist leaders and hurling them, without trial, into dungeons. Suppose that the State Department refused permission to American Jews to visit Israel. And suppose that American newspapers were all controlled by the Government and suddenly began denouncing Bernard Baruch, Irving Berlin, David Dubinsky, Louis B. Mayer, Rudolph Halley, Irving H. Kaufman, David Lawrence, Walter Winchell, and George Sokolsky as "homeless cosmopolitans, people without kith and kin, tribeless bastards, rabbits, passportless wanderers."

Would—or could—there be any honest doubts that official anti-Semitism had come to America?

Yet these suppositions are brutal realities for the estimated 2,000,000 Jews in Soviet Russia. Arrests of Jewish leaders on such fantastic charges as "cosmopolitanism"; disappearances of numerous Jewish artists, writers, and intellectuals; the destruction of Jewish organizations; the abolition of the sole remaining Yiddish-language newspaper—all these can lead to but one tragic

conclusion: that the Kremlin is conducting an all-out campaign to wipe out Jewish culture.

But apologists for the Red Utopia (most of whom stomach even the Soviet-Nazi pact) insist that this is not really anti-Semitism. Unfortunately, too many otherwise knowledgeable liberals maintain that, even if there's much that's deplorable about the U. S. S. R., anti-Semitism is impossible there. Why? Because it's forbidden by the Constitution. By the same logic the U. S. S. R. is the world's greatest democracy. That, too, is written in the Soviet Constitution. By this juridical cretinism the Soviet myth-makers have been able to fool some people into believing that national and racial prejudices have been wiped away by the Bolsheviks. Only recently, for example, a book reviewer in a great metropolitan daily could state, as casually as if it was a fixed law in physics, that "racial prejudice has no place in the Soviet Union." Ironically, the twisted mentalities making up the Fascist crackpot movements also insist there's no anti-Semitism in Russia. Otherwise, how can the Gerald L. K. Smiths and the Upton Closes continue their refrain that "all Jews are communists" and "Russia is being enslaved by the Jews."

But, if we are to judge from past reactions to Soviet events, it will take considerable time before the outside world believes there is really anti-Semitism in Russia. Mass awareness has always come too late. When man-made famine stalked Russia in the early thirties, few people believed the reports that millions of Russian peasants had perished. Such reports, the liberals thought, were inspired by the reactionaries to discredit the young Socialist state. By the time the non-Communist world learned the bitter truths about Stalin's monumental boner in attempting forcibly to collectivize the farms, there was no way to aid the victims. The same thing occurred with the purges which went on consistently in the twenties and thirties.

JEWIS ARE ISOLATED

This time the victims are Jews. And the deadly time lag between the event and the realization is dooming the Russian Jewish community to isolated suffering. Instead of world-wide indignation, the Jewish victims of the new Soviet terror can count only on apathy, for the most part. Perhaps when the present victims of Soviet tyranny are beyond our reach, there will be considerable indignation and protest—but then it will be entirely too late.

For anti-Semitism in Russia is now in the stage of violence. For the first time in Soviet history, Jews are being menaced physically. And the shocker is that Stalin is not doing anything to prevent violence against them. Outbreaks against Jews are regular occurrences in many parts of Russia, particularly the Ukraine. According to reliable reports reaching the West, summarized recently by J. L. Teller in the *Christian Science Monitor*, "even more disturbing . . . have been assaults on individual Jews in such large cities as Moscow, with its 300,000 Jews, and Odessa, with its 100,000 Jews. Soviet officials are reported reliably to have shown indifference to the complaints of the Jewish victims and to have taken no steps to curb the mounting frequency of these incidents, notwithstanding the formal ban on anti-Semitism in the Soviet Constitution."

The tragedy is that there is still speculation as to whether anti-Semitism exists in the Soviet paradise. As early as 1947, *Newsweek*, in what was far from the first report, had already informed the American public that "an unpublicized but nevertheless effective anti-Jewish policy which was first adopted by the Soviet Government at the time of the Soviet-Nazi pact . . . has now been revived as a corollary to the Soviet antiwestern campaign."

V. M. Molotov had already stated, in announcing the Soviet-Nazi pact, that fascism was "a matter of taste." Nevertheless, the *Newsweek* story was startling. Not that the Jews in the Soviet Union ever led a better existence than other sections of the population. They suffered equally with the others. But here was something new. The Jews were being singled out for special repressions. Not a crack down on Jews because they were bourgeois or Kulaks, but a crack down on Jews as Jews—the classic name for which is anti-Semitism.

The bare bones of the *Newsweek* story have since been given documentary flesh. Before me, as I write, is a small mountain of tragic material—material which makes a newspaperman lose his customary professional restraint, particularly if the newspaperman happens to be Jewish. There are newspaper reports by Drew Middleton, Cyrus Sulzberger, Edmund Stevens, and other well-known correspondents, as well as scholarly studies on different aspects of the plight of Soviet Jewry by such noted scholars as Solomon Schwarz, Jacob Lestchinsky, and Harry Schwarz. There are studies by the American Jewish Committee and the recent documentation of the Jewish Labor Committee, which urged the United Nations to undertake a thorough investigation into the practices of the Soviet Union in the treatment of minorities and especially the pogrom that is being executed against the Jewish people. Note the use of the dread word "pogrom."

To deal properly with this testimony would take an entire issue of this magazine. Let us content ourselves with a few incontrovertible reports.

Pulitzer prize-winning correspondent Edmund Stevens, of the *Christian Science Monitor*, who left Moscow in the fall of 1949, has reported: "Even more drastic was the systematic campaign to eliminate Jews from posts of responsibility and especially from positions involving contact with the outside world. In a matter of weeks (in the winter of 1948-49) all Jews serving with the Soviet occupation administrations in Germany and Austria were recalled. No more Jews were included on foreign missions and delegations. Today Jews are not even admitted to the special school that trains personnel for the Soviet foreign service. The same restrictions apply to the Ministry of Foreign Trade."

EXPOSED SELVES IN 1949

In 1949 the masters of the Kremlin revealed their anti-Semitism to the world. They opened fire on Russian Jews under the obscene battle cry of "war against the homeless cosmopolitans"—words right out of the Nazi lexicon. Then they took another lesson out of Dr. Goebbels' master study of how to torment Jews. The Soviet press began to print, in parentheses, the original Jewish names of the cosmopolitans, along with the Russian pseudonyms under which they were known to the public.

That this is a brand-new practice aimed solely at the Jews was denied by a writer for the left-wing *Daily Compass*, of New York, who declared: "It is regular Soviet practice to print both the pen name and the family name of authors when they are mentioned in connection with any official or state matter." But, the *Daily Compass* notwithstanding, the Soviet press has yet to print the real names of Stalin or Molotov (Djugashvili and Scriabin) or of any other non-Jew. Still aping the foul Nazi press, the Soviet publications went the whole hog—publishing cartoons of the cosmopolitans which, according to Edmund Stevens, "depicted them with Faginlike profiles and the public got the point."

EHRENBURG: AN EXCEPTION

Only one Jewish writer of prominence managed to come through this period of anti-Semitic upheaval with his hide and

huge income intact. But Ilya Ehrenberg was a Jew in name only and one of the most slavish adherents of the Stalinist regime. Ehrenberg apparently won his way back to favor by publicly insulting Mrs. Golda Myerson, the first Israeli minister to the U. S. S. R. at a diplomatic reception. Within hearing of such foreign dignitaries as Lt. Gen. Walter Bedell Smith, then the United States Ambassador in Moscow, Ehrenberg said loudly: "I can't bear to hear English, especially when spoken by a Russian-born Jewess."

According to General Smith, in his book, *My 3 Years in Moscow*, a few Jews like Ehrenberg who hold high positions in the Soviet hierarchy "are always pointed to by the Kremlin to refute any implication of anti-Semitism. But during the past decade it seems that Jews have systematically been removed from influential positions in the Soviet Government and the diplomatic and armed services." He added this significant detail: "From the foreign office alone, while I was in Moscow (1946-49), Litvinov, Lozovsky, Maisky and less important but almost equally able Jewish officials were relieved or relegated to retirement or to positions of less importance."

It might be well to ask any Communist: Can you name any Jewish official in any Soviet mission abroad? Or ask the comrade to cite a single—only one—Yiddish publication in the vast Stalinist empire. Ironically, not even the *Freiheit*, the Yiddish Red daily published in New York, is permitted to circulate in Russia. Yet publications in languages of other Soviet nationalities are allowed to flourish.

Even the Soviet satellites are picking up the refrain. The Hungarian radio, in a broadcast which sounded very much like the unlamented Goebbels, recently attacked the international Jewish bourgeoisie and the international Jewish speculators who cooperate with the West German Government. And the Communists of the world are now bitterly assailing the new Israeli Government. Moscow radio accused Prime Minister David Ben-Gurion of cooperating with the Nazi clique of Western Germany in order to prepare a new slaughter of the Jews.

But why go on? At this late date the problem is not to "prove" that anti-Semitism in Russia is government policy. Only those who refuse to see will deny the facts. The question, as it was with Hitler, is: What can we do to save our Jewish brothers?

In order to do this we must try to understand the whys of Soviet anti-Semitism. It must be understood that the Soviet regime is completely amoral—capable of anything which would preserve the iron-tight Stalinist dictatorship. That is why the past three decades have been the graveyard of all hopes anyone had ever entertained about the U. S. S. R. (a monumental work on this subject is Julien Steinberg's *Verdict of Three Decades*).

The new Soviet anti-Semitism is an invocation of the scapegoat technique, which served Hitler so well. The Jews have always been useful villains. On their shoulders can be placed all the faults of the dictatorial regime. Even before World War II, anti-Semitism had been widespread in the Soviet Union. The tragic extent was disclosed by the Nazi invasion, when the conquerors were greeted as liberators by millions of Russians. And, according to Solomon Schwarz, of all the ideological nonsense brought into the occupied Russian areas by the Nazis, only Jew hatred met with staggering success.

"When the war ended," the noted former Moscow correspondent, Eugene Lyons, wrote in the *Freeman*, "the Kremlin apparently decided to accept and exploit the malicious force it had been unable to curb or control."

Having failed to achieve unity with the people on the higher levels of loyalty to the regime or Communist ideology, it now sought identification with the masses on the lowest level of their primitive prejudices. In a perverted fashion Stalin chose to come closer to his subjects by pandering to one of their worst moods. * * * It could be turned into a convenient lightning rod to draw at least part of the mass discontent away from the Soviet masters * * *"

Another factor making for the new anti-Semitism is the rise of Israel. The birth of the new Jewish State was greeted with joy by the Jews of Russia, as by their brethren everywhere. But Zionism—even the teaching of the Hebrew language—has long been forbidden by the Soviet regime. And in the U. S. S. R., enthusiasm for any other nation leads to grim repercussions. The un-Soviet behavior of the Russian Jews (who flocked to the new Israel Embassy in Moscow to seek visas to the Promised Land, but were forbidden to leave) whipped the Politburo to Nazi-like intensity in carrying out its already established anti-Semitic program.

Twice in our time the Jews have been the victims of mighty dictatorships. We had no trouble in understanding the tragedy in the first instance. How long before the world understands the second?

Revision of the Italian Treaty

EXTENSION OF REMARKS

OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Italian Treaty Revision," published in the Evening Bulletin, of Providence, R. I., on July 23, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ITALIAN TREATY REVISION

It is patently unjust and, under present world circumstances, unrealistic to hold Italy to a peace treaty made 5 years ago when Japan is to be treated benevolently and Western Germany will receive tender handling.

Italy certainly has worked her way back into the comity of free states. She became a cobelligent of the Alien Powers in 1943 with the fall of fascism. She has disavowed the monarchy and set up a republican form of government. She is a member of the North Atlantic Treaty Organization. She has resisted the internal pressure of Italian communism to take over political control.

The United States, at the time of negotiations, did not want to impose onerous burdens or restrictions upon Italy. We went along under two assumptions: (1) That with the Italian treaty finished the Austrian and German treaties would follow speedily; (2) that Italy would be admitted to the United Nations and, through a clause in the peace treaty, rectifications of the treaty would be possible.

These assumptions have been proved invalid. Russia has refused to conclude the Austrian treaty, whose principal terms have been settled, and has balked every attempt to draw a German treaty. Four times Russia has vetoed Italy's application for membership in the United Nations.

With Italy's fine record and the radical change in circumstances since the signing of the Italian treaty, the time has come to forget legalistic arguments and approach revision on the facts in the case.

It is a contradiction for the United States to supply Italy with arms and military material for the strengthening of western defense and yet hold her standing army to the peace-treaty limitations of under 300,000 men. It is economic nonsense to expect Italy to pay reparations to Russia and war claims to others when the United States is pouring in millions to keep Italy a going concern. It is the reduction to the absurd for Italy to turn over war vessels to Russia and then have the United States give Italy war vessels.

While the three western powers continue to hold Italy to the letter of the treaty lest the Soviet Union use revision for propaganda and diplomatic exploitation, Russia has reduced the treaties with Hungary, Bulgaria, and Rumania, which the western nations signed, to scraps of paper by rearming the satellites.

The movement in the United States Congress to bring the Italian treaty in relation to the realities reflects the sentiment of the American people. But it would not be sound policy and it would be unwise for the United States to act unilaterally. President Truman wrote to Secretary of State Marshall on May 6, 1947, when opposition developed in the Senate to ratifying the Italian treaty: "It would be a heavy blow to our country's leadership in world affairs should we unilaterally withhold approval of the treaty." That same unilateral argument is good today when revision is the issue.

We should adopt the same procedure toward Italian treaty revision that we did with the Japanese treaty—that is, secure consent from Britain and France through diplomatic channels and put revision on a multilateral basis. Russia will howl, of course, but the demands of simple justice to Italy cry more loudly.

Open Mind on McCarthy

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. BUTLER of Maryland. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Open Mind on McCarthy," by Bill Cunningham, published in the Boston Herald of July 17, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OPEN MIND ON MCCARTHY—RIGHT OR WRONG, SENATOR IS A TWO-FISTED FIGHTER

(By Bill Cunningham)

I expect to go to Washington later in the week, more on pleasure than business, and it's entirely possible that at the place I'm going I shall meet the famous—or notorious, depending on who's talking—Senator JOSEPH MCCARTHY, of Wisconsin. That happened the last time I was there and I was somewhat amazed to discover he didn't wear horns, slug his fellow guests with a blackjack, nor monopolize the conversation with abuse of Dean Acheson.

I'm reminded of this because practically the only unfinished business in this steamfitter office here at midsummer, with the dog

days apanting, are letters to the number of a score or so trying to get me on record for or against the controversial gentleman from Wisconsin. I refuse to get—one way or the other. The truth is I just don't know.

I can't go along with anybody who makes charges without proving them. Yet, what is proof and what's the time limit on it? Proof or vice versa, of his main contention is locked in the State Department files and protected by the Presidential order not to deliver. Still, what of this new development, with two key figures suspended by the loyalty board and some 26 others apparently likewise fingered for reexamination? Is that heading toward proof?

IMMUNITY BUSINESS NOT RELISHED

I don't like this "immunity" business—direct character attack from the privileged sanctuary of the Senatorial floor, where nothing said can be held legally against the say-er. That seems too much like hitting a man when his hands are tied, and still I'm wondering if I wouldn't do the same thing in a kill-devil fight, especially if I were a fighter of the type of Senator MCCARTHY.

That last possibly can stand a little explaining. I think MCCARTHY, right or wrong, is an all-ways fighter. Temperamentally, he's of the type of the last of the old Southwest I saw as a kid. When you jump him, or he jumps you, it's a fight to the death and there are no rules. He'll fight you fair. He'll fight you foul. Or he'll fight you fair and foul. The main idea is that only one man is going to be able to walk away when it is over.

As I understand the MCCARTHY story, he was a freshman Senator, a bachelor, and with time on his hands when the Republican senatorial veterans asked in routine fashion who of the general brotherhood would be available to make Lincoln Day speeches over the country where these annual affairs would be held. Considering it a call to duty, he sent in his name.

Since his name didn't mean much, they gave him a couple of second-class dates, one out in his own district, the other somewhere in West Virginia. The big shots, naturally, knocked off the big ones for themselves—New York, Chicago, Boston, and so forth, where they'd get their names in the big city papers. Almost like the celebrated Carl Moore song, "Nobody knew what happened to McCarthy," rather what was happening with McCarthy.

ADVICE OF WARM FRIENDS SOUGHT

MCCARTHY, however, taking his assignment seriously, went to some of the members of the faculty of one of the colleges in Washington—warm friends of his, as I understand it, from his days in the service. He discussed the assignment with them and asked their advice on a subject. They told him they didn't see how he could do better than to attack communism.

That corresponded with his own ideas, so he instructed his secretary to procure sufficient source material for an address on the evils of that great conspiracy. The story goes that the secretary then went to several Washington writers of various categories who specialized in the subject. These were delighted to hand over their files.

Those who consider this all to have been a terrible thing maintain the trouble was that these files contained a conglomeration of material, some of it authentic, some hearsay, some nothing but rumor. They charge MCCARTHY was either too naive or too headline-hungry to differentiate.

In any event, he let go first in Wisconsin. He had no particular coverage of the national sort. The big shots had hogged that, but by the time he got around to repeating his suddenly sensational charges against the State Department in West Virginia, the delayed-action report had boomed out of Wisconsin and every ear was tuned to that little

West Virginia radio station that aired the repeat.

Suddenly, the Republicans had won themselves something. They didn't know what, nor just what to do with it. Action was swift and sensational. A congressional hearing was ordered (the Tydings committee). The young man was going to need money to set up his side of the case. I know the Senator who started calling the somewhat startled faithful. He managed to get \$3,000, which he turned over to McCARTHY for investigators, extra secretarial help and so on, and he told McCARTHY he was afraid that was all he could get.

COMING ELECTION TO TELL STORY

It was to develop, however, that the young man wouldn't need any more. Contributions, with no strings attached, started pouring in on him voluntarily, and although certain of his colleagues began to decry and denounce him, they dried up fast when it swiftly developed that a great ground swell from the grass roots was pro-McCARTHY and wanted to hear more.

That's how it began. The rest of the saga is well enough known. McCARTHY may be riding to a terrific fall. That fall may come with failure to be reelected next year. Every effort will be made to beat him, and if he is defeated, that may be the end of him. If he wins . . . ?

Right or wrong, don't make the mistake of discounting his courage. These new efforts to discredit his war record are strictly the bunk. He had the war record, all right, as a captain of Marines. He did not quit at the height of the war, as charged. He was invalidated home with a broken and burned foot and leg, and before he was well the war was over. That red-card business is more of the same. Every Senator and Representative who's a Reserve officer has exactly the same card in his file, following a Defense Department ruling that as of now, they're of more value in Washington than they would be with troops.

My mind is open on Senator McCARTHY. It does look as if he's been guilty of some terrible things, but were any of them as guilty as Yalta? Let's wait and see what the harvest is. Somebody or something—maybe McCARTHY—deserves to be reaped before very much longer.

Proposed United Nations Covenant on Human Rights

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bricker's Warning," published in the Charlotte (N. C.) Observer of July 21, 1951. I discussed this subject on the floor of the Senate last week.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRICKER'S WARNING

The Senate should favorably consider the resolution of Senator JOHN W. BRICKER expressing disapproval of the proposed United Nations Covenant on Human Rights, which he has denounced as a "blueprint for tyranny" aimed at stifling criticism of the Fair Deal through Government control of the press.

He said the covenant had been drafted under the immediate direction of Mrs. Eleanor Roosevelt and he called upon Secretary Acheson to instruct her, as the United States delegate on the U. N. Commission on Human Rights, to renounce this blueprint for tyranny or accept the consequences for sponsoring it.

Although he predicted the covenant never would be ratified, he said adoption of his resolution would minimize the undeniable embarrassment of treaty rejection.

Senator BRICKER did well to warn that the proposed covenant would make the press subject to certain penalties, as he said Secretary Acheson must realize, and that this would radically change the meaning of the Constitution by abrogating its guarantee of the freedom of the press and allow the Government to crack down on newspaper critics.

The Ohio Senator is not a newspaperman but a lawyer. It is therefore the more significant that he charged that the international-do-gooders and the State Department are pushing this Covenant on Human Rights toward ratification because it is an ingenious mechanism designed to stifle all criticism of the Fair Deal.

"In this country," he said, "the State Department is moving to destroy the freedom of the newspapers by using the United Nations as a shield for its activities."

Senator BRICKER has rendered a valuable public service by sharply warning against the proposed United Nations Covenant on Human Rights.

Hon. Joseph R. McCarthy, of Wisconsin

EXTENSION OF REMARKS OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 24, 1951

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD various editorials commending the Senator from Wisconsin [Mr. McCARTHY]. They are taken from the Chilton (Wis.) Times-Journal, of July 12, 1951; the Wisconsin State Journal, of July 20, 1951; the Doylestown (Pa.) Daily Intelligencer; the New Bedford (Mass.) Standard-Times; the Marshfield (Wis.) News-Herald; and the Parkersburg (W. Va.) News.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chilton (Wis.) Times-Journal of July 12, 1951]

CONVENTION WHOOPS IT UP FOR McCARTHYISM

It is to the everlasting credit of the delegates to the State convention of the Republican voluntary committee at Wisconsin Rapids last Saturday that they went on record in overwhelming numbers in support of a resolution lauding Senator McCARTHY's fight against Communists in Government.

There is a small but highly vocal group of politicians in the State who are eagerly intent on disparaging McCARTHY. They want to make him out to be an irresponsible man whose conduct and actions transgress reason and principles. They are afraid of him, actually. They accuse him of smearing reputations and then use the tactic they exorcise to smear him. They don't attempt to answer his charges. They just stuff them

off by calling what he does and says "McCarthyism," and by insinuating that the term has the meaning of aathema.

Recently Senator McCARTHY prepared a highly documented survey of United States foreign policy in the Far East since Yalta. In the development of his thesis he quotes liberally from books and speeches by such people as Winston Churchill, Admiral William Leahy, Henry L. Stimson, James F. Byrnes, Sumner Welles, Robert Sherwood, Hanson Baldwin, Gen. H. H. Arnold, Gen. Claire Chennault, and many others. He quotes also at considerable length from the white paper prepared by Secretary Acheson and his State Department to paint a black picture of Chiang Kai-shek and his followers in China.

The documented record tells in detail the part Secretary Acheson and Gen. George C. Marshall played in the events that led up to the loss of China to the Communists. The record is very far from a flattering account of the statesmanship of the two men who were most responsible for what has occurred. We haven't seen any effort on the part of McCARTHY critics to question the accuracy of the data he presents. They resent any impugnement of the record of the great Gen. George C. Marshall but don't point out in what detail McCARTHY is wrong in attributing to him a major share of the blame for the loss of China to the Reds. They charge "McCarthyism" and hope that the people will just take it to be the irresponsible mouthing of an irresponsible Senator. The delegates to the Wisconsin Rapids meeting didn't fall for that kind of smear.

A favorite contention of the critics of McCARTHY is that he has made charges but has not proved them. The American people who read the newspapers know how hard it is to prove charges against a member of the Government whom the Government is bent on protecting. Facts implicating Alger Hiss as aiding the Russians were given to an assistant to the President early in World War II. They were laughed off as is McCarthyism now. Hiss was kept on to play an important role in the establishment of the United Nations, to advise the President at Yalta after that occurred. The charges against him were called a red herring by President Truman and it was not until about 10 years later that Hiss was convicted. The story is much the same in the case of William W. Remington, a \$10,000-a-year Commerce Department employee. He was investigated and let out of his job and taken back. Years passed before he finally was convicted of lying when he denied that he ever had been a Communist. It isn't easy to convict a traitor when he has powerful friends in Government to protect him.

Clear evidence that our State Department leaned to the Communist side is to be found in the fact that such thoroughly informed and thoroughly American men as General MacArthur and General Wedemeyer were never consulted about the formulation of far-eastern policy. That fact alone renders our policy makers suspect.

Then we have the spectacle of a Secretary of State who won't turn his back on a convicted traitor who played an important part in concocting the mess our country now is in.

And the final and most convincing evidence of all that there has been something rotten in our Government is the fact that China—a nation of 450,000,000 people, bound to the United States by 100 years of friendly relations, a fighting ally in World War II—became in the space of a few years a ruthless shooting enemy. That is the payoff of the work of our far-eastern policy makers. By their fruits you shall know them.

Senator McCARTHY is accused of being indiscreet, of evidencing more zeal than discretion. There may be justification for the charge. The same may be said of every

American hero who has been awarded the Congressional Medal of Honor for deeds of valor in the Korean war. Every man of them showed more zeal for achieving an objective than discretion to save his own life. Of the 27 men so far awarded the medal, only 7 survived the heroic actions for which the awards were made.

The American people know there have been Communists in our Government from the records of convictions and confessions. They know there are in it "liberals" who do the work of Communists. They admire McCarthy for braving the criticism and scorn to do a job that he—and they—believe should be done.

[From the Madison (Wis.) State Journal of July 20, 1951]

QUESTIONS FOR QUESTIONERS

Some Democrats in these parts wanted to know what Gov. Walter Kohler thought of "McCarthyism." The governor told them, and at the same time asked some questions of his Democratic inquisitors.

We are sure all citizens of Wisconsin would like to hear Badger defenders of the Fair Deal discuss these points:

Do Democrats contend there never have been and are not now Communists, fellow-travelers, or sex perverts and other poor security risks on the Federal payroll, in strategic places?

Do Democrats believe the Communists-in-Government charges brought by Senator McCarthy were given a full and fair hearing by the Tydings committee?

Do Democrats care to defend Secretary of State Acheson, who has refused to turn his back on Alger Hiss, a convicted traitor?

Do Democrats care to defend "Trumanism," with its mink coats, deep freezes, RFC scandals, Missouri vote frauds, and "Government by crony?"

The governor admits he is flatly opposed to the infiltration of Communists into our Government. How stand his Democratic questioners, on this and other issues mentioned by Walter Kohler?

[From the Doylestown (Pa.) Daily Intelligencer]

THE SMEAR TECHNIQUE

No single episode more clearly reveals the extent to which the American people have mislaid the power of self-government than does the current discussion over the indictment of General Marshall by Senator Joe McCarthy.

The whole business is like a bad dream. Only in a world gone completely cockeyed could anything of the sort take place.

Here is a member of the younger generation, one of the men who fought it out, risking their lives a thousand times during the recent war, trying to save the American people and their Government from the dictators of the earth.

He came home. He campaigned against the La Follette dynasty in Wisconsin and defeated the gaudiest of that family in a stirring campaign. When he went to Washington he discovered that this Nation is in far more danger from its enemies within than from those outside our borders—found that it has nursed vipers in its bosom.

Joe McCarthy took on the biggest of the big shots in the group that has been busily selling us down the river for years, giving away our assets and betraying our friends in order that the evil red star of Russian communism might rise in the sky.

Senator McCarthy dealt in facts. He followed his conclusions where the facts led him. Gradually he came to discover that the kingpin in the machine which had stripped us of all the advantages we should have gained from the costly victory in the Second World War was Gen. George Catlett Marshall.

As we said, Joe McCarthy dealt primarily in facts. They were unanswerable facts. No one has yet demolished them. His critics, the defenders of the Truman administration and of the gilded reputation of General Marshall, have never seriously tried to reply to these facts.

Instead, the marine hero sent to Washington to represent the supposed owners of our National Government, the American people, has been given the most gigantic and best organized course in personal abuse ever known in American history.

This is the smear technique. It is the device of dictators and demagogues. It is the enemy of truth.

On the few occasions when anyone ventured to enter open debate with McCarthy they got hopelessly the worst of it. That is what happened to former Senator Tydings of Maryland.

Now a new chapter has unfolded.

Senator McCarthy recently finished a gigantic new job of factual research. Having been accused of bias in reference to Marshall, having been accused of carelessness in giving credence to unreliable witnesses, he undertook to tell the story of Marshall's record out of the writings of unimpeachable figures—most of them personal friends and admirers of Marshall.

He analyzed the works of Winston Churchill, Cordell Hull, Henry L. Stimson, James F. Byrnes, Sumner Welles, Edward Stettinius, Robert Sherwood ("Roosevelt and Hopkins") and a host of others of similar standing, and went through reams of official documents and sworn testimony.

The fruits of this research he presented to the United States Senate in the form of an address entitled "America's Retreat from Victory—The Story of George Catlett Marshall."

The transcript covers 48 large pages. In it, very little is in the words of Senator McCarthy, virtually all is quoted from others—as noted, many of them—Marshall's friends.

To anyone who reads it seriously and with an open mind, its impact is devastating. It is unanswerable. McCarthy's strictures are irrefutable. He is right as rain, on down to the solemn warning near the end:

"The Congress of the United States is the people's last hope, a free and open forum of the people's representatives . . ."

But who will read it?

The tragic truth is that very few will ever see copies of the manuscript—far fewer will ever read it through. How the American people have slipped and slid. Back in the early days, when our Constitution was being ratified, it was studied and discussed throughout the Nation. The "Federalist Papers" analyzing it were eagerly passed from hand to hand. Nearly every American had an opinion of some sort, founded upon factual knowledge and information.

Now we're too busy to be bothered in a matter even more urgent.

And the reply; It is nothing more than a renewed smear. Hardly any of Senator McCarthy's opponents have bothered to read what he says. Many of them brazenly accuse him of saying things not contained in the address. The whole reliance is on personal abuse.

There is the picture—a factual serious analysis, based almost entirely on quotations from men of the highest standing, being torn to pieces by those who have not read it and are not replying to what it contains—and the jury in the case, who will also be the victims in the threatening tragedy, too much entertained with trivial interests to go to the bottom of the matter.

[From the New Bedford (Mass.) Standard-Times of July 16, 1951]

WHITEWASH WEARS OFF

The whitewash the Tydings committee applied to the State Department loyalty in-

vestigation last summer is beginning to peel. It has been confirmed that an undisclosed number of State Department officials have been suspended pending a check on their security status.

Only two of the suspended group were identified, their names having leaked already. Both are specialists and influential in China policy. Another far eastern expert in the Department, John Carter Vincent, recently was demoted from a ministerial post to a consulate in north Africa. Loss of China to the Communists has been called by General MacArthur the greatest diplomatic blunder in United States history.

The security screening has been slow to start. An explanation might be the disclosures of the MacArthur hearings, or it might be, as Senator McCarthy says, that the State Department is afraid of the newly created Internal Security Subcommittee headed by the outspoken Senator McCarran. The latter was instrumental in obtaining passage of a tightened security law last year, under which Federal employees may be dismissed if there is reasonable doubt of their loyalty.

The Security Subcommittee currently is investigating charges that Communist sympathizers have been slanting Voice of America broadcasts, but is preparing to delve into pre-Korea Far East policy.

Probably the most effective influence, however, has been that of Senator McCarthy, himself. He invited Department attention to several of those suspended more than a year ago. Developments since have emphasized the absurdity of calling his charges a hoax, as did former Senator Tydings and his committee colleagues, Senators Green, of Rhode Island, and McMahon, of Connecticut.

Senator McCarthy declared he had to overstate his case initially in order to arouse public opinion. Certainly nothing less than shock treatment could move the State Department from its naive insistence that all was well. Developments come slowly but they attest the service Senator McCarthy performed for the American people.

[From the Marshfield (Wis.) News-Herald of July 20, 1951]

BACK OF IT ALL

The failure of the Tydings committee last year to provide for a full and open investigation into the charges of Communist influences within the State Department and the committee's obvious desire to smother the whole situation, continues to plague the Democratic Party.

And the plague is just as aggravating to party leaders and followers today as it was when the charges first were made. Senator McCarthy has become a half-shirt to the Democrats. He has a mean, brusque manner to needling the party, from President Truman down. He continues to employ the needle with telling effect. Democrats have coined the word, McCarthyism, in an effort to bottle him up and all who go along with the Senator. But it just isn't effective. Joe still goes on.

And well he might. His accusations have never been disproved. On the contrary, evidence continues to build up supporting his claims that the State Department is infiltrated with Communists or Red sympathizers. Just last week a half dozen or more high placed employees in the Department were suspended by Secretary Acheson who said nothing about his official act until the news was smoked out by newsmen.

This newspaper has, on numerous occasions, voiced its disapproval of Senator McCarthy's methods, but we have had to confess that until some one in or out of the State Department comes forth with all the facts and proves beyond the shadow of a doubt that McCarthy is wrong, and that his charges are unfounded, we must go along

with the junior Senator. Why did the Tydings committee smother the investigation into those charges? Why, if they are unfounded, does not Dean Acheson come forth with the proof? A simple statement, backed up by adequate proof, would serve to silence Joe McCarthy for the rest of his life.

Wisconsin people have watched their junior Senator pretty carefully. Voters of this State like a fighter and consequently they admire McCarthy. But they would drop him like a hot potato if proof were furnished that he is making false accusations. He would be a dead duck politically.

It is amusing to note the efforts of Democrats in the State to kill McCarthy off politically. He has had a tough time with the opposition since starting his campaign against the State Department. He has been smeared and belittled. Even in his own party, many leaders have remained aloof, fearing to be injured politically if his charges were proved unfounded. The word "McCarthyism" was invented as a smear word.

Recently, efforts have been made by Wisconsin Democrats to force Governor Kohler to disown McCarthy, politically. How he ever permitted himself to be pushed into a corner, we do not know; the governor is pretty naive politically, and much too trusting for a man in politics. He agreed to meet four enterprising young Democratic politicians to explain his position with reference to McCarthy.

The ranking member of the four young legislators broke the appointment and the governor then refused to make another appointment. Instead, he invited the Democrats and the whole Democratic Party from Truman down to clean up their own back yard, including the situation in the State Department. The young Democrats issued a statement saying the governor refused to meet them and had made an unwarranted attack on the Democratic Party on unrelated matters.

The waste in Washington, mink coats, deep freezes, Reds in the State Department, theft of atom-bomb secrets by Reds, Kansas City ballot-box theft, and the whole gamut of graft and corruption in and out of Washington are all matters related to the Democratic Party and Wisconsin Democrats are in big business trying to hide the party's sins behind a trumped-up situation involving Governor Kohler, admittedly one of the most successful chief executives this State ever had.

We don't think the ruse has worked. McCarthyism isn't sticking as a smear word. It has a different connotation than its inventors intended. It points right at the Truman administration, the State Department, and one of the saddest predicaments in which this Nation ever found itself politically.

Back of it all is the hope that some Republican will knock McCarthy off in the primary next year so no Democrat will have to tangle with him in the general election. Again we say, Acheson can kill off McCarthy if the Secretary and his Department are clean. But that's about the only way McCarthy can be beaten in 1952, in either primary or general election.

If Acheson resigns before the end of the year, as is rumored, and without clearing his Department or himself, then the Democrat who tangles with McCarthy in the general election in 1952 is in for a rough time. This, we surmise, is what the four young Democrats have in mind in their political maneuver involving Governor Kohler.

[From the Parkersburg (W. Va.) News of July 20, 1951]

SENATOR JOSEPH MCCARTHY DESERVES GRATITUDE OF THE AMERICAN PEOPLE

Once again Senator JOSEPH R. MCCARTHY, of Wisconsin, has demonstrated that he de-

serves the gratitude and acclaim of the entire American Nation for his fearless factual exposé of the political incompetence of Gen. George Catlett Marshall, who, despite terrible errors of the past, is still a chief counselor and mentor of both the Pentagon and the White House, though on the score of a faulty memory alone he long since, in our opinion, should have been relegated to retirement.

We here do not impugn in any manner the high patriotism of General Marshall; nor do we question his acknowledged military genius. It is in the field of world politics that we offer our criticism of a succession of errors on his part that have cost us the once tight alliance with China and catapulted that nation's 450,000,000 of people into the maw of imperialistic communism.

PURSUIT OF FATA MORGANA

Nor are we here speaking with the benefit of hindsight, for at the time—back in 1947 and subsequent years—we made vigorous protests against the utter folly of General Marshall's pursuit of the Fata Morgana of compulsory coalescence of the Chinese Communists and Chinese Nationalists while he was in China as the special emissary of the United States President.

Senator McCarthy since then, however, has thoroughly documented General Marshall's career, not from memoranda of his political enemies, but from the memoirs of his friends.

As in the case of Senator McCarthy's battle against Secretary of State Dean Acheson—now all but won, for the handwriting is on the wall and Acheson's days are numbered—once again the administration's \$100,000,000 propaganda machine has been turned against the Wisconsin statesman with all of its formidable capacity.

AN ICONOCLASTIC BLAST

Possibly ex-Captain of Marines JOE MCCARTHY was too blunt in his arraignment of the failings of General Marshall, for the public obviously was unprepared to swallow so bitter a pill in connection with the Senator's iconoclastic blasts against the glittering figure of a national hero. But it is a pill that, in our opinion, someday will have to be swallowed, and, indeed, may loom large in the history of our times.

But who will be the people's champion, if not someone who has the courage to go against the political Goliaths of the present regime—the biggest of the "big brass"? Of the ultimate vindication of Senator McCarthy by the harsh facts of history, we have no doubt whatever. And it would richly reward the American people, in our view, if they listened intently to him now, rather than later.

THE KEY TO EVENTS

See the cartoon elsewhere on this page today, and you will get the key to much that has happened and is happening. It shows someone resembling Mr. Truman joyfully boarding a gorgeous bandwagon and preparing to move his party into 1952 under the flaunting banner: "Peace and Prosperity."

What a monstrous irony.

For Korea is a "peace" of abject appeasement.

And the prosperity is a fake prosperity—the fool's gold of war and rearmament.

But the picture explains much. It is the attempted rejoinder to the well-nigh unanswerable "Three Democratic Presidents and three wars in one generation." Here they are: Wilson, 1917-18; Roosevelt, 1941-45; and Truman, 1950-51.

This is the dread political incubus which the administration so desperately is striving to escape, and it has now culminated in the blatant, ludicrous assertion that the present administration which got us into the foolhardy war in Korea—at a cost of 80,000 dead, wounded, and missing—is the "peace party."

ECHOES OF MUNICH

Nor can it be forgotten that it was Acheson, the United States Secretary of State, who sued for peace; and not Malik, the Soviet envoy, as some would make it appear. Malik in his cease-fire proposal merely echoed what Acheson had proffered in his testimony before the Senate investigators in June.

And how feebly that contrasts with the unconditional surrender demand made on Hitler, even though the fruits of that surrender were frittered away at Yalta.

Give the impeccable Mr. Acheson a monocle and an umbrella and he would appear to many to be the living image, in his Korean peace tenders, of Neville Chamberlain at Munich.

The world well remembers Winston Churchill's dour comment on Munich, when he said:

"Gentlemen you have chosen between war and dishonor. You have chosen . . . dishonor. You shall have war."

Mr. Churchill's comment scarcely was heeded then; just as Senator McCarthy's comment on our far-eastern fiasco has not been widely enough heeded now.

Indeed, the American people are already beginning to feel that our Korean misadventure was either a Quixotic bit of idealism unsuited to the realities of the present world, or the rashness of a small group of inflated egotists, who disdainfully overrode Congress, in a badly calculated risk, that now brings the dread denouement of an ignominious armistice—something hitherto unheard of in all the annals of America—a truce that has cost us face throughout Asia.

ONWARD RODE THE 600

And all this at the cost of the blood of brave American men who knew not for what they fought, but who, in the tradition of "Onward Rode the 600!" at Balacava, died heroically doing their duty to the memory of a great past, but under the flabby banner of a flimsy, superogative government that knew not the reverence for Old Glory which still animates our Nation.

As the heroic 600 died in the Crimea nearly 100 years ago, so our boys died in Korea for a not dissimilar error in the Crimea in 1945. And the enemy was the same—Imperial Russia.

The present painful events in the Kaesong armistice camp, more than ever indicate that Acheson and Marshall must be dispensed with, if there is to be an end of the blood-letting. All the flamboyant bandwagons and flaunting political banners on earth will not overmatch this inescapable conclusion. We therefore say, without reservations:

"More power to Senator McCarthy."

Problems in Rain Making

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SMITH of Mississippi. Mr. Speaker, the disastrous floods in Kansas and Missouri have brought national attention on the over-all problem of the control of rainfall through artificial methods.

It is obvious that the Congress should authorize a study of this entire problem before harmful precedents are set, and before vested interests develop. I have

introduced a resolution calling for such a study by the House of Representatives.

There is a very enlightening article in the July issue of the magazine *Public Works*, by T. H. Evans, dean of engineering, Colorado Agricultural and Mechanical College. I include it as a supplement to my remarks:

PROBLEMS IN RAIN MAKING

(By T. H. Evans)

In the far-western States during the past 2 years there has developed almost a tidal wave of large-scale operations to force nature either to give up or to withhold moisture in the atmosphere to suit the will of man. This work comes under the general heading of artificial nucleation, a scientific development that is only an infant but which gives promise of unbelievable results. It is claimed by one operator in the field that it is possible in many arid regions of the country to double the average annual precipitation or run-off. This means doubling either the average annual rainfall, or snow-fall, or a combination of these, depending on the region. It is further claimed that hail can be prevented, and that undesirable rain can be prevented at will. It is even believed by some that fog can be dissipated where desired. These are merely some of the claims. Perhaps they will all be substantiated. Most of us who live in the arid and semiarid West hope they can be.

It is easy to imagine the terrific impact of such an achievement on agricultural practices, engineering, law, economic level, transportation, domestic water supplies, hydroelectric power, and almost every human activity. If the claims prove correct this will be the biggest thing since the atomic bomb. The impact, of course, will not be limited to the drier sections of the country but will be felt nationally. The large-scale experiments that are going on in the West were tried in the New York City watersheds to improve the critical situation that developed there in 1950.

WHAT COULD HAPPEN

The impact would radically alter certain agricultural practices because it would not be necessary to hope for rain in dry farming—it would be there about when wanted. Susceptible areas that now rely entirely on a little rain and elaborate irrigation systems could forget their worries about water shortages in the system, or about priorities under appropriation law. In fact priorities might even become unnecessary if there were always assurance of an abundant water supply. Towns that are now limited because of inadequate water supply might continue to expand. Regions that are short on industry because of inadequate water could begin to attract industries. Areas that have had their economic level held down because of all too frequent crop failures could begin to raise that level. Grazing lands would be lush with rich grasses. The threat of dust bowls would disappear. Streams would have new and higher averages that would be free of the extreme variations that exist now. Hydroelectric plants could operate on a larger firm power load. If fog could be dissipated at will, the transportation systems—particularly ship and air—could maintain better and safer schedules.

This all sounds too good to be true, and that may be just the case. So far there is no conclusive proof, on a sound scientific basis, that all this can be done. In the first place there has not been sufficient time for adequate proof and, secondly, even outstanding meteorologists, who are most closely allied to this scientific field, are in disagreement as to its possibilities. We, in the West, where additional water is needed badly in most areas, want the experimenters and operators to have every reasonable opportunity

to prove their claims. We feel that these large operations on a county- or basin-wide scale must be continued for enough years to acquire reliable scientific data for reevaluation.

HOW RAIN MAKING STARTED

All of this really got started just a few years ago. Although many laboratory research men, here and abroad, had delved into the science of meteorology and cloud physics for decades, it was probably not until Schaeffer's experiments at General Electric in 1946 that the real possibilities of causing artificial precipitation from certain types of clouds was fully realized. Dr. Irving Langmuir made some large scale experiments in New Mexico in 1949 that received considerable publicity and seemed to start a chain reaction of other experimentation. There are now many commercial concerns operating in this field under various kinds of contracts with farmers, ranchers, municipalities, and so forth. At present, practically anyone can try to milk clouds or knock off thunder-heads, but the fly-by-night operator with no experience, unsuitable equipment, and poorly trained personnel will probably only last a short time.

The principal method used today is that which involves spraying vaporized silver iodide into the atmosphere from the ground in such a way as to disperse it by winds to the so-called target area. By the time the particles have traveled some distance downwind from the generator they have dispersed into a very large volume of air—both vertically and horizontally. The optimum conditions within the area must be such that precipitation is incipient and lacks only the necessary nuclei to trigger it off. It is possible also to "over-seed" and dissipate a potential rain, or even the entire cloud. Nuclei are quite often there naturally. If not, however, and all other required conditions exist, then the artificial nuclei will start things going. Another advantage of the artificial nuclei is that even though some natural rain would fall, the amount can be increased because such nuclei are effective at much lower altitudes in a cloud than are the natural nuclei. This article will not attempt to explain the theories involved in this complicated set of phenomena. The explanation has been given in several outstanding scientific papers by authorities in the field such as Langmuir, Schaeffer, Vonnegut, Krick, and so forth. A very good popular explanation is that by Roscoe Fleming in *Public Power* for October 1950.

Another still common but apparently less efficient method, that was actually in use before silver iodide, involves using dry ice dispersed from an airplane. It has the big disadvantage of requiring expensive airborne equipment, and gives dispersal on vertical surfaces rather than over a large volume. It further requires operation under the most unfavorable flying conditions. Although silver iodide can be dispersed from a plane, the usual practice is to employ ground generators.

The need for additional, reliable water supplies in most of the far West is quite obvious to those who live in its vast arid and semiarid sections. The need is probably also evident to those who live in the more humid regions of our country but have traveled through the West, have seen pictures of it, or have read of the antagonisms that develop between some Western States over a relatively small quantity of water. This crying need is the reason there have been so many large-scale operations carried on in California, eastern Oregon, Arizona, New Mexico, and Colorado during the past 2 years. It is understood an operation on the vast King Ranch in Texas is contemplated for this year. It appears that the operations will snowball into such a multitude that the State of Colorado, as an example, may be almost completely covered by contracts from

the Continental Divide to the Kansas and Nebraska line on the east. About the eastern one-third of Colorado is practically all dry-land farming. It was part of the Dust Bowl of the early thirties. Large parts of the remainder up to the eastern edge of the Rockies are irrigated. There are even extensive mesas within the Rockies that are largely irrigated. Colorado is second only to California in the acreage irrigated in the United States.

TYPES OF RAIN-MAKING CONTRACTS

There seem to be several types of contracts available to those who hire the operators. One is a flat fee for a service covering a definite time interval in months or perhaps a year. In this case the contractor does not necessarily guarantee any specific results. Another type might be called a minimum-maximum contract. A minimum fee is paid no matter what happens, but if a stated increase (perhaps doubling an annual average) is proven then the maximum is due. A third type could be called a double-or-nothing contract, since that is just about the way payments would be made. If the goal is to increase an annual average, a certain sum would be due if accomplished. If not, then nothing is due. Of course, if the operator came through on this latter type his total fee would be larger than in the other two types. Any kind of a contract might be negotiated, but most possibilities would be some of the examples given, or a combination of them. As a numerical example of cost it was proposed in one case that for doubling the average annual runoff from an increased snow pack the third type of contract would cost \$100,000 or nothing. The quantity of extra water under consideration was about 350,000 acre-feet. In most regions this is very cheap water provided the farmers wouldn't get it naturally.

THE NEED FOR WATER

It is easy to see why the desire to try these methods of getting additional moisture is spreading and has reached pandemic proportions. Many regions of our West suffer almost continual drought for many years in succession. Other areas have mined their water tables to supplement surface supplies to such extents that critical situations are developing. In other areas there just isn't enough surface water to irrigate properly all irrigable land or to supply cities and towns with enough domestic water. The new artificial precipitation science looks like manna from heaven if all the advertising, as well as statements from some outstanding scientists, prove correct.

Because there is disagreement, however, between top-notch scientists regarding the possibilities and long-range worth of weather control through artificial nucleation, it is evident that proper scientific evaluation must be made over a reasonable period of years. How much of the increases claimed in precipitation is natural and how much is purely artificial? It is relatively easy to measure total precipitation and runoff but we don't know how much is natural and how much artificial in these operations. It is a satisfactory yardstick to measure these components of the total that we need. No one seems to have devised that yardstick yet that is acceptable to all scientists. Methods are available, which over a span of perhaps 3 to 5 years, may prove something, although longer periods would provide better results. In the case of rainfall, however, the accuracy of results would depend for one thing on the adequacy of coverage in the target and adjacent areas by gages of long and reliable past records. Really good coverage does not exist in most regions that might be affected. At any rate some evaluation is better than none, and unless the present large-scale operations are properly evaluated by qualified neutral agencies, then a marvelous

opportunity will be lost and we may never have an unbiased answer. People are skeptical for the most part of evaluations carried out by operators who are in the business to make a profit, no matter how honest and sincere they may be.

NEEDED LEGISLATION

Because of the need for evaluation, so the public will be properly informed in the near future, there is need for legislation. As a bare minimum the legislation should require registering or licensing operators in order to keep track of them and their areas of operation. It should require also, a central agency to receive regular reports from operators as to when and where they operate in order to have proper data on which to evaluate the results. If there isn't such an agency set up in a State, then the public will never be able to go to a source for an answer it will rely on unless the Federal Government takes over the job.

At the present time the State of Colorado has a committee working on a proposal to regulate artificial weather modification. This was submitted to the legislature in the form of a bill and was passed by both houses in March. The spirit of the bill is to encourage experimentation and development in every reasonable way. A very minimum of regulation is spelled out but a commission is proposed which will be able, as the need arises, to adopt the necessary regulations to protect the public interest. The commission recommended would be composed of one representative, appointed by the Governor, from each of the four congressional districts in the State, and the State engineer. The commission, among other things, is empowered to hire an individual or organization to evaluate scientifically operations carried out in Colorado. The commissioner of agriculture actually handles the administration of the act on recommendations of the commission. The commission will recommend licenses and hear cases involving license revocation or charges against an operator. It will also have power to require an operator to cease activities in any area where it could be shown excess moisture would be against the public interest at a particular time.

The committee that worked out the proposal consisted of varied interests within the State. It invited in other parties who might offer criticisms or recommendations to make a better bill. The principal opposition appeared to be from groups already contracting for extra rain or snow and who resented governmental interference in the way they spend their money. They did not seem to realize that the entire public is concerned deeply in these activities and that the intent of such a bill is not to hamper experimentation and development but to provide reasonable safeguards of the public interest. If the opponents are paying for something they would have gotten anyway, they will probably be glad to learn about it one of these days. The bill cannot conceivably keep any group from getting a legitimate rain-increasing job done and spending as much for it as they see fit.

A bill has been introduced in the Federal Senate, known as the Weather Control Act of 1951, by Senator ANDERSON, of New Mexico, that gives the Federal Government pretty complete control over anything done along this line. It also sets up a commission under the Secretary of Commerce with very great powers for rigid control of the conduct of experiments and operations. It further would protect any contractor (operator) from damage suits growing out of his activities. The Government would stand these if proven.

This commission would be empowered to carry out, or have carried out, research in all aspects of weather control, including processes, devices, and materials, as well as the utilization of weather control in agri-

culture, industry, commerce, and military operations. It would also have the power to issue and revoke licenses. Not the least of the contemplated powers of such a commission would be to fix fees, rates, or charges in weather-modification contracts. It could issue injunctions in any case where it felt the general welfare would thus be served. It could also require reports of all activities and methods of operators, and inspect the activities at any time. In other words, this proposed commission would have practically absolute authority in the control of any weather-modification or weather-research activities carried on in the United States.

It is understood that several States in addition to Colorado are considering legislation at this time to regulate in one way or another the operations of those engaged in artificial nucleation. Arizona, California, and Wyoming are three known to have under consideration such bills. At a meeting of the Western Interstate Committee on Agriculture held in Santa Fe, N. Mex., last October, the following resolution was passed regarding artificial nucleation:

"Since the business of artificial nucleation of clouds to create rainfall has relatively recent beginning and has not progressed to a status where regulation is indicated, although some preliminary supervision by a proper State agency would appear desirable, your committee recommends that (a) research and development work in artificial rainmaking be encouraged; (b) legislation be adopted, if necessary, to provide for the registration with a proper State agency of (a) persons or organizations engaged in the business of operating artificial nucleation equipment with provision for information on areas of operation, and (b) of persons or organizations selling equipment and supplies for artificial nucleation or possessing equipment and supplies used in connection therewith."

It is believed by many people that the first statement in the resolution is not strong enough. Apparently some Congressmen feel that strong regulation is indicated, and a number of others in positions to know, feel definitely that a reasonable minimum of regulation is needed. While unduly restrictive legislation would undoubtedly hamper and discourage free experiment and development, that being proposed in Colorado would not. It is so flexible that it will enable rules and regulations to be developed as the need arises. It does give the reasonable minimum protection, however, to which the general public is entitled at this time.

This Matter of Ethics

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. ZABLOCKI. Mr. Speaker, morality, ethics, propriety, and integrity in government and business is suffering under the prevalent attitude of "for you, my dear Mr. Gaston," so effectively illustrated in the following recent editorial from the Milwaukee Journal:

A disturbing thing about the growing national concern with ethics and integrity is that in most cases it deals with ethics and integrity for somebody else.

Business groups, for instance, think we need a higher level of ethics in government—but say nothing about some business groups that corrupt government.

The best illustration of all, perhaps, lies in Congress.

A Senate committee is busy holding hearings on ethics. Half a dozen codes of ethics for government employees have been introduced. Congressmen and Senators have peraded before the committee calling for higher standards for Government service.

This is all fine—but Congress shows little concern about its own ethics. The Senate refuses to do anything about the filibuster, for instance, which enables one or a handful of men to block majority action on important measures. Neither House does anything about log rolling and "pork barrel" legislation in which Congressmen vote gravy for colleagues and get gravy in return.

The House ignores the fact that one of its Members, Representative **WALTER BREHM**, Representative of Ohio, has been convicted of forcing his employees to pay "kickbacks." He is still a representative in—as far as the House is concerned—good standing. The Senate has ignored the fact that Senator **JOHN BUTLER**, representative of Maryland, had a campaign manager who pleaded guilty to violating Maryland's corrupt practices act in the election in which BUTLER won his Senate seat.

Quoting Doris Fleeson, Washington columnist, Congress seems to think "it's fine to be against sin as long as it does not involve unkindness toward a Member of the club."

If Congress is sincere about ethics, one of the first places it ought to start house cleaning is right in its own "clubhouse."

St. Lawrence Seaway Will Not Cost United States More Than Other Projects Authorized, Constructed, and Under Construction, Comparable Costs Favorable to Others—California Central Valley Project Just Completed at Cost of \$600,000,000

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to point out that the cost of the proposed St. Lawrence seaway will not cost the United States more than other projects already constructed, under construction and authorized.

The hearings by the House Public Works Committee disclose, beginning at page 1341, part 2, of the hearings, a few of the projects which will cost the Government as much or more than the United States portion of the seaway, \$818,063,000.

While it is true that the St. Lawrence seaway will cost the joint sponsors—Canada and the United States—\$818,063,000, this cost is divided jointly between Canada and the United States; however, since Canada has already constructed a part of the project, and since Canada will have to build tunnels and bridges not included in the project itself, even taking this into consideration, the actual cost to the United States, including the power portion of the project,

our total contribution will be only \$566,794,000.

If the Congress should vote to turn the power project to the State of New York, the State of New York would contribute \$192,493,000, which would reduce the amount to be paid by the United States to \$374,301,000.

Therefore, this is not a billion-dollar project to the United States as some have tried to represent.

In addition, the hearings will further disclose that the project for the United States portion will be self-liquidating, and I have proposed an amendment to amortize the revenues by a bond issue over a period of 50 years, and if this amendment is adopted, there will be no money required from the Treasury of the United States, but on the contrary, the revenues will take care of the bonds and interest.

Below is a partial list of a few flood-control projects which have and will cost the United States Government a comparable amount with the St. Lawrence seaway, to wit:

Los Angeles County drainage area—exclusive of Whittier Narrows Reservoir—\$301,605,000.

Garrison Reservoir, N. Dak., \$268,000,000.

Fort Randall Reservoir, S. Dak., \$189,200,000.

Oahe Reservoir, South and North Dakota, \$245,900,000.

Arkansas River and tributaries, Arkansas and Oklahoma, \$686,370,000.

Oregon, McNary Dam, Oregon and Washington, \$270,000,000.

Washington: Chief Joseph Dam, \$266,000,000.

The above are only a few of the flood-control projects. The amount expended and authorized on the Missouri River Valley and the Mississippi River Valley is more than the cost of the St. Lawrence seaway.

Projects of the Bureau of Reclamation cost millions of dollars. For instance, the Grand Coulee Dam will cost the United States \$253,600,000, Hoover Dam will cost \$173,900,000, and Bonneville Dam will cost nearly \$100,000,000.

Of interest in this connection is the story on the completion of the Central Valley project of California, constructed by the Bureau of Reclamation at a cost of \$600,000,000, and which will be dedicated by President Truman on August 1 of this year, which I will read into the RECORD, as follows:

SACRAMENTO, CALIF., July 14.—California's \$600,000,000 Central Valley project, center of many a bitter fight in and out of Congress since construction work began 14 years ago, is about ready for a dramatic public demonstration.

With \$400,000,000 worth of big dams, power plants, pumps, canals, and transmission lines representing the first phase of the project due for completion within 2 weeks the Federal Bureau of Reclamation has set August 1 as the starting date for integrated operation of the project.

During the following 10 days, by means of a system of rivers, canals, and a pumping station, there is to be carried out what the bureau describes as the longest mass movement of water ever attempted by man. Bureau officials here expressed confidence that, despite conflicting reports from Wash-

ington, President Truman would be in California to participate at Tracy in one part of the 10-day program on August 4.

The Central Valley project, first envisioned as a State proposition and then taken over and expanded by the Federal Government, is based in its irrigation aspects on the fact of an uneven water distribution in California.

VALLEY 500 MILES LONG

The Sacramento Valley on the north and the San Joaquin on the south make up the Central Valley, 500 miles long. The San Joaquin Valley has two-thirds of the irrigable land but the San Joaquin watershed offers only one-third of the total water supply. Thus the problem posed to engineers was how to transport the surplus water of the Sacramento hundreds of miles southward to help irrigate the semiarid San Joaquin area, in which the underground water table has dropped to alarmingly low depths.

The forthcoming celebration is to mark the solving of this problem. The ceremony starts at Shasta, the world's second largest and second highest concrete dam, 10 miles north of Redding at the northernmost end of the Central Valley. Water being conserved in Shasta Lake, behind the dam, will be spilled over the dam and sent coursing down the Sacramento River.

Not far from where the Sacramento empties into an arm of San Francisco Bay, some of the water is to be diverted from the river through floodgates into a so-called delta cross channel.

This channel carries the water to the Tracy pumping plant, some 50 miles east of San Francisco. There, beginning on August 4, when the Shasta-released waters are due at Tracy, a set of six powerful pumps will lift the water 200 feet into the Delta-Mendota Canal. These pumps, capable of lifting 2,000,000 gallons of water a minute, are second only in size to pumps installed by the Bureau at Grand Coulee Dam in Washington to lift water 280 feet out of Lake Roosevelt to irrigate the Columbia basin lands in the central part of that State.

The pumping plant at Tracy is operated by electricity brought down from the Shasta Dam generating plant over a Government transmission line. The water hoisted by the plant will flow southward for 117 miles through the Delta-Mendota Canal.

At the canal's southern point the water will be dumped into the San Joaquin River, to flow back northward and eventually empty into San Francisco Bay. In the meantime, in the San Joaquin Valley water will be released from Millerton Lake, behind Friant Dam, near Fresno, into the Madera and Friant-Kern Canals. The latter will carry it southward 153 miles to the vicinity of Bakersfield, 500 miles south of Shasta Dam.

Because of the relatively small water supply in the San Joaquin Basin, it is unfeasible to take this water in quantity from Millerton Lake on the San Joaquin and divert it northward 37 miles through the Madera Canal and southward through the Friant-Kern Canal without replenishing the San Joaquin River itself somewhere along the way.

This is why the Shasta Lake water is being sent all the way down to Mendota and dumped into the San Joaquin. Thus, in a sense, water from Shasta Lake will be used after early August to irrigate lands as far south as Bakersfield, 500 miles from the lake itself. Actually, some symbolism is involved, since the Shasta Lake waters will start back northward after being poured into the San Joaquin.

Some acreages in the San Joaquin Valley already are under irrigation from Friant Dam, however. As a result, Bureau of Reclamation officials have collected such examples as these:

A 160-acre farm netting \$331 from pasture 2 years ago with this year's net from

an irrigated cotton crop estimated at close to \$20,000; a 400-acre farm netting \$1,500 from barley and pasture in a dry farming condition with an expected profit this year of more than \$77,400 from cotton.

Completed parts of the Central Valley project have a power generating capacity of 450,000 kilowatts and are designed to help control winter floods, increase summer water flows, combat salinity on farm lands and improve river navigation.

Imprisonment of William N. Oatis a Challenge to America and Americans

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. JENISON. Mr. Speaker, the shocking conviction and imprisonment of William N. Oatis on trumped up spy charges by Communist-ruled Czechoslovakia ought to jolt every American into full realization of the true nature of the enemy we face in a divided world.

Mr. Oatis was an Associated Press correspondent in Prague. He is a mild-mannered, conscientious, patriotic midwesterner who went from the newspapers of Marion, Ind., up the ladder to a position as head of the American wire service bureau in a foreign capital. His only crime was his devotion to his duty, as we see it in this country, to get the truth rather than the propaganda of the Communist government in power in Czechoslovakia.

Mr. Oatis is in a Communist jail today because Red-dominated nations around the world are determined to discredit American prestige, and because they know that a supine State Department in Washington will confine itself to diplomatic protests rather than militant action.

The Oatis case is not unlike that of Robert Vogeler, American businessman in Hungary, who stayed in a cell for 17 months while the State Department made futile protests. He got out only after heavy ransom was paid and then due primarily to the determination and resourcefulness of his wife, rather than from any help of the American Government.

The present situation is a sad contrast with the days still within the memory of many when America "spoke with a soft voice but carried a big stick." There was a time when the rights of Americans abroad were treated with respect—and the world knew the Government of the United States could not be pushed around. But it is a far cry from Theodore Roosevelt to Dean Acheson. An official who is soft in dealing with Reds in his own country cannot be expected to get tough—or be effective—with arrogant Red governments.

Mr. Oatis already has been confined since April. How long he remains confined will depend on just one thing—the degree of indignation of the American people. That indignation can be

given official recognition through Congress. It can be given effective power in two channels—trade and diplomatic relations. Commercial relations with this country, vital to Czechoslovakia, could be and should be terminated. Diplomatic relations could be severed if other means failed.

It is revealing to note that during the first quarter of the present year, Czechoslovakia was allowed to sell over \$7,000,000 worth of goods in this country. At that rate, nearly \$30,000,000 worth of her goods will come into the United States this year. At the same time, the United States permits the sale of machinery, vehicles, chemicals, textiles, and animal products to Czechoslovakia. Both the trade and the materials are vital to the Red-dominated country. Immediate and firm action to halt such trade until the release of Mr. Oatis would be something the Reds could understand. The threat of severed diplomatic relations would be equally understood.

Such a course already has been proposed in the Congress by my distinguished colleague, the Honorable JOHN V. BEAMER, of Indiana. The determination of the American people can turn that course into action. The time has come—in fact it is long overdue—to impress deeply on Communist minds everywhere that the United States can and will retaliate effectively when Americans are abused by other governments.

It is time for the voice of America to be heard, backed up by the big stick of determination.

Mission to Madrid, 1951

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. POULSON. Mr. Speaker, I am inserting this article by George H. Todt, which appeared in the Highland Park News-Herald, one of the progressive newspapers in my district in Los Angeles. I wish to state that I concur in Mr. Todt's analysis.

MISSION TO MADRID, 1951

(By George H. Todt)

At long last, and none too soon to suit me, we have dispatched Admiral Forrest P. Sherman, of our Joint Chiefs of Staff, to Spain to attempt to bring that nation into some sort of unilateral military working agreement with this country.

Perhaps I am too naive to understand the politicians, but it has seemed to me in the past that it was our announced intention to gird ourselves to deter possible aggression from—pardon me for being blunt—Russia.

Now, if this were indeed the case, it would seem to me that we have not gone directly to the heart of the problem. If we had, then it would be bound to follow that we might have proceeded differently than we have.

For instance, it seems rather silly to give the English and French untold billions of

economic and military assistance when all we receive from them in return are their pitiful bleats instead of combat divisions for General Eisenhower and his European Army.

After 2 years of trying, as they claim, they have now managed to present the supreme commander with less than 10 of these highly prized units.

And the Red Army has 200 facing the 10 of the west.

Less than 20,000,000 Spaniards have 23 combat divisions on the line today. With some American equipment and a little beefing up here and there, these people could be added to General Eisenhower's numerically weak forces.

Frankly, he needs more men than our niggardly allies are willing to provide for him. Therefore, I think we should cast about for some new allies.

Keep the old ones—yes. But with new allies in Europe, some of the prima donnas might come to realize that American money can be allocated to others than themselves if they are not willing to do their decent share. And it should be, too.

It is no priceless privilege for us to be taxed through the nose to try to help nations that don't have enough backbone any longer to even try to save themselves from the evil forces which Josef Stalin is presently assembling for their early conquest.

These apathetic dullards are letting us down—and particularly General Eisenhower. The greatest general in the world cannot fight well against 10 or 20 times his numbers.

Now, in the event anyone considers me unjust to think of the French, British, and Italians as something of phonies at this time, let me tell you why this is the case.

These people have 150,000,000 of population. We have aided them on every hand with many billions of ECA aid. They are unable to produce more than 10 or 15 divisions among them.

On the other hand, let us consider the little nations of Europe for a moment. Spain, Switzerland, Sweden, Yugoslavia, Greece, and Turkey have only a total of 70,000,000 people all told. They have not received much financial assistance, if at all, from us.

Yet they have a total of 138 combat divisions between them.

So who is kidding who this time?

You see, it can be done where the spirit is willing.

But it cannot be done in the cases of nations who are unwilling to do their fair share and instead drag their feet.

It is my suggestion that we all write our Congressmen and request them to do one important thing.

Let them allocate the American foreign aid and armaments in the future in direct proportion to the contributions of the various nations concerned to General Eisenhower.

If the French only care to offer 5 divisions, give them only 5 units of aid. If the Spaniards give 23 divisions, give them 23 units' worth of armaments and assistance.

If anyone else will lay it on the line for us, why, then give them a generous full measure of whatever we have.

But I, for one, am tired of this one-way traffic between us. I am willing to help them as long as they do their share. But heaven help them if they do not. And good riddance, too.

So that none will misunderstand me here, let me make my position clear. I am very fond of the Europeans themselves and have always been friendly to them in the past.

Since I have lived among them for many years, I am not entirely blind to some of their faults. One which is inescapable to those who know them is simply this:

They are moochers—at least wherever the rich Americans are concerned.

They will be delighted to let us make their beds for them and sweep up after them—as long as we are suckers enough to do it.

Now I am not requesting any end to assistance which we have commenced for our allies. I am not trying to rock the boat. But I am asking for a more realistic approach to this entire matter.

This is how realistic I intend to be about this.

From now on I am a friend of any European nation in direct proportion to the amount of tangible assistance it provides now for Dwight Eisenhower. I do not want him participating in some European Bataan of the future.

But he will unless our allies come through with their share of men.

Now before the apologists for the Europeans take me to task for what I have written here, let them answer this question for me first:

If little Switzerland and Sweden have 15,000,000 people and 45 combat divisions, how many should 150,000,000 French, English, and Italians be able to provide?

I will be very grateful for your answer.

Government Economy and Public Pressure for Spending

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Times-Herald of June 20, 1951:

GOVERNMENT ECONOMY AND PUBLIC PRESSURE FOR SPENDING

Advocates of high Federal taxation as a relatively painless device for preventing inflation almost always qualify their argument by adding the phrase "with strict economy in nondefense items of the Federal budget."

Unfortunately, while it is easy to increase taxes, it seems virtually impossible to reduce expenses. Because of this, the money collected through high taxes is spent by the Government. Purchasing power is, therefore, only shifted from some pockets to others.

Currently, the champions of economy in the Senate and the House of Representatives in Washington are being heard from. It is reported that they are likely to cut huge gaps in the budget of the National Government, that is, in the parts of the budget that have no connection with the rearmament program.

For instance, one committee has momentarily voted to cut down drastically the number of automobiles with full-time chauffeurs used by staff members of the numerous departments in Washington. However, when the smoke clears, it probably will be revealed that very few chauffeurs have been released.

Of course, the Government is so big that if all the chauffeurs on the Federal payroll were discharged the saving would be hardly visible to the naked eye. This particular gesture toward economy is significant mainly as an indication that some Members of Congress are aware that there is in the Government too strong a tendency toward luxury, and that extravagance in some places is soaking up revenue that is badly needed in other places.

The truth is that the Government is so big that expenditures cannot be closely checked. Congress appropriates huge sums of money to various spending agencies and simply cannot exercise the degree of vigilance that is necessary to prevent waste. When it is ultimately discovered that money has not been spent wisely and frugally, Congress orders a probe, and although the blame may be fixed, the money has already been spent.

At this time, while the taxpayers are being gouged to finance a colossal armament program, it is obvious that nondefense items should be cut to the quick. But when Congress or the budget officers of the executive department begin to wield the pruning knife, loud complaints are heard. Officials of the agencies that are threatened express these complaints but they have supporting them powerful lobbies representing sections of the public.

While the public at large deplores the rising cost of Government, politicians have learned by sad experience that economy, when it becomes specific is not popular. Every item of Government spending benefits some element, large or small, of the public. Everybody favors governmental economy in principle, but at the same time, everybody expects the other fellow's item to be cut. As long as this situation exists the champions of economy will be overruled, and the Federal Government will grow bigger and bigger and more and more luxurious.

More Reclamation Bureau Propaganda

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. POULSON. Mr. Speaker, not long ago, this House sought to lighten the tax load on our citizens by cutting down on what we thought were unessential activities of Government Departments.

Our colleagues in the Senate discovered some expenses we overlooked, and voted to make further cuts, for which all of the taxpayers should be grateful.

One of the most money-saving motions ever made in Congress was to put some curbs on the production of propaganda—not on necessary information, but on uninvited, self-glorifying, seldom-used press releases from Federal agencies—by reducing the appropriations for Government ballyhoo artists.

Before this Congress finishes with the long-delayed appropriations for the fiscal year that started 3 weeks ago and before we let too much revenue go to waste because little items are overlooked, I hope the conferees on the Interior appropriations bill will give a little study to some of the mimeographed propaganda that comes out of the Reclamation Bureau.

On previous occasions, I have pointed out that this agency acts as if the Federal Treasury was a monetary spring that never dries up. The Reclamation Bureau seems callously indifferent to the pain felt by our people when they discover how much of their income has been withheld by their employers to satisfy Uncle Sam.

A sample of the way a Government agency can abuse and misuse appropri-

ations that we vote, is given by a press release issued by the Interior Department last week.

This hand-out is captioned "National benefits from California's Central Valley project." It goes on to say that "every State in the Union contributed materials that went into California's new Central Valley reclamation project."

Who doubts that every State, and perhaps some foreign countries, supply raw materials used in building this project, which, incidentally, Californians will pay for, unlike the people in some other States who want to make Uncle Sam into a streamlined Sam-ta Claus.

I hope my colleagues will look closely at this product of the Interior Department's press section and ask why it is necessary to spend taxpayers' money preparing, mimeographing, and distributing such statements. None of my newspaper acquaintances feel that this press release includes any startling information and most of them agree that anybody interested in these facts could get them by telephoning or going over to the Interior Department.

This release shows that Congress should be more alert in seeing that information staffs of Federal Departments supply information that is wanted and needed and demonstrates, I submit, that we can cut down the size of press relations outfits which exist to beat bass drums attracting attention to their bureaus and bosses.

There is much interesting information in the press release I am criticizing. I am pleased to know how many States shared in the generous outlays of public funds. However, I wonder if enterprising newspaper, magazine, and radio reporters could not have dug out these facts without a mimeographed statement that gives the impression the Reclamation Bureau is a generous sugar daddy.

When we get around to voting on the next tax bill, I hope my colleagues will remember this statement that was financed by every one of our constituents. Following is the heading of the statement: "National benefits from California's Central Valley project"

Experiment in International Living

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. SMITH of Mississippi. Mr. Speaker, my home city of Greenwood, Miss., is in the second year of its participation in the Community Ambassador project sponsored by the Experiment in International Living. In 1950 one of the young businessmen of our city spent several months in France as a representative of our community, and this year a young lady from Belfort, France, will visit Greenwood as a further extension of the project.

It is this mutual exchange of knowledge and understanding at the practical grass-roots level which can be of inestimable benefit to international amity. I am proud of the role which Greenwood has played in this project.

Mlle. Gabriel Macaire is the French Community Ambassador who will visit our country. She arrived at Quebec last week, and her tour of this country before going on to Greenwood will include a visit to Washington arranged by Miss Mary Elizabeth McBee, of Washington and Greenwood.

As an extension of my remarks, I include an article which originally was published in the Greenwood Commonwealth:

COMMUNITY-AMBASSADOR PROJECT TO BRING FRENCH GIRL TO GREENWOOD

Under the sponsorship of the Greenwood Community ambassador project, Mademoiselle Gabriel Macaire, of Belfort, France, will be brought to Greenwood from her native country for an extensive visit during August and September. Mlle. Macaire will arrive in this city on the night of July 29.

Last summer Minter Aldridge of this city visited for several weeks in the Macaire home at Belfort. He was sponsored by the same organization as Mlle. Macaire and traveled through the channels of the Experiment in International Living. Mlle. Macaire will follow the same procedure.

The Experiment in International Living is a nonprofit, nonsectarian educational organization, working to build up in various countries a group of people interested in promoting mutual understanding and respect between their own and other lands. Founded by Mr. Donald B. Watt in 1932, the experiment for 18 years without interruption has been sending college and secondary-school-age groups to live as members of families abroad, and to work, camp, and travel in close association with their contemporaries in Europe and Latin America.

Mlle. Macaire's visit has been made possible through the cooperation of the various civic clubs and the governments of Leflore County and the city of Greenwood. Representatives of these groups, as a result of the successful tour of Minter Aldridge last year, have recognized the import that a project of this type carries in good will among nations. While in Mississippi Mlle. Macaire will spend a good deal of her time traveling to various points of interest in the State. A trip to New Orleans has also been planned. Her headquarters will be in a private home in Greenwood.

Her ship will dock at Quebec, Canada, on July 20. From Quebec she will travel to New York and thence to Washington, where she will be met by a Mississippi delegation, which will conduct her on a 5-day tour of the Nation's Capital. From Washington she will fly to Memphis, where a Greenwood delegation will meet her and drive her to Greenwood.

The Voice of America

EXTENSION OF REMARKS OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the Record, I want to call to the attention of all Members of Congress the following article entitled "Voice of America Future

Hinges on Senate Views," which appeared in the Washington Sunday Star of July 22, 1951.

In view of the debate that is currently going on in the House, this article which was written by Creston Mullins is of particular timeliness. The article follows:

VOICE OF AMERICA FUTURE HINGES ON SENATE'S VIEW—STATE DEPARTMENT IN HARD FIGHT FOR FUNDS WITH WHICH TO STEP UP TRUTH CAMPAIGN

(By Creston B. Mullins)

The State Department is keeping its fingers crossed these days as it awaits Congress' verdict on its request for more funds with which to carry on its world-wide truth campaign.

It has been an uphill fight all the way. The Department, already slapped down in the House, is pinning its remaining hopes on the Senate. Here is the situation at the moment.

The bill, which has been reported out by the House Appropriations Committee lops \$30,000,000 off the \$115,000,000 sum which the Department thinks it needs to operate its international information and education program for a year. This bill, due for consideration on the House floor any day now, covers operating expenses only.

Earlier this spring the House took an even tougher view of legislation covering State's ideas on capital outlay for expansion of its Voice of America radio network. The Department had asked for \$97,000,000 to build additional transmitters. The House bill granted it less than a tenth of the figure asked—\$9,500,000 to be exact.

When the Senate took up these bills, it decided to consider them together. It has held hearings on the whole information program. A report will be issued shortly. The Department has made for the Senators—and still is making—an all-out effort to try to salvage as much as it can toward a step-up of America's campaign in the world war of ideas. Its plans have the backing not only of the President, but also of the National Security Council and the Joint Chiefs of Staff, for they are considered to play an important part in our prosecution of the cold war.

TEST OF FIRMNESS

Special interest attaches to the issue at this time, moreover, for how Congress acts on the information program appropriation is regarded as a test of congressional resistance to the temptation to relax in the wake of Korean truce negotiations.

The arguments which the State Department is putting forward in urging the need for expansion of its education program runs like this:

Our war of ideas against the Soviet Union and its bloc of satellites not only may have a great bearing on whether there will be a shooting war but also certainly will influence the psychological conditions under which any future war will be fought.

The Voice of America is engaged, in conjunction with the British Broadcasting Corp., in a verbal bombardment of Russia which is making real inroads in the U. S. S. R. From 38 transmitters in this country and 12 abroad, radio programs go throughout the world in 48 languages. Six of these are in the languages of the Soviet Union itself. Five more are in the language of the European satellites, and four are in Chinese dialects. The rest are the languages of the free world, all of which must be regarded as potential, if not actual, allies of this country if world war III breaks out.

What of the results? How are we doing?

There is no such thing as a Hooper rating for Voice reception behind the iron curtain. Traditional methods of sampling listener selection and reaction are totally useless in judging the effectiveness of Voice broadcasts in the Red bloc.

JUDGE BY REACTION

That does not mean, however, that there is no criterion by which Voice effectiveness can be judged. As a matter of fact, there are some very good, if unorthodox, means of determining how the Voice is worrying the Communists. Perhaps the most reliable indication of effectiveness is the "ouch!" method. Step on Stalin's corns and he lets out a yell. Stalin recently has been yelling ouch more frequently and loudly than ever before.

The jamming of American broadcasts has grown to the point where approximately 1,000 ground wave and 200 sky wave distortion transmitters are being employed to block out Voice programs. Yet more than 25 percent of the American broadcasts are estimated to be getting through to the interior of Russia. This operation of obstruction is estimated to be costing Russia as much or more each year as the whole Voice program for the 1951 fiscal year—\$15,000,000.

That Russians continue to hear the Voice is known from independent reports of defectors, those who have deserted to the west from the U. S. S. R., as well as friends of the west who remain in the Soviet.

GIVE THEM THE FACTS

But there is even more pertinent evidence of Voice effectiveness. The Soviet official propaganda for home consumption frequently presents rebuttals to statements which the Russians could have heard only on the Voice. These rebuttals thus give further currency to the very statements they are intended to counteract.

The effectiveness of American broadcasts to Russia lies in their dispensing of the scarcest intellectual commodity in the Soviet and its whole bloc—news, real, hard, factual news. Voice broadcasts are heavily laden—and will be increasingly so—with that kind of simple, straightforward, truthful report of facts and happenings which people listen for eagerly, and which passes from mouth to ear in unsuppressible defiance of laws which carry the death penalty. More than 60 percent of the broadcasts beamed to Russia are strictly news programs.

Although the Red-held territory and that one-third of the human race which is under Red bondage is the battleground on which the Voice fights its principal battle, its attention is devoted also to stimulating the peoples of the free world, not only counteracting the Red propaganda spread in non-Communist countries but also presenting a picture of the best there is in American culture and American life.

Audience reaction is followed closely by Voice officials, particularly in non-Communist countries, where it is possible to gauge listeners' selection of programs and their response to what they hear. Each point of presentation—clarity of reception, pronunciation of the language by announcers and commentators, the speed at which they talk, and the inflection of their voices—is checked constantly and carefully. In some countries it is possible to maintain panels of observers, who judge the programs constantly.

WRITTEN WORD, TOO

The other major phase of International Information and Education—press and publications—is producing results which can be totaled up in millions of column inches of reading matter published each year in the newspapers, magazines, and specialized periodicals of all the free countries.

International information falls into three main categories, which are far more distinct in the printed word and picture than in the spoken word of the radio. These are:

1. Straight news and feature stories, which carry to the rest of the world the real picture of America, to destroy the false picture presented by communism.

2. The propaganda of freedom—that is, factual commentaries explaining world events in terms of liberty and western civilization, and

3. Point 4 material—that is, scientific, technical, and other specialized articles, reprinted for the people of other countries to help them develop their industries and agriculture, thus raising their standards of living and their resistance to Communist blandishments.

HUNGARY COULDN'T TAKE IT

Again, proof that this highly developed and expertly directed campaign is beginning to hurt the Communists is found in the official reaction against it in Communist nations where it is still operating. The latest and most dramatic demonstration of the pain it is inflicting was the recent expulsion from Hungary of two American Legation officials. Only thus could Hungary's Red government rid itself of a most troublesome thorn in the side.

The United States agreed to eliminate its information and cultural activities in Hungary, but followed up with the expulsion of two Hungarian diplomats from this country.

Russia has strictly limited the number of copies of the magazine *Amerika*—done in the best American style for distribution in Moscow. Throughout the Communist world, American news and propaganda has hurt so badly as to provoke drastic measures against it.

But, while the publication part of the program has been severely throttled behind the iron curtain, it goes forward unchecked, and with even greater effectiveness, among the peoples on this side of the curtain, not only countering the immediate blows of Communist propaganda in free countries, but also laying that foundation of truth on which, alone, democracy can be built.

There can be no vacuum in the minds of men, the State Department believes. If we don't fill it the Communists will.

Are We Financing Both Sides of the Korean Conflict?

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an article by Hon. William C. Bullitt, a former American Ambassador, on the subject of Hong Kong, which I trust every Member of Congress and everyone else who has the opportunity to do so, will take time to read.

Some of its revelations are astounding. The matter referred to follows:

HONG KONG: BEAUTIFUL PROBLEM CHILD

(By William C. Bullitt)

Of all delightful islands that stud the southern seas, Hong Kong is one of the most beautiful. Only a mile from the Chinese mainland, its mountains spring abruptly from the blue waters of the South China Sea, embracing sunny bays and beaches and one superb harbor. In latitude and climate it approximates Hawaii. On its peaks and heights in summer a cool evening breeze wipes away the heat of noon and renders even the hot season a tranquil felicity. On those peaks and heights live the British—fewer than 10,000. Below, on both sides of the port, live 2,000,000 Chinese.

The island has delivered a fabulous stream of wealth to the British since first they seized

it in 1839 as a base from which to smuggle opium into China. Last year they made more money than ever before by selling Communist China the goods and materials she needed to make war in Korea. Nevertheless, there is a cloud on this happy British business horizon. The Chinese Communists, like all other Chinese, are determined to take back Hong Kong from the British. The roots of this determination run deep. For to all Chinese, Hong Kong symbolizes the sufferings and humiliations they have endured ever since 1839 when their great old civilization began to be battered to bits by British guns in the First Opium War.

From its birth as a British Colony, Hong Kong has been a problem child. In the eighteenth century, under Emperors Kang Hsi and Chien Lung, China stood at an extraordinary height of culture and prestige. Europe and Great Britain had an excessive admiration for all things Chinese. There was a fad for Chinese painting, furniture, porcelain, wallpaper, silk, and tea.

England emerged from the Napoleonic Wars mistress of the seas; leader of the industrial revolution; with goods to sell and with a burgeoning impulse to increase her wealth and dominion. China remained aloof. She refused to exchange ambassadors with any nation, and her desire for foreign goods was so slight that she refused to permit foreign merchants to land in any port except Canton, where they were confined to an inconveniently small area on the waterfront and obliged to do business through a group of merchants selected by the Chinese Government.

The Chinese demand for British goods was small, and in order to balance their annual account with China the British had to pay out large amounts of silver. Silver began to be drained away from India, then ruled by the British through the agency of the East India Company. The East India Company had a monopoly of all the opium produced in India; it was also the principal British agency trading with China through Canton. How to balance the trade and reverse the flow of silver? The British found an easy answer: Sell vast quantities of Indian opium in China.

The Dutch had introduced opium into Formosa about 1650, and thence the vice had spread to the mainland. In 1800 the Chinese Emperor issued an edict prohibiting the cultivation of the opium poppy in China and the importation of opium from abroad. The East India Company stopped sending opium to China in its own ships, but it continued to produce ever-larger quantities of opium and to sell it to merchants who smuggled it into China.

By 1821 the smuggling was thoroughly systematized. In the center of Canton Bay rises a harborless mountain island called Lintin. The British anchored three large floating warehouses close to Lintin, and opium clippers, fast ships carrying about 20 guns, transferred their chests of opium to the floating warehouses, where it was packed in small bags and smuggled ashore in boats manned by Chinese. Officials were bribed to wink at the trade.

Smuggled opium rose from about 2,000 chests in 1800 to about 26,000 in 1836. Approximately one-sixth of the entire revenue of the British Government of India was coming from the sale of opium to be smuggled into China. The tide of silver turned and so much of it flowed out of China that a silver scarcity began to upset the price level. The Emperor was warned that the bodies and morals of his subjects were being corrupted more profoundly each year, and that the country would face a vast economic depression unless opium smuggling should be stopped. Thereupon the Emperor ordered an incorruptible official,

Lin Tse-hsu, to go to Canton as Imperial Commissioner to suppress the traffic.

In March 1839 Commissioner Lin ordered the British merchants in Canton to deliver to him all their opium within 3 days. He announced that he would prohibit all British trade with Canton—including the lucrative tea and silk trade—unless the opium was surrendered. Captain Elliot of the British Navy ordered all British merchant vessels to assemble in the safe anchorage of Hong Kong down the bay below Lintin. The only British ship of war then in Chinese waters was ordered to protect the smuggling fleet.

Commissioner Lin countered with a blockade of the river. On March 27 Captain Elliot gave in. More than 20,000 chests of opium were turned over to Lin, who destroyed it.

Lin got rid of the 1838-39 opium crop, but he knew that a fresh crop would be coming from India. He wrote to Queen Victoria, appealing to her to stop the growing of opium in India: "We have heard that in your honorable barbarian country the people are not permitted to inhale the drug. If it is admittedly so deleterious, how can to seek profit by exposing others to its maleficent power be reconciled with the decrees of Heaven?"

"We have reflected that this noxious article is the clandestine manufacture of artful schemers under the dominion of your honorable nation. Doubtless, you, the Honorable Chieftainess, have not commanded the growing and selling thereof."

But Parliament had officially approved the opium traffic by adopting a resolution: "It does not seem advisable to abandon so important a source of revenue as the East India Company's opium monopoly in Bengal."

Palmerston was the Queen's Foreign Secretary. Elliot wrote him urging "powerful intervention." The destruction of 20,000 chests of opium had so raised the price that British smugglers were arming their clippers more heavily and organizing gangs of thugs to get the new opium crop ashore. Elliot admitted that the opium traffic was "discreditable to the character of the Christian nations under whose flag it is carried." Yet he urged that Great Britain use force if necessary to compel the Chinese to back down.

On August 21 Elliot gathered all the British from the Canton Bay area on ships in the harbor of Hong Kong, where they could be protected from any possible violence. Commissioner Lin countered by forbidding the Chinese to sell food or to give water to the British on the ships. Three Chinese war junks lay on the Kowloon side of the harbor. When food and water were refused in Kowloon, Elliot, on September 5, 1839, opened fire on the junks. Thus started the First Opium War.

Secretly Palmerston wrote to the Government of India, ordering 16 warships and 4 armed steamers to carry 4,000 troops to blockade Canton and also the mouths of the Yangtze and the Yellow rivers. When rumors of this expedition got back to England, Palmerston could no longer avoid a debate in Parliament. Many Englishmen were horrified at the idea that Great Britain should go to war to compel the Chinese to smoke opium.

William E. Gladstone, later Prime Minister, said in that debate: "I will ask the noble Lord a question. Does he know that the opium smuggled into China comes exclusively from British ports, that is, from Bengal and through Bombay? If that is a fact—and I defy the right honorable gentleman to gainsay it—then we require no preventive service to put down this illegal traffic. We have only to stop the sailing of the smugglers' vessels. . . . The great principles of justice are involved in this matter. You will be called upon, even if you escape from condemnation on this motion, to show cause for your present intention of making war upon the Chinese. They

gave us notice to abandon the contraband trade. When they found that we did not, they had the right to drive us from their coasts on account of our obstinacy in persisting in this infamous and atrocious traffic. I am not competent to judge how long this war may last, but this I can say, that a war more unjust in its origin, a war more calculated in its progress to cover this country with permanent disgrace, I do not know, and I have not read of." Nevertheless, the House of Commons voted in favor of the Opium War by a majority of nine.

The Chinese were everywhere defeated. On August 29, 1842, a treaty of peace was signed. It provided for the absolute cession of Hong Kong to Great Britain. The Chinese were also compelled to open the ports of Canton, Amoy, Foochow, Ningpo, and Shanghai to British trade and to pay for the opium that Commissioner Lin had destroyed. Otherwise, opium was not mentioned.

It did not need to be, for with Hong Kong a safe base for the smugglers and open ports on the coast, the British could smuggle into China as much opium as India could produce. The number of chests smuggled rose from 26,000 in 1836 to 52,000 in 1850. Hong Kong prospered, and the drug gnawed deeper and deeper into the vitals of China.

But the peace which ended the First Opium War was no more than an uneasy armistice. The British wanted to get the opium traffic legalized. In addition, they wanted access to more cities, and a diplomatic representative in Peking.

The humiliation of the Chinese was so profound that an enormous wave of feeling rose against the Manchu Dynasty. This was one of the roots of the Taiping rebellion, which began in 1848 and did not end until 1865. That civil war cost 20,000,000 Chinese lives and the destruction of Nanking and the richest parts of the Yangtze Valley. When the Chinese Government was weakened by the rebellion, the British again made war in 1856—the Second Opium War, which ended in 1858 with China's complete defeat.

By the treaties of Tientsin in 1858 and of Peking in 1860 the opium traffic was legalized, and part of the Kowloon Peninsula was ceded to the British. In 1898 the British obtained a 99-year lease on a large strip of the mainland adjoining Kowloon, so that today greater Hong Kong comprises both the island and a substantial bit of the mainland.

Hong Kong grew into a vast port for legitimate trade and has now abandoned completely the smuggling of opium. But scarcely a day has passed in more than a century without smuggling of one sort or another being done through its harbor. In 1948 and 1949 China's Nationalist Government tried to prevent the smuggling of gold and valuables out of China to Hong Kong and the smuggling of luxury articles into China from Hong Kong, but bankers and merchants of that port smuggled, both ways, everything on which they could make a profit.

In those years, as the Communists advanced toward Hong Kong, the British began to fear that Mao Tse-tung might seize the colony. He could bring overwhelming force against its long land frontier and perhaps capture Kowloon. Then the port and the beautiful island would be at his mercy. Moreover, if the Communists could gain control of the trade unions in Hong Kong, they could paralyze the port with strikes and riots; and if Mao chose to prohibit trade between Hong Kong and the rest of China, he could ruin the colony.

Bankers and merchants, faced by these possible threats, decided that if they made themselves sufficiently useful to the Chinese Communists Mao would not seize Hong Kong. As commercial agents for a Communist Government of China they would prosper

mightily. Some Hong Kong businessmen pointed out that this was short-sighted policy: the Chinese Communists would become so powerful and so hostile to Great Britain and the United States that the vital interests of those two Nations would oblige them to force Hong Kong to stop serving the Communists. Therefore, they contended, it would be in the long-run interest of Hong Kong to support the Chinese Nationalists. But most of the bankers and businessmen chose to believe that Hong Kong would be able to continue indefinitely to do an enormous business with Communist China. They persuaded the British Government to take this view.

Great Britain recognized the Communist Government of China. Hong Kong began to supply the Communists with everything, including war materials, for which they were able to pay. In 1950, after the outbreak of the war in Korea, Hong Kong made more money than in any similar period in its history.

Now the British Government is in a predicament. It has 12,000 soldiers fighting the Chinese Communists in Korea. Its Crown Colony of Hong Kong is supplying materials to those Communists who in turn are killing British and American soldiers. But if Hong Kong were to cease to make itself vitally useful to Mao Tse-tung, he might take the colony. This is one reason why the British continue to favor appeasement of the Chinese Communists, although their aggression in Korea and the declarations of their leaders have made it clear that they are an integral part of the world-wide Communist war machine.

The supplies shipped via Hong Kong to our mutual Chinese Communist enemy have helped to produce more than 50,000 American casualties. Yet the United States Government hesitates to interfere with this British harvesting of quick war profits by imposing severe restrictions on trade with Hong Kong.

It is contrary to the interests of the democratic world for Hong Kong to be supplying the Chinese Communists. It would be contrary to the interests of the democratic world to have the Chinese Communists take Hong Kong. The British do not quite know how to get themselves out of the moral morass they have muddled into. Yet if the question of Hong Kong is tackled courageously it should not be beyond the intelligence of the British Commonwealth, the United States, and the United Nations to devise a solution. But the initiative must come from the United States Government—and quickly.

What Does Organized Labor Think of Our Foreign Policy?

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. DONDERO. Mr. Speaker, in an article entitled "The Road Ahead to a Free World" appears this significant expression of convictions of a large segment of our American people.

The article says, in part:

Traditionally our country has upheld the principles which are basic to all human progress: Respect for the supreme worth of each person because he has a divine soul, and for his right under God to work out his destiny.

In political life this means self-government and self-determination of nations; in economic life, free enterprise and free unions.

The article then goes on to talk about the threat to the free world. It says:

Our country has thus far met this challenge with only a piecemeal and halting strategy of defense. * * * Our defense wall in the Far East was not clear in 1949 and early 1950. We had given Stalin every reason to think that in Korea we would not offer military resistance to invasion. * * *

While stopping the Communist advance in Europe we gave away China to Stalin (1947-49), thus opening ourselves and our allies to a two-front attack—in Asia and Europe. A consistent policy, with adequate help to the anti-Communist Chinese, could have prevented the present huge loss of lives for Americans and our allies in Korea. * * * They—referring to the Truman administration—were at one time ready to consider admitting Red China to the United Nations and yielding Formosa to her.

Let me say at this point that, while the paragraphs I have just quoted were lifted from the context, nevertheless not one word in the article changed or weakened in any respect the statements of opinion just quoted.

This is a serious condemnation of the New Deal and Fair Deal administrations' foreign policy.

This criticism has been voiced by Republican leaders. But this article is news. No doubt you have come to the conclusion that this article appeared in the United States Chamber of Commerce bulletin or in a publication of the National Association of Manufacturers. In this you would be mistaken.

This article clearly states some of the paramount issues of the foreign and domestic policy of the administration. It was published in Labor's Monthly Survey, issued at the highest policy-making level of the American Federation of Labor. To be exact, it was printed in the April-May 1951 issue, volume 12, Nos. 4 and 5.

It seems to me, beyond any possible doubt, that this article in a leading labor publication demonstrates several things that are too often ignored or overlooked.

One is that the rank and file of American labor are good and patriotic Americans. That goes without saying, but this article is proof of any doubts which some people may entertain.

In this article, too, is demonstrated the complete understanding of labor that the Truman administration foreign policies, mistaken if not worse, have cost the American people the friendship of the greatest and most populous nation in Asia, and that those policies alone have thrown the Chinese people to the Communist wolves.

Still further, this article plainly indicates the understanding of labor that the end result of the Truman foreign policies, up to this moment, has been the tragic loss of nearly 80,000 American boys, dead, wounded, and taken prisoner, to say nothing of \$10,000,000,000 in expenditures which must be borne by the taxpayers of our country. And if I am not mistaken, the end is not yet.

These things, in themselves, I believe, should challenge our attention when the

Fair Deal administration boasts that it possesses the blind support of organized labor, regardless of administration sins against the American people.

Another thing demonstrated by this article in Labor's Monthly Survey, it seems to me, is the fact that the American heritage of plain common sense enables the unionists to understand that, without free enterprise, unions cannot exist.

This, I believe, comprises an important part of the justification for the attitude of this Congress and some others before it, in refusing to go along with the socialistic program of the Truman administration.

Organized labor knows, in this country as they are coming to know in some others, that under any socialistic form of government unions are destroyed. When everybody works for the Government, and the word of government is law, where is the place for free and independent bargaining, and what becomes of the right to strike?

Organized labor in this country has looked at the plight of the British people under socialism. As evidenced by this article in Labor's Monthly Survey, labor understands that socialism destroys, not only the unions, but also the basic freedoms which have made the American people the happiest, most prosperous, and the strongest, at peace and at war, of any in all the world.

Let me say in conclusion that this authoritative article in Labor's Monthly Survey makes me happy to realize how closely my own thinking on these matters agrees with the rank and file of organized labor in America.

Research in Action

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 22, 1951

Mr. TEAGUE. Mr. Speaker, on Thursday, July 26, the twelfth annual Cotton Research Congress will convene in College Station, Tex., the home of the Agricultural and Mechanical College of Texas. It is fitting that the Cotton Research Congress has selected this site on which to meet, as this year this great college is celebrating its seventy-fifth anniversary. The agricultural department of the Agricultural and Mechanical College of Texas has contributed greatly to the work of cotton research, and rightfully so, cotton being Texas' largest agricultural product.

Under leave to extend my remarks in the RECORD, I wish to include the keynote address which will be delivered by Mr. Burris C. Jackson, of Hillsboro, Tex., chairman of the State-Wide Cotton Committee of Texas, upon the official opening of the twelfth annual Cotton Research Congress:

We would indeed be remiss in opening this twelfth annual cotton research congress if

we neglected to recognize at the outset the great achievements in many fields including cotton research which in three-quarters of a century have emanated from the institution which is host to this meeting—the Agricultural and Mechanical College of Texas.

As this seventy-fifth anniversary of Texas A. and M. is celebrated we can trace its amazing growth from a humble beginning in 1876 to the huge and efficient plant we see here today. Undeniable visual proof of this progress is evidenced in a comparison of Foster Hall on the military walk with this modern air-conditioned building in which we are meeting.

We can talk about buildings and laboratories—about men who have traveled the road from these halls to high places in our Nation and in the councils of the world. But as we pause in our reflection it requires only slight concentration to realize that among the greatest achievements of this institution are those which have not made the headlines—that no medals hang from the breasts of the men who accomplished them—yet, as a result of their service, our land and the lives of its people will be enriched for generations to come. It would take far too long to recount here the good deeds of the men of Texas A. and M. in nearly every field of human endeavor.

Today, let us think of cotton, not especially because of this congress, but because in this greatest of all cotton producing States, cotton is the very lifeblood of our economy, and millions of Americans are dependent upon cotton.

The factors which influence cotton and its future, influence the very way of life of our people. For when cotton prospers, they prosper. When cotton moves forward, so do the people. That is why the contributions of Texas A. & M. College to cotton, and the deeds of many of you people who are with us today are as enduring as our land itself.

It would be unfair, indeed, to single out the names of individuals in connection with some of these achievements and it is not possible to enumerate all the research work for cotton. We would not attempt to cite any one phase of research or to evaluate its importance in comparison with others. We can only briefly illustrate by calling to mind, at random, a very few of these accomplishments, take a quick look at some research in action, the theme of this Congress.

We can recall the demonstrations in Texas in the early part of the century which led to the establishment of the agricultural extension services throughout the country. We can review the progress in cotton breeding which produced a cotton adapted to the dry lands and winds of a section of this State—a variety of cotton which today is planted on 3,500,000 Texas acres and has made the high plains of Texas one of the largest producers of cotton in the world.

We can point to the advances in mechanization which have allowed us to produce cotton economically, which have slashed to an amazing low the hours required in all operations from land preparation through harvesting. We can remind you of the amazing trend toward mechanical harvesting—of the 5,000 cotton strippers that are being manufactured this year to reduce to a minimum the back-breaking labor required to harvest cotton.

Our mind's eye, too, turns, to the early experiments in cotton irrigation which have made possible the production of cotton on acres that once were barren waste, opening up new lands to provide this Nation and the world with the fiber it demands in ever-increasing quantities.

We recognize further the basic work in cotton genetics and cytogenetics now going on, the remarkable progress that has been made in the control of cotton diseases and insects,

and in the development of equipment, both ground and airborne, for applying insecticides and other materials. Research, too, has made possible better ginning, processing, marketing, and manufacturing of cotton. The research in cottonseed is far reaching in its scope and in result.

Yes; cotton research is in action, not only in Texas but throughout the cotton belt and elsewhere. It will open up new markets for fiber and seed and bring greater prosperity and comfort to our people. That will be discussed at this Congress.

I recall a recent demonstration in which a scientist held up two apparently identical samples of cotton fabric, then wadded them up in his fist. One wrinkled but the other resumed its original shape. Making cotton wrinkle-resistant enables it to compete in markets for a million additional bales annually—and that's only one example of one phase of cotton research, and the vast possibilities offered.

In another instance two ironing-board covers were displayed. Both were cotton. One was unserviceable after 28 hours' use. The second, which was partially acetylated, was still in service after 114 hours. Laundry press covers use more than 100,000 bales or \$20,000,000 worth of cotton annually. The new acetylated cotton cloth will outlast nylon, will cost less money and will turn out high quality work.

Cotton now can be dyed with wool dyes, making it possible to achieve a brilliance in fabric which once was not thought possible. With more research cotton will be made stronger, more resistant to weather, to wear, to wrinkling and to soiling. It will be crisp or soft, sheer or opaque, absorbent or water repellent.

We mentioned a moment ago the work of our cotton breeders with new and improved strains of cotton. These hold promise of high luster, low nap count, greater strength, longer staple, and many other desirable characteristics.

Other researchers in their basic studies of cotton fiber are examining its structure, how moisture and heat affect it, and the result of heat, acids, aging, and other influences on it. They are seeking to stabilize cotton against these destructive influences and to improve its quality in other respects, through chemical modification.

In research on cotton processing they are working to develop cotton yarns which can be knit at higher speeds. They are finding out more about the spinning qualities of the fiber and are working to develop better machinery for opening and cleaning cotton at the bolls.

All these things mean that there will be a greater use for cotton, this product which is our greatest agricultural commodity and which means so much to our Nation and the world.

I would like to continue to paint you an optimistic future for cotton, but I feel, that in all fairness, we cannot afford to be anything other than realistic about the magnitude of the task that lies before us in cotton research.

This job is enormous but it is one that is so important that the whole future of cotton depends on how well it is accomplished. Our future depends on it because cotton's future lies in its markets and the key to markets is research and promotion.

Cottons' markets today are faced with the greatest challenge they have ever confronted. Our competitors, through research and promotion, have so strengthened themselves that they are threatening to take from us an income which we once felt was secure. Yet cotton remains the greatest of all fibers, the most useful, the most versatile, and the cotton industry stands as a bulwark of the Nation's economic system.

It is pointless to detail just who are these competitors and where they are hurting us. Those facts are widely known. What cotton must do is broaden and intensify its own research program. A main purpose of this Congress is to aid in pointing the way. Cotton must mobilize its forces stronger than ever, and the American public, who has a big stake in cotton's progress, must be able to realize it. For the people's sake, cotton must move forward in its opportunities to serve mankind.

Cotton and cottonseed products are also essential in war, so vital in these troublesome times. Cotton is the one fiber that can expand its production in a single season without building costly new plants at Government expense. It is a commodity second only to steel in military importance and is used in more than 11,000 items for our Armed Forces.

These simple facts, without further elaboration, not only emphasize the sheer folly of curtailing the cotton-research program but prove the need for expansion.

And as we dedicate ourselves to this task of expanding and strengthening research for cotton, safeguarding it from any short-sighted assault, we are working for the best interests of our country. We are working in the interest of freedom itself. With that assurance, and in this atmosphere of a great institution, I am pleased to open the twelfth annual Cotton Research Congress.

Kentucky Is Still Noted for Its Beautiful Women

EXTENSION OF REMARKS

OF

HON. JAMES S. GOLDEN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. GOLDEN. Mr. Speaker, during the 200 years of the existence of Kentucky, since its early discovery in 1750 by Dr. Thomas Walker, of Charlottesville, Va., Kentucky has been noted for its courageous, virtuous, and beautiful women.

That tradition has been handed down from generation to generation and for the past several years in Bell County, Ky., near Pineville, the county seat, the Kentucky laurel festival in beautiful Laurel Cove, a beauty contest has been held each year when the mountain laurel is in bloom where the most beautiful young lady of this State is crowned beauty queen.

Each of the colleges and universities of the State and adjoining States select their most beautiful girl and in the last week of May, when all of the beautiful mountain flowers and shrubs are in bloom, the Governor of the Commonwealth crowns the young lady who is selected as the most beautiful.

The seat of this Kentucky mountain laurel beauty contest is just a few miles from the national park at Cumberland Gap through which most all of the pioneers and early settlers passed during the early history of America as they marched westward and northwestward to conquer the wilderness. This section of Kentucky is replete with many historic shrines and beautiful recreational grounds for tourists to visit. It is only

about 30 miles from the site of the first house built by white man west of the Allegheny Mountains known as the Dr. Thomas Walker State Park. It is also close to the beautiful Cumberland Falls which is now a State park and within less than a half day's drive of one of the greatest inland lakes in America, known as Cumberland Lake where a huge dam across Cumberland River in Russell County has impounded a lake approximately 110 miles long and from 2 to 10 miles wide.

This lake furnishes excellent fishing and boating for tourists and all of this section of Kentucky, which is near to one of the Seven Wonders of the World, namely Mammoth Cave, is fast developing into a great tourist center where millions of American people can come and enjoy the beautiful scenery, the historic shrines, and the hospitality of the Kentucky people.

This year's mountain laurel festival was written up and described in the Courier-Journal by one of Kentucky's foremost newspaper columnists, Mr. Gerald Griffin, and I am attaching hereto and incorporating as a part of my remarks his account of this beautiful and festive occasion:

1951 LAUREL FESTIVAL WAS BEST YET

(By Gerald Griffin)

PINEVILLE, June 2.—The 1951 Kentucky mountain laurel festival was the biggest and best of them all.

Festival officials, committee members and spectators who have seen all the pageants since the first one in 1931 agree on this point. This year's, held last week end in Laurel Cove, a few miles out of Pineville in Pine Mountain Park, was an event that will long remain in the memories of the thousands who saw it.

The reigning queen, Miss Betty Lyen, of Harrodsburg, was crowned by Gov. Lawrence Wetherby climaxing an elaborate pageant and ceremony at the cove on the afternoon of May 25.

A striking brunette, she is a member of this year's graduating class at Transylvania College, where she is a member of Delta Delta Delta sorority. She is the daughter of Mr. and Mrs. Homer T. Lyen.

WAS POPULAR CHOICE

Miss Lyen, as festival queen, took over the mantle and diadem of laurel blossoms from another lovely brunette, Mrs. Clyde Bennett, of Evans. Representing Union College at Barbourville, Mrs. Bennett was Miss Patricia Parsons. She was a freshman when Senator EARLE C. CLEMENTS, then governor of the Commonwealth, placed the crown on her head.

And the Senator was on hand at the festival this year to watch his successor place the crown on the head of the new queen.

The choice of Miss Lyen as queen was a popular one with the thousands of spectators who crowded the natural amphitheater to see the pageant and hear the music. It was her second appearance as a candidate for the queenship. She represented Transylvania 2 years ago.

The festival continued the greater part of 3 days, beginning Thursday night with a dinner and reception for the 16 girls representing Kentucky colleges. It was held at the home of Dr. S. H. Flowers and Mrs. Flowers in Middlesboro. Then the queen candidates and their escorts were guests at a dance in the Lincoln Memorial University gymnasium at Harrogate, Tenn.

After the coronation, the new queen and her attendants were guests of honor at a

grand ball in the Pineville High School gymnasium where Queen Betty and the Governor led the grand march. There was an intermission floor show by girls from the Lillas Courtney School of the Dance, Louisville. These girls also presented a ballet at the conclusion of the coronation ceremony.

HIGH-SCHOOL GIRLS TAKE OVER

But, whereas the college girls were the center of attraction the first two festival days, the high-school girls came in for their share on Saturday night. That was at the Princesses' Ball, also held in the gymnasium here, and a new princess was crowned. There were 17 candidates for this honor, from high schools in southeastern Kentucky.

The new festival princess is Miss Barbara Vermillion, Corbin. She succeeded Miss Marty Blair, Barbourville. A big chief of the Mohawk Tribe of Red Men's Lodge crowned her with a feathered Indian headdress.

The festival provided a gala time for Pineville, with many luncheons, receptions, and parties during the 3 days.

On the day of the queen's coronation, Mr. and Mrs. Herndon Evans entertained with a luncheon for out-of-town guests including Senator Clements, Mrs. Clements, Governor Wetherby and Mrs. Wetherby. That afternoon, just after the pageant, Mr. and Mrs. Richard Barker entertained the group at a cocktail party at their home, next door to the Evanses.

Among other guests at both parties were Mr. and Mrs. Fred B. Wachs, Lexington, and Mr. and Mrs. Harry Carr, Louisville. Mr. Wachs is retiring president of the Mountain Laurel Festival Association, Mr. Carr, who formerly lived in Pineville, is the new president. Last year he was master of ceremonies at the pageant.

Mr. Speaker, Kentucky wishes to invite all Members of Congress and American citizens to visit our beautiful State, and we hope that it may be possible for you to come during the laurel festival so that you can see the growing of Kentucky's beauty queen and mix and mingle with the Kentucky people and participate in her hospitality.

We Should Send the Report on Housing Back to Conference

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. PHILLIPS. Mr. Speaker, for nearly 20 years this country has been kept in an almost continuous state of national emergency.

The idea of declaring an emergency, whenever it might serve to scare Congress into yielding before White House demands, began with the first administration of Franklin D. Roosevelt.

Most of these national emergencies have been artificial. They have been used to further socialistic schemes by which the executive branch of Government increased its own powers at the expense of the legislative branch.

We are presented once more, on a lesser scale, with one of those phony emergencies.

This time no national emergency has been declared, but the scare aspects of the emergency technique are present in full force.

We are being shocked by heart-rending stories of appalling slum conditions under which married personnel of the Armed Forces are compelled to live in the areas around military and naval installations.

We are shocked by stories of rent-gouging on the part of supposedly patriotic Americans; rent gouging on a scale never seen before, unless it was in England at the dawn of the industrial revolution.

Photographs have been shown us to prove that Army and Navy families are living in doll houses originally built for children; in shacks made of tin cans and beer bottles, and even in chicken coops.

Statistics have been read in this House, designed to show that landlords in the neighborhood of military and naval posts have boosted rents for armed services personnel anywhere from 100 to 500 percent.

All this is very shocking. It is no doubt true, so far as it goes. These examples of slum conditions for armed services personnel and of the lowest kind of rent gouging, represent the exception rather than the rule. Truth has been perverted into a lie.

Which of us will testify that this sordid picture represents the real situation in our home districts? Who will say that even a small percentage of landlords, who rent to Army and Navy families, are so lost to patriotism and to common decency as to prey on the defenders of our Nation?

In every community there are a few landlords of the kind depicted in the photographs and the statistics laid before us. In every instance where such a condition exists, it must be eliminated immediately. No man in his right mind would think otherwise.

This bogey of slum housing and excessive rents for armed services personnel has not been raised in good faith. It has been raised to scare Congress into doing something that has no relation to housing for Army and Navy married personnel.

In H. R. 3880, making appropriations for the independent offices and agencies, the House voted to restrict public housing starts by the Public Housing Administration to 5,000 during the 1952 fiscal year. The Senate amended the bill to increase the number to 50,000, where it stood when reported back to the House by the committee of conference.

Therefore it should be obvious that these horror tales concerning the plight of armed services personnel were calculated to stampede the Congress into accepting the highest possible figure for the authorization of public housing starts this year.

The propagandists ignored the fact that relief for such Army and Navy families as are being victimized should properly be granted in other appropriation bills. That can and should be done.

It should be apparent that the administration has applied pressure, by relating two separate propositions, in an effort to use Federal public housing again as a step toward socializing the American economy. The Truman administration pushes for more and more Federal public housing, in spite of the fact it has failed to carry out the authorizations Congress granted in the 2 years since enactment of the Housing Act of 1949.

Government wastefulness in construction of public housing, the high rentals charged for housing units in Government projects, far beyond the reach of low-income families, and the demonstrated fact that local governmental units can do a better housing job than the Federal Government can do—all have been discussed ad nauseum.

There are other considerations against a continuance of large-scale housing construction by Federal agencies which have received little attention.

One of these is the political aspect of public housing. Political organizations, devoted to perpetuating Federal public housing and interested in the patronage jobs connected with such projects, have grown to large proportions. These organizations, by their very nature, are being used for political purposes far removed from public housing.

The Boston Herald, dated Tuesday, May 1, 1951, published an article headed "City asks probe of pay-offs for project homes."

The Herald story goes on to say:

The Boston City Council yesterday asked Federal housing authorities and the attorney general to investigate persistent reports that in order to obtain an apartment in a Boston public housing project one must slip a person of influence \$300 to \$500.

"In the two new Brighton housing projects a prospective tenant must have a 'sponsor' in addition to the under-the-table payment," complained the councilman from the district. "People are going to be surprised at the names of the sponsors," he added.

The council's action followed a warning by Mayor Hynes that no gratuities should be paid for apartments. He urged applicants to report any such irregularities to the housing authority.

That would make it look as if the Boston municipal authorities were asking the Federal housing authorities to investigate themselves. What kind of a sponsor would it be necessary for an apartment-seeker to have?

Here is an example of what is going on in Kern County, Calif. I quote from a bulletin from by Fred E. Widmer, executive director, Housing Authority of the County of Kern, to all employees of that housing authority, as follows:

At a meeting of the League of California Housing Authorities, held in San Francisco August 4 and 5, 1950, it was resolved that proposition No. 10, which will be voted upon at the general State election to be held November 7, 1950, is a measure to kill all public housing in the State of California. It is a vicious move, promoted by a small, selfish, well-financed minority.

To survive we must put up a successful fight to bring out a "No" vote on proposition No. 10. To do this we have hired one of

the best professional agencies to conduct the program—and this costs money.

It was recommended that each employee of both Federal and local authorities contribute a certain percentage of their salaries for the next seven pay days.

Salaries up to \$275 per month, 3 percent; up to \$450 per month, 4 percent; over \$450 per month, 5 percent.

We, our families, and our friends must get out a "No" vote on proposition No. 10. It is going to be a hard fight, but we can and will win.

Almost anyone can imagine what would happen to those who failed to kick in with the political contribution.

Here is still another example, this time in Miami, Fla. I quote from a special bulletin, dated June 26, 1950, and addressed by V. M. Kimbrew, housing manager, to all tenants of Edison Courts, a Federal project located at 325 Northwest Sixty-second Street, in Miami. Says the bulletin:

Tomorrow, June 27, is voting day. Tomorrow we either win or lose more public housing in Miami. If you appreciate what public housing did for you (and is still doing) when you needed housing so badly, then go to the polls tomorrow, Tuesday, the 27th, and vote "yes."

Every tenant in this project will be expected to vote "yes" tomorrow. The polls are open from 7 a. m. to 7 p. m., located in Edison High School Auditorium, Northwest Second Avenue and Sixty-first Street. If you need transportation, contact our office.

A distinguished Member of this House told me, some time ago, of the statement of the manager of the Federal housing project in his home city. He was told not to worry about the vote from the Federal housing tenants, it would be delivered by the manager. I add that the Congressman assured the manager he did not want that kind of help.

The investigation of the Federal housing projects in the County of San Diego showed similar political influence exerted on the tenants. This report, if I recall correctly, came from the Committee on Expenditures in the Executive Departments, during the Eightieth Congress.

My interest has been primarily in waste, and the failure to produce the number of houses required, when the matter was placed with some Federal agency, as compared with the results under local agencies, or in the hands of private builders. A recent clipping, which I seem to have mislaid at the moment, is a straw in the wind. It referred to a Federal housing project, with about 500 units. The manager has been getting \$8,000 for supervising this project; the clipping announced the increase of his salary to \$9,100. There is no way in which ordinary business criteria can be impressed on Government agencies.

A motion to recommit the conference report will be made when it comes to the floor. One of the items in disagreement will be this problem of Federal housing, as compared with local projects, or privately built homes. I hope we will say that the wording in the bill as it left the House should be retained. This said that the housing agencies should not send planners and promoters

all over the Nation, giving the impression the Congress was committed to more projects than had yet been authorized or financed. We could at the same time keep the number of starts to any minimum number.

If we are to have public housing, let us have public housing sponsored, supervised, and financed by the States, the counties, or the cities. We will save money and we will get houses. Even before that, we should check the greater likelihood of getting more houses, and cheaper houses, and getting them more quickly, if we give every possible encouragement to private builders. Everybody in America will be better off, especially the families who need shelter, and the already overloaded taxpayers.

A Birthday Party de Luxe: Detroit, 1701-1951, 250 Years

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the Record, I rejoice in the privilege to tell of the gala ceremonies on the two hundred and fiftieth birthday of dynamic Detroit.

The giant city that took on new rules in World War II, that stilled its production line for its automobiles and turned her thoughts to the defense of the Nation, and became known throughout the world as Detroit, the Hub of the Arsenal of Democracy, today pauses and makes merry to celebrate her two hundred and fiftieth birthday. No wonder she celebrates with the world's largest birthday cake, stationed in Grand Circus Park in the heart of the city, lighted with 250 candles. There will be the big parade at the festival's peak on July 28, at which the President of the United States, Governors from various States of the Union, foreign diplomats, and officials from various walks of life, will take part. There will be the anniversary medallion modeled in beautiful bronze depicting in bas-relief the landing of Cadillac in 1701 and Old Fort Pontchartrain contrasted against the Detroit of today and tomorrow as a lasting souvenir of this great birthday celebration. The University of Detroit, my alma mater, staged Detroit's official birthday show, the City of Freedom, at the stadium grounds on the university campus. All groups have entered into the spirit of the birthday festival of Detroit, the City Beautiful, and everything from the new Veterans' Administration Building to the animals at the zoo have polished and slicked-up in conformity with the opinion expressed by Mr. Selden B. Daume, president and general chairman of Detroit's two hundred and fiftieth birthday festival.

But why should I go on? Let the able pen of Mr. John C. Manning tell the story

of the miracle in Michigan as it appeared in Town and Country magazine in its publication of February last. The article follows:

MIRACLE IN MICHIGAN

(By John C. Manning)

Detroit is preparing for a birthday party, come summer. Except for the sudden shadow of war it would doubtless have been the most robust shindig ever witnessed by man or beast in this part of the country. The city will be 250 years old in June and the municipal officials want to tell the world about it, loudly and with flourish. But, aside from the city fathers and those loyal groups who always rally in matters of communal enterprise, not one Detroitier in a thousand is wasting a minute's thought about it. This may seem difficult to understand, but it is quite in character. Detroiters rarely wear their civic pride on their sleeves.

Detroit was founded 50 years ahead of Pittsburgh and a century ahead of Cleveland and Buffalo and is the oldest American city of consequence west of the Atlantic seaboard. It was founded 17 years before New Orleans, 28 years before Baltimore, and it is more than a hundred years older than Chicago. It is only 75 years younger than New York, 70 younger than Boston, and a mere 21 behind Philadelphia. Yet the average educated Detroitier generally knows more about the history of Boston, New York, and Philadelphia than of his own town. This is not because he is a dullard, he simply takes Detroit for granted. It suits him, and he doesn't bother about the whys and wherefores. He feels it is his prerogative to traduce his town venomously, which he does at the slightest opportunity, but he does not welcome criticism from outsiders however well meant it is.

Detroit actually was created in defiance of the judgment of the keenest statesmen of seventeenth-century France. It was chartered toward the end of that Imperial era as the future leading fur post of the western world. It never fulfilled the forecast even for a decade or a year. It lay inconveniently north of the great, natural transcontinental trade routes. It had no advantage as a port because it lacked good harbors. Therefore, men said, it would stagnate and die as civilization rolled westward, to the south of it. But it refused to wither, paradoxically, it took root and grew. It grew in spite of itself, slowly, indifferently you might say, through the eighteenth and nineteenth centuries. And then overnight, with the birth of the present century, it fairly exploded into growth and action.

Detroit was born under the white-and-gold flag of France while France and England warred for possession of North America. The English eventually won the city and the children of the first French settlers helped their British conquerors fight off American colonists during the Revolution. This defense was carried out so shrewdly that Detroit did not come under the American flag until 20 years after the Colonies had won their independence.

Most historians agree that this reluctance of Detroiters to revolt against British rule cost the settlement favor from our infant Federal Government and retarded Detroit's development for nearly a generation. The same stubborn refusal to kowtow to Washington, only a few years ago, deprived the city of those lavish New Deal grants that stimulated vast public works in so many American communities, and nobody in Detroit regrets it.

For the first 200 years of its life, Detroit was sedate if not downright somnolent. For the last 50, it has been a strident and swag-

gering world metropolis. Fifty years ago it was unpretentious among American cities and enjoyed no fame abroad. Today, with the exception of London, New York, Paris, and Berlin, it probably is the most widely known city in the world. Everybody in the world would like an automobile and everybody knows that Detroit is the automobile capital of the world.

Seventy-five years ago, nearly all Detroiters knew each other. Today, nobody knows his next-door neighbor. Better than 60 percent of the residents are automobile workers or their kin. If they think about their city at all, they look upon it as a big factory, and their civic pride is measured by the size and regularity of their pay envelopes.

But you would be wrong to conclude from this that Detroiters have no pride in their city. It prevails to a lusty degree. Those who cherish it, however, have learned patience the hard way. Detroit is so highly industrialized that it feels the quirks of economic variety more quickly and drastically than such cities as St. Louis, where commerce is conservative and financial ups and downs less mercurial.

People who consider Detroit their real home and who love every sprawling, nolsy mile of it, realize that today's dream of community betterment may be sidetracked temporarily by tomorrow's recession. They cling to their dreams, serene in a faith that, if not tomorrow, then the day after or the day after that, Detroit will boast a water front to rival Rio's and a revived symphony orchestra to rival Philadelphia's, and an express highway system to rival New York's.

The tomorrows of the faithful sometimes lengthen into years, but the dreams do come true one day. Detroit is that kind of community. It is the optimistic type of community where the very nondescripts and migrant workers, who give it a shoddy surface appearance now, will, by some alchemy of association, be the most fervent boosters for civic improvement 10 years hence.

A retrospective glance reveals the skein of paradox that began with the first page of its history and continued unbroken to this moment.

Sieur Antoine de la Mothe Cadillac founded Detroit. He came out of Gascony to the New World, a protégé of Pontchartrain, Finance Minister to Louis XIV. He was among the most intrepid of those reckless adventurers who explored the northern stretches of this continent for Louis at Versailles. In addition to his courage, he possessed the practical French conviction that a man should feather his own nest in life. Because he arrived late on the American scene, the slender Gascon noble found precious little feathering. Frontenac, Governor of Canada, tried to help him, but by then the pickings were slim. As commandant at Michilimackinac, the island fortress on top of Lake Huron, Cadillac learned to his chagrin that, without grafting, he couldn't amass any formidable bundle of money. He respected money almost as much as he respected adventure, but he was not a grafter.

Cadillac knew of the narrows now called the Detroit River. Whether he had actually visited the region is uncertain. There is no uncertainty, however, about his being a man of vision. He figured that a settlement on those lower straits not only would have sound military value, by commanding the approaches from the lower to the upper lakes, but that it could be developed into the center and clearinghouse for the fur trade of the entire Northwest country.

He went to Paris and sold his idea to the court. Armed with the royal blessing, he returned to Montreal and, on June 2, 1701, led a canoe flotilla from there through the Nipissing and down through Lake Huron and Lake St. Clair to "d'Etoir," which means

the narrows. Past beautiful Belle Isle they floated, the long canoes containing 50 soldiers and 50 settlers, and a mile or two beyond where the river swings westward they headed in and landed on the north shore.

On the north shore, mind you. That landing provided the first and most fantastic of Detroit's many paradoxes. Eighty-odd years later, the peace treaty, following the American Revolution, set the border between Canada and the United States on a center line through the Great Lakes and their connecting rivers.

Consequently, Detroit, Mich., is north of Windsor, Ontario. Travelers, especially from the middle States, include a trip to Windsor as a must on their first visit to Detroit. Unless they be geographers, it confounds them to go south across the river from Detroit to Canada. They insist it just cannot be. Every schoolboy knows Canada is north of the United States and no one can tell him differently.

The beginning of the city in its present form and outline dates from 1805 when it was swept by a fire which destroyed every building except one. It was rebuilt on a pattern similar to that employed by L'Enfant in the laying out of Washington. Woodward Avenue runs north from the river and divides the city east and west. Grand River Avenue runs diagonally northwest into the center of the State, and Gratiot Avenue northeast to Port Huron and the Thumb district beyond. Michigan Avenue, heading northwest on a lesser bias, is the old post road than once ran from Detroit to Chicago.

This fanlike arrangement of principal thoroughfares, considered ideal 150 years ago in that it permitted potential spacious park areas between the spokes of the fan, has resulted in a constantly increasing traffic snarl within a 2-mile perimeter of the downtown business section. As a matter of fact, if an inquiring reporter were to poll Detroiters on the worst feature of their city, the consensus would be that it is the traffic congestion in the main sections.

In 1805 the population was between 6,000 and 7,000, a third of whom were English, Scotch, or Irish, and two-thirds descendants of the original French settlers. The French influence still remains in Detroit. More than a few families trace their ancestry back to the voyageurs or soldiers who scrambled ashore behind Cadillac. In this connection, it is pertinent to recall that modern Detroit reflects the stamp and the blending of three distinct cultures. First, the French, a handful of whom were aristocrats and the remainder level-headed, frugal peasants. They were a sociable folk but home loving. Next came the English. They were better mixers and leaned more to public entertainment and gatherings. The final definitive culture to infiltrate was that of the New England and other eastern colonists.

These three social strains followed one upon the other. Over the years they blended happily into a lasting cultural pattern which never has been appreciably disturbed. An immigration poured West in the 1800's, Irish and Germans and Slavs and Latins settled here as they did in other industrial centers. And after a generation or so, they were absorbed in the existing cultural background.

Through the nineteenth century Detroit experienced several phases of expansion. Considerable shipbuilding was done in yards along the long water front. Then, about 1830, the town became a rather bustling center of general wholesale and retail trade. Hundreds and thousands of land-hungry easterners began emigrating to central Michigan and upper Ohio were farm acreage was cheap and good. They stopped over at Detroit to buy their farm equipment and maybe pick up a horse or two and

a farm wagon. Manufacture of farm vehicles led to the eventual establishment of shops for the building of more elaborate buggies and carriages. And this little industry grew into the automotive empire that not even the most visionary Detroiters dreamed of in those placid times.

By 1880 Detroit was a solidly established, second-class American city of the older kind, as we measure age in American history. Its streets were, for the most part, wide and tree-lined. Its homes, in the better residential sections, were stanchly built and commodious. A surprising proportion of them (considering the architectural morbidity of the Victorian period) were gracefully attractive in a quaint way. Along such fashionable avenues as Woodward, Jefferson, Cass, West Fort, and Lafayette Boulevard, the predominant building materials for homes were brownstone, granite, and sturdy red brick. Frame houses were the rule in the more modest sections. Slums at that time were only a vague threat. Even in the poorer sections, most of the wooden cottages were neat, with front and back yards.

Detroit, circa 1880, became noted for its pharmaceutical products. It led in the manufacture of stoves and furnaces, and such heavy things as wheels and parts for railroad trains. Its people were conservative in business, conservative in social intercourse, conservative in their general outlook, conservative in the utilization of their wealth. The rich families were cultivated and urbane enough, but hardly smart in the frivolous sense. They traveled moderately. They sent their sons to Yale, Harvard, Princeton, or to the University of Michigan, which had been founded jointly by a great Catholic priest, Gabriel Richard, and his friend—a great Presbyterian minister, the Reverend John Monteith. They sent their daughters to finishing schools in the East, or to exclusive local seminaries. They were, in a word, smug.

When the new century arrived, Detroit's population was about 285,000. Then came the automobile and a metamorphosis as bewildering as anything in the Arabian Nights. Henry Ford, Henry Leland, Durant, the Dodge brothers, Chalmers, and the rest of the automotive pioneers created a jumbled kaleidoscope of bursting growth and community prosperity that shuttled the quiet city of 285,000 into today's glamorous place of 2,000,000 inhabitants.

The story of Detroit and the automobile has been told so often, so voluminously, that repetition here would be tiresome. And the story of Detroit's wartime production is familiar to all literate people in the world. It is worth touching on only because, at the dawn of the Second World War, considerable doubt existed that the city's industry could meet the demand for guns and tanks and planes and munitions. You may remember, for example, how newspaper columnists and radio commentators used to allude to the Willow Run bomber plant as "Ford's Folly" and how Detroit automobile manufacturers were scolded by far-left liberals as selfish moneygrubbers who were not interested in changing over to war production and who knew only how to make automobiles.

You may remember, too, how those sneers were throttled and the scolding transformed into applause as the B-29's rolled out of Willow Run, and the GM planes, and Chrysler tanks and the Hudson and Packard armament surged into being as Detroit rapidly became the Arsenal of Democracy. If you are a statistician, you may recall that, between 1940 and 1946, Detroit factories shipped \$25,000,000,000 in war matériel; that Detroit manufactured 11 percent of all the war equipment employed by the Allied armies and navies.

So, in this year of grace, 1951, Detroit sprawls along the north shore of her river, thinking little, if anything, about her past and readying calmly but competently for whatever the future may decree. If it be another war, she will build for it more quickly even than she did for the last one. Her laboratories and research plants have gained by experience. She is big in area as well as in population. Besides the city proper, she completely surrounds two good-sized cities—Highland Park and Hamtramck. The latter, in a recent census, was said to contain more Poles than any city except Warsaw.

Detroit is untidy and restless and noisy. Her residents are of every race under the sun and every color. They get along fairly well together. In fact, from the population viewpoint, the city is as cosmopolitan as Marseilles or Port Said. But in another way, it is almost as parochial as a Vermont village.

Two million inhabitants, for instance, and only two legitimate theaters; few restaurants to capture the interest of an epicure, less than a dozen first-rate urban clubs, no present big-scale symphony (it died unnoticed because those who could have saved it were too busy making munitions in the last war); no tenderloin district, but a slather of tawdry saloons and taverns scattered all over town and a slather of neighborhood movie houses that did a land-office business until television invaded the beer gardens; no single, sharply defined smart shopping district, but several widely separated and fragmentary districts that drip exclusiveness.

You might think from the above paragraph that the average well-to-do Detroiters has no recourse at night but to stay home and go to bed. On the contrary, he is as gregariously inclined as his fellows in any other city. He is an avid country-clubber. Detroit boasts more than its share of good golf and suburban clubs. In the gracious precincts of such places as the Country Club, the Little Club in Grosse Pointe, the Detroit Golf Club, Oakland Hills, Bloomfield Hills, Meadowbrook, Red Run, Knollwood, Plum Hollow, the Grosse Pointe Hunt Club, and Bloomfield Open Hunt, Detroiters entertain and take their ease. And because Detroit is a waterside city much of its life revolves around its several distinguished yacht clubs—the Detroit Boat Club, the Detroit and Bayview Yacht Clubs, and the magnificent Grosse Pointe Yacht Club.

Because its industries grew faster than it could digest them, the present residential sections have been shoved farther and farther outward. Save for those conservative families who ignore change, most of the better residential sections are on the outskirts of the city or beyond. Palmer Woods to the north, and Sherwood Forest and Huntington Woods are typical. Grosse Pointe to the east along the shore of Lake St. Clair is one of the most widely acclaimed gold coasts on the continent. Birmingham and Bloomfield Hills, a dozen miles north of the city proper, and several villages to the west house many prosperous Detroiters.

Wherever they live, Detroit is their city. They grumble at it and pretend they hate to work in it day after day. But they are liars. They love it. They love everything about it—good and bad. Many of them, particularly in the financial and manufacturing fields, almost might be said to commute between Detroit and New York on the crack Wolverine or Detroiters of the Michigan Central Railroad. They are always glad to get home.

They remind you of Kipling's flea-bitten old sailor who, speaking of the world in general, said:

"It never does no good for me
But I couldn't leave it if I tried."

Fortification of Dorchester Heights

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a copy of a letter written by Morgan Connor on March 9, 1776, to Samuel Potts, Esq., of Philadelphia, Pa.

Due to the fact that Dorchester Heights, which was recently recognized as a national shrine, is located in my congressional district, this copy was sent to me by Conrad L. Wirth, Associate Director of the National Park Service of the Department of the Interior, with the information that—

Superintendent Ronalds, of Morristown Historical Park, Morristown, N. J., came across this letter in going through Mr. Lloyd M. Smith's vast collection of revolutionary manuscripts.

In relation to the identification of Morgan Connor, and the part he played at Dorchester Heights, where under the leadership of Gen. George Washington, the Continental troops compelled the British to evacuate Boston, as well as an outline of his service during the Revolutionary War, Mr. Wirth further said:

In this connection [Superintendent Ronalds said] Morgan Connor had come to Boston in the summer of 1775 a first lieutenant in a Pennsylvania rifle regiment. When he wrote the letter he was a captain in the First Continental Infantry. Eventually he became lieutenant colonel of the Seventh Pennsylvania, and was granted 6 months' leave on December 2, 1779. He was lost at sea in January 1780.

This historic and most interesting letter brings us back to the trying and early days of the Revolutionary War.

It is also a letter that brings to light one of the unknown heroes of that vital and important period in the life and history of our country, in those days when our very independence as a Nation and our freedom as a people was at stake.

The letter follows:

CAMP ON PROSPECT HILL, March 9, 1776.
TO SAMUEL POTTS, ESQ.,
To the care of W. D. Potts, Merchant,
Water Street, Philadelphia, Pottsgrove.

SIR: Last Saturday night we began to bombard the town of Boston, which was warmly returned on the side of the King's troops. This fire was continued till Tuesday morning and was intended to draw their attention this way and cover a design that was formed of fortifying two hills on the south side of Boston. This had the desired effect, for our people to the amount of 3,000 went on Monday night, and by means of the heavy fire kept up were not discovered till next morning, when, to the great surprise of the King's troops, two towering fortifications appeared on the heights of Dorchester. This seemed to throw them into great confusion, as those hills command the harbor. We learn that it was agreed in a council of war to give us battle, but while they were making the necessary dispositions a heavy gale of wind sprang up which for that time put a stop to

their further progress. I believe they have since thought better of it, for we discover no movement of theirs that would indicate such a design. Some deserters who came out yesterday say they are preparing to abandon the town, but what degree of credit is due to this report I am not able to determine. Certain it is that they are shipping as fast as possible a great many effects, large quantities of artillery and ordnance stores, but I rather think they mean to risk a battle and are prudently taking every necessary step to have everything in readiness to push off in case of a defeat. If they attacked our lines at Dorchester we had 4,000 men ready with boats to make an attack upon the town at this side so that we would have had a warm day of it, and I verily believe we would have given them a drubbing. On Monday night we fired 300 cannon and mortars, which were answered by 4 times that number, so that from 7 in the evening till 6 in the morning there was nothing to be heard but a constant explosion of cannon and bursting of shells. We had two men killed, but what execution our fire did we don't learn. We very unluckily burst five mortars among which was a fine 13-inch brass mortar taken in the store ship. There were bombs thrown from Boston almost to Cambridge; this is full 2 miles. I've no time to say more, as I am this moment ordered out on duty. Please to make my compliments to Mr. and Mrs. Tut-ter, to whom I would wish to have this letter addressed with you. I would wish my best compliments made acceptable to Mrs. Potts and all other friends.

I am, sir, with great esteem, your assured humble servant.

MORGAN CONNOR.

P. S.—This moment the selectmen of Boston came to the lines with a flag of truce to let General Washington know that General Howe said if he (Washington) would desist firing that he (Howe) would evacuate the town in 3 days without plundering or destroying it, but if we continued to harass his troops he would burn the town. What answer the general will give is not known. To-night we shall make some nearer approaches by fortifying an eminence within half a mile of the town. Adieu, sir, once more.

M. C.

Profane Priest Makes Mockery of American Immigration Laws; Costs Taxpayers One-fourth Million Dollars

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. GOSSETT. Mr. Speaker, Constantinos George Georgiades entered this country illegally more than 15 years ago. Although his illegal status was immediately discovered, and although immediate steps were taken to deport him, he is still here. Not only did this alleged priest enter this country fraudulently and illegally, but his conduct during these last 15 years has been insulting to the church of which he professes to be a member, and harmful to the many American communities in which he has lived.

For the record, let me give you a chronological statement concerning this illegal alien's record.

On February 25, 1936, Constantinos George Georgiades, a priest in the com-

munity of Clygada, district of Athens, Greece, appealed to Bishop Arsenious, of Brooklyn and New Jersey, for a position as priest under the bishop's jurisdiction. But before receiving a reply he left for Buenos Aires, Argentina, leaving behind his wife and children, for which no reason has ever been given, and finally became installed in a paying position in a Greek church at Buenos Aires. Something happened in Buenos Aires having to do with the conduct of Georgiades and apparently kept secret by the church authorities. But in the month of August 1937, Georgiades appealed again to the bishop, this time for a parish in the United States. He arrived here on September 30, 1937, at the port of New York, with a special passport under section 3 (1) of the Immigration Act of 1924, upon the representation that he was to be assigned for duty at the chapel of the Greek Embassy, Washington, D. C. Incidentally, there was no such chapel, which Georgiades well knew, and no attempt was made to assign Georgiades to the Greek Embassy in Washington, but instead he was sent as a priest to the Greek community of a small town in Massachusetts, Clinton. His service there was a short one, because the whole parish was up in arms shortly after his arrival and the officials of the Greek community were thoroughly disgusted with his conduct. From then on Georgiades was assigned first at one church and then another, because time after time complaints became too violent to keep him where he happened to be; and at Biddeford, Maine, for instance, his conduct became so unseemly that a movement was started to have him sent out of the parish because of his profane and obscene language, and, in addition to which, according to the record, he was guilty of most immoral conduct. The record shows that he made improper advances to women both within and without the Greek community and that he patronized a colored house of ill fame in the city of Portland, Maine.

This gives you but a brief indication of the pattern of Georgiades' conduct throughout the 14 years he has been in the United States, during which time the Immigration Service has continuously, but with gentle hands, endeavored to have him deported. I desire at this point to submit for the record a copy of facts relied upon for the deportation of Constantinos George Georgiades, the original of which can be found in the files of the Immigration Service, as it gives in brief but pointed language a number of the facts concerning this so-called priest.

Now let me point out to you, fellow Members of Congress, a few facts relative to the 14 years of effort by the Immigration Service to rid the Nation of this alien. I feel sure that you will agree with me, that now that we are preparing to defend ourselves against a world menace, it is about time that the extravagance of the Government in coddling aliens at the expense of the taxpayer should stop. You can at least begin to comprehend the cost of this unnecessary expense when I tell you that the outline of the proceedings in the case of Constantinos Georgiades, Case No.

1256369, submitted from the files of the Immigration Service, shows that from September 30, 1937, to November 21, 1950, there were 109 actions, not to speak of endless correspondence, interviews, notices, hearings and the like.

This outline of proceedings shows that there have been 5 decisions of the Board of Immigration Appeals adverse to Georgiades, 2 petitions for writs of habeas corpus filed, 6 private bills introduced in the House and Senate for the benefit of this alien, not any of which have been approved but which for months stayed the proceedings of the Immigration Service; that he has been taken into custody for deportation three times, and that the date of deportation has been extended by various officials, 6 months twice, 60 days once, and 30 days several times. Time after time he has requested and the Department has granted him the privilege of voluntary departure, but he is still with us, and the case is still pending, and the taxpayers are still bearing the unconscionable expense of this farce.

On January 27, 1949, The Central Immigration Office found this alien deportable on charges, denied his application for voluntary departure and reexamination, and ordered the alien deported to Greece. A warrant of deportation issued. This was approved by the Board of Immigration Appeals, making the fifth decision to that effect.

Public Law 863, July 1, 1948, Eightieth Congress, second session, expanded classes of aliens who may be eligible for suspension of deportation and on August 20, 1948, the Central Immigration Office ordered hearings reopened to afford Georgiades an opportunity to apply for benefits of Public Law 863, but he declined and refused to avail himself of this opportunity to prove himself worthy of special consideration under this law.

On February 20, 1950, the United States Supreme Court rendered an opinion in the case of *Wong Yang Sung v. McGrath* (339 U. S. 33) to the effect that hearing provisions of the Administration Procedure Act was applicable to deportation proceedings and as a result of this it became necessary to rehear hundreds, possibly thousands, of cases pending in the Immigration Service, and therefore it became necessary for the Central Immigration Office to direct its field office to grant Georgiades a hearing de novo as required by the Sung decision. As a result of this proceeding the hearing examiner concluded that Georgiades is deportable and that he has established statutory eligibility for suspension of deportation. The case is again pending before the Board of Immigration Appeals.

Mr. Speaker, I further submit for the record the following memorandum prepared for use of the subcommittee of the House handling immigration matters:

1

On February 25, 1936, Constantine Georgiades, a priest in the Community of Clygada, District of Athens, Greece, applied to Bishop Arsenious of Brooklyn and New Jersey for a position as priest under the Bishop's jurisdiction.

II

Before receiving a reply from Bishop Arsenious, respondent left Greece for Buenos Aires, Argentina. He left a wife and family in Greece. His reason for so doing has never been given.

III

He was installed in a paying position in the Greek Church at Buenos Aires, under the jurisdiction of Archbishop Athenogoras.

IV

Shortly after undertaking his duties as a priest in Buenos Aires something happened which has been kept sub rosa, apparently by church authorities. However, information is that the Greek Counsel at Boston, Mr. A. L. Liatis, has a certain document which concerns the conduct of Constantine Georgiades during his brief stay in South America.

V

In August 1937 Georgiades appeared again to Bishop Arsenious for a parish in the United States. Bishop Arsenious accepted the application of Georgiades and received a request from him for documents allowing him entry into the United States. He pledged "absolute secrecy."

VI

On August 23, 1937, Georgiades, knowing that some irregular method was being pursued to secure his entrance into this country, wrote Bishop Arsenious saying, "If I do receive any documents, do I risk the danger from the American Embassy or the Greek Embassy?"

VII

Simultaneously with Georgiades' application to Bishop Arsenious, he set about procuring a separate passport through Archbishop Athenogoras.

VIII

On August 23, 1937, Georgiades wrote Bishop Arsenious: "I am trying to prepare the ground in order that my resignation will not seem sudden." For some reason he was exceedingly anxious to leave Buenos Aires as soon as possible.

IX

On September 30, 1937, Georgiades arrived at the port of New York on steamship *North-ern Prince* with a special passport and was admitted under section 3 (1) of the Immigration Act of 1924 upon the representation that he was to be assigned for duty at the Chapel of the Greek Embassy, Washington, D. C. (There was no such chapel, and Georgiades knew it.)

X

No attempt was made to assign Georgiades to the Greek Embassy in Washington, but immediately after his arrival in New York he was sent as a priest to the Greek community of a small town in Massachusetts (Clinton).

XI

Georgiades' term of service at Clinton was a short one. The whole parish was up in arms shortly after his arrival, and the officials of the Greek community were thoroughly disgusted with his conduct.

XII

Georgiades was dismissed as the priest at Clinton, Mass., on September 8, 1940, on certification of the officials of this Greek community that the conduct of Georgiades "was far below the standard set for a man who has the honor of wearing a Roman collar."

XIII

Straightway Georgiades was assigned as priest for the Greek community at Biddeford, Maine, and straightway his conduct became so unseemly that a movement was started to have him sent out of the parish. He used profane and obscene language, and, according to the record, was guilty of most

immoral conduct. The record shows that he made improper advances to women both within and without the Greek community, and that he patronized a colored house of ill fame in the city of Portland, Maine.

XIV

The record also shows the sworn evidence of persons who knew nothing of Georgiades or his church affiliations that he brought different women to an auto camp and spent the night on various occasions with these women.

XV

On November 11, 1941, Georgiades was arrested and brought before court at Worcester, Mass., on November 12, 1941. He had been caught by the owner of an auto camp in Clinton peeking through auger holes which had been bored into the side of an auto camp where he was staying overnight. His attorney urged the owner of the camp not to press the complaint; that it would ruin Georgiades and his church. Whereupon the case was settled out of court on the ground of wanton destruction of property.

XVI

Throughout these episodes at the tourist camp in Clinton, Georgiades disguised himself as a layman by concealing his priest's collar.

XVII

A few days before Georgiades was caught peeking through the auger holes at the tourist camp in Clinton the record shows that one Eranouel Haramis, of Saco, Maine, was in the room where Georgiades lived in Biddeford and saw a carpenter's auger. When questioned why he had it, Georgiades said he wanted it to bore a hole into his trunk because he had lost the key.

It should be noted here that the owner of the tourist camp in Clinton discovered new auger holes the day after Georgiades stopped at his camp. He finally became suspicious of Georgiades for this reason and for the fact that he registered women as his wife.

The discovery of the auger in the priest's home and his apprehension in the act of peeking through the holes in the cabins are highly circumstantial evidence to prove that the man is abnormally immoral.

XVIII

Nobody denies that Constantine Georgiades is in this country illegally. On August 27, 1942, a letter from Commissioner Earl C. Harrison, of the Immigration and Naturalization Service, Philadelphia, states, "• • • You are advised that the file of this office shows that Constantine Georgiades was found deportable from the United States, but in view of the circumstances in his case he was given permission to depart voluntarily."

XIX

On May 9, 1942, a letter from Howard K. Travers, Chief of the Visa Department, Department of State, wrote concerning the deportation of Georgiades in part as follows:

"This case has been carefully considered by an interdepartmental committee, by an interdepartmental visa review committee, and by the Board of Appeals. Notwithstanding such consideration, the conclusion has been reached that a favorable recommendation for the issuance of a visa is not warranted at this time."

Since I do not have access to the complete file, I do not know how many times this case has gone the rounds of procedure both in the Department of Immigration and the Department of State. I am informed that the full interdepartmental procedure has been employed at three different times and each time the decision was that this man was an

undesirable person, that he was here illegally and should be deported.

XX

At the conclusion of each round of procedure, another preexamination has been given allowing Georgiades to depart voluntarily.

XXI

This preexamination procedure as practiced makes vicious inroads upon any attempt at enforcement of our immigration laws. The deportee utilizes Congressmen and Senators to bring pressure upon consulates along the border for a promise of visa in advance of voluntary departure.

XXII

General Information Concerning United States Immigration Laws from the United States Department of Justice, Immigration and Naturalization Service, Philadelphia file No. 55878/558, was recently received in response to inquiries regarding this case. Among other rules and regulations contained in the above-mentioned pamphlet is the following:

"Besides having the right documents, an alien must meet other requirements. The immigration laws intend that only those aliens who are mentally sound, morally clean, and physically fit shall enter the United States."

XXIII

Constantine Georgiades is in this country illegally. The special passport on which he gained entrance at the port of New York contained a gross misrepresentation of fact. This misrepresentation deceived our immigration officials. The Immigration Department has decided that Georgiades is here illegally. The record shows that he has not only deserted his own wife and children in Greece, but that he is a man of gross immorality.

XXIV

We are well aware that many times aliens who are here illegally are permitted to remain because they are found to be worthy people and the facts in their particular cases are persuasive that they will conduct themselves as decent, moral people. The instant case presents exactly the contrary situation. It is difficult to understand why anybody who is such a menace should be permitted to remain in this country, cover himself with the cloth of the church, and demean all concepts of decency and of religion.

XXV

The attorney of Constantine Georgiades has argued that his client is a good man but that there is a war between two factions in the Greek church and he has been caught between the upper and nether millstones. He has also argued that there is some wealthy man in Maine who from personal pique is trying to persecute Georgiades. Those are not the facts. Regardless of which faction of the church Georgiades serves, he is still here illegally. True, he deceived one bishop, and for the time being pays homage to another, but this has nothing to do with the deportation case, except as it goes to show that Georgiades is a dishonest and an insincere person.

XXVI

There are many Greeks in Maine and Massachusetts who earnestly desire the deportation of Constantine Georgiades, not only as one who is in this country illegally, but as one who is an unworthy priest who practices profanity and immorality. They ask his immediate deportation in accordance with law for the honor of Greek people in this country and for the well-being of all communities contaminated by his presence and conduct.

Mr. Speaker, I requested the Immigration Service to give me a brief notation of the various docket entries in the Georgiades case. From the following recitation of these entries, it is obvious that Georgiades has cost the American taxpayers at least a quarter of a million dollars:

OUTLINE OF PROCEEDINGS IN CASE OF CONSTANTINOS GEORGIADES

September 30, 1937. Alien arrived at New York in possession of section 3 (1) nonimmigration visa and was admitted.

March 23, 1938: Investigation conducted as to legality of alien's immigration status. Alien examined under oath by immigrant inspector.

April 14, 1938: Application for warrant of arrest submitted to central office.

June 14, 1938: Central office requests additional information from Secretary of State.

February 2, 1939: Secretary of State supplies additional information.

February 10, 1939: Warrant of arrest under immigration laws issued by Assistant to Secretary of Labor, charging that alien remained longer than permitted by law.

February 23, 1939: Additional information received from Secretary of State.

March 17, 1939: Alien taken into custody under warrant of arrest. Hearing thereunder started and adjourned to permit alien to obtain counsel. Alien released on own recognizance.

March 22, 1939: Hearing held. Additional charge lodged that at time of entry alien was immigrant not in possession of immigration visa. Hearing is concluded. Presiding inspector concludes alien is deportable on lodged charge and recommends voluntary departure.

April 18, 1939: H. R. 5852, Seventy-sixth Congress, first session, private bill introduced in alien's behalf.

May 1, 1939: Central office directs deportation proceedings held in abeyance pending outcome of private bill.

May 22, 1939: Record forwarded to central office for review.

January 3, 1940: Board of Review finds warrant charge not sustained, recommends that Department of State be requested to advise whether alien's Greek passport was fraudulently and illegally obtained.

January 17, 1940: H. R. 7995, Seventy-sixth Congress, third session, private bill introduced in alien's behalf.

June 20, 1940: Request addressed to Department of State.

July 1, 1940: Act of July 1, 1940 (54 Stat. 711), amends section 15 of Immigration Act of 1924 by setting limits to period of admission of section 3 (1) nonimmigrants; also provides for approval of Secretary of State before they can be required to depart.

August 19, 1940: Secretary of State submits report indicating alien's passport was obtained in good faith.

October 15, 1940: Board of Immigration Appeals concludes that act of July 1, 1940, is retrospectively applicable and that warrant charge is therefore tenable; orders that Secretary of State be requested to advise whether he approves contemplated action that alien be required to depart.

November 1, 1940: Request addressed to Secretary of State.

November 18, 1940: Secretary of State approves contemplated action requiring alien's departure.

January 27, 1941: Board of Immigration Appeals finds alien deportable on warrant charge and directs that order of deportation be not entered but that alien be required to depart within 90 days after notification of decision.

February 5, 1941: Central office transmits Board's decision to field office. Central office notifies sponsor of H. R. 5852.

February 6, 1941: H. R. 3136, Seventy-seventh Congress, first session, private bill introduced in alien's behalf.

February 8, 1941: Field office notifies alien's attorney of Board's decision and directs that alien depart by May 8, 1941.

February 13, 1941: Central office directs field to hold further action looking to alien's enforced departure in abeyance, pending outcome of private bill.

May 26, 1941: Alien files motion for reopening in order that he may apply for preexamination.

June 16, 1941: Board of Immigration Appeals grants motion and orders proceedings reopened.

August 22, 1941: Alien's attorney files application for preexamination.

October 16, 1941: Reopened hearing held. Presiding inspector recommends voluntary departure and preexamination.

December 22, 1941: Record of reopened hearing submitted to central office for review.

May 8, 1942: Alien and witnesses interviewed in connection with H. R. 3136. Sworn statements taken.

June 2, 1942: Field report of investigation on H. R. 3136 submitted to central office.

July 2, 1942: Central office submits report on H. R. 3136 to Attorney General.

July 8, 1942: Attorney General submits report on H. R. 3136 to chairman, House Committee on Immigration and Naturalization.

Thereafter, on various dates, private citizens submitted protests against alien.

July 26, 1943: Attorney for private citizens asks Board of Immigration Appeals for opportunity to appear before Board and argue against grant of discretionary relief to alien.

September 24, 1943: Argument before Board of Immigration Appeals. Alien's attorney and attorney for opposing private citizens heard.

November 24, 1943: Board of Immigration Appeals orders case reopened for further investigation, limited solely to issue of alien's good moral character.

March 27, 1944: Reopened hearing held and completed.

April 8, 1944: Presiding inspector's opinion concludes alien has established good moral character.

April 25, 1944: Record of reopened hearing submitted to central office.

September 7, 1944: Board of Immigration Appeals extends time within which alien may depart voluntarily for 6 months and authorizes preexamination.

April 28, 1945: Alien's attorney submits motion to Board for extension of 6 months within which to depart voluntarily.

June 4, 1945: Board of Immigration Appeals grants 6 months' extension.

October 18, 1945: Alien preexamined and found admissible to United States when in possession of a quota immigration visa.

Instead of departing for Canada to make formal application for the visa, the alien thereafter corresponded with the American consul in an effort to obtain a section 4 (d) nonquota immigration visa as a clergyman. On December 19, 1945, the consul advised the alien that no further consideration would be given to his visa application until he abandoned his illegal residence in the United States. The alien's attorney thereupon requested the central office to legalize his status without having him leave the country or in the alternative that a 6 months' extension be granted.

February 21, 1946: Central office extends departure time for 60 days and orders alien

placed on notice that if he fails to depart within said period preexamination will be rescinded and an order of deportation entered.

June 1946: Central office orders alien deported to Greece on charge stated in warrant of arrest.

July 16, 1946: Board of Immigration Appeals affirms.

July 16, 1946: Warrant of deportation issues.

August 2, 1946: Alien's attorney files exceptions and asks reconsideration.

August 19, 1946: Central office orders stay of deportation for 30 days, pending decision of motion for reconsideration.

September 13, 1946: Alien's attorney files motion to reopen.

September 25, 1946: Board of Immigration Appeals orders that outstanding order and warrant of deportation remain in full force and effect.

September 29, 1946: Alien's attorney applies for 30-day stay of deportation.

September 30, 1946: Central office denies application for stay.

October 1, 1946: Alien taken into custody for deportation.

October 1, 1946: Alien applies to United States District Court for the Western District of Pennsylvania at Pittsburgh for writ of habeas corpus. Writ issued, returnable October 4, 1946, and date for hearing set for October 31, 1946. Court orders alien released on \$500 bond.

October 2, 1946: Board of Immigration Appeals affirms central office order of September 30, 1946, denying application for stay.

October 3, 1946: Court extends time for filing return to writ to October 15, 1946.

October 14, 1946: Return to writ filed.

October 23, 1946: Hearing date on writ adjourned to November 22, 1946, on court's motion.

October 28, 1946: Hearing date on writ indefinitely postponed on court's motion.

January 6, 1947: Hearing date on writ set for January 14, 1947.

January 8, 1947: H. R. 698, Eightieth Congress, first session, private bill introduced in alien's behalf.

January 14, 1947: Alien's attorney moves for continuance of hearing on writ in view of pendency of H. R. 698. Court grants continuance to April 3, 1947.

March 28, 1947: Court grants alien's attorney's ex parte motion for indefinite continuance of hearing on writ.

May 2, 1947: House Judiciary Committee votes down H. R. 698.

May 14, 1947: Hearing on writ set for June 16, 1947.

June 16, 1947: Writ of habeas corpus dismissed on motion of alien's attorney. Alien remanded to custody of Immigration and Naturalization Service.

June 20, 1947: Alien released on \$500 bond.

July 2, 1947: Central office recommends termination of proceedings on ground warrant of arrest was invalid at inception.

July 8, 1947: Board of Immigration Appeals affirms.

July 18, 1947: S. 1660, Eightieth Congress, first session, private bill introduced in subject's behalf.

August 11, 1947: Secretary of State requested to advise of any objection to reinstitution of deportation proceedings.

October 28, 1947: Secretary of State advises there is no objection.

November 25, 1947: New warrant of arrest issued, charging alien remained in United States after failing to maintain exempt status under which admitted.

December 10, 1947: Central office submits report to Attorney General on S. 1660.

January 12, 1948: Warrant of arrest served on alien. Alien released on \$500 bond.

January 20, 1948: Attorney General submits report to chairman, Senate Judiciary Committee, on S. 1680.

January 28, 1948: Hearing held and completed under warrant of arrest. Alien applies for voluntary departure and preexamination.

February 12, 1948: Presiding inspector concludes alien is deportable and recommends voluntary departure and preexamination.

April 1, 1948: Record of hearing forwarded to Central Office for review.

July 1, 1948: Public Law 863, Eightieth Congress, second session, expands classes of aliens who may be eligible for suspension of deportation.

August 20, 1948: Central Office orders hearing reopened to afford alien opportunity to apply for benefits of Public Law 863.

September 23, 1948: Alien's attorney advises that alien does not wish to apply for suspension of deportation but wishes matter disposed of on present record.

January 27, 1949: Central office finds alien deportable on warrant charge, denies application for voluntary departure and preexamination, and orders alien deported to Greece. Warrant of deportation issues.

February 7, 1949: Alien's attorney files notice of appeal to Board of Immigration Appeals.

March 22, 1949: Oral argument heard before Board of Immigration Appeals.

July 15, 1949: Board of Immigration Appeals (one member dissenting) affirms central office decision.

September 21, 1949: Alien submits letter to Board of Immigration Appeals requesting reopening in order that he may apply for suspension of deportation.

September 28, 1949: Board of Immigration Appeals denies reopening.

October 13, 1949: S. 2684, Eighty-first Congress, first session, private bill introduced in alien's behalf.

October 18, 1949: Alien taken into custody for deportation.

October 18, 1949: Alien applies for writ of habeas corpus in United States District Court, Western District of Pennsylvania, at Pittsburgh. Writ issues, returnable in 16 days, and court orders alien released on \$500 bond. Hearing on writ set for November 7, 1949.

October 26, 1949: Central office instructs field office to stay further proceedings during pendency of private bill.

October 31, 1949: Court permits alien's attorney to withdraw writ of habeas corpus.

November 18, 1949: Formal order entered by court, permitting withdrawal of petition for writ of habeas corpus and remanding alien to custody of Service.

November 29, 1949: Alien released on \$500 bond.

February 20, 1950: Opinion of United States Supreme Court in *Wong Yang Sung v. McGrath* (339 U. S. 33), holds hearing provisions of Administrative Procedure Act applicable to deportation proceedings.

April 4, 1950: Senate Judiciary Subcommittee on Immigration and Naturalization indefinitely postpones action on S. 2684.

April 6, 1950: Central office directs field to grant alien a hearing de novo as required by Sung decision.

April 14, 1950: Alien's new attorney requests permission to review record.

June 2, 1950: Relevant portions of record loaned to alien's attorney.

July 5, 1950: Alien advised that hearing is scheduled for July 13, 1950.

July 6, 1950: Hearing rescheduled for August 14, 1950, at request of alien's attorney.

July 12, 1950: Hearing rescheduled for August 17, 1950, at request of alien's attorney.

August 17, 1950: Hearing under warrant of arrest conducted and concluded. Alien applies for suspension of deportation.

November 2, 1950: Hearing examiner concludes that alien is deportable and that he has established statutory eligibility for suspension of deportation.

November 16, 1950: Alien's attorney files exceptions.

November 21, 1950: Record of hearing forwarded to central office for review and decision.

Mr. Speaker, for the last 10 years, to my personal knowledge, numerous Members of Congress have appealed to Immigration officials for the speedy deportation of Constantine Georgiades. His case makes this Government look ridiculous. His case causes the good citizen to ask himself, "Can an alien criminal spend his life in America and thumb his nose at law and decency?" Apparently, the answer to this question is "Yes."

Resolutions From the Military Order of the Purple Heart

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. DOYLE. Mr. Speaker, I am pleased to call to your attention the two resolutions hereinafter set forth from the Military Order of the Purple Heart of my native State of California. They come to my attention from the distinguished department adjutant, Mr. Adrian H. Mayer, who is a resident of my home city of Long Beach, Calif.

I know that the subject matter of each of these fine resolutions is close to the heart and purposes of the Members of Congress in their dedication to the proposition that those who have served our beloved country in uniform shall not lack in every reasonable and proper protection and worthy benefit.

The above-mentioned follows:

MILITARY ORDER OF THE PURPLE HEART,
DEPARTMENT OF CALIFORNIA, INC.,
Long Beach, Calif.

HON. CLYDE DOYLE,
Congressman From California,
Washington, D. C.

DEAR SIR: Enclosed are two resolutions adopted unanimously by the eighteenth annual convention of the Military Order of the Purple Heart, Department of California.

It is our belief that the material contained in these resolutions is of vital concern to the veterans of all wars and conflicts, and we will appreciate any effort on your part in behalf of these resolutions.

Patriotically yours,

By the commander,

REX W. FRANKLIN,
Junior Past Department Commander.

Whereas the widows of World War I veterans who became the wife of a veteran after December 14, 1944, are not eligible for a widow's pension: Now, therefore, be it

Resolved, That this eighteenth annual convention of the Department of California, Military Order of the Purple Heart, go on record as favoring the extension of eligibility time limit for widow's pension from December 14, 1944, to December 31, 1950; be it further

Resolved, That the California representatives in both Houses of Congress be requested to introduce a bill in Congress, and support it, to extend this pension eligibility; and be it further

Resolved, That the national department, Military Order of the Purple Heart, be requested to act on this matter, memorializing and mandating same at the next annual national convention, to be held in Phoenix, Ariz., August 14-18, 1951.

Whereas Public Law 346, commonly known as the GI bill, is to expire July 25, 1951; and

Whereas due to the aid received by many veterans under this law, this country has been benefitting in that better and more satisfying citizens are taking their proper place in life, many of these veterans have greatly improved their opportunities, and their standing in their respective communities, and

Whereas if this law is permitted to expire, many veterans who have not had an opportunity to take advantage of this law, and the rights extended to them under it, will lose out in the privileges intended to be extended to them: Now, therefore, be it

Resolved by Motion Picture Chapter No. 1898, of the Military Order of the Purple Heart, Department of California (in meeting duly assembled this 26th day of June 1951), That the Congress of the United States be petitioned to extend Public Law No. 346 for a period of 2 years from July 25, 1951.

Iron Ore

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the Record, I wish to include an article by George Kennedy, columnist, published in the Washington Star on Sunday, July 15, 1951, as follows:

A little ceremony was held on a Baltimore dock last month to mark the arrival of the Liberty ship *Simeon G. Reed* with the first load of iron ore from Liberia.

The Liberian Ambassador, C. D. B. King, made a speech, as did representatives of the State Department, the Import-Export Bank, the port of Baltimore, and the Republic Steel Corp., which has developed the Liberian mines. Unfortunately, the ship was detained at quarantine by the public health authorities. It was not in sight during the speech-making. And the ceremony was dampened by a heavy shower.

But, before the week was over, the *Simeon G. Reed* was made fast alongside the Baltimore & Ohio's new \$5,000,000 ore dock. Big grab buckets were plummeting through the hatches and being hoisted back with 5-ton bites. The lumpy ore was screened onto the longest, single-loop, rubber-belt conveyor in the world and carried to a hopper which dumped it into railway gondolas. And soon Diesel locomotives were huffing and puffing to get the precious stuff over the humps of the Appalachians on its way to Republic's furnaces in Ohio.

It was history's first movement of ore from an Atlantic port across the mountains, and the management of the B. & O. could take great satisfaction in it. Like all midwestern railroads, the B. & O.'s big revenue has always come from the movement of coal to

seaboard. Now there was every prospect that the railroad would have a profitable two-way haul over the mountains, east-bound coal and westbound ore. The Pennsylvania Railroad would share in this movement, but the B. & O. got ahead of its larger competitor with the construction of the new ore dock.

And the Nation could well take satisfaction in it. For it meant that the postwar ore rush, which had prospectors drilling iron deposits in every continent, was paying off.

BETTER THAN TACONITES

The ore rush was caused by the possibility that the day may come when the big power shovels in the Lake Superior district will take their last bite of high grade, open-pit ore. The steel industry already has spent millions experimenting on taconites. Taconites are pellets of ore obtained from rock. The process calls for grinding the rock finer than face powder, picking out the iron with a magnet, and then cooking the iron powder to make it back into pellets.

If the steel industry had to be fed on taconites there would be a change in our economy that would make the current controversy on the price of beef seem frivolous. Our recent progress in the iron age has been based on steel made from low-cost, open-pit ores. That is what made possible the \$500 model T, the \$2 keg of nails, multistoried buildings, the 10-cent can of soup, throw-away razor blades, and bobby pins.

The present danger is not that the Lake Superior district, with its great Mesabi Range in Minnesota, actually will run dry. It lies, rather, in the fact that this region's ore-producing capacity has been expanded about as far as it can go.

The United States now is making steel in the same amount as at the World War II production peak—100,000,000 tons a year. The rearmament program may boost that figure by 15,000,000 tons next year. The National Security Resources Board estimates that our steel production will go to 130,000,000 tons by 1960.

It takes a ton of ore to make a ton of steel—a ton of scrap is added. So if we are going to be making 30,000,000 extra tons of steel in 8 or 9 years, and if Mesabi's expansion days are over, it can readily be seen that 30,000,000 tons is going to have to come from somewhere else.

That has been the reason for the big ore search. The results so far give every reason to hope that the 30,000,000-ton gap can be closed by 1960.

LIBERIA A SMALL SHOW

The iron range of hills in Liberia, into which Republic Steel is digging, is small compared with some of the other finds. Republic plans to import about a million tons a year from Liberia. Bethlehem plans to get 3,000,000 tons a year out of its Venezuelan operation. The first shipment arrived in Baltimore Harbor in April. The United States Steel Corp. has discovered an iron mountain in Venezuela, the Cerro Bolivar, which is bigger than its Hull-Rust-Mahoning mine in the Mesabi, heretofore the biggest iron mine in the world.

Even the Venezuelan supply may be small compared with Labrador, where drillers have already proved about as much iron as there is in sight on the Mesabi. What is going on in Labrador is one of the great industrial adventures of our time.

In a few days drillers will hole through a tunnel almost a half mile long, to push a railway through the Laurentian Mountains to get the ore. This railroad, which will run north from the port of Seven Islands, just within the great breakwater provided by Anticosti Island in the St. Lawrence Estuary will be double-tracked and 365 miles long. It is probably the biggest railroad construction undertaken on this continent since the transcontinental Canadian lines were built.

There are 1,600 men working up there now. All those in the mine area, and all their equipment and supplies, had to be flown in. Weather stations and flying fields have been established. And all this is being done at a time when private capital—so it is said—no longer takes risks.

Labrador ore is being developed by the M. A. Hanna Co. of Cleveland, which is the second largest shipper of ore from Minnesota. Hanna made the explorations and obtained the mining concessions together with the Hollinger Co., which mines gold and silver in Canada. Hanna then created the Iron Ore Co. of Canada, an American company, and through it brought five steel companies into partnership in the enterprise. In all, the group has about \$225,000,000 to fool around with.

The work has been running ahead of schedule. Current plans call for the shipping of 5,000,000 tons of ore during the 1955 season and 10,000,000 tons in 1956 or 1957.

This Labrador ore is not piled up in mountains. It comes out of one of the dreariest wastes in the world. The region looks from the air as if an ocean had dried up leaving a lot of big puddles. There is hardly any game except small fur-bearing animals. The trappers used to go in in the winters and avoid the area like the plague in the summers, because it teems with mosquitoes.

Iron ore was discovered there years ago by a missionary priest of the Oblates of Mary Immaculate.

WHY THE DELAY?

Here is how George M. Humphrey, president of the Hanna Co., told Congressmen about it in the St. Lawrence seaway hearings earlier this year:

"Now the reason that nothing was ever done about it before," Mr. Humphrey said, "is this: That part of Labrador is a very sparsely settled country. Practically all of the people in Labrador live within 5 miles of the coast, because there are no roads. There are no railroads. There is absolutely no means of communication of any kind except by water.

"Human beings were limited to this: You took a canoe and a pack and went up there, taking only what you could carry on your back. It took 6 weeks or more to get in, and 6 weeks or more to get out and you only had a couple of months to be up there. Then all you could discover was what you could look at, or what you would dig by yourself with what you could carry.

"So that until flying became available, there was no means of determining how much ore was there. When flying came in and developed, you were confronted with this problem. To get planes big enough to carry substantial equipment and set yourself up in a substantial way, meant that somebody had to be prepared to gamble and lose two or three or four or five million dollars. There are not a lot of people who are willing to do that.

"We got ourselves financed so that we were willing to do that. It was known that it was going to take an enormous investment to get the ore out of there. That meant there had to be a great big tonnage up there."

The Hanna Co. found the tonnage. The drills which were taken down, packed in flying boxcars, flown to Labrador's interior and reassembled, have already proved 400,000,000 tons of high-grade open-pit ore. Mr. Humphrey was not sure what portion of the known ore-bearing territory had been proved, but he was sure that it was less than 10 percent.

Mr. Humphrey was testifying in favor of the St. Lawrence seaway, the navigation and power project that would enable ocean steamers, with 26-foot draft, to go up and down the river between Montreal and Lake Ontario. The present locks are only big

enough for small steamers with 14-draft. He said that with the seaway, his company would ship about 10,000,000 tons of ore to the steel plants on the Great Lakes. Without the seaway, the limit would be about 6,000,000 tons.

POLITICAL CONSIDERATIONS

Although Labrador will only be able to ship ore about 7 months of the year, because in winter the ore freezes in the railroad cars, Labrador has one great advantage over other parts of the world—as an ore producer. That advantage is political.

Undoubtedly the political stability of Canada was an element in the willingness of insurance companies to take a \$100,000,000 mortgage on the U.S. deposits.

In Venezuela, things are a little different. Foreign capital has been encouraged, and the great oil companies have experienced a bonanza there. Still, there is something about a country where a military junta can replace an elected government overnight that must be hard on the ulcers of an American industrialist investing \$100,000,000 of his corporation's funds there.

The United States Steel Corp.'s mountain of iron was found in 1947 by F. H. Kihlstedt, a Swede who was an unhappy neutral under Japanese rule in the Philippine Islands until VJ-day.

The modern iron ore prospector is a far cry from the gold prospector of song and story. In the first place, he is a corporation employee, his discoveries belong to his employer. Mr. Kihlstedt's find has been estimated to be worth a total of \$10,000,000,000, presumably when the mountain has been moved to the stockpiles of blast furnaces in the United States.

Mr. Kihlstedt's reward for his efforts has not been revealed, but he is reported to be a well-satisfied man. The adventure had one similarity to gold prospecting. The party of prospectors tried to move about unobserved in the vast savannas of the Orinoco. They knew if they were seen taking an interest in any locality, Venezuelans of the neighborhood might beat them to filing claims. As it was, one of the prospecting party made the mistake of talking about the mountain of iron in a night club. It cost the steel company \$450,000 to buy off the resulting claims.

Mack C. Lake, an old-time M. A. Hanna Co. geologist borrowed by the steel corporation for exploration work, is credited with giving Mr. Kihlstedt the tip that led to his discovery. Mr. Lake, who had ordered an aerial photography survey of an 80-mile strip of territory along the Orinoco, was consulting with the Swedish prospector at his base camp. The geologist looked off into the distance and pointed out the mountain on the horizon.

"That's an interesting looking hill," he said. "Better have a look at it."

Kihlstedt first took several looks at the mountain from an airplane. Then one morning long before dawn, his party set out in a convoy of jeeps. He found the mountain was covered with a high grade of iron ore. Drilling has since proved it to contain 500,000,000 tons of the ore.

The steel corporation still is negotiating with the Venezuelan Government over royalties.

Also in Venezuela's Orinoco Valley are ore deposits from which Bethlehem is already feeding its furnaces at Sparrows Point in Baltimore Harbor. The spot is known as El Pao, and was discovered in 1926 by a native prospector. Bethlehem acquired the concessions in 1933. A railroad was built from the mine to the river, where barges are loaded. The barges are towed to Puerto de Hierro, Bethlehem's "port of iron," 230 miles downstream, which can be reached by ocean-going vessels.

Construction was started in February 1941, but Pearl Harbor put an end to it until after the war. The iron port was not completed until a year ago.

El Pao is an open-pit operation with the most modern machinery, producing a maximum of ore with a minimum of man-hours. The ore is scooped up by electric shovels and loaded into 30-ton Diesel trailer trucks. The trucks take the ore about a mile downhill to a crushing plant, where it is broken into small pieces and dropped into 70-ton railway cars.

At the end of the railroad, which is 35 miles long, the barges are loaded with the most modern type of rubber-belt conveyors. The same type of conveyors at the dock at Puerto de Hierro load it into the ships. Bethlehem plans to bring 3,000,000 tons a year from El Pao to take care of its current increase of 2,800,000 tons in steel production.

All of this ore will come to Baltimore, most of it for the Sparrows Point plant, although some may be shipped to Bethlehem, Pa. Even if the St. Lawrence Seaway is completed, it is not expected that Venezuelan ore will be carried the additional 1,300 miles and more to get it to the Bethlehem and United States Steel plants on the Great Lakes. Bethlehem will continue to import ore from its Chilean mines, and this also will be unloaded at Baltimore.

Photographs of the Republic Steel Corp. s mining in Liberia show that comparatively elementary techniques still are being used there. The ore deposit is in the form of a cliff almost a mile long, and from 30 to 100 feet high. The face of the cliff has weathered and broken off through the centuries, leaving a huge continuous pile of ore at its foot. The pieces range in size from a marble to a box car.

GRAVITY SYSTEM

Liberian laborers, with pneumatic drills, break off pieces of ore, which fall down hill—where other laborers pick them up by hand and put them in trucks.

To get the ore to Monrovia, the capital and seaport of Liberia, a 43-mile railroad was built, the first in the country. At the dock in Monrovia grab buckets lift the ore from the railway cars and drop it through the hatches of the ship.

Republic has ordered a fleet of 23,000-ton ore carriers built at Clydebank, Scotland. The first will be delivered in September. The new ore discoveries are going to be a boom to the shipbuilding industry. The M. A. Hanna Co. intends to build a fleet of ships for its Labrador ore, and United States Steel will need more ships when it starts to get ore out of Venezuela.

While the discovery and development of such vast deposits in Labrador, South America and Africa have prevented a forced change in our economy, from low-priced to very high-priced steel, this shift in the source of supply is bound to make changes in the location of the industry.

The United States Steel Corp. is going ahead with the construction of its plant at Morristown, Pa., opposite Trenton—a plant which will be supplied by Venezuelan ore. A survey is underway for a steel plant location on the banks of the James River, near Newport News, Va., and the New England Council is trying to get a steel plant built near New London, Conn.

Whether this development will turn out to be simply an addition in the East to the Nation's steel-producing capacity, or the start of an actual shift in production from the Great Lakes area to the East, depends on whether the St. Lawrence Seaway is built. About 75 percent of steel production is west of the line between Pittsburgh and Buffalo, an area that cannot get its proportionate share of the new discoveries without opening the St. Lawrence.

Faith of Our Fathers: Congressman Doyle Urges Colleagues To Attend

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. DOYLE. Mr. Speaker, recently Mrs. Doyle and I and a group at my invitation attended the magnificent and historically accurate, timely pageant, Faith of Our Fathers. It was a real inspiration.

This pageant of history, produced midst the beauty of God's out-of-doors in the heart of Rock Creek Park, is not only informative; it is a rich contribution to our further appreciation of the life and times of George Washington. It perceptibly increases the knowledge of the life of the Father of Our Country and his distinguished associates.

This dramatic pageant with a cast of over 1,000 active participants is produced at 8:40 each night except Sunday up to and including September 3, 1951. The general admission is only 75 cents, while the reserved seats are only \$1.50. It is produced by the National Capital Sesquicentennial Commission at the Carter Barron Memorial Amphitheater at Rock Creek Park.

I have no hesitancy to urge you and each of you to attend this symphonic drama by Paul Green. For instance, one of the scenes is the laying of the cornerstone of the United States Capitol in the District of Columbia, September 18, 1793.

Senator Byrd's Jefferson-Jackson Day Address in Atlanta

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial appearing in the Chattanooga Times of June 30, 1951, which discusses the attitude of the southern voters toward the opinion expressed in the address by the senior Senator from Virginia [Mr. BYRD] at the Jefferson-Jackson Day dinner at Atlanta. It is my feeling that the Chattanooga Times editorial expresses the viewpoint of the southern people.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT IN TUNE WITH THE PEOPLE

Senator HARRY BYRD, addressing a Jefferson-Jackson Day dinner in Atlanta "to raise funds for the Democratic Party," threatened a southern revolt if a civil-rights plank is included in the Democratic platform and if "socialistic schemes" are not stopped.

Senator BYRD said: "No Democratic President can be elected without the votes of the Southern States." It may be that no Democratic President can be elected next year even with a full solid South vote, but in four of the last five national elections the Democratic candidate could have given the votes of the 11 Southern States to his opponent and still would have been elected. And in the last election Georgia and Florida could have been added to the four Dixiecrat States and Mr. Truman would still have been elected. The Democratic Party can't win without the North and the West.

Senator BYRD's appeal for governmental economy has more support now than ever before. But in his Atlanta speech he placed most emphasis on an attack on Government aid of various sorts—including public housing—and he called this socialism.

"Socialism and free enterprise cannot live under the same roof," said Senator BYRD. But some of the governmental assistance projects he calls socialism "live under the same roof" with free enterprise in every democratic country and will continue to do so.

The fact is, southern politicians do not interpret the mind of the southern people. The civil rights issue and, in another day, prohibition and religious bigotry combined are effective political arguments in the South. We say that with regret. But the average southerner has no sympathy with any alliance of Democratic Congressmen with Republican Congressmen to take the lid off of prices, to give support to the lobbies which seek to undermine public power as socialism, to give support to McCarthyism or to throw monkey wrenches into the effort of this country to prepare itself against world war III.

They have no sympathy with any view so narrow that it calls any form of governmental assistance which helps the common people socialism.

Southern politicians may permit themselves to be used as tools in these endeavors, but they are out of touch with the southern people. There will come a time, we suspect, when the South will resent the efforts of its political figures to make it appear that southern citizens do not think for themselves but can be delivered in any way the politicians choose.

The civil-rights issue was strong in 1948 just as bigotry was strong in 1928, but neither was strong enough to deliver the South. Certainly, issues which involve the mere use of labels as does this application of socialism to everything the expensive lobbies oppose cannot be used by Senator BYRD or anyone else to any effect in the South.

United States Policy Regarding Trade With Communists

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the story in the New York Times of Sunday by the Times' distinguished correspondent in Geneva, Switzerland, Mr. Michael L. Hoffman. Mr. Hoffman's cabled dispatches, in my judgment, consistently show the best understanding of economic problems within Europe, and in the economic relationships between Eu-

rope and the United States, of any such dispatches appearing in the American press.

Here, in a very short story, only 10 paragraphs long, Mr. Hoffman gives a remarkable summary of how United States trade policy confuses Europe. In particular he shows the unsoundness of the so-called Kem amendment, or any other such legislative efforts to regulate trade policy in detail through congressional action.

I have not previously seen Mr. Hoffman's phrase "the balance of advantage," but it is an excellent phrase to describe the objectives we should establish in our trade policies with Russia and its satellites, and in the trade policies of Western Europe as well. The western countries should seek to develop policies which will give us the balance of advantage. As Mr. Hoffman points out, it is folly for us in Congress to try to decide by legislation whether it is good or bad, for example, for the west to ship 10 tractors to Poland in exchange for 5,000 tons of coal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES TRADE POLICY CONFUSES EUROPE—ATTEMPTS BY CONGRESS TO FIX EAST-WEST COMMERCE RULES IRK EXPERTS ON CONTINENT

(By Michael L. Hoffman)

GENEVA, July 21.—European governments are confused as well as irritated by the United States handling of various issues connected with trade between the Communist and non-Communist world. The irritation is attributable to the attempt of Congress to make acceptance of Congress' theory on what is right and what is wrong in trade policy a condition for receiving United States aid.

European trade experts doubt very much whether Congress, with all its other tasks, can form a very sound judgment on whether it is good or bad, for example, for the west to ship 10 tractors to Poland in exchange for 5,000 tons of coal.

But taking all things together, it is probable that the confusion about United States policy is doing more damage than the irritation. What is the United States trying to accomplish, European governments want to know. United States representatives throughout Western Europe have been trying unsuccessfully to answer this question for the last 3 years.

VIEWED AS ECONOMIC WEAPON

It seems from the latest manifestations, such as the Kem amendment (which would ban all United States aid to countries sending forbidden materials to Communist countries) that the United States is coming close to regarding east-west trade as an element in economic warfare. No United States spokesman ever has told any Europeans this but this is how they interpret recent United States actions.

Now Britain and the United States, and one or two other countries, have had lots of experience in economic warfare. During World War II control of trade with neutrals, for example, was managed on the basis of agreed principles enforced by a blockade. Nobody ever suggested even at the height of the war that trade with Sweden or Switzerland be suspended on the ground that Sweden and Switzerland were manufacturing valuable armaments and other things for the enemy.

The reason that trade with the neutrals was not cut off was that such trade was a two-way proposition. In fact, it has several dimensions, including a financial and a transport dimension. The best Allied experts

figured out where the balance of advantage lay and released goods to the neutrals accordingly.

EUROPEANS FOR WARTIME POLICY

What Europe cannot understand is why the United States does not follow the balance-of-advantage principle now if economic warfare of some kind is the objective instead of trying to write a blanket formula into the law.

Every Western European country has some kind of trade agreement with one or more Communist countries. There is almost always some kind of trade negotiation going on between the East and the West. But every western country at present has to consult Washington bilaterally on what the United States considers contraband. There is not any mutually agreed policy applied by the West as a whole.

From the European viewpoint, Washington's apparent preoccupation with what goes from the west to the east and neglect of what comes from the east to the west also seems short-sighted.

Europe is hoping that after Congress finishes writing a law on the subject enough flexibility will be left so that the United States Government can overhaul its whole policy on east-west trade and put an end to what Europeans characterize as the bungling that has marked the situation up to the present.

Under So-Called Progressive Education the Child Exists for the State

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. BURDICK. Mr. Speaker, the Saturday Evening Post of July 14 carries an article by Frank Chodorov that should not escape the attention of the people of this country. A progressive-minded educator was employed in Pasadena, Calif., and upon assuming control of the school started in on certain reforms said to be embraced in progressive education. The whole central idea of education, as he viewed it, was to adjust the child to a group and not to train him as an individual. Molding of the child to social order is the principal business of modern schooling, according to this leader.

To add further to this scheme of education, the parents were not to interfere with this wonderful new discovery in education. Says the professor, in substance: "Parents have no competence in the field of education, and individual relationships between parent and child terminate when the child enters school."

This is surely an innovation in our system of education. If this is what they call progressive education, I, for one, do not want any of it. I have always supposed that the state existed for the individual, but according to new doctrine in education the child exists for the state.

Many prominent educators have endorsed the new progressive education system of alienating the child from family ties and directing his education to have him fit into social groups instead of equipping him with the means, as an

individual, to lead an independent and dignified life. Pasadena, where this system was tried, disapproved it and the educator of this new scheme was fired.

This new progressive education idea sounds exactly like the Nazis of Hitler Germany, the Fascists of Italy, and the Communists of Russia. There seems to be a well-organized group in the United States bent on destroying all systems we have known and even the Government itself.

Since those who advocate the overthrow of our laws by means of conventions of the United Nations, and those who advocate making the child a cog-wheel in the state are, many of them, citizens of the United States, their activities are more to be feared than any nation on the globe today. If we remain true to our purpose in preserving a democracy which has lasted since 1789, there need be no fear from without, but we can be easily destroyed from within. The people of this country must remain alert to all the multitudes of changes in our lives advocated by impracticable men who happen to be serving in our educational institutions. Men who have been educated and reeducated until they have no common sense left are dangerous to this democracy.

Increasing Encroachment of the Federal Government in Private Enterprise

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. BROWNSON. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include therein the following resolution adopted by the American Legion Post No. 300, Department of Indiana, on May 6, 1951:

INDIANAPOLIS POWER & LIGHT POST,

AMERICAN LEGION, No. 300,

Indianapolis, Ind., May 16, 1951.

The following resolution was presented and unanimously approved at a regularly constituted meeting of the post on May 11, 1951, held in Ipalco Hall:

"A resolution opposing the increasing encroachment of the Federal Government in private enterprise

"Whereas we, of the American Legion, have associated ourselves together to uphold the Constitution of the United States of America, to foster and perpetuate a 100-percent Americanism, to inculcate a sense of individual obligation to the community, State, and Nation, and transmit to posterity the principles of justice, freedom, and democracy; and

"Whereas certain groups and individuals, having influence both within the Government and without, are known to be conspiring for the purpose of socializing our American economy; and

"Whereas according to the Hoover report on reorganization of Federal business enterprises, there are about 100 important undertakings which the Federal Government owns or in which it is financially interested, these concerns engaging directly or indirectly in lending money; guaranteeing loans

and deposits; writing life insurance; producing, distributing and selling electric power and fertilizers; operating railways and ships; purchasing and selling of farm products; and the smelting and sale of metals; and

"Whereas the socialistic influences have, in many instances, successfully disguised their objectives by the use of benign terminology such as "welfare," "security," "public ownership," etc.; and

"Whereas an attempt has been made to exploit the field of socialized medicine and a movement is now under way to exploit and promote other socialized programs under the guise of the national emergency, the first and foremost point of attack being in the field of electric power, which has been definitely declared by the proponents of socialism as the key to greater general nationalization of the country's industrial resources; and

"Whereas the ambitious program to establish a duplicating giant power network and steam-generating facilities under Government ownership already constitutes a serious burden on the American taxpayer, because this encroachment on privately owned business is destroying one of the Nation's principal sources of tax revenue, namely, the business-managed, taxpaying public utilities; and

"Whereas the defense of America, including the battle against inflation and the Communist drive to ruin our economy, depends very largely on eliminating nonessential expenditures from the Federal budget: Therefore be it

"Resolved, That this Post 300, American Legion, Department of Indiana, pledges to oppose, by all lawful means, the continuing encroachment of the Federal Government upon business-managed industry in general, and this body of voters opposes, in particular, the unnecessary construction of Government-owned generating plants and duplicate transmission lines which compete with and will ultimately exterminate business-managed, taxpaying electric utilities; and be it further

"Resolved, That this resolution be forwarded to the Indiana Department of the American Legion for its endorsement and transmittal to the national organization for incorporation in its national program, with action requested at the next national American Legion convention; and copies of this resolution be transmitted to the Senators and Representatives of the State of Indiana in the United States Congress "

WINFRIED F. PULSIFER,
Commander, Post 300.
BERTRAM C. BEHMANN,
Adjutant, Post 300.

Alaska-Hawaii Statehood

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. YORTY. Mr. Speaker, I should like to direct attention to an excellent article by Mr. Marquis Childs, which points out some of the disadvantages the whole Nation suffers as a result of our failure to grant statehood to Alaska and Hawaii, both of which Territories are integral parts of the United States and should be recognized as such by admission into the Union as sovereign States.

We have delayed too long in taking the necessary action to grant statehood to these Territories. There has been a feeling that the House should await Senate action, and, although this might be

desirable, it has proved impracticable, and I intend, therefore, to ask our Committee on Interior and Insular Affairs to schedule hearings on the statehood bills without further delay.

The Childs' article points up the problems which have arisen due to our inability to arrange for a dependable supply of newsprint sufficient to take care of the needs of our publishing industry. So much depends upon the ability of the press to obtain newsprint that we should allow nothing to deter us from moving forward in every possible way to enlarge our newsprint supply. This is one of many reasons why the statehood bills should be enacted. The following Childs' article appeared in this morning's Washington Post:

ALASKAN NEWSPRINT: SHORTAGE AMIDST PLENTY

(By Marquis Childs)

High on the list of failures of both the preceding and the current Congress is the refusal to grant statehood to Hawaii and Alaska. The two Territories will always remain in semicolonial status until they are incorporated in the Union.

This is particularly true of Alaska, which will never get adequate military defenses until it becomes something more than an outpost. That is why some of the strongest pressure for statehood came from responsible defense officials when a year ago it seemed that final action was possible.

Now Secretary of Interior Oscar Chapman has shown in a special report what great new potentialities for industrial development exist in the Northwest. If Canada would go along in a joint development plan for both Alaska and British Columbia, a new industrial empire is possible which would provide homes and jobs for at least 6,000,000 people. With our rapidly expanding population it is important to look to the future.

Alaska is a source of wealth for one of the commodities in shortest supply in the world today—newsprint. This shortage, which has inflated the price of newsprint to an extraordinary level and which keeps papers in Europe and elsewhere pathetically small, bears directly on the issue of freedom of information and the competition of free ideas. The newsprint squeeze, along with the rapid rise in other fixed costs, constantly narrows the range both of information and opinion.

According to Secretary Chapman, timber in Alaska is sufficient to produce 1,000,000 tons of newsprint annually in perpetuity. The Forest Service in the Department of Agriculture is now trying to interest manufacturers and groups of newspaper publishers in starting plants in southeast Alaska.

There the Tongass National Forest, which covers most of the area, can support indefinitely on a basis of sustained timber yield at least five large pulp and paper mills, plus some lumber, plywood and so forth. The estimated sustained yield is a billion board feet, which at present prices would be worth more than \$150,000,000. The present yearly output, virtually all of it in lumber, is 70,000,000 board feet.

In the face of this extraordinary wealth, with newsprint growing scarcer and dearer month by month, not a single pulp mill has been built in Alaska. A contract for a rayon pulp development has been negotiated, calling for an estimated 1,500,000,000 cubic feet of timber from the Ketchikan area of the Tongass forest and several groups are said to be interested in newsprint manufacture in the area around Juneau which is capable of producing 1,000 tons daily in perpetuity.

One reason this development has been so delayed is that powerful interests in this country would like to cut Alaskan timber and ship it to mills in British Columbia and the United States. But the Department of

Agriculture, supported by the Interior Department, has fixed a policy prohibiting the export of logs unless they have received at least primary manufacture in the Territory.

The reason for such a policy is obvious. If Alaska's wealth were to be shipped out merely as raw material for industries to the south, there would be no development in the Territory itself. Stripped of its wealth, it would remain like the cut-over country in northern Wisconsin and Minnesota more or less empty and unproductive. The chance for building a stable population with a real stake in Alaska—the only basis for adequate military defenses—would be gone.

That has unfortunately been the attitude of some of the interests that lobbied so powerfully behind the scene to stop Senate action for statehood for Alaska and Hawaii after the legislative process had gone nearly to completion. They have concentrated on getting out quick returns regardless of what happens to the land or the people. These interests seem to have special influence with Senator HUGH BUTLER, of Nebraska, who more than any single individual was responsible for blocking the statehood bills.

The issue of public versus private power enters in here, too. Whether private utilities could develop the great water power sites in Alaska or whether they could be properly utilized only through a comprehensive TVA approach by Government is a question that is bound to be sharply debated.

But with the great potential wealth to the north, present scarcities will not long be tolerated. As was suggested by the able summary prepared by a special newsprint subcommittee of the Committee on Small Business headed by Senator HUBERT HUMPHREY, of Minnesota, unless action is taken by the Federal Government, it probably will be many years before the Alaskan development occurs. Here is a wide open opportunity for private enterprise to forestall Government and show that it can do the job.

Pitchmen on the Payroll

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. HILLINGS. Mr. Speaker, as this body considers bills which appropriate the taxpayers' money to support the various Federal agencies for the next fiscal year, I think we should keep in mind the fact that huge sums are being expended to maintain various publicity men and press agents on the payrolls.

An editorial published in the Baldwin Park (Calif.) Bulletin on Thursday, July 12, enumerates some interesting examples of Government publicity activities. This article states that the Bureau of Reclamation has been one of the principal offenders in carrying out propaganda activities.

The editorial follows:

PITCHMEN ON THE PAYROLL

The recent Saturday Evening Post article How Government Pressure Boys Squander Your Money, should be required reading for Californians. For one of the outstanding examples cited in this startling exposé of how "Government agencies beat the drum to glorify and perpetuate themselves with expensive books, cocktail parties and thousands of paid press agents," concerns the

arrogant propaganda activities of the Bureau of Reclamation here in California.

All Government agencies have legal—and presumably useful—functions to perform under laws enacted by Congress. Those proper functions, by no stretch of the imagination, include lobbying at the public's expense. Yet, the Post article discloses that all 1,600 of the Bureau's Central Valley project employees were officially instructed as follows:

"You are information people, every one of you. You have got to get out and meet the folks, even joining the luncheon clubs and the chamber of commerce and the churches. Congress is very sensitive and susceptible to what goes on at home, and the more friends we make here the more easily it will be back in Congress to get our appropriations."

Last month a high spot in the Bureau's propaganda activities was reached with the mailing from Sacramento of a 2-foot long, heavy cardboard mailing tube containing a cartoon map of CVP, a 1,500-word long press and radio release, a three-page list of fillers, describing CVP, and a sheet listing dates and places for various water festival celebrations during the summer. This mailing was sent not just to California newspapers but to papers all across the country. The Columbus (Ga.) Ledger ran an editorial condemning the mailing as a shocking waste of public funds and printed the map under the caption: "Note to Reds—Here are your targets."

The Bureau of Reclamation isn't the only offender in this regard. Though the expenditure of official time or Federal funds to influence legislation is punishable by fine and imprisonment, it is apparently established procedure in a great many Federal agencies. The pitchmen on our public payroll, creating artificial desires for more and more Government services, cynically egging on each and every pressure "gimme" group, blithely spend our money to convince us that they need still more.

Lovely Lobbyist

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. RODINO. Mr. Speaker, were there more lobbyists of the kind represented by the lovely wife of my esteemed colleague the distinguished gentleman from New Jersey, GORDON CANFIELD, I am confident that we would have passed a more effective control bill last week.

Unfortunately, however, lobbyists are not always as unselfish and as interested in the welfare of our Nation—they are more interested in serving purely a special interest.

I was very pleased to hear the remarks of my colleague the gentleman from New Jersey [Mr. CANFIELD] when he alluded to Mrs. Canfield as the "very charming, very gracious, very lovely" lobbyist who was working in the interest of price control. She, like many other housewives, was confronted with the problem of high prices and immediately called it to the attention of her husband. Though I am certain that the gentleman from New Jersey, who has always been able to feel the pulse of the people, and who represents them well,

also understood the problem, I am nonetheless certain that Mrs. Canfield's lobbying had a very strong effect.

Under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Newark Evening News, of July 23, 1951, entitled "Lovely Lobbyist":

LOVELY LOBBYIST

Mrs. Gordon Canfield, of Paterson, has one advantage over most housewives in New Jersey; she does not have to go out of her own home to make her views known to her Congressman. That she does make her views known, and effectively, was testified to the other day on the floor of the House of Representatives by her husband.

This "very charming, very gracious, very lovely" lobbyist, as Representative CANFIELD described her, is at her wit's end trying to find in the stores of her community how she can properly get food to feed five hungry mouths. In this respect, she is no different from other housewives. It is a problem common to most Jersey homes.

Mrs. Canfield does have special access to her Congressman. But every housewife can have ready access to her's if she will but take advantage of the mails. There is no question that the Congressman will give heed if enough housewives make their views known.

Need Firm Hand

EXTENSION OF REMARKS

OF

HON. JOHN A. WHITAKER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. WHITAKER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial entitled "Need Firm Hand," appearing in the Park City Daily News, Bowling Green, Ky., July 1951:

The Russian peace proposal offers hope to the millions of people who would like to see an end to the fighting and something approximating real peace established in this war-weary world.

Or does it? Is it an honest attempt to negotiate at least a dispute that has already claimed thousands of lives and cost billions of dollars in war expense and destruction of property? Or is it another crafty Kremlin trick to lull the United States and its U. N. allies into a feeling of false optimism? Is it a trick to split the Allies by causing dissension among them over the actual peace terms?

Those questions have to be asked by any sensible person because of Russia's long record of diplomatic duplicity, double-crossing and shameless dishonesty in her international dealings. They have to be asked despite U. N. Secretary-General Trygve Lie's assurance that the Soviet's motives are sincere and their off-hand peace bid should be taken seriously. They have to be asked because a wise man always reaches for a grain of salt when listening to pious utterances from a known liar.

So while Mr. Malik's gambit offers hope to some, it also confronts President Truman, the State Department, and their opposite numbers among our U. N. allies with a keen challenge. It is a challenge to their judgment and their ability to come through when the chips are down in an international poker game in which one player has no compunction about using a marked deck and hiding a few aces up his sleeve.

By their handling of the situation the President and his advisers have a chance to redeem themselves with many citizens throughout the country who feel that Truman-Acheson and company have demonstrated something less than dynamic leadership in their handling of the whole problem of communistic expansion in Asia.

Because of previous sad experience of those naive enough to take Russian promises at face value, it is only the part of wisdom to retain a healthy skepticism until the Reds' sincerity is proved beyond doubt. But that does not mean that we should lead the U. N. along the path of timidity. The burden of proof of sincerity is on Russia. By taking a firm stand with her and refusing to be stampeded by wishful thinking, we can call her hand and make her put her cards on the table. Then perhaps our diplomats will learn that Russia doesn't hold all the trumps they had credited her with. Or that she is just trying to cheat again.

Mutual Security Program

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a statement by Mrs. Allan C. G. Mitchell, a director of the League of Women Voters of the United States. This statement is a reflection of the thinking of the women of the Nation. I agree with the thinking expressed in this timely statement and urge the House membership to give thoughtful attention to the statement:

STATEMENT OF MRS. ALLAN C. G. MITCHELL, BLOOMINGTON, IND., A DIRECTOR OF THE LEAGUE OF WOMEN VOTERS OF THE UNITED STATES, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE, ON THE MUTUAL SECURITY PROGRAM

The League of Women Voters is a non-partisan organization devoted to developing informed and active citizens. We now have over 100,000 members organized in 764 communities in 43 States. The league is supporting a program of economic and military assistance to other countries because we believe such a program to be basic to the present and future security of the United States. In particular, the league has given sustained attention to the North Atlantic Treaty Organization, the European recovery program, and assistance to underdeveloped countries by the United States and the U. N. We would like to see these three programs included in the bill which this committee will write. I should like to speak briefly about NATO and ERP and then at more length about aid to underdeveloped countries which our members believe should be emphasized.

1. The League of Women Voters support of the North Atlantic Treaty is based on our conviction that collective security offers the best chance for a lasting peace. We have supported this treaty since 1949 when it became evident that efforts in the United Nations to create an effective security system were being blocked. We regard the treaty as a necessary expedient and supplementary to the United Nations but by no means as a substitute. In April, at our national council, the delegates again discussed collective security problems. We favor the strengthening of the North Atlantic Treaty Organization

and supplying it with the necessary materials to enable the member countries to build and coordinate their defense efforts.

2. The league endorses the European recovery program in 1948 after prolonged discussion of the risks and costs involved. The evidence shows that the hopes of the program were realized beyond most expectations. Exclusive of the accomplishments in the realm of industrial and agricultural production and increase in trade there are other favorable outcomes. The European recovery program has inspired the member nations to take bold steps toward the integration of their economies and toward closer political cooperation. The organization of European economic cooperation, the Strasbourg Assembly, the Schuman plan, the European Payments Union, and proposals for a European army represent significant advances toward a Europe capable of supporting and defending itself.

All western European nations, however, have not progressed in their recovery at the same rate. In some nations production still lags and the balance-of-payments problem is acute. Also, the living standard is still so low that many of the people remain discontented and are susceptible to totalitarian doctrines which seem to promise relief. The existence of such problems warrants continued United States participation in European recovery. These nations now have the added burden of rearming to defend themselves against possible aggression. Without continued United States help, European nations would seriously jeopardize the economic strength brought about by their labor in the last few years. The League of Women Voters, therefore, urges Congress to continue adequate appropriations for economic aid to western European nations.

3. In the past 2 years the league has given much attention to the acute problems of underdeveloped countries, particularly their effect on the immediate security of the United States as well as our longer-range plans for peace. At our last convention in 1950, one of the three national issues chosen for concentrated attention was "the expansion of world trade and international economic development with maximum use of United Nations agencies." More recently at this year's council meeting the delegates were outspoken in reporting widespread support among the league membership for technical assistance to underdeveloped countries.

The support among our membership for this program of assistance to the underdeveloped nations is so great that I am including a few quotations from local leagues:

From Peterboro, N. H.: The Peterboro league heartily endorses the point 4 program. It does not want to see the longer-range objectives lost sight of in the defense crises. It felt that the psychological value was as great as the strategic-materials value if they must be balanced against each other. The league believes that in spite of difficulties and complications due to the defense effort the program should be carried out for the benefit of the peoples in the underdeveloped areas and in the hope that it will further the peace effort.

From Lancaster, Pa.: "We feel strongly that a really bold and imaginative point 4 program is the most important challenge facing us. . . . By far the strongest feeling [that came out of the debate] was that the military-aid program should not be allowed to disrupt economic recovery in Europe and that a strong point 4 program is the best 'containment' policy for Asia."

From Yellow Springs, Ohio: "We believe that conditions in 'backward' areas are an ever-increasing danger to world peace and would be so even if Russian imperialism should somehow disappear. Therefore, we feel that point 4 cannot wait until the

emergency is over, but must be pushed immediately and vigorously. . . . Yellow Springs members are strongly in favor of our promoting the point 4 program largely by appropriating funds to be administered through the U. N. We support wholeheartedly maximum use of United Nations agencies."

From Pasadena, Calif.: "At a time when military measures are receiving primary consideration, we believe it is the league's function to emphasize the importance of international economic development as a means of promoting world stability and lasting peace."

From St. Louis, Mo.: "At a members' meeting, March 16, 1951, our league voted to ask National to be on the watch for point 4 legislation, and to support it in every way possible."

From Stillwater, Okla.: "We believe that the need for aid to the underdeveloped countries of the world cannot be seriously questioned. We feel that the extremely low standard of living of two-thirds of the world's population constitutes a real and continuing threat to world peace and stability. We are supported in this view by the present threats to world peace which we find in China, Iran, Indonesia, the Philippines, and Korea, all of which lie in that area designated 'underdeveloped.' We further feel that the defeat of communism, without a subsequent rise in the living standards of the people, would bring only temporary relief. Poverty, not communism, is the basic threat to world stability."

This program makes sense to our members, and we believe it has also caught the imagination of the American people. We agree strongly with the view expressed in the Rockefeller report, *Partners in Progress*, that the United States can no longer assure its own security with means found here at home. We need the underdeveloped countries, both economically and politically, and the peoples of those countries are anxious for a chance to help themselves. We believe the United States should seize this opportunity for a mutually beneficial program. Such a program offers hope to the people of the United States and the free world that we can in due course cope with our world-wide economic problems before we are overcome by internal or external attack or by the strain of arming against attack.

Communism has spread by exploiting the very real conditions of want which exist for the vast majority of people in the underdeveloped countries and for the sizable group of underprivileged in certain developed countries such as France and Italy. The sound way to combat the Communist advance is for the free world to meet it squarely with a positive program to cut the ground from under its feet.

Fortunately, the free world has already made a successful start on such a positive program through the activities of the United Nations and its specialized agencies, the United States point 4 program and the Colombo program of the commonwealth. We have learned through experience with the European recovery program and in Latin America how to apply the techniques of mutual aid and self-help so that the contribution we make in personnel and dollars can result in lasting benefits. The technical-assistance program is one that allows those who have skills and who have profited from the atmosphere of a free society to share those skills with others who have not had these opportunities.

The league is concerned that the technical-assistance program go forward as much as possible through the U. N. We realize some of the limitations of such a program progressing on a multilateral scale, but the league believes that the advantages outweigh the disadvantages. Maximum use of

the United Nations is efficient use of American money as it means sharing with other countries the burden of providing funds, equipment, technicians, and training facilities. Maximum use of United Nations also has the advantage of counteracting the deep fear of recipient countries of exploitation by the economically developed countries. The Congress and those who administer technical-aid programs should look with foresight to the increased use of the U. N. in carrying out these programs. It is gratifying that the rehabilitation programs for Korea and the Arab refugees are to be carried out through the United Nations. I emphasize the United Nations here because the league believes that the foundation of United States foreign policy lies in supporting and strengthening the United Nations whenever we can. Without such an international body there is little possibility of maintaining international order.

Our success in maintaining the rearmament effort over the necessary period of years will depend directly on the success of the economic effort of the free world. Furthermore, not only the rearmament effort but the present and future prosperity of the industrialized regions depends on the markets and raw materials of the underdeveloped regions, which are in turn dependent on us. We see the interrelationship of these programs to the extent that one cannot succeed without the fulfillment of the other two.

One of the most difficult questions which the Congress must face in connection with this mutual-security legislation is what is a sound division of funds and materials between the arms program and economic program. We fear there may be a tendency to sacrifice economic aid to the more obvious needs for military aid. We believe this would be short-sighted and in the long run perhaps disastrous. The importance of economic aid has been expressed by our members again and again, and I want to emphasize this to the committee.

The league is well aware of the strains which the rearmament effort is putting on the American economy with the consequent danger of inflation. In the modern world the price level is not merely a domestic concern. Inflation here produces repercussions throughout the free world. Our members have been active in urging the Executive and the Congress to support a firm program to control inflation, particularly stressing the need for a pay-as-we-go tax program, credit controls and reductions in nonessential Government expenditures. At the same time we are convinced that the United States must continue to fulfill its collective security obligations under the United Nations Charter and such regional arrangements as the North Atlantic Treaty. In the long run a collective system of defense will be less costly to the United States as well as offering the world its best chance of deterring aggression.

In summary, the League of Women Voters is supporting military aid to implement the North Atlantic Treaty, continuance of the European recovery program and assistance to underdeveloped countries. We are emphasizing the importance of the economic-assistance programs and full use of U. N. agencies wherever possible.

We believe that the goal of world peace is to be won only through cooperative effort. We are convinced that United States leadership is imperative if this cooperative effort is to succeed. Finally, we know that United States leadership is the responsibility of every American citizen. The League of Women Voters, a citizens' organization concerned with Government's role in national and international affairs, assures the Congress of its active and concerted support for these three programs of United States foreign policy. We ask that the bill which your committee reports make adequate authorization for their support.

Protection Needed at Noyo Harbor, Calif.**EXTENSION OF REMARKS
OF****HON. HUBERT B. SCUDDER**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from the Press-Democrat, published at Santa Rosa, Calif., under the date of July 15, 1951, entitled "Fort Bragg Fishermen Stand To Lose \$750,000 This Year."

Next month the tuna and albacore season begins, and due to hazardous conditions at Noyo Harbor, located near the city of Fort Bragg, the fishing industry there expects to lose an estimated \$750,000 worth of business. This revenue is derived from the larger fishing boats that ply the waters off northern California during the tuna and albacore season, and in the past have accounted for 75 percent of the business in this type of fish conducted at Noyo. This revenue will be lost because the skippers of these boats have served notice they will not enter Noyo Harbor this year.

The skippers still remember what happened last year when considerable damage was inflicted upon their craft by the heavy seas buffeting across the unprotected harbor.

The hazardous conditions at Noyo Harbor have accounted for a great deal of damage to expensive equipment, bodily injury—and even loss of life. The risk is so great that marine insurance companies refuse to insure equipment operating from this harbor, or set the rate so high that it is prohibitive.

There is a permanent investment of \$2,751,500 represented in fishing vessels, riverside production and distribution facilities at Noyo Harbor. During 1950 value of the fish harvest to meet civilian consumer demands and requirements of the military was set at \$8,500,000. This harbor is the only haven for fishing boats and smaller craft along a 200-mile stretch of rugged, stormy coast line.

A project to construct a breakwater to protect Noyo Harbor was recommended by the Corps of Engineers many years ago. Congress authorized the project 8 years ago, but no funds have been allocated. I have been informed by the Corps of Engineers that the cost of constructing a model breakwater and subjecting it to the necessary tests would amount to some \$25,000.

I have called the necessity for this project to the attention of the Senate Subcommittee on Army Civilian Functions, requesting the desired allocation if additional funds are recommended for new projects. If favorable action develops, the dangerous threats to the economic welfare of a multimillion dollar fishing industry will be greatly diminished.

The article citing the loss which the fishing industry at Fort Bragg faces due

to existent conditions at their harbor is as follows:

**FORT BRAGG FISHERMEN STAND TO LOSE
\$750,000 THIS YEAR**

(By Edwin F. Davis)

The tuna and albacore season begins next month, and the Fort Bragg fishing industry expects to lose \$750,000 worth of business due to silting of Noyo Harbor.

Already skippers of large tuna boats, which range almost the length of the west coast and account for 75 percent of Noyo's tuna and albacore business, have given notice they can't risk entering the harbor this year.

Still fresh in their minds is the densely packed harbor of a year ago, when white-crested waves broke across the unprotected harbor entrance and buffeted the fishing boats, causing thousands of dollars in damage.

Heavy rains have carried silt down the Noyo River, depositing it near the harbor entrance. Stormy seas, in turn, have beaten the silt back into the channel entrance and alongside the fishing-plant docks on the north bank of the river.

Louis Cavallini, manager of one of the six fisheries and chairman of the Noyo Harbor District Board of Commissioners, comments:

"We tie boats alongside the dock and keep the propellers whirling to churn out a channel which fishing boats can use to come alongside without keeling over."

"It has got so bad they can't berth at low water, but have to come in at high tide."

Noyo Harbor is one of several in the redwood empire which is gradually silting in due to the lack of periodic dredging by the Corps of Engineers.

The corps' deputy chief of civil works for rivers and harbors explained in a letter to the Sonoma County Board of Supervisors, referring to Bodega Bay and its \$550,000 of annual fish production: "Maintenance of navigation facilities for recreational craft, where the benefits are of a local nature, or for small volume of general commerce, under present conditions must be deferred."

The west-coast fishing industry, which in California alone exceeds New England's, would dispute the word "recreational" as an accurate description of Bodega Bay, which handles upward of 600 fishing vessels during salmon season, of the Petaluma River, with its multimillion-dollar industry depending on large traffic, or of Noyo Harbor, with its \$2,751,500 permanent investment in permanent fishing vessels and river-side production and distribution facilities; and its \$8,550,000 of fish harvested in 1950 for civilian and Armed Forces use.

There are two other projects, in addition to the crucially needed dredging, which Noyo Harbor fishermen and fish processors believe highly important to future operations of the industry.

1. The harbor district seeks a Government loan to dredge a mooring basin upstream from the present channel, which ends 0.6 of a mile above the harbor entrance. The loan would be repaid in 10 years, from mooring rental receipts. Mr. Cavallini points out that the law forbids impeding a navigable channel, but now fishermen have no alternative, despite the danger of fire or storm damage in a heavily crowded and unprotected harbor.

2. A federally constructed breakwater, anchored to a rocky cliff extending seaward on the south side of the harbor entrance. This project was recommended by the Corps of Engineers a decade ago and Congress authorized it 8 years ago, but has not allocated funds.

Ray Welch, secretary of the Fort Bragg fishermen's Union, cites a half dozen wrecks which have occurred within the past several years due to the absence of a breakwater. Only last November the \$65,000 fishing vessel *Del Monte* crashed against rocks south

of the harbor entrance, a total loss, as it attempted to navigate the jetty mouth in heavy seas.

The Corps of Engineers estimated the cost of the breakwater project at \$600,000 in 1940. Since then, the cost has roughly doubled, but the value of boats has trebled and the cost of repairing them is four times what it was 11 years ago.

Members of the Noyo fishing industry consider their projects not only important to them and to the community's prosperity, but also to the Nation as a whole.

Is not plentiful food necessary in peace or war? they ask. They add that Noyo Harbor, the only haven for fishing boats and other small craft along a 200-mile stretch of coast between Humboldt and Bodega Bays, was also headquarters for a Navy sea-rescue unit during World War II.

Let's Stay Strong**EXTENSION OF REMARKS
OF****HON. JOHN A. WHITAKER**

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. WHITAKER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial entitled "Let's Stay Strong," appearing in the Park City Daily News, Bowling Green, Ky., on July 2, 1951:

It took a long, long time, but at last we are on the road to achieving universal military training. Although some 18½-year-olds (and some parents) may disagree, that's the most important news, in the new manpower draft bill just signed by President Truman.

To be sure, a lot has to happen before UMT becomes an actuality.

First off, a five-member National Security Training Committee will have to get to work and spell out the details of operation. The committee has to make its report to Congress sometime within the next 4 months, and it has to have the endorsement of the Secretary of Defense.

After that, the Armed Services Committees of each House will have 45 more days to mull over the details. Then comes the debate on the floor. As has happened before, of course, the argument could go on forever without getting anywhere. But Senator RUSSELL, chairman of the Armed Services Committee, promises action will be speedy once the supporting legislation needed for UMT is ready.

There is one other hitch. Even after the law is passed, UMT will not go into operation until the President or Congress decides it is no longer necessary to draft men under 19 to keep our authorized armed strength. The experts in Washington seem to think this means UMT will take a back seat until the Korean war is over, an observation which could mean anything, since nobody knows what the next move in Korea will be.

Nevertheless, it's an historic step. Now that nearly everybody seems to agree we ought to have UMT, it makes sound sense that we build the foundations for it carefully.

The administration began urging it back in 1946. The American Legion says it's been urging UMT ever since the end of World War I. And Secretary of Defense Marshall goes back much further. "The objective of a universally shared obligation for the defense of our country," he points out, "is now within our grasp for the first time since George

Washington began the pursuit of this goal a century and a half ago."

Whether it took 5 years, 32 or 150, another 5 months or so does not really matter. UMT seems destined to be part of American life for quite a while.

The important thing now is to put UMT together in such fashion, to quote General Marshall again, that "it will permit us thereafter to continue strong militarily in keeping with our great purpose of promoting peace in the world."

Mutual Security Program

EXTENSION OF REMARKS OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks, I enclose herewith a statement by the Reverend Thomas B. Keehn, legislative representative, Council for Social Action, Congregational Christian Churches. Reverend Keehn particularly directs attention to the importance of the point 4 program. I agree with the idea that point 4 should be kept clearly defined. This article is worthy of careful consideration:

STATEMENT OF REV. THOMAS B. KEEHN, LEGISLATIVE REPRESENTATIVE, COUNCIL FOR SOCIAL ACTION, CONGREGATIONAL CHRISTIAN CHURCHES, BEFORE COMMITTEE ON FOREIGN AFFAIRS, HOUSE OF REPRESENTATIVES, JULY 23, 1951

Mr. Chairman and members of the committee, my name is Thomas B. Keehn, and my address is 1751 N Street NW, Washington, D. C. I am appearing before your committee today to testify on behalf of the Council for Social Action of the Congregational Christian Churches with respect to the mutual-security program. My position with the Council for Social Action is legislative secretary. The council is composed of a board of 18 persons elected by the general council of the Congregational Christian Churches, which is the representative body of our 8,000 churches and 1,100,000 members. The Council for Social Action has been given the responsibility by the general council of helping the individual churches make the Christian gospel more effective in society in the areas of international relations, race relations, and economic affairs. I should like to make clear, at this point, that according to our policy each individual church and each national board speaks only for itself. In my capacity as a witness today I am, therefore, speaking only for the Council for Social Action.

I am also authorized to state that another body of the Congregational Christian denomination, the American Board of Commissioners for Foreign Missions, has recently expressed its approval of the point 4 program as an essential part of America's foreign economic policy. The American board has carried on a program of education, social welfare, industrial and vocational development, and medical care for more than 140 years. This program, which involved expenditures of more than \$1,800,000 during the last fiscal year, has always been centered primarily in the so-called underdeveloped areas of the world.

In a letter dated July 19, 1951, addressed to me, Dr. Ronald Bridges, president of the American board, stated:

"I am interested and gratified to learn that you are to appear before the House Foreign Affairs Committee in its hearings on the mutual security program.

"You know of the great concern that is being evidenced by the various foreign boards of our churches, especially in connection with the point 4 program, and I want to be sure that you have the action recently taken by the prudential committee of the American board on this matter. Enclosed you will find a copy which you may use as you see fit in the presentation of your testimony."

The resolution referred to by Dr. Bridges reads as follows in sections particularly relevant to this testimony:

"That approval in substance be given to the findings of a special consultation on the churches' relations to peoples in underdeveloped areas of the world held at Buck Hill Falls, April 24-26, 1951, as a guide to the staff in dealing with the immediate proposals before them and as a basis for the formulation of a long-range policy for the American board.

"That officers and missionaries of the American board be asked to interpret to individuals and churches the fundamental humanitarian principle of sharing which is at the heart of the point 4 program, to the end that, progressively, popular support and congressional support of the point 4 program may be forthcoming."

This convergence of interest of the American board and the Council for Social Action is, we believe, a happy and significant development. It indicates a widespread interest within the churches in the kind of program to aid in the economic and social development of the underdeveloped areas which is symbolized by point 4. Growing out of generations of practical experience of the American board in the foreign-mission field, and the interest of the Council for Social Action in foreign policy, this program—point 4—represents something which we believe should be in the forefront of American foreign policy.

One personal word may be appropriate here. At the request of the Division of Foreign Missions of the National Council of Churches, I was released from my present responsibility for the 8-month period, October 1950 to June 1951, to make a special study of the relationship of missions to the point 4 program. The Division of Foreign Missions represents the major Protestant missions boards. As has been stated on many occasions by both churchmen and political leaders, foreign missions pioneered in developing the point 4 idea. Particularly in the fields of health, education, and agriculture these religious agencies have been concerned with basic human and social needs of people in the underdeveloped areas, as well as in their moral and spiritual welfare. One of the activities carried on during this period of service for the Division of Foreign Missions of the National Council of Churches was to assist in the planning and carrying out of a 3-day consultation on the churches' relation to peoples in underdeveloped areas. This meeting was attended by 125 leaders of Protestant missions and social-action agencies. I am sending to each member of the committee a copy of the report of this consultation entitled "The American Churches and Overseas Development Programs." This document represents a realistic appraisal of the needs and obstacles to economic and social development in the underdeveloped area and the motivations and principles which must guide a program of this kind if it is to be successful.

As is apparent from this background, we are particularly interested in the provisions of the proposal before this committee relating to the economic aid of the more than 1,000,000,000 people who live in the under-

developed areas of the world. This part of the foreign-aid program represents expenditures of approximately \$500,000,000. We are not at all opposed to the larger items requested for economic aid to Europe and military aid to the free world. In fact the Council for Social Action has on several occasions supported both of these programs. We do not feel qualified to speak about the details or amounts requested for either of these activities. It might be appropriate to express the hope that in the European economic-aid program, the original purpose of the Marshall plan will not be lost because of the new conditions occasioned by the rearmament program. Certainly some adjustment will be called for, but no military program in Europe can be achieved or even made palatable to the people unless there is a sound and continuing improvement in the program of economic development in the European nations.

About the program of economic and social development in the underdeveloped areas, we do have several specific comments.

First we would like to emphasize the strategic and long-term importance of this program of economic and social development in the underdeveloped areas. Here we agree with the thesis developed by the report of the International Development Advisory Board and by Mr. Nelson Rockefeller in his testimony before this committee. The report of the Churches and Overseas Development stated:

"In the past man has lacked the physical capacity either to destroy his kind by the tens of millions or to lessen measurably the misery and squalor which too often were an accepted condition of their daily existence. That is no longer true.

"Today man has developed scientific instruments which are easily capable of crippling civilization as we knew it. But he has also developed knowledge and techniques which for the first time make systematic social and economic progress a possibility not only for the citizens of a few nations but for most of mankind.

"The poverty and social disorder which afflict so much of the world are ancient and persistent evils. Their eradication will not be a matter of years, or even of decades. The problem is vast and complex, the misery pervasive, the causes intertangled. But a road toward a better lot for the people of these areas has become increasingly visible in the private, governmental, and inter-governmental development programs which have been launched or proposed since the end of the Second World War. The philosophy behind these programs has become familiar to Americans as the point 4 concept.

"If the point 4 concept is not vigorously applied, a series of degenerative wars appears to be almost inevitable. But if the concept is given full support, the result can be a more wholesome and secure world for our children than their parents have ever known."

Thus we want a point 4 program that is clearly identified, that is in the spotlight, that is a central and permanent part of American foreign policy. That is, from our point of view, a weakness of the proposal before you. Point 4 functions are scattered throughout the four titles of the document. It takes some arithmetic and a skillful detective to locate the pieces which, when put together, spell point 4. We believe that point 4 should be, at the very least, a separate title in an over-all foreign-aid bill. At present it is lost amidst military and temporary economic programs. This is a major weakness, a weakness which will be misunderstood particularly by the more than 1,000,000,000 people who live in the underdeveloped areas. Because military and economic aid are so mixed, it may be believed in some countries that they must take the military aid in order to qualify for the eco-

nomie. And this will produce tension, perhaps resentment, in the underdeveloped areas where the spirit of political independence is as potent as the economic and social needs of the people are widespread.

Secondly, we are concerned with the magnitude and administration of the program. Point 4 has become a generic term. It is a symbol. It has a long history in government as well as among private agencies. At the present time there are at least two major point 4 programs carried on by the United States Government—one under the aegis of the Technical Cooperation Administration of the Department of State and the other under ECA, particularly its Special Economic Missions in Southeast Asia and its program in the Dependent Overseas Territories of Africa. According to the report of the Rockefeller International Development Advisory Board, all of these activities taken together accounted for the expenditure of nearly \$300,000,000 in fiscal 1951. ECA programs in the underdeveloped areas differ somewhat from TCA activities in that the former supplies some grants and materials as well as technicians. But they are all point 4 in the broadest sense. Presumably the \$500,000,000 listed as economic aid to the underdeveloped areas in the draft now before you represents a continuation and enlargement of this program although we have not seen a country by country break-down. At any rate we strongly believe that the amount of \$500,000,000 for technical assistance and economic and social development in the underdeveloped areas is a reasonable amount for the next fiscal year. It should be approved. This is the amount recommended by both the Gray and Rockefeller reports.

To administer such a program effectively, the operations now carried on by TCA and the ECA underdeveloped areas functions, should be combined into a single administrative unit. Probably this should be a division of ECA with clearly defined responsibilities and authority. This division could then become the nucleus of a single independent overseas economic administration as recommended in many private and public studies of the problem. The functions of this agency could be clarified as experience dictated. But at least here we would have the beginning of the kind of permanent, independent overseas economic agency which appears to be so desperately needed.

Incidentally, reports from certain parts of the world indicate that in each country there should be much more effective coordination of the various United States programs—economic, information, and military—than now exists.

Thirdly, we believe that there should be the maximum use of voluntary agencies in the point 4 program. This was the intent of Congress as expressed in the Act for International Development, adopted last year. At the planning stage in advisory relationships, both here and in the field, and in the actual administration of certain projects, we believe that the aims and purposes of point 4 can best be fulfilled by use of voluntary agencies of all kinds.

A fourth and final concern which we would like to stress is related to the direction in which the program should move. For example, church agencies generally feel that increasing use should be made of the United Nations and the specialized agencies in technical assistance and economic-development programs. Especially as long-term, large-scale development projects are undertaken, financial and investment programs under U. N. aegis will help avoid possible charges of imperialism and thereby serve America's real interests. For this reason we support the proposals in the Rockefeller report for an International Development Authority and an International Finance Corporation, both related to the International Bank for Reconstruction which is a U. N. agency. Congress

would serve the United States and the U. N. well by initiating steps to get these new programs started. At best, several years will be required, and now is not too soon to begin. In the meantime, we have made an investigation of technical-assistance programs now carried on by the U. N. and the specialized agencies. We believe they fulfill an important function and could be expanded. United States contributions of approximately 10 percent of current appropriations for technical assistance and economic development in the underdeveloped areas could be usefully employed by the U. N.

Church agencies and members appear to be committed to the point 4 idea carried on by the United States and U. N. with greater enthusiasm than anything else in the last decade with the possible exception of the establishment of the U. N. itself. With their world-wide organization, they are prepared to carry on programs of education and assistance in the grass roots of America and the rice roots of Asia. They believe that this is a program which must be supported by citizens and by the Government for the long pull—for at least the next 50 years. Point 4 must go on when—in fact especially when—the military-aid programs decrease. Point 4 can become a kind of twentieth-century emancipation for the billion and more people, largely colored, who are enslaved by poverty, ignorance, disease, misgovernment, and disintegrating social orders in the underdeveloped areas of the world. It can become a road to peace along which mankind may walk forward into the sunrise of a better tomorrow.

No Need for Oil Price Controls

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. SCHWABE. Mr. Speaker, the following article was clipped from a recent issue of the Independent Petroleum Association of America.

The price of oil has advanced less than 1 percent, according to this article, since the Korean war began. In contrast with other items, this is practically no advance at all. Under these circumstances, there certainly is no rhyme or reason, no excuse whatever, for arbitrary regulations and directives attempting to regulate the prices of crude oil and its products.

Following is the article, which shows that there is no need for oil price controls:

ON PRICE CONTROL

Government statistics show that oil prices are being frozen in the face of steady increases in other prices and costs. The United States Bureau of Labor Statistics reports that wholesale prices of all commodities have increased 17 percent since the beginning of the Korean war. Farm-products prices are up 22 percent; foods, 16 percent; textiles, 35 percent; metals, 10 percent; building materials, 13 percent; chemicals, 26 percent. In contrast, the price of crude petroleum, as a result of minor adjustments, has increased less than 1 percent.

The facts show that price-control authorities are following a course that threatens to repeat the discriminatory and unsound actions as to oil prices taken during World War II. These actions during the last war

greatly depressed oil prices in relation to the other prices and the rising costs of finding, developing, and producing crude oil. As a result of OPA policies, our reserve producing capacity was dissipated and the American consumers suffered the hardships of temporary oil shortages in 1947 and 1948. The Nation cannot afford to repeat these mistakes by following unrealistic price policies: Now, therefore, be it

Resolved, That Federal agencies concerned with petroleum be urged to recognize the disparity between oil prices and the price of other commodities and avoid discriminatory and inequitable price actions that would threaten the future of supplies upon which this Nation's security depends.

The Other Cheek

EXTENSION OF REMARKS

OF

HON. JOHN A. MCGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MCGUIRE. Mr. Speaker, under leave to extend my remarks, I wish to include in the Record a thoughtful editorial from the Meriden (Conn.) Morning Record of July 20:

THE OTHER CHEEK

The imprisonment of William Oatis in Prague diminishes again the number of western newsmen behind the iron curtain. At present there are less than a score trying valiantly to cover events in the vast area of Communist Europe. Six of these are in Moscow. Prague is now without any coverage at all, except what is phoned out for the UP by a Czech national, who, incidentally, must be a very bad insurance risk at the moment, and the daily dispatches of two United States embassy representatives.

In this country, on the other hand, Communist newspapermen are going about their business without let or hindrance. Tass reported, undoubtedly in glowing terms, a peace rally in Chicago at which a number of notorious Communists kicked the Red gong around. Newsmen for Russian publications as well as for the Daily Worker and indigenous pink-tinted sheets have equal chance with reputable democratic papers for Government press meetings and releases, and can still prowling about the Pentagon waiting for the breeze to blow loose sheets of paper their way.

There has been no official protest, nor is there likely to be, about the peculiar yardstick which governs the orientation of Red-reported news stories. Ordinary newsmen report the facts of their stories as conscientiously as they are able and, given a chance to editorialize, disagree violently about the conclusions. Communist newsmen live in happy harmony. If something benefits Uncle Joe it is a good thing. If it militates against his interests it is a bad thing. When a Communist newsmen digs out a story closer to espionage than anything William Oatis ever approached, which has happened more than once, we berate ourselves for our stupidity in letting him get the information, not the reporter for his spying.

Anyone who doubts that western democracy is founded on Christian principles should take a sharp look at this policy of turning the other cheek. Our policy has always been, and should always be, to keep the avenues of information as open as possible, even though they are temporarily one-way streets and though Red reporters give wrong reports of their turnings.

Like most of the Christian precepts, it is good common sense as well as good religion. For the people who read the Communist newspapers, knowing how western reporters have fared in their own countries, must be struck by the freedom which permits our news to reach them. More important still, the people of free countries and countries aspiring to freedom see and judge the two news policies. It is an example of democracy in action that no amount of propaganda can distort.

Income-Tax Exemptions for Certain Military Personnel

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1951

Mr. PATTERSON. Mr. Speaker, Congress has delayed in many instances in adopting legislative measures of benefit to the Armed Forces performing so valiantly in Korea. A dramatic incident concerning a Veterans' Administration hospital refusing treatment to a wounded Korean veteran was needed to accomplish the passage of a medical-benefits bill for veterans of Korea. To date, no action has been taken by Congress to increase the monthly pay of service personnel in combat zones. It is shameful that no impetus has been supplied by the leadership to attain this worthy objective.

I hope that no such delay will affect the provisions of the bill I introduced today to continue tax exemptions for servicemen and women in combat zones. The present authority for such exemption expires on December 31 and should be reenacted as soon as possible. I have tried to correct one inequity in the present law and trust that the Committee on Ways and Means will favorably consider its adoption.

Under the authority granted by Congress, income-tax exemptions for members of the Armed Forces covers the entire compensation of enlisted personnel and \$200 monthly compensation for officers. The exemption applies only to compensation paid during the months served in the combat zone as designated by the President under Executive Order No. 10195.

The present exemption fails to provide for members of the Armed Forces who are hospitalized elsewhere as a result of wounds or sickness incurred in the combat zone. It is this contingency that I wish to have included in the law. The meager compensation now granted should be tax-exempt while the member of the armed services is confined to a hospital, whether it be in the United States or Japan. Certainly the period during which a wounded or sick soldier is hospitalized should be considered as one of active service. My bill provides that the exemption shall apply only to hospitalization necessitated through service in the combat zone.

Let us keep the faith with those who have kept faith with us. This would be little enough to compensate the fighting men in Korea for their defense of freedom. It is essential that Congress not allow this very small benefit to lapse through inaction.

Radio Speech in Regard to Legislation Introduced by Hon. Frank L. Chelf, of Kentucky, With Respect to Indecent Molestation or Sexual Abuse of a Minor

EXTENSION OF REMARKS

OF

HON. FRANK L. CHELF

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over WHAS, Louisville, Ky., on July 22, 1951, and WGN, Chicago, Ill., on July 24, 1951:

Ladies and gentlemen, first, I want to thank Mr. Quaal, of WHAS, for inviting my old friend and former House colleague, the Honorable EVERETT DIRKSEN, that great United States Senator from Illinois, and myself to discuss with you tonight the all-important subject of the urgent need for Federal legislation to protect our children from the sex criminal and the peddler of narcotics. Senator DIRKSEN and I have each introduced bills in the Senate and the House, respectively, which would provide penalties of life imprisonment or death to those furnishing narcotics to a minor.

Inasmuch as I have also introduced a bill in the House to provide severe penalties for those who would ravish our children, I will, therefore, confine my remarks to that particular phase of this discussion, leaving the question of the sale of narcotics to my able and good friend, Senator DIRKSEN.

My friends, the tenth amendment to the Constitution prevents a Nation-wide, uniform Federal law pertaining to sex criminals. The tenth amendment reserves to the individual State legislatures all general police power. In other words, if we are to have adequate laws for the protection of our people, they must be enacted by the States. This is known as States' rights.

There are only two courses of action to be followed in seeking a Federal law to prevent sex crimes against children. One is to attempt to amend the Federal Constitution. However, during the past 162 years there have been 4,468 attempts to amend the Constitution, and, as you know, only 22 have been successful, since we have today just 22 existing amendments. This course, then, appeared impractical.

The second possibility to be explored is to amend the United States Code to include penalties for a flight across a State line to avoid prosecution on a charge of sexual abuse of children. I am trying to do this with my bill.

In the present Lindbergh law the Federal Government has jurisdiction only in cases where the kidnaper flees across a State line. This law has almost stopped kidnapping. My bill regarding the sex criminal is patterned after this law.

I have been informed that recent figures of aggravated assault and rape throughout the country reached the shocking total of over 93,000—during a 12-month period.

Broken down, this means 250 criminal assaults per day—or approximately 10 such violations against our citizens every single hour. These facts alone graphically point up the desperate need for both State and Federal legislation for the protection of our children against the sex pervert.

During the past 20 years that I have practiced law, I have had first-hand knowledge in the prosecution and defense of almost every known crime on the statute books. Ten of my twenty years were spent as prosecuting attorney. As a result, it has been my experience that 75 percent of all criminals commit crimes willfully and maliciously. It is my contention, therefore, that the greatest deterrent to a potential violator of the law, is the definite knowledge that a stiff penalty awaits him.

I cannot agree with some that practically all sex offenders are mentally deficient, and as a result, not responsible for their acts, no more than I can agree that every person charged with murder is insane. Dr. Val B. Satterfield, assistant professor of psychiatry at Washington University School of Medicine at St. Louis, stated that the sex criminal is basically no different from a thief in that he takes what he wants without the consideration of the rights of others.

My friends, I am willing to concede that approximately 25 percent of sex crimes are committed by those who are mentally deficient, but this should not excuse them for their acts of violence against our children. What is needed, and I shall do my utmost to help provide it—is the enactment of legislation for the construction of a new modern Federal psychiatric hospital staffed with the best psychiatrists, in order to treat and cure these sex deviates. But in the name of heaven, we must keep them incarcerated during their treatment so that they cannot stalk our highways, streets, and alleys looking for new victims amongst our youth.

Folks, I do not profess to have all of the answers to this grave problem but this, I think all can agree, action is needed now to (1) provide laws that sting to the quick the 75 percent of these criminals who willfully seek out our children to perform their depraved acts, and (2) provide adequate Government hospitals to cure that 25 percent of those mentally deficient criminals. I am supported in this assertion by none other than the Honorable J. Edgar Hoover, of the FBI, who recently said: "If existing State statutes do not provide for * * * psychiatric treatment [of sex deviates] * * * then it is time to pass such a law."

Ladies and gentlemen, a recent news story stated that a sex criminal charged with raping a little 9-year-old girl was so severely beaten by the other inmates in the jail that he had to be placed in a separate cell. Yes; his act was so despicable that other hardened criminals could not "stomach" what he had done.

The Cleveland Plain Dealer had this to say, editorially, about my proposed legislation: "No crime deserves punishment more swiftly and surely than a sex crime against a child. Violation of the body of a child is so ghastly, it sickens us as citizens. Congressman CHELF may have the answer. * * * CHELF's idea, though drastic, makes sense because the situation is drastic."

Ladies and gentlemen, I notice that my time is about up. Therefore, in conclusion, let me summarize by saying that I am trying to protect our children from sex perverts, and where there is now no Federal law upon the subject, my bill would make it a penalty of from 10 to 20 years for the first offense and for the second offense—life imprisonment or possible death.

Thank God, Senator DIRKSEN, there's no politics where our children are concerned. You pass your narcotic bill in the Senate and I hereby promise to support it vigorously when it comes to the House.

Our Town: A Modern Sodom**EXTENSION OF REMARKS**

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. SCHWABE. Mr. Speaker, it may stand us in hand to take stock at home, to determine whether our town, our home city, or place of residence is a modern Sodom. There may be more corruption and maladministration at home than we realize. Not all of the corruption is in Washington, D. C., the National Capital, bad as that may be. By and large, the Government at Washington, in my humble opinion, largely reflects the conditions of our local government at home. Is our town a modern Sodom? If it is, a heavy responsibility rests upon each of us to do something about it. Each of us may be a contributing cause to this bad situation, and each of us owes a responsibility to ourselves our generation, and to future generations, to attempt to see that our town is no longer a modern Sodom.

The following article is a sermon by Ira W. Langston, minister of the Park Avenue Christian Church in New York City, delivered a few months ago, and which I copy from the Christian-Evangelist of April 4, 1951:

OUR TOWN: A MODERN SODOM

Some of our boys will die today on the sides of mountains and in the marshlands of Korea. Most of them will die in a pursuit that they had no desire to follow and be buried in a land that they had no desire to see. Why is this thing happening to the sons of our flesh?

It is true that most of the men in our Armed Forces had no desire to grow up and be soldiers and sailors and marines. The military has never been a glamorous profession in our country. It is true that most of them had no desire to see Korea. Korea is a small country in the Far East that has never been dramatized to the public in our country. Why then, are these sons of ours dying on the battlefields of Korea?

Our boys are dying in Korea today because we have come to a period in world history when most of us believe that the nations of the free world will stand or fall together. We want to have our part in maintaining the free world. There is an element of nobility in the stand that our boys are making in Korea today.

But most of our boys have been told that it is necessary for them to fight in Korea today in order that our way of life be maintained here in this country. Our boys are dying on the battlefields of Korea in order to maintain our way of life.

I hope to God that those from our city have not been able to get and read the local newspapers during these recent weeks. Are you aware of the story that the front pages of papers have been telling recently about our way of life?

We have been told that hoodlums and racketeers have been buying and paying members of our police force for protection while they gorged their greedy souls on the filthy money that they have illegally bilked from the people of our community.

We have been told on the front pages of our papers that some of the public servants in whose care we have intrusted the safe-

keeping of our homes against the ravages of fire, have been guilty of graft and the misappropriation of funds.

We have been told that dope peddlers, than whom there surely must be no lower form of human life, have been exploiting the children in our schools and on the streets of our city.

We have been told that even the exterminating contracts of our public schools have been turned over to a pack of vermin who care more for unearned money than they do for the health and welfare of our children.

We have been told that some of the basketball heroes of our local colleges have been approached and appropriated by gamblers who care nothing for the prospects for the future of our bright young men, who scorn the noble traditions of our distinguished educational institutions, who if you please, make a laughing stock of our boys in Korea who are dying for our way of life.

We have been told on the front pages of our newspapers in these recent days, that Ambassador William O'Dwyer knew how to stop the hoodlums and gangsters from interfering with the war effort when he was a general in the Army, but they did not tell us why he did not know how to stop these same unscrupulous characters from sabotaging the peacetime democracy of our city while he was mayor of our town.

Indeed we have been told so much about the symptoms of rottenness that have been exposing themselves in our city during these recent days, that it is not too much to presume that this community which you and I call home, is fundamentally rotten to the core.

It is because of this that the basketball scandal suggested the parallel to me between our town and the ancient Sodom, which God looked upon with such outrage because of its immorality that he rained fire and brimstone from Heaven upon her. Sodom was destroyed because there were not 10 righteous men in the city. How much lower must we go before God must deal with us in this same cauterizing fashion?

Let us face it, my friends. The moral temperature of a city must reach a low estate before general corruption becomes a matter of public knowledge. In a city where the moral temperature of the citizenry is high, there is not likely to be a scandal in the police department, the fire department, the educational system, and the college institutions, all at the same time. This is not just a matter of a few individuals who have lost their sense of moral and ethical judgment. These are symptoms of fundamental rottenness. This is possible only when the moral temper of the whole community is sufficiently low that it can tolerate such things. And for us, you and me, for us to allow the moral temperature of our community to get so low at the very time that we are asking our boys to fight and die for our way of life is a matter that is shocking indeed.

We have shrugged our shoulders too long at things that we have known about our city that brought us shame. But the very attitude that we can shrug these things off is one of the very causes that make it possible for them to exist. You cannot build a good community out of bad people, and bad people can never take over and run a good community. They can't do so for long. Either the good people will turn in righteous indignation and spew the vermin out or they will adjust to their presence and partake of their violence and vulgarity.

Now, New York is different. It is a big city. It is difficult to know and accept the responsibilities of citizenship in New York. It is much easier to move into a house behind the isolation of doormen and accept the protection of the altitude and the elevator men. But this will not spare our children from dope while they are at school or on the

street. It will not make safe a city that allows graft and pollution in its departments of protection and safety.

Some time ago I was talking to a young woman student who was here in this country from Tibet. She and I met on a college campus in central Ohio. She was homesick for New York. I could not understand why. "I like New York better than any other place in the United States," she said, "because everyone in New York is a displaced person." Do you see what she means? She is telling us that we all hide from our proper responsibilities as citizens here. We just dwell here for the time being but our real home is 'way down South or way out West.

That is one of the major reasons why the lowest elements of our community can set the moral tone of our society. You can't have a good society run by bad men. Either the good people will spew out the bad or they will compromise with and partake of the immorality that abounds. In our aloofness we have chosen the latter.

Many of us have partaken of the immorality of this city in a semilawfulness of the fact that we were doing so. Let me refer again to Sodom. When the time came for Lot and Abraham to divide their flocks and separate into their own ways, Lot looked down upon the rich plains about Sodom and Gomorrah. Lot knew that Sodom and Gomorrah were wicked cities. He knew also that they were rich. Now Lot was not a bad man. Lot was a righteous man. But he saw that Sodom and Gomorrah and the plains around about were rich. So Lot chose the way of Sodom and Gomorrah. He did not choose the wicked ways. Indeed he did not even go into Sodom at first. He did not because he wanted to partake of the riches without partaking of the evil. But Lot did partake of both. And everyone who comes to New York does the same thing. New York is a rich city. It is rich with money. It is rich with opportunity. And countless of our best people from all over this Nation of ours, come annually to New York to partake of the riches in money and opportunity. But when they do so without assuming responsibility for the moral tone of our community by actively joining hands with the forces which are dedicated to maintaining a healthy moral climate, they are throwing their weight in with the scum that is leading our city and our way of life down the road to destruction. And by this very act they are calling down the perils of evil and wickedness upon all of us.

Nor is this a minor matter. The best records that I have indicate that less than 2,000,000 of our people are known and recorded as members of the Roman Catholic Church of our city. Less than 700,000 Jews are known and counted by the synagogues of our city, and less than 600,000 Protestants are known and recorded by the Protestant churches of our city. Less than 3,500,000 of our 8,000,000 people are even known by the religious institutions of our city. I wonder what the ratio was in Sodom before God rained fire down upon her houses and streets.

Now the best guess that I would be able to make about the number of people who are actively concerned for the religious institutions of our city would be about one-half of those whose names are recorded as members. If this is true, then out of 8,000,000 souls, we have less than 2,000,000 who are doing anything recognizable to maintain and extend a safe moral standard of living in New York City through her religious institutions.

This is not to apologize for the churches and synagogues either. Even 2,000,000 people who were genuinely dedicated to the idea that our community would be a fit place to live would have made a better record than we have seen written. But these 2,000,000 are too often concerned about their differences of opinion about what happened in the first century and have no time or energy to

act in concert on what is happening in New York today.

This is not an apology for the religious institutions of our town. If they had been fulfilling their function they would have observed and challenged the community before this cesspool of iniquity had erupted to spill all over their beautiful temples.

We are all in this thing together. We must all face the ghost like passage of the spirits of our boys as they depart this life, having given the last full measure of their lives for "our way of life." I do not believe that they are dying to make New York safe for dope peddlers. I do not believe that they are dying to make New York a haven for the gambling rings and the racket kings.

I do not believe that they are dying so that you and I can live in safety close enough to this "Sodom" to gain the fame and riches that are here to be garnered.

I do not believe that you and I can face God and the memories of these and others who have died for the defense of this land if we acquiesce in the perpetuation of the unholiness of this establishment which is our city.

Well, what can we do?

In the first place, I would like to shout into the ear of every self-respecting citizen of this city, who is not in the place of worship of his choice and say, "Go down to our jails this afternoon and say a word of greeting to your partners who have been accepting bribes for throwing basketball games." They are your partners for you are helping sustain a city where that kind of thing has been winked at and jested about for years.

After that, go down to Bellevue Hospital and ask to see some of the young dope fiends that you have helped to create. You did help because you have felt that it is enough for you to live in a city and refuse to use dope yourself. That is not enough. A democratic city is the responsibility of all her citizens, and when dope is peddled freely among the youngsters of that city, it is peddled because the good people allow it. Good people cannot live in isolation and insulated against the realities of community life.

Then I would say, get on down to the temple of your choice and ask God's forgiveness for your negligence as one of His favored children. And while you are there, pledge your continued and constant support to the institutions in the community which represent and proclaim the highest moral standards that we know.

Then I would say to the churches of this city, you Roman Catholic church members, let your cardinal know that this immorality and violence outrages you. Ask him to call upon the people in power on your behalf to see that this city is cleaned up. I am embarrassed that the faculty of Bradley College in Peoria, Ill., is afraid for their boys to come to our town to play basketball. I believe that you are embarrassed, too.

I would say to the Jewish congregations of the city. Let the representatives of Judaism know that you want this city cleaned up.

To the Protestant congregations of this city I would say, call, write, or wire Mr. Pettit of the Protestant Council of the City of New York. Tell him how many citizens you represent and ask him to call upon the authorities of this city to clean it up.

To the active members of this congregation I would say, bow your heads with me as we pray God's forgiveness for the part that we have had in allowing our town to become a symbol of moral degradation and shame. Join with me also in the petition that God will lead us in the days to come to assume more fully our proper responsibilities as Christian citizens of this our chosen city.

For God has promised: "If my people who are called by my name will humble them-

selves, and pray, and seek my face, and turn from their wicked ways, then will I hear from heaven, and will forgive their sin, and will heal their land."

Effects of the Manufacturers' Roll-backs

EXTENSION OF REMARKS OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I have prepared with reference to the roll-back prohibition, section 2, which was adopted by the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. PAUL H. DOUGLAS, OF ILLINOIS

There has, I believe, been a great deal of misunderstanding about the actual effects of the roll-back prohibition, section 2, which was adopted by the Senate. I believe that it is now generally understood that section 2 not only cancels the two beef-cattle roll-backs proposed for August and October; it also cancels the general manufacturers' order, which was originally to take effect on May 28, was then extended until July 2, and is now being held in abeyance pending final congressional action on the question of roll-backs.

What may not be so well understood is the fact that the manufacturers' regulation not only involves price roll-backs; it also involves price roll-forwards for those manufacturers whose cost increases advanced faster than their prices by the time the general price freeze of January 25 caught them. Such manufacturers are depending on the various manufacturers' regulations to bring them relief, but the relief will not come unless the House-Senate conference allows these manufacturers' regulations to go into effect.

Because of the long lead-time in the machinery industry, in which contracts are often made a long time before actual delivery takes place, there were a great many cases in which costs had advanced faster than contract changes could be made. The machine-manufacturers' regulation provides, therefore, for many price roll-forwards.

In order to show how many of these firms are depending upon the manufacturers' regulations for relief, I ask unanimous consent to insert in the RECORD at this point the text of a telegram I have received from a machine manufacturer in Rockford, Ill., whose name I will withhold for reasons of privacy:

"Manufacturers who restrained their price increases as a part of voluntary price controls have been assured by OPS that they would be allowed to catch up with costs through such regulations as CPR 30. Now OPS has petulantly suspended that regulation because they have been forbidden to roll back the prices of those manufacturers who raised prices indiscriminately. This is grossly unfair to those who attempted to cooperate and can only undermine such value as there may be in price controls. Your expression of your thoughts of this to OPS will be appreciated."

OPS has not suspended CPR 30, which covers machine manufacturers, out of any petulance. Far from it, they have suspended the regulation by direction of Congress, since the stopgap extension we passed until July 31 prevents their putting CPR 30 into effect,

as will the Senate roll-back prohibition. That is why I am passing my thoughts on to my colleagues in the Congress.

There have been those who have made light of the efforts of many patriotic businessmen who responded to the Government's request for voluntary price restraint last December, and who tried to hold their prices despite some rising costs. These businessmen deserve the relief contained in such regulations as CPR 30. And while Congress has not prevented OPS from granting upward adjustments, unless it allows OPS to bring down the prices of those concerns whose prices have far outstripped their cost increases, the adjustments required will be much greater, since every price will have to be brought into line with the highest prices. It seems clear to me that this can only mean the beginning of an uncontrolled wage-price spiral.

Obligation for the Education of Children

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial taken from the Saturday Evening Post of July 14, 1951, entitled "Educators Should Be Warned by the Pasadena Revolt."

I recommend that all parents take an interest so as to ascertain the method of teaching their children. It is possible for children to be inculcated with ideas that are hostile to our American institutions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATORS SHOULD BE WARNED BY THE PASADENA REVOLT
(By Frank Chodorov)

Are parents, as parents, relieved of all obligation for the education of their school-age children? Do parents, as taxpayers, have any right to express an opinion on the curriculum or teaching methods in the public schools?

These are the questions that have emerged from the now-famous Pasadena case. They are, of course, fundamental, and transcend the particular issues involved in the controversy, and the attendant passions. To see how they have come to the surface calls for a brief summary of the main events in this highly publicized controversy.

A superintendent of schools—one with a national reputation—was hired by this education-conscious California city. Immediately he began introducing changes in subject matter and teaching technique, toward the end that Pasadena might have the "best" and "most modern." Taken as a whole, the reforms followed the lines of what is called progressive education, which emphasizes the adjustment of the child to the group, rather than his development as an individual. The acquisition of knowledge, this philosophy of education holds, is of little or no importance, while the molding of the child to the social order is the principal business of modern schooling.

These ideas did not set too well with many Pasadena parents; they held to the notion that schools were for the teaching of the three R's and some other subjects which their children might find helpful. Their

dissatisfaction with the innovations came to the boiling point when the superintendent asked for a considerable boost in school taxes to meet the higher cost of progressivism. The election campaign let loose all their pent-up dissidence. The charges of socialism and communism were freely hurled at the new system, and the superintendent was excoriated for being a traitor to American tradition. The passions aroused did not subside with the overwhelming defeat of the tax proposal, but found expression in a popular demand for the removal of the superintendent.

With the resignation of the superintendent, the case should have been closed. The fact is, it seems to have started with that event, for the advocates of progressive education have taken the dismissal as a challenge to their ideas. A book-length story of the incident, in which the author gives the superintendent's side the better of it, has received laudatory reviews from highly placed educators and pamphleteers have taken up the cudgels for the superintendent and his philosophy, and against the people who deposed him. Perhaps all this agitation is due to the fear that the ousting of the superintendent, who stands high in the progressive movement, portends further set-backs in other cities where an aroused citizenry are on the march.

Putting aside the arguments for and against progressivism, the implications of the general position taken by these protagonists are: (a) parents have no competence in the field of education and therefore ought not to interfere with the experts, (b) as taxpayers they have no more right to express an opinion on how their children should be educated than a patient has a right to dictate the doctor's prescription.

Whether or not progressive education is a tool of socialism, as charged, there is no question about the socialistic character of that position. It very definitely holds that the individualistic relationship between parent and child terminates when the latter enters the public school. At that moment, it says, the child becomes a ward of the community, as far as its education is concerned, and the community, operating through its experts, must not be interfered with in the exercise of its guardianship. This is not far removed from the Spartan doctrine that the child belongs to the state and should be trained exclusively for its service.

Thus the Pasadena case has blossomed out into a fundamental moral and social question. Even if progressivism were to go back to teaching the three R's, and were to revert to the idea that the purpose of education is to prepare the child for a happy and fruitful individual life, rather than to turn out a cog for the social machine, even if there were no quarrel with what or how the teachers taught, could we, should we, accept the idea of alienation from home ties? Is it consistent with the nature of things for the mother to rid herself of all concern in the intellectual development of her offspring? Finally, is it consonant with democracy to say that the taxpayer has no voice in how his money shall be spent?

Hoover Commission Report

EXTENSION OF REMARKS OF

HON. ALLAN OAKLEY HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. HUNTER. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following resolution relative to the Hoover Commission report:

HOOVER COMMISSION REPORT — RESOLUTION SPONSORED BY REPRESENTATIVE JOSEPH W. MARTIN, JR., REPUBLICAN LEADER OF THE HOUSE, AND ADOPTED BY THE REPUBLICAN CONFERENCE OF THE HOUSE, JULY 25, 1951

In time of crisis like the present, when our country is threatened by inflation from within and military conquest from without, it is of urgent importance that the Federal Government be operated with maximum efficiency. A clear course toward that end was charted by the Hoover Commission on Government Reorganization, which recommended reforms that would save an estimated \$5,400,000,000 a year.

The Hoover Commission was established by the Republican Eightieth Congress, and enactment of the Hoover report has been a steadfast goal of Republican Members. However, the present Democrat-controlled Congress has accomplished almost nothing toward putting the remaining half of the Hoover Commission recommendations into effect. Of 20 legislative proposals submitted by the Citizens Committee for the Hoover Report, not a single measure has been enacted. In the House of Representatives hearings have been held on only one measure. President Truman's record is even worse, of 51 reorganization plans suggested to him by the Citizens Committee, only one has been forwarded to Congress.

It is the sense of Republican Members of the House that national solvency and security demand prompt consideration of the pending Hoover report recommendations. Republican Members urge President Truman and the Democrat leadership to join them in such a united effort.

A Few Things We People Are Thinking About

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. SCHWABE. Mr. Speaker, a few days ago I received a very interesting letter from a constituent of mine. This man lives in one of the most prosperous smaller cities of my congressional district in northeastern Oklahoma. He has been in the retail business in his city for perhaps more than a quarter of a century. He is one of the outstanding Christian gentlemen of his community and enjoys the respect, esteem, and unquestioned confidence of his fellow citizens.

This constituent wrote me voluntarily. He is a lifelong Democrat. He has at least one close relative on the Federal payroll. He is a student of human nature, economics, business relations, and government, and is capable of an intelligent exposition of any subject to which he addresses himself.

It is most heartening and encouraging to find those who will voluntarily write their Representatives in Congress, giving them the benefit of the thinking of not only the authors of such letters, but of the people themselves with whom they

come in daily contact. This well-informed gentleman says:

In this letter I will try to give you some of the ideas that are expressed by the ordinary, representative people.

Those are the best ideas on earth. Such ideas are of incalculable assistance to any Representative who conscientiously is endeavoring to represent the wishes and the best interests of the people of his district. It certainly enables him to know their thinking and how he can best protect their interests at all times. In concluding the letter, my worthy constituent says:

"I can mention in one letter only a few of the things that we people are thinking about."

The letter to which I have referred, which I prize as one expressing true American sentiments, follows:

Like many other persons I have refrained from writing to you about different matters but I notice that numerous organized minorities seem to make themselves felt and heard with the Members of Congress so you may be interested in hearing from one of the common people. Many times the customers of my store, who are farmers and small-town people, express themselves about public matters and most of them are very well informed. In this letter I will try to give you some of the ideas that are expressed by ordinary, representative people.

Most people do not mind paying taxes but they do not like to have taxes increased by the Federal Government when they feel that the Government itself is not using much sense and little economy in its own affairs.

According to the papers there are many instances of waste and extravagance on which savings could be made and, except for defense, probably most of the departments could operate on a large percentage less money than they now use. I notice that some effort has been made to cut the vacations of civil-service employees from 6 weeks to 5 weeks, which would save about \$200,000,000. No doubt you know that the average vacation in business is not more than 2 weeks and I see no reason why the Government should spend millions of dollars for additional vacations for its employees when taxes are so high.

The papers indicate there are thousands of public relations men and chauffeurs for the big men of our Government and we might be able to struggle along without them.

These things may be small ones but at \$200,000,000 a crack they would soon add up to a billion. We certainly can get along with a lot less government from Washington than we now have. No one, of course, wants to see a war but most people do not want to be taxed to death for years and years and let Russia sit back and push us around whenever convenient. People do not want further appeasement and many of them think we should quietly rearm to the hilt and then push Russia back or go to the mat with her for good.

All of us are afraid of inflation and many people believe the Government has caused more inflation than anything else that affects the question. It just seems a matter of common sense that if the Government permits and encourages the granting of increased wages to large pressure groups that prices in turn must be increased and we have a daily upward spiral.

Many people think that those in authority are looking for votes rather than trying to protect this country. The Government is setting up a tremendous organization, on

one hand trying to keep prices down when for years they have kept increasing wages and the Government agencies have been lending money and, in fact, almost forcing people to borrow money from them.

Few people desire to have this country socialized but the program which is being followed by the Government is driving us toward socialism. The Government is getting into too many businesses and competing with private business too much. There are too many people that are exempt from taxes and I refer particularly to the big co-operatives.

The labor unions are creating national monopolies and must be trimmed down and broken up into State groups so that they cannot exert national pressure to a degree which endangers our national interest.

This letter is now too long and I can mention in one letter only a few of the things that we people are thinking about. People are seriously concerned with our National Government and many think we have too much government and that the quality is rather poor.

Condition of Farmers Under Communism

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Agrarian Reform," published in the Winnipeg Free Press of June 14, 1951. It deals with the conditions of farmers under communism.

There being no objection, the article was ordered to be printed in the Record, as follows:

AGRARIAN REFORM

In their efforts to win the sympathy of Canadian farmers, the Communists argue that their various conquests of power represent not the triumph of a new imperialism but the attainment of simple justice by poor peasants long subject to a degrading feudalism. Simple-minded fellow travelers once contended—and may still do—that the new rulers of satellite states are not really Communists at all but agrarian reformers thrown up by mass discontent.

It would be difficult to conceive a more fantastic deception.

The nature of the Communist agricultural revolution and counterrevolution is admirably illustrated by the case of Estonia. With the exception of Hungary, where the end result is the same, all the European Cominform states accord with this pattern.

FACTS SUMMARIZED

The facts regarding Estonia are admirably summarized in the World Today, a publication of the Royal Institute of International Affairs. Prior to 1914 there were in Estonia 51,000 independent farmers. There were also 52,000 tenants farming large estates. About 58 percent of the land was held by great proprietors whose possessions averaged 5,200 acres.

After the First World War, independent Estonia carried out a large-scale land reform. The big estates were parceled into small holdings of not more than 124 acres. New farms to the number of 37,000 were created. By 1939 there were 140,000 farms in the country, averaging 56 acres each. Farms exceeding 250 acres comprised only 3.3 per-

cent of the land. Under this type of feudalism the area of arable land was increased by nearly 20 percent, production of food grain by 52 percent, of cattle by 88 percent, with comparable improvements for horses, pigs, the yield of milk, of eggs, butter, and bacon. There were no less than 3,972 co-operative societies. Mechanization was proceeding apace.

The Russians seized Estonia in June 1940, promising that there would be neither nationalization of land nor collectivization of agriculture. Within a month the land had been nationalized. Farms exceeding 74 acres were then broken up for the benefit of new settlers and persecution of the kulaks or wealthier farmers followed in the spirit of class war.

In 1947 there began the drive for collectivization. The first weapon employed was discriminatory taxation. Specifically the farmer possessing a cow, a pig, 10 sheep, and 15 chickens was taxed 5.4 times as much as his neighbor who had joined a collective and maintained the same number of stock on the acre formally left for his own use. Between March 1948 and March 1949 the number of collectives rose from 59 to 530. As only 15 percent of the farmers had then joined, the Communists decided that the pace was too slow.

They fell back on their second weapon—deportation. Some tens of thousands of farmers were deported to remote areas of the U. S. S. R. By June 1949 Moscow was able to boast that there were 2,950 collectives comprising 78 percent of the former Estonian farmsteads.

SECOND PHASE

The collectivization drive then passed into its second phase. It was argued, as in Russia, that the collectives were too small. They are therefore being lumped together in larger units surrounding agrogorods or agricultural towns.

The nature of a kolkhoz or collective farm is not well understood in this country. Like the serf of ancient times, the kolkhoznik is bound to the soil. He cannot even leave the collective farm on a visit without a permit from the authorities. This is liberation.

Rewards of labor are based on the piece-work system. Each day a farmer must accomplish a fixed "norm," which is set high. If he works faster and accomplishes more he gets higher wages but there are no higher rates for overtime. He can devote his leisure to his own plot but there are ways and means of circumscribing such activities. One is "socialist competition," a system whereby the Communist bosses of one collective challenge another in the fulfillment of labor tasks.

SLOW PROGRESS

Agricultural production is still far below prewar standards. Communist authorities have shown concern over livestock figures which are only half those of 1939. Slow progress here seems directly related to collectivization which does not favor animal husbandry since it removes the freeholder with a direct incentive to care for his stock. Yields of field crops generally have been lower largely due to a shortage of farm manure.

These declines are reflected in standards of living. In terms of meat the 10 rubles received by a farm worker for a normday is worth only one third of what the industrial worker received in 1939 and even this is subject to a discount of 10 to 15 percent, for taxes. But the prices of most consumer goods have in the interval mounted six to 10 times. While the Soviets are most reluctant to provide comparative figures, it appears that the "liberated" collective farmer is having a thin time.

In the face of what has actually happened the propaganda about "agrarian reform" looms as a monumental Communist lie.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record program Nos. 42 and 44 in my broadcasts to the people of Pennsylvania in the series, Happenings in Washington. These programs were broadcast on June 4 and July 2, 1951.

There being no objection, the broadcast was ordered to be printed in the Record, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 42)

This is Ed MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of Happenings in Washington.

Within a few weeks we will have reached the first anniversary of that fateful day last June when President Truman ordered the Armed Forces of the United States into action to repel armed aggression against the free Republic of South Korea.

At the same time he ordered American naval forces to prevent military action between the Island of Formosa, held by Chinese Nationalist forces, and the mainland of China, controlled by the Communists.

This decision, you will recall, was a complete and sudden reversal of the Truman-Acheson policy in the Far East.

At the beginning of 1950 Secretary of State Acheson, dealing at the same time with political and military aspects of the situation, wrote off Korea and Formosa as having no strategic value to the United States.

Carrying out this Truman-Acheson policy, the President on January 5, 1950 announced "that the United States Government will not provide aid or advice to Chinese forces on Formosa."

Secretary Acheson announced a line of defense in the Pacific which left Formosa and Korea to the tender mercies of the Communists.

That, I maintain, was an invitation to the Communists to embark on a free ride into Korea. That invitation they accepted, expecting to meet only the weak opposition of the poorly organized South Korean defense force.

Now, almost a year after the shooting started, testimony before the Senate Investigating Committees reveals who was responsible for the decision to abandon Korea and Formosa.

It is clear from the testimony that this Truman-Acheson policy was adopted by the President and the Secretary of State against the advice of the Joint Chiefs of Staff.

It was a political decision, contrary to the definite opinion and advice of the top military experts of our Nation.

The testimony reveals just as clearly that President Truman and Secretary Acheson reversed their policy and plunged us into war without giving the military any opportunity to make plans for successful operations in Korea.

Our soldiers, inadequately trained and poorly equipped, were thrown into battle against a superior force, although the President and the State Department had no definite plan or objective.

Now, after nearly a year of death and destruction, does the President, the State Department, or the Joint Chiefs of Staff have

any definite policy in Korea and the Far East?

Let me say that to me, after examining the official record, the most shocking thing is the admission that our floundering Government at this late date has not yet agreed on the political or military objectives of this tragic war.

It was brought out in the testimony that on February 13 of this year, when the Joint Chiefs of Staff met with the State Department, and again on March 15, at another meeting, the military had been unable to get the State Department heads to define our political objectives in Korea.

The State Department asserted it wanted to wait until the military outlook was clarified. At the same time the military leaders wanted a political decision upon which to base a course of military action.

Out of all this buck passing between the State Department and the Joint Chiefs of Staff there was evolved a synthetic, make-believe policy, described by Gen. Omar Bradley in his testimony as a "wait and see" proposition.

I repeat that—wait and see.

But the bullets, the shells, and the bombs of the enemy didn't know about that.

The fire from the Chinese Reds did not wait and see.

Each week the casualty lists given out at the Pentagon grew bigger and bigger.

And today, at this very moment, the same policy persists—wait and see.

And the casualty lists continue to grow bigger and bigger.

When General Bradley testified before the Senate committees on May 24 the American people learned for the first time the truth about the casualties in Korea.

In his testimony General Bradley admitted that the American forces fighting in Korea had suffered casualties totaling nearly 142,000.

We have been led to believe that our total casualties were about 69,000. But General Bradley revealed that noncombat deaths and injuries had not been included in the figures given to the public.

Let me remind you that when President Truman went on the air to justify his dismissal of General MacArthur, he said, and I quote:

"I have * * * considered it essential to relieve General MacArthur so that there would be no doubt or confusion as to the real purpose and aim of our policy."

But he did not say that the weak, timid, vacillating, wait-and-see policy, enunciated by Secretary Acheson, was responsible for all the doubt and confusion.

General MacArthur had constantly called for new political decisions essential to a solution of the situation in Korea.

He did not get the political decisions he requested just as the Joint Chiefs of Staff were unable to get definite decisions on political objectives from the State Department.

He recommended to the Joint Chiefs of Staff a program which he felt was required by military necessity in the conduct of the war.

1. The intensification of our economic blockade against China.

2. The imposition of a naval blockade against the China coast.

3. Removal of restrictions on air reconnaissance of China's coastal areas and of Manchuria.

4. Removal of restrictions on the forces of the Republic of China on Formosa, with logistical support to their effective operations against a common enemy.

One of the most important things brought out in the investigation is the fact that this program, as outlined by General MacArthur, is the same plan recommended

by the Joint Chiefs of Staff to President Truman, through Secretary of Defense Marshall, in a report dated January 12.

A copy of this report was sent to General MacArthur.

Again the military recommendations were overruled and rejected by the political policy makers.

General MacArthur also had asked authority to engage in what the Air Force calls hot pursuit of enemy planes, even if they crossed the Yalu River. Again the Joint Chiefs of Staff approved, but again the political policy makers—Truman and Acheson—rejected the proposal.

In my analysis of the testimony I find that the only difference between General MacArthur and the Joint Chiefs of Staff on the basis of military strategy, was the question of bombing supply bases and troop concentrations in the Communist sanctuary north of the Yalu River.

With the exception of this one point, our country is now demanding from the United Nations or has received approval of every recommendation made by General MacArthur.

So that the MacArthur policies, which the President declared did not agree with those of the Truman-Acheson administration are now being adopted as the official program for the conduct of the war in Korea.

In many speeches, on the Senate floor and elsewhere, I have insisted that the American people have a right to know what commitments we have entered into all over the world.

I have argued that one of the great dangers to world peace rises out of secret agreements reached without the approval of Congress. It has never occurred to me that diplomatic commitments would ever be made by the President and the Secretary of State beyond our military capacity to carry them out.

But General Bradley, appearing before the Senate committee a week ago last Thursday, made the astounding statement that the United States may have more diplomatic commitments than we can carry out militarily at the present time.

I believe the policy of open covenants, openly arrived at, advocated by Woodrow Wilson would do more to restore and preserve peace than any diplomatic deals made in secrecy and withheld from the people who must pay the price of their fulfillment.

At this time I want to discuss one phase of the Korean struggle which is too little understood by our people. Let me try to clear away some of the confusion so that we can have a clear understanding of the great need for clear thinking and clear decisions from our Government.

It has developed in these hearings that we have surrendered the right of independent action in international affairs to the United Nations.

Testimony has been given disclosing that decisions agreed upon by the heads of our Military Establishment and the State Department, and approved by the President, have been vetoed by our allies in the United Nations.

Those countries, with mere token contributions to the fight against aggression in Korea, have been responsible for scuttling most of the proposals of General MacArthur and the Joint Chiefs of Staff.

When you ask the reason, Secretary Acheson will tell you: "We cannot go it alone. We cannot stand without allies. We must not offend them or we shall be left alone and friendless in a hostile world."

But I would like to ask:

"If they walk away from us, where will they go? How will they stand without us? Who will provide the funds for their rearmament? Who will supply the ships and planes

and food and military supplies they need so urgently?"

They know that without our help they haven't a chance to escape enslavement under the tyranny of Red Russia.

Now I want to call your attention to one of the most alarming developments in the Truman-Acheson attitude toward Communist China.

You must remember that when the conflict in the Far East comes to an end the terms of peace will be negotiated by the United Nations, and the United States.

Recently Secretary Acheson made it known that if a cease-fire agreement was reached he would be willing to discuss the admission of Red China to the United Nations and the surrender of Formosa to the Chinese Communists.

And he further stated that while we are opposed to the admission of Red China to the United Nations and are opposed to turning Formosa over to the Communists, we would not exercise the veto power if a majority in the United Nations voted against us.

That proposition, my fellow Pennsylvanians, is appeasement in its worst form.

It would be a dishonorable betrayal of every American boy who is fighting in Korea in the cause of freedom and justice to help the brutal march of armed aggression.

It would be shameful abandonment of the cause for which heroic American boys paid with their lives on foreign soil, far from their homes and loved ones.

My fellow Pennsylvanians, it must be clear that the military policies and the strategy of this war are not being decided by the Joint Chiefs of Staff, who are best qualified to do so.

Those decisions are being made by the same leaders who sold China into the hands of the Communists and by our allies in the United Nations who value trade with the enemy above hope for peace and freedom.

That calls for the immediate dismissal of Dean Acheson as Secretary of State and a thorough housecleaning in the State Department.

This is Ed MARTIN, speaking to you from the Nation's Capitol. I will be with you again in 2 weeks. Thank you for your attention.

HAPPENINGS IN WASHINGTON, PROGRAM NO. 44
(By United States Senator EDWARD MARTIN, of Pennsylvania)

This is Ed MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

First let me tell you how much I appreciate the many messages of cheer and encouragement I received during my illness.

Also I want to extend my thanks to my friends and colleagues, Congressman VAN ZANDT and Congressman GAVIN, for the interesting and informative talk they gave 2 weeks ago when they substituted for me on this program. I am sincerely grateful for their valuable assistance.

In recent weeks Congress has been engaged in battling with an enemy whose destructive force can wreck the whole economic structure of the United States.

That enemy is inflation. It is the rising spiral of price increases which robs the American dollar of its purchasing power and brings cruel hardship to a large percentage of our population.

It brings the worst harm to the great majority of our people who live on fixed incomes, the white-collar worker, the aged and retired who depend upon the return from their invested savings, and those who receive pensions or annuities.

Every housewife who has struggled to make ends meet knows how rising prices at the

store make it impossible for her to buy the things her family needs and should have.

I don't mean fancy goods or luxuries. Many families have been deprived of actual necessities because inflation has stolen a substantial portion of the workers' wages.

In considering this serious problem we must realize, of course, that there is no magic formula by which we can have low prices, high wages, and big profits all at the same time.

There is no magic by which Congress can stop the rise in prices overnight merely by passing a law.

There are no miracle men in any of the agencies of Government created to deal with prices and wages.

For many years we got along pretty well with a sound, natural law that maintained a balanced economy without Government help.

It was not passed by Congress. It was not written in the law books.

It was the ancient law of supply and demand.

That law regulated the price we had to pay for things without controls and without an army of administrators, investigators, enforcement officers, and others on the public payroll.

It operated as an integral part of the free-enterprise system of the United States.

It was supported by open competition in the market place.

It gave incentive for the production of more and better goods at a lower price.

It was the strongest factor in the development of the giant productive capacity of American industry.

It created our ability to out-produce any other nation in the world.

When we were plunged into the Korean conflict a year ago, production for civilian needs was at a high peak. It became necessary to expand military production as rapidly as possible in preparation for any eventuality, including the possibility of all-out war on a global scale.

Materials needed for the manufacture of guns, tanks, planes, ships, and other weapons of war cut sharply into the supply of civilian goods.

Some businessmen, expecting to reap a harvest of big profits, rushed out to buy. Consumers increased their purchases because they expected there would be shortages.

In the meantime, Government spending added billions to the money supply, increasing the inflationary pressure and started a new upsurge of prices.

Congress recognized the danger and in September we enacted the Defense Production Act of 1950. This act gave the President greatly increased power to impose ceilings on prices and wages, to restrict consumer credit, and to establish priorities and allocations for critical materials.

It also gave the President power to seize or requisition materials and facilities, including real estate, necessary for national defense.

It authorized the President to make loans to private business for the expansion of production and to guarantee financial institutions against losses incurred in financing defense contracts.

The President, in a message to Congress, had asked for some of these powers. But he did not ask for authority to fix prices and wages. He took the position that such action was not necessary.

But time and costly experience have proven that the President was wrong.

The dangers of inflation have increased tremendously and the problem of combating

it has been made much more difficult because the President failed to impose price and wage controls when they could have been used most effectively to check rising prices.

When the Defense Production Act of 1950 was passed I urged the President to freeze prices and wages immediately clear across the board, and even to roll them back to June 25, but Mr. Truman refused. He told a news conference that Senator MARTIN was mistaken about the need for such controls.

In a State-wide broadcast to the people of Pennsylvania, I said I had great fears of inflation unless effective controls were imposed at once to protect the consumers of our Nation.

In that broadcast I said:

"I hope the President will use the powers granted in this bill immediately.

"Everyone knows that prices are constantly moving upward. With increased Government spending for defense they will rush even higher. Labor is already demanding wage increases to meet the rising cost of living. Artificial shortages have been created by some unscrupulous businessmen to extort higher profits from the public.

"Unless controls are put into effect at once, clear across the board, we will have a race between prices and wages that will mean a dangerous inflation.

"Let me say that we cannot have wage control without price control. Neither can we have effective price control without wage control. They must go together."

On September 1, in a discussion of the defense production bill on the Senate floor, I repeated that statement and I added:

"If we are to halt runaway spiraling of the cost of living, controls must be placed simultaneously on both prices and wages, clear across the board. In my opinion that is the only system of controls which has any chance of working."

It is difficult to estimate how much the President's failure to take prompt action cost the American people.

Eric Johnston, Economic Stabilization Administrator, stated recently that inflation has added \$21,000,000,000 to consumers' living costs since January 1950. That period, of course, includes 6 months of rising prices prior to the Korean war.

Another frightening figure was given by the Secretary of Defense, General Marshall, when he testified before a House Banking and Currency Committee hearing a month ago. He said that the enormous increase in prices has already reduced the value of defense appropriations for 1951 by \$7,000,000,000.

In other words, the defense loss from inflation is very close to the total amount of additional revenue that the Government will collect under the new tax bill now being written.

But the worst feature of the situation grows out of the stubborn refusal of the Truman administration to attack the fundamental causes of inflation—uncontrolled and extravagant spending by Government, excessive public debt, and unsound fiscal policies.

Somewhere along the road we will have to put on the brakes or else face the danger of wrecking the whole economy of the United States. That would mean national bankruptcy.

In his recent radio talk to the Nation, President Truman made this significant statement, and I quote:

"If inflation gets away from us and wrecks our savings and ruins our economy, it would be the easiest victory the Kremlin would hope for. Communist Russia would win the

whole world to totalitarianism without firing a shot."

Then he said, and again I quote:

"This fight we have to make is not a partisan fight. It strikes all the people in all parties. This is a fight for everyone to join—a fight for the very life of the Nation."

Yes, my fellow Pennsylvanians, it is a fight to preserve our Republic as a land of liberty and freedom of the individual.

It is a fight which can end in crushing defeat unless we build our economic defense as well as our military strength.

And more important than controls and restrictions—more important than concentrating unlimited power in the Truman bureaucracy—is to curtail all Government spending not connected with national defense.

The first step in that direction should be the scrapping of all the socialistic schemes that pretend to give the people something for nothing.

Next we should return to a sound currency and restore fiscal policies that will prevent watering our money with printing-press dollars.

Next we should adopt a tax program that will pay the cost of our defense preparations on a pay-as-we-go basis.

But Mr. Truman in his broadcast made no mention of these things. He proposed only greater power to control, not only prices, but all business and industry.

When the Truman administration submitted its draft of the new defense production bill it contained a provision to license every business dealing in material or services under price regulation. It was argued that such a license system could be used to put out of business any person or firm that violated controls.

I am happy to report that this dictatorial proposal was overwhelmingly rejected by both the Senate and the House committees.

Of course, none of us has any sympathy for law violators but such a drastic program could open the way for its misuse for political purposes. Also it could impose unwarranted punishment upon innocent victims. Some of the control regulations are so complex that even a Philadelphia lawyer can't understand them.

The American people do not like controls. Under normal peacetime conditions they will resist every attempt by the Government to place restrictions upon the freedom of the individual.

But in times of emergency, when the safety and security of our Nation is threatened, they are willing to give up a portion of their freedom in order to strengthen the defense of our liberty and independence.

However, in making this and every other sacrifice that may be needed, they have the right to demand that all restrictions be removed at the earliest possible date, consistent with national security.

Next Wednesday we will celebrate the one hundred and seventy-fifth anniversary of American independence.

We mark this Fourth of July at a time when freedom in the United States and in the world is facing its supreme test.

As part of the Nation's observance it is planned to hold a token session of Congress in Independence Hall where liberty was proclaimed throughout the land, unto all the inhabitants thereof.

This should serve to recall our debt to the founding fathers and to impress upon every American the sacred obligation to protect and preserve the great freedoms we enjoy as Americans.

This is Ed MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Three Million Children in United States Attend Shockingly Bad Schools

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MITCHELL. Mr. Speaker, the distressing shortcomings of the Nation's educational plant outlined by Mr. Stacy Jones in the current Parents' magazine article should be called to the attention of Congress and of the people. And, under unanimous consent, I insert the article in the Appendix of the RECORD.

We cannot afford an educational plant which fails to prepare the youth of the Nation for the future. Full utilization of defense and civilian production potentials will demand a constantly more skillful citizenry.

It is time we had an accurate accounting of the cost to the Nation of bad or missing school facilities. I am sure the cost would stagger the imagination and make appear small in contrast the funds now asked for school building.

The effectiveness of any defense program depends upon the ability of the people who carry the gun or operate the machine. The effectiveness is definitely affected by the schooling of the individual.

The article follows:

CHILDREN AMERICA FORGOT—THREE MILLION CHILDREN RIGHT HERE IN THESE UNITED STATES HAVE SHOCKINGLY BAD SCHOOLS, IF ANY

(By Stacy Jones)

If you were living today with your serviceman husband near the Tinker Air Force Base, in Midwest City, Okla., you might be hopelessly anticipating the prospect of sending your child to class in an abandoned coal bin, come to the beginning of this school year. If husband Fred were stationed at the Wright-Patterson Air Force Base, near Dayton, Ohio, Fred Jr., would be learning his multiplication tables in a once-abandoned building, constructed when Ulysses S. Grant was President of the United States. In winter, in this building, heat comes courtesy of a pot-bellied stove. In any season of the year, there is no plumbing at all. Whether it's June or January, each time a child wants to go to the toilet he has to cross a busy highway to get there.

If you were married to an engineer, about to go to work in the H-bomb plant of the Atomic Energy Commission, to be set on 200,000 acres along the Savannah River in South Carolina, your child would not fare any better. He might find no classroom in the countryside near the project. Although the H-bomb plant is expected to bring in at least 25,000 children of new families within the next 3 years, all the available classroom space on the development is already choked to capacity. If you and your husband found a home across the river in Richmond County, your child wouldn't be any better off as to schools. Because Richmond County, already pressed by Federal personnel from Camp Gordon, from two Veterans' Administration hospitals, from an arsenal, from Clark Hill Dam, has 6,000 children without classrooms now. They are meeting in churches, on the stages of auditoriums, in private houses, and in empty storerooms.

As an atomic scientist, your husband might be ordered to Paducah, Ky., where the Atomic Energy Commission is presently constructing a \$350,000,000 gaseous diffusion plant to manufacture uranium 235. But in the area around sleepy little Paducah, the school population has been shrinking steadily for the past 10 years. Old buildings have been abandoned in favor of consolidated schools. The schools' ex-personnel has been looking for, and finding, other work. Today, with the new AEC plant in the process of being built, it is true that Paducah has been shocked wide awake. In all good faith, the town is frantically attempting to re-expand its educational facilities to meet the inevitable influx of new hordes of school-age children. But Paducah is running up against the hard wall of a complicated economic problem. The high wages of the Atomic Energy Commission itself have lured school janitors and school bus drivers and school teachers away from their old board of education jobs into new and much more lucrative Federal positions. (The AEC pays \$12 a day to ex-janitors whose wages, previously, had been about \$4 a day.) So next fall, Paducah, Ky.—home of this country's newest uranium 235 plant—may have inadequate school staffs and have to use temporary schoolhouses.

In many defense-affected areas the classrooms which do exist are already miserably overburdened. Many of the schools operate on half time, with two shifts of students using the same desks every day.

Luckily, this critical state of affairs is not Nation-wide. Although there are children without proper schools elsewhere, it is endemic primarily to America's defense-affected vicinities—small towns where new defense plants or military posts are being reactivated or expanded. The arrival of thousands upon thousands of defense workers and/or military personnel with families has completely flooded the schools in these communities.

But the appalling statistics of this children's crisis are a measure of its national importance. Right this minute, at least 810,000 sons and daughters in these United States are without schools. They are being packed in with the 2,200,000 other pupils who, as of now, comprise the total student population of all the defense-affected areas in the country. This means that, as a direct result of Federal activity, more than 3,000,000 American children don't have proper schools. They are children America forgot in its rush to build defense plants and Army installations. Nobody knows how many more millions will be drastically affected as the Nation's defense activities continue their mushroom growth.

Who is responsible for the shameful failure of the most scientifically and culturally advanced country in the world to provide adequately for its own children's education—and so, for its own future. Last year, Congress officially accepted the responsibility. It admitted that it wasn't fair to expect communities, in which huge new defense plants were being built and communities where Army camps are being expanded, to finance the construction and maintenance of additional schools needed to take care of the new, sudden influx of children. Besides gorging the schools in defense areas with more children than they can handle, the Federal Government further handicaps the very same schools in another way. When it moves into a locality with an Army camp or a defense project, it removes the suddenly Government-owned land from the district's tax rolls. A congressional committee has calculated that land which the United States owns now inside America's school districts would—if the Government could be assessed for it—bring into these money-strapped communities about \$186,200,000 annually in school

taxes. In its last session, Congress passed an act which provided that the Federal Government should pay its fair share in the erection of the new schools needed in the defense-affected areas throughout the country. But when appropriations time came around, Congress voted less than a tenth of the sum to which the act's formula would have entitled the country's defense-affected school districts. Even if the funds are doubled by a supplemental appropriation, almost nothing in the way of school construction can be accomplished by the beginning of the next school year.

Briefly, this is the legislative case history of the defense-affected schools' scandal. Public Law 815, the act which provides Federal aid for school construction in defense-affected areas, accepts the Government's responsibility to pay for such new schools in proportion to the number of children it forces on any given district. The appropriation of \$46,500,000 voted for this year proved to be shockingly inadequate. Under the law's formula \$350,000,000 would have been needed.

So the United States Office of Education got an assignment in arithmetic. Seven hundred and forty-eight defense-affected districts had filed applications for aid on more than 1,000 school-building projects. In all, these districts asked for about \$200,000,000—or about \$150,000,000 less than the \$350,000,000 to which the law would entitle them. Although most of these crowded districts have already borrowed and taxed themselves to the limit, they proposed to spend, anyhow, about \$100,000,000 of their own money.

From these figures, you can calculate the pay-off. The Office of Education is over \$100,000,000 short of funds which have been requested by the distressed school districts, this Department is required to allot whatever money is at its disposal in order of "urgency of need." In practice, it works out so that the very worst cases get some financial aid from the Government, but the others get none at all. One harassed education official said, "I feel like a father who has 10 barefoot children, and only enough money for 2 pairs of shoes."

Actually, here is how those precious, woefully inadequate \$46,500,000 are being spent. Funds were set aside to meet the most pressing demands for new schools at military bases and \$2,500,000 went for temporary school buildings, chiefly at the Savannah River and Paducah AEC developments. This left only \$31,500,000 to fill \$200,000,000 worth of requests from 748 districts. Out of this, tentative allotments were made to 75 cases.

The President has recommended a supplemental appropriation of \$50,000,000. But even with this, the United States Office of Education would still be short \$103,000,000 of what the schools asked. At this writing, the fate of the President's recommendation is unknown.

Fortunately, the schools fare somewhat better under Public Law 874, which is aimed not at school construction, but at school maintenance and operation in defense-affected areas. Congress appropriated \$28,500,000 for these matters, to be divided pro rata. More than 1,000 eligible districts will get about three-quarters of the money to which the law's formula entitles them. But this doesn't solve the problem of how to operate and maintain a school for whose existence Congress failed to provide.

Around the Wright-Patterson Air Force Base, where school children must cross a heavily trafficked Ohio State highway to go to the privies, the Government not only removed taxable property from the rolls, but it also left a school bond issue standing against the remaining non-Federal property.

On top of this, tax-exempt Federal housing was constructed in town, and federally owned plants were leased to private companies which were also exempted from taxation.

There is yet another legal loophole which fuels up the country's attempts to provide decent education for its defense-affected children. The law requires that a school district's application for funds be based on average daily attendance for the current year. Obviously then, a town like Paducah, which will house the AEC's new uranium 235 plant, can only helplessly anticipate the arrival of thousands of new school children in time for next term. It cannot request funds for children who will be, but are not yet, in attendance at its schools.

As the mother of a school-age boy or girl and the wife of a defense worker or a military man, you would face educational set-ups just as shameful as the ones in Paducah and the Wright-Patterson Air Base at many, many smaller camps throughout the country. The Chanute Air Force Base, for instance, is the sole business of Rantoul, Ill. Next year, school attendance will probably be eight times as large as it was in 1940. The town has long ago outgrown its schools.

Let's say your husband is an instructor in the weather school on the base. You, your husband, and your two sons rent an apartment with two bedrooms in a converted private garage in town. You have no yard and no front porch to call your own, so your boys play after school in vacant lots.

Rantoul's elementary school is, naturally, full up. So your sons travel by bus to temporary classrooms on the base. These classrooms were hastily created by putting up flimsy partitions in the hospital wards. Each room might hold 20 children in reasonable comfort. But there are 35 kids in Jimmy's room and 45 in Frank's. The partitions aren't soundproof, so the children are inevitably distracted by what goes on next door. There is practically no blackboard space. It is unbearably hot on sunny fall days.

All the children must go without outdoor recess and play because their shouts might disturb the convalescent men in the hospital buildings. There is no gymnasium or auditorium, and therefore, no physical education or visual-aids program. Because the kids have no cafeteria either, your boys travel home again for lunch. But since they are in different classes, they come and go at different times. So you prepare breakfast and lunch for them separately, as a daily routine.

Moreover, you have been informed that the hospital ward classrooms are only loans from the base. In case of an epidemic, they will have to be reconverted for the use of patients within 24 hours. But epidemic or not, the school board has been on notice that it will have to return the rooms to the base by this fall.

Rantoul and 21 other Illinois school districts which are similarly affected asked for Federal aid for schools. Rantoul was lucky. The town received more than \$1,000,000 for a new school. But Rantoul turned out to be one of only four to get construction funds.

On the Pacific coast, with its heavy concentration of naval and air force bases, school conditions in defense-affected communities are as bad, if not worse. A distracted mother in Atomic City, Idaho, a hamlet near another AEC project, wrote recently to President Truman. She told him that the mothers in Atomic City had to drive their children 26 miles to a high school, 28 miles to a grade school, and 32 to a junior high. She begged him, in the name of the town, for a local school. In Roswell, N. Mex., the dilapidated school building outside Walker Air Force Base has coal stoves and outdoor toilets.

Detroit is another good—or more accurately a bad—example of a metropolitan area which has never recovered from its tremendous growth during World War II. Within 10 miles of Detroit's city hall, schools exist where wells and outside privies are used in lieu of toilet facilities.

It is inevitable that these intolerable school conditions will permanently scar the children who are suffering from them now. Earl James McGrath, United States Commissioner of Education, puts it like this: "When a child becomes 6 years old and finds no school to go to, there is no way we can repair the damage 3 or 4 years later. America's children cannot be put into educational cold storage for the duration of the emergency and then later be moved into an academic hothouse for forced growth."

Well, why doesn't Congress appropriate enough money to meet its own formula for Federal aid to schools in defense-affected areas, you may well ask? What happened to that other \$150,000,000 which Congress might have voted for school construction this year, but did not? The answer is obvious, ironical, and it could be fatal to the future of this country—unless every outraged American citizen brings the tragic case of this country's forgotten children to the attention of his home-district Congressman at once.

In the vast, hurried build-up of military installations, atom-bomb projects and industrial plants all over the country, Congress has short-changed the children in defense communities.

Congress has apparently not yet recognized that the most powerful Nation in the history of the world will be only as effective in securing the peace as the minds of men can make it. The 3,000,000 children, caught now in the cultural and intellectual trap of defective schools, are the men and women of America's tomorrow. If we continue to sacrifice their schooling—the making of their minds—to expediency, we may well be sacrificing the future of this country.

Write or wire to your Congressman urging him to vote the appropriations necessary to meet the school needs of these forgotten children.

Neosho Flood Control

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. GEORGE. Mr. Speaker, in connection with the disastrous flood that has just taken place in Kansas, under leave to extend my remarks, I wish to insert the following editorial taken from the Parsons Sun, one of the leading daily newspapers in southeast Kansas:

NEOSHO FLOOD CONTROL

The greatest flood in Neosho River history has raised an inevitable question: What can be done to prevent a repetition of such a disaster?

The United States engineers have a plan for flood control on the Cottonwood and Neosho Rivers. It involves four dams on the Cottonwood and the upper Neosho at a cost of some \$36,000,000.

The series of dams would absolutely control floods on the upper branches of the river; it would reduce the peak overflows in the lower valley. An engineers' estimate is that 6 to 7 feet of water would have been

taken off last week's crest in this area had the dams been in operation.

That means, in event all four dams are constructed, southern Neosho County and all of Labette County would be spared from the most devastating floods. Six to seven feet off of last week's high mark would put the peak at about the 1948 record, which was bad but much less so than the recent catastrophe.

The Neosho River has a history of frequent floods. Its record in that respect may be equaled only by the Marais des Cygnes in Kansas. Floods ranging from mild overflows to the all-time high of last week occur on the Neosho as often as two or three times a year.

The Army engineers have a plan for controlling those floods. Even the most ardent flood-control boosters on the river admit it isn't a complete and foolproof program, but still it is a big step in the right direction.

The Sun has viewed the over-all national flood-control program of the engineers with mixed emotions. It never has questioned the wisdom of flood control on the Neosho River; the only question has been the most effective methods to be followed.

After the recent disaster, there isn't much room left for debate. The water must be impounded at or near its source if calamity is to be averted. That means, for better or for worse, big dams. They wouldn't have stopped all of last week's overflow; they would have saved much of the valley from the devastation which has come upon it.

Estimates are that damage in the Cottonwood and Neosho watersheds from the flood will reach \$50,000,000. That may be high—or it could be low. If it is high, it won't be very high. The engineers' contemplated \$36,000,000 expenditure for the four dams thus will be no more than the damage last week, and probably a lot less.

The engineers have a plan; this area can do no less than give it all-out support. There should be no repeat performance of the 1951 disaster, if human efforts can prevent it.

The dams can't be built overnight. The first step is to secure \$250,000 planning money from Congress this year for Strawn dam. If that is included in the new Federal budget, the next step will come a year hence when appropriations for the dam itself must be secured.

Residents of this area can inform their United States Senators, SCHOEPPEL and CARLSON, of the urgency of providing the planning money this year. They can give moral and financial support to the Neosho-Cottonwood Flood Control Association which is spearheading the fight for the dams on the two rivers.

Action will be necessarily slow, but no time can be lost if effective measures are to be taken at the first possible moment. The engineers may not have the complete answer, but it is the only one immediately available and should be accepted by the Neosho Valley as the chief hope of preventing the river from approaching this year's destructive stage again.

The Effect of Price Control on the Textile Industry

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. DORN. Mr. Speaker, I represent one of the greatest textile manufacturing

districts in the world. Many thousands of my people labor daily in these great plants.

These people have been loyal Americans for generations. They always do more than their part in times of national emergency. During World War II not 1 day was lost by any of these mills in the Third South Carolina District. They operated night and day weaving cloth for the Armed Forces.

Management and labor enjoy a beautiful relationship in South Carolina. They are united in wishing to see the textile industry grow and prosper.

My people view with alarm and apprehension the increasing power of the Federal Government, reaching its bureaucratic tentacles into every phase of American life. Government meddling and red tape has created confusion in the textile industry. Bureaucrats who have little knowledge of this industry are administering the present price-control program. The textile people have not even been represented in the high policy councils of the OPA dictatorship. When our mills are forced to curtail because of foolish Government policy, the working people suffer.

The following letter was written to me by people who actually work and sweat in a large cotton mill in my district. These people ought to be heard and their opinions considered. They are the ones who are forced to pay high taxes. They, as public-spirited American citizens, hate to see their money wasted by this orgy of Federal spending. They want freedom from fear and freedom from too much government.

EASLEY, S. C., July 23, 1951

Hon. WILLIAM J. BRYAN DORN,
Member of Congress, House Office
Building, Washington, D. C.

DEAR MR. DORN. As cotton-textile operatives, we want to write you our ideas about controls. We had a very small cotton crop last year and the farmers this year have planted 58 percent more acreage at the request of the Government and expect an increase in production of 60 to 70 percent, which will relieve the raw-cotton shortage.

Soon after the Korean war began the textile industry did its part by increasing production to take care of civilian and military needs, reaching peak production in January, February, and March. However, in January 1951, our Government, by issuing price-fixing and control orders, demoralized the industry. On account of this Government interference the textile operatives are very unhappy as extended vacations and curtailed schedules are beginning to be felt throughout the industry.

We would like very much to see the abolishment of the OPS, for with its numerous orders and counterorders the industry is in so much confusion that we can see no hope for normal operations for a long time, and, unless we should have an all-out war, we see no excuse for controls of any kind. However, should war come, we stand ready, to the best of our ability, to do our part in seeing that production will supply the needs of both civilian and military requirements.

Yours very truly,

S. G. Allen, J. R. McNeely, D. M. Underwood, L. A. Ross, J. L. Hayes, Fred A. Hamilton, H. S. Hughey, Sam Thomas, Cal D. McGohe, E. H. Atkins, Lowell Southerland, Weldon Carmas, J. S. Barwell, James Adkins, Claude Peace, B. S. Halder.

Tribute to Miss Katharine Lenroot

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 25, 1951

Mr. WILEY. Mr. President, last evening the Senate confirmed the nomination of Dr. Martha M. Eliot to be Director of the United States Children's Bureau of the Department of Labor.

I should like to say just a few words with regard to her distinguished predecessor, Miss Katharine F. Lenroot, of Superior, Wis., who resigned recently.

Miss Lenroot had announced her retirement at a time when I was in Europe with the Senate Foreign Relations Committee, and so this has been the first possible occasion for me to say a few words in tribute to this splendid American woman leader—daughter of one of the great Senators of the United States and of the Badger State, Hon. Irvine Lenroot, and in her own right the long-time Chief of the United States Children's Bureau.

I cannot imagine a single field more satisfying, more productive of good, more important in terms of the Nation's future, than that of service to America's children. In this field Katharine Lenroot has for so long excelled that her name, like that of Dr. Eliot, has become synonymous with the modern concept of developing the potentialities of children and giving them every possible break that a wise and sound nation can.

She has not, however, confined her activities solely to the children of this land, but during 36 years of Government work has contributed of her great talents to the children of the U. N. and of the world.

We of America's Dairyland are proud of Katharine Lenroot, and proud of the tradition of service of which she and her late distinguished father have been such shining examples. We wish her all of the very best. We know that one so active as she cannot close the curtain completely down on so splendid a career, but that we can count on her for continued service for good causes.

Let me add a brief biographical note. Katharine Lenroot was named head of the United States Children's Bureau in 1934 by President Roosevelt. She became the third woman to hold that job. Previously she had served as Acting Chief of the Bureau.

She was born at Superior, Wis., on March 8, 1891, and was graduated from the University of Wisconsin in 1912. The following year she was appointed a deputy of the Wisconsin State Industrial Commission, a post which she resigned to join the staff of the Children's Bureau in January 1915. Her salary at that time was \$1,200 a year. She became Assistant Chief of the Bureau in 1922.

In 1935 she served as president of the National Conference of Social Work; later she also served as executive secre-

tary of the White House Conference on Children in Democracy, as an adviser to United States delegates to the International Labor Organization Conference at Paris in 1945, as secretary of the U. N. temporary Social Commission, and as United States member of the executive committee of the International Children's Emergency Fund.

I was happy indeed to note that in the July 17 CONGRESSIONAL RECORD the junior Senator from New York [Mr. LEHMAN] had printed an editorial from the Washington Post in praise of Miss Lenroot.

At this time I ask unanimous consent that there be printed in the Appendix of the RECORD two additional splendid editorials, the first from the Madison (Wis.) Capital Times, of July 11, 1951, and the second from the Superior (Wis.) Evening Telegram of July 14, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times of July 11, 1951]

WISCONSIN IS PROUD OF KATHARINE LENROOT

One of Wisconsin's great daughters announced the other day that she is retiring from her long and distinguished career of public service. She is Katharine F. Lenroot, Chief of the United States Children's Bureau and the daughter of a shining name in Wisconsin's history, the late Senator Irvine L. Lenroot.

Katharine Lenroot began the career that was to bring her national fame here in the State of Wisconsin, as a member of the State Industrial Commission. She later went to the Children's Bureau in Washington and rose rapidly to the position from which she has now resigned.

Few people have brought such selfless devotion to so good a cause as Katharine Lenroot brought to her job of defending and protecting the children of this Nation. Her rich experience and her limitless capacity for understanding and work brought lasting benefits to America. In recent years the world has borrowed from her through her contributions to the welfare programs of the United Nations.

The Nation's sentiments were well expressed by the President who paid tribute to her as "a tough and persistent champion of children's rights."

Wisconsin is grateful to and proud of Katharine Lenroot.

[From the Superior (Wis.) Evening Telegram of July 14, 1951]

MISS LENROOT'S NOTABLE ACHIEVEMENT

Her Superior neighbors justly take pride in the career of Katharine F. Lenroot, one phase of which has by her own decision been closed this week at the Nation's Capital.

As chief of the United States Children's Bureau, Miss Lenroot rose to a position of eminence not only in her own country, but throughout the world wherever people have come to recognize the nurture of children as a highly important responsibility that confronts government. She went to Washington eager to have a part in this line of activity which was just emerging as a force containing possibilities for great accomplishment. Encouraged by President Wilson and inspired largely at first by Grace Abbott, its competent director, the Bureau had got only well started when the change in administration found its loyal and far-visioned staff battling to maintain the ground that had been won.

Only a comparatively small staff made up the department when in 1921 Miss Lenroot, upon Miss Abbott's recommendation, was appointed to succeed her as chief. Less than 10 years out of school at the University of Wisconsin, she was called upon to take over the leadership in a fight for the very existence of the organization to which she and her associates were so devoted and in the future of which they had such unbounded confidence.

But Miss Lenroot was well qualified for the task. At the University of Wisconsin her studies under such professors as Commons and Ross had grounded her well and the few years immediately following graduation she had spent in the industrial commission of her home State. Furthermore, from early childhood she had grown up in surroundings that were conducive to the development of the spirit of public service to which she early decided to dedicate her life. In Wisconsin she had witnessed many stirring political scenes of which her father, the late Irvine L. Lenroot, was an integral part. It was no surprise to her to learn that even such a vital work as the Children's Bureau should be subjected to a fight for its life in political Washington.

In the decade that followed Miss Lenroot's first term as Bureau chief its importance became more fully recognized both by the administrative and the legislative departments of Government. Appropriations followed that placed it on a plane with other fully recognized activities. Its influence soon was being felt throughout the Nation and the goals it set became the aspiration of thoughtful leadership in all quarters. Under her wise guidance, this influence spread to other nations and other continents and Miss Lenroot was sought from many directions for advice and inspiration.

Such a career naturally led to international recognition when the United Nations organization was brought into being and Miss Lenroot was summoned to take part in beginning for the world the type of work that had built up one of her own country's most cherished possessions. She is still associated in that work.

Miss Lenroot's plans for the future have not been announced but her Superior neighbors well know that these plans will include the use of her great talents and experience for the further benefit of all peoples that will ever be seeking to build a better generation to replace the one that went before. Superior is well justified in its pride for having had part in the building of the career of such a daughter.

Koreans Lose the War

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to submit an editorial from the Topeka Daily Capital on the Korean war and the difficult situation in which the Korean people now find themselves. This editorial is taken from the paper published by former Senator Arthur Capper, and I think pretty well explains the terrible tragedy that has taken place in Korea:

KOREANS LOSE THE WAR

Korea is a long way off and those of us here at home perhaps cannot have any conception of what conditions are like, but reports from that tragic country indicate that the original purpose of the war probably has lost all meaning by now.

No matter how the peace negotiations result, no matter whether the war is halted or whether it continues, the real losers are the Korean people both north and south of the parallel.

While our U. N. delegations haggle over disputed points, while soldiers fight on the field of battle, and while peace groups argue over terms, the Koreans keep right on wandering over their devastated land.

With thousands of our own people displaced temporarily by floods, we Kansans have a broader understanding of what it means to be homeless than we could have had a few weeks ago. But, bad as the floods are, they are in no sense comparable to the suffering in Korea.

It is estimated that one person in six, perhaps one in four, is dead, hurt, or homeless in Korea's war which is now a year old.

About 3,500,000 persons including women and children are war refugees. Entire towns have been wiped off the face of the earth. In the city of Seoul alone, the tide of war swept through five times in separate battles. This meant destruction, looting, and an almost complete elimination of daily necessities of life.

During this year of tragedy, Koreans by the thousands upon thousands have marched on foot through bitter cold as well as blistering heat, not stopping to count or bury the dead falling along the way. While mass starvation was prevented by food brought from the United States, starvation and disease nevertheless have taken a ghastly toll.

And the worst of it is that the Koreans face the future without hope.

Some of our people like to believe that our forces are fighting for the freedom of mankind in Korea, but our diplomatic and military blunders to date make it doubtful that this will ever be achieved as far as the Koreans themselves are concerned.

Even if the war should halt tomorrow and never be resumed, the Koreans have lost. They would have been far better off if it had never started.

During World War II it was necessary for Allied forces, in order to liberate France and some of the other European countries from the Germans, to bomb the cities of friendly nations. While many friendly to the Allied side were killed, the people as a whole welcomed this phase of the war because they knew it meant future liberty for those who survived. Not so in Korea. There is no guarantee of any kind, and scarcely even a hope, that the Korean people will not eventually become Communist-dominated.

This is the horrible futility of the Korean war as it stands today.

The effect upon our own country has been noted for months. The United States never engaged in a war so unpopular or so little understood.

No one has been able to explain satisfactorily why we entered the war, what we hoped to gain, or why the war has been conducted in a manner to make a military victory an impossibility. The peace negotiations, while arousing some hope that our troops can be returned home, have been bungled badly.

As a result, the program of European defense has taken heavy set-backs. With Korean experiences fresh in mind, many Americans are questioning whether we have any business getting into what could be a great world war. If we cannot settle a comparatively small problem in Korea, how can we solve the big one shaping up in Europe?

Secretary of the Treasury Snyder Carries Propaganda of Falsehoods on Incomes to the Chicago Bond Club

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement from Free Enterprise News Bulletin for June 15, 1951:

SECRETARY OF THE TREASURY SNYDER CARRIES PROPAGANDA OF FALSEHOODS ON INCOMES TO THE CHICAGO BOND CLUB

The Associated Press reports that Secretary of the Treasury John M. Snyder, speaking before the Chicago Bond Club, on June 13, said:

"The average per capita income in the United States today after taxes, will buy almost 40 percent more in actual goods and services than the average per capita income in 1939."

Mr. Snyder is also quoted as having said: "Give us full confidence that the one roadblock to peaceful progress—the threat of Communist aggression—will eventually be removed, and that our Nation can then look forward to a new era of world peace and prosperity. This is our goal."

Mr. Snyder's fine statements are belied by the facts, as revealed by the Government's own economic advisers and statisticians.

Taxes, per se, of necessity include the levies by Federal, State, and local governments. In comparing what the per capita income will buy for any specified years, the taxes are a fixed obligation, and the remaining income, after the tax liability at all levels, is the measure of purchasing power, which coupled with the value of the dollar in the market place, gives a true indicator of the economic situation.

Tying per capita income, before taxes, to wage gains since 1939, we offer for the record the following table showing the real wages in the manufacturing industries since 1939:

[1939 dollar = \$1]

Year	Average hours worked	Average hourly wage	Weekly average wage	Purchasing power of \$1	Wage in 1939 dollars
1939.....	37.7	\$0.633	\$23.86	\$1.00	\$23.86
1940.....	38.1	.661	25.20	.992	25.00
1941.....	40.6	.729	29.58	.945	27.96
1942.....	42.9	.853	36.65	.853	31.27
1943.....	44.9	.961	43.14	.804	34.71
1944.....	45.2	1.019	46.08	.791	36.48
1945.....	43.4	1.023	44.41	.774	34.37
1946.....	40.4	1.084	43.74	.718	31.39
1947.....	40.3	1.221	49.25	.631	31.07
1948.....	40.0	1.327	53.15	.583	30.99
1949.....	40.0	1.401	54.92	.587	32.28
1950.....	40.0	1.466	59.33	.581	34.31
1951 (February).....	40.0	1.420	56.80	.542	33.37

The table presented on page 1 of this bulletin was compiled from various tables presented in the Monthly Labor Review, issued by the Bureau of Labor Statistics in the Department of Labor. The purchasing power of the dollar was computed on the basis of the cost-of-living index using the average for the years 1935-39 equals 100.

It should be remembered that in 1939, the average workingman paid little if any Federal income tax, since the personal exemption for a married man with no dependents

(other than the wife) was \$2,500 plus \$400 for each dependent. Today the tax rate allows a personal exemption of but \$1,200 for a married couple, plus an extra \$600 for those over 65 years of age, plus \$600 for each additional dependent. Thus a workingman earning \$23.86 per week in 1939, or a total of \$1,240.72 for the year would have been exempt from Federal income taxes. Today, a workingman with a wife only, earning \$56.80 a week or a total of \$2,953.60 for the year will be obliged to pay \$255 in Federal income taxes by the computation on the short form for persons with incomes under \$5,000.

By deducting the income tax from the total earnings, the remainder for the working man in February 1951 is \$2,698 which multiplied by the purchasing power of the dollar (54.2 cents) shows a comparable 1939 income in purchasing power of \$1,462.32. The difference between 1951 and 1939 is \$221.60, which represents an increase of approximately 18 percent over the 12-year period. This is a far cry from Mr. Snyder's 40 percent more in actual goods and services.

THE SITUATION WITH RESPECT TO COMMODITY MARKETS

Based upon reports of the Bureau of Labor Statistics on the Daily Index Numbers and Spot Primary Market Prices for 28 commodities at wholesale, as of June 1, 1951, based upon the August 1939 equals 100, we find the following situation:

Index, August 1939, equals 100; June 1, 1951, equals 359.6 cents.

Purchasing power of \$1 equals \$1; June 1, 1951, equals 27.8 cents.

Per capita income:

Average, 1939-----	\$554.20
Tax liability-----	136.95
Disposable income-----	417.25
Average, 1951-----	1,659.50
Tax liability, 1951-----	437.21
Disposable income-----	1,222.29
Purchasing power of \$1 (multiply)-----	.278
Real disposable income in 1939 dollars-----	339.80

Tax liability consists of Federal, State, and local taxes averaged against the total population. National income reduced to per capita basis by dividing the reported total by the population.

Incidentally, the per capita national debt rose from \$309.03 in 1939 to \$1,696.10 in 1951.

The New Deal-Fair Deal administration continues its well-trying and thoroughly organized system for control; viz: Patronage, propaganda, promises, and deficit spending.
PAUL O. PETERS.

Twelve Million Prisoners

EXTENSION OF REMARKS OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. STEFAN. Mr. Speaker, from the very instant of the infamous arrest of Associated Press correspondent William Oatis—through his mockery of a trial, and now, in his unjust imprisonment—there has been an unceasing demand

from the American people, and from this Congress which represents the American people, for the liberation of this innocent man.

This Congress cries out for the release of William Oatis because he is a fellow American.

This Congress cries out for the release of William Oatis because he has become the universal symbol of the freedom of the press, guaranteed in the Constitution of this Republic.

Let us be swift to point the finger of accusation at the real persecutors of William Oatis.

But let us be slow to accuse an entire nation for the bestial acts of a few.

William Oatis is not the only prisoner in Czechoslovakia.

There are 12,000,000 prisoners in Czechoslovakia.

According to a 1949 United Nations estimate, the entire population of Czechoslovakia was 12,463,000.

Of this number, it is safe to say, 12,000,000 are unwilling prisoners of the Kremlin.

The Czechoslovaks, prisoners though they are today, are a sturdy and an independent people by nature.

They are farmers, artisans, artists, mechanics, miners, and educators.

Their wisdom and their courage contributed as much to the progress of their geographical area as did the great natural resources of their land.

There are large numbers of Americans of Czechoslovak origin. My own Nebraska is proud of its citizens of Czechoslovak ancestry. Pennsylvania, Ohio, Illinois, Michigan, and Wisconsin, and other States have a like pride in the sturdy contributors to their progress whose forefathers came from this land.

I know. I have made it a point to know. I was born in Czechoslovakia.

It is common practice today to think of the linking of the people of Bohemia-Moravia and Slovakia as a new thing—an event that came about in this Republic in 1918.

But they were joined together a thousand years ago—as the great Moravian Empire—in the ninth century. They speak different languages but they understand the language which the other group speaks.

They have been temporary prisoners many times in their long history. The Magyars held them for a time. They regained their freedom. The empire of Austria-Hungary held them for a time. They regained their freedom.

The 12,000,000 prisoners of Czechoslovakia will again fight their way through to liberty because they want to be free.

I decry the imprisonment of William Oatis by the Communists who are now in control of Czechoslovakia. I condemn the Red masters in Prague for this vile atrocity.

I decry the imprisonment of 12,000,000 free citizens of Czechoslovakia. I condemn the Red masters in Prague for this atrocity.

The United States is a great, free Republic. Our people understand and give their prayers for one man, William

Oatis, and for 12,000,000 men, women, and children.

He will be free.

They will be free.

Pagan Rome fell before the prayers of the Christian martyrs.

The invading Huns of Attila reeled back from praying Western Europe.

Let William Oatis rejoice.

Let the people of Czechoslovakia rejoice.

Let Stalin tremble.

The American people are making their plea to God.

And no evil force that was, is, or ever will be on this broad earth has the strength to resist the limitless power of a free people in prayer.

Food Costs Double Since April 27, 1942, As Dollar Value Declines

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. REED of New York. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement from Free Enterprise of July 24, 1951:

FOOD COSTS DOUBLE SINCE APRIL 27, 1942, AS DOLLAR VALUE DECLINES

The American people who so gullibly swallow the New Deal-Fair Deal economic nostrums apparently have extra short memories when they write to their Representatives in Congress demanding economic controls.

Back in April 27, 1942, at a time when our economy was under war-time controls, including OPA and all the rest of the New Deal emergency agencies, the Safeway stores of the Washington metropolitan area printed an advertisement in the local newspapers quoting food prices and also an insert urging the people to "Keep 'em Flying" by buying war savings stamps at your neighborhood Safeway in 10- and 25-cent denominations.

We have one of these advertisements before us, and have computed the items of food which could be purchased at retail for \$18.75, the cost of a \$25 savings bond which matures in April 1952.

We also have before us several of the pious declaration by the late Franklin D. Roosevelt, who in a speech at Brooklyn, N. Y., on November 4, 1932, said:

"The Democratic platform specifically declares, 'We advocate a sound currency to be preserved at all hazards.' That . . . is plain English."

In a radio address on October 22, 1933, Mr. Roosevelt said:

"When we have restored the price level, we shall seek to establish and maintain a dollar that will not change its purchasing and debt paying power during the succeeding generation."

Just how badly fooled the American people were is hard to estimate. However, those who bought savings bonds and held them up to now, instead of investing the money on things of tangible value, such as homes, or personal property, can find little of comfort in the facts revealed by our survey of current food prices in the same Safeway stores as of July 24, 1951.

Comparative cost of food items in Safeway Stores of Washington, D. C., Apr. 27, 1942, and July 24, 1951

[This survey shows what \$18.75 would buy in April 1942, and what the same items cost as of July 24, 1951.]

¹ Out of season.

Secretary of the Treasury Snyder has been speaking at various places throughout the Nation and has frequently been quoted as having said:

"The average per capita income in the United States today, after taxes, will buy almost 40 percent more in actual goods and services than the average per capita income in 1939."

He also is reported to have said:

"The per capita purchasing power of the American people has improved by about 40 percent since 1939 after making full allowance for tax increases and price changes."

This technique of the big lie, stands exposed by a careful investigation of all facts about income, taxes, and the cost of living.

The per capita income in 1939 was \$536. However, the dollar had a purchasing power of \$1.30 in the market place. Thus, the actual per capita income amounted to \$696.80.

The per capita income for 1950, reported by the President's Council of Economic Advisers, was \$1,336. The purchasing power of the dollar in the market place averaged about 50 cents. Thus the \$1,336 reported per capita income represented only \$668 compared with \$696.80 in 1939.

The real Democrats and Republicans in Congress could render distinguished service to the American people by exposing the technique of the big lie which the New Deal-Fair Deal depends upon to pull the wool over the eyes of the American people while they squander our tax dollars in all kinds of international enterprises throughout the whole civilized world excepting Russia and the iron-curtain countries.

PAUL O. PETERS.

Present Danger From Air Pollution

EXTENSION OF REMARKS OF

HON. JAMES J. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MURPHY. Mr. Speaker, under unanimous consent to extend my remarks, I include an editorial from the Staten Island Advance of July 23, 1951, on air pollution.

The effects of air pollution have become so serious a national industrial health problem as to have proven fatal in extreme cases, such as that of Donora, Pa.

If poisonous air can become fatal in concentrated quantities, how can there be much doubt that the slow, day-by-day inhalation of lesser amounts could prove fatal eventually through accumulation of poison in the system, resulting in a foreshortened life span.

The industrial hygiene experts of the United States Public Health Service have expressed the opinion that industrial air pollution is a serious menace to health, more serious than they believe they are able to determine within the limited means available to them.

As I have a serious air-pollution problem in my district, comprising Staten Island and lower west Manhattan, I requested permission of the State health authorities of New York and New Jersey to permit the United States Public

Health Service experts to examine conditions in the area. This they did 2 years ago, but explained that they did not possess the funds to make a thorough research into the problem of air pollution which, they said, involves unexplored factors.

The Federal health authorities explained that scientific research could not be made without a special authorization of appropriations for the purpose. This research, they said, must be done on a national scale over a period of years so as to provide the widest scientific experimentation in order that any particular area affected would derive the fullest benefit.

In cooperation with the United States Public Health officials, I introduced House Joint Resolution 416 in the last Congress, to provide for an extended survey of the air-pollution problem in order to benefit the Nation, as well as my district. I familiarized every Member of Congress with the legislation but the Korean outbreak necessarily diverted attention to national defense. House Joint Resolution 416, therefore, died with the Eighty-first Congress.

But it is my contention that national health is a bulwark of national defense, that even with all things being equal the healthier nation will survive and excel. I, therefore, introduced House Joint Resolution 38 on the first day of this Congress. This measure was identical with House Joint Resolution 416 of the Eighty-first Congress.

However, pursuant to an agreement made between the Bureau of Mines, Department of the Interior, and the United States Public Health Service, Federal Security Agency, to combine efforts toward the elimination of air pollution, I introduced House Joint Resolution 218 in order to fully cooperate with the Government agencies upon whom the solution of the problem would depend.

House Joint Resolution 218 superseded House Joint Resolution 38 and broadens its scope by providing for the combined efforts of the Bureau of Mines and the United States Public Health Service in an extensive research and survey to determine the causes, the effects on the health of man, and the means of preventing air contamination. The resolution provides for authorization of such sums as may be necessary each fiscal year for the next 5 years. Each year, no later than January 1, after funds are made available, reports shall be made to Congress by the Surgeon General of the Public Health Service, through the Federal Security Administrator and the Secretary of the Interior, respectively.

It has been my earnest endeavor to obtain a hearing before the Committee on Interstate and Foreign Commerce, to which this legislation has been referred, so that expert testimony can be heard from the Bureau of Mines, Public Health Service, Health Commissioners of various States and cities, and the taxpayers of intensely affected areas, who should be given an opportunity to explain the conditions to which they are subjected.

As an indication of representative sentiment in my district in favor of House Joint Resolution 218, I submit

the following editorial from the Staten Island Advance of July 23, 1951:

Too Vital To Die

Congressman MURPHY's antismog measure could be stamped DIC—died in committee.

And 'Islanders could reconcile themselves to breathing foul air, farmers to viewing ruined crops because of New Jersey smog for several more years at least.

Congressman ROBERT CROSSER, Ohio Democrat, has put the cards on the table.

Chairman of the House Interstate and Foreign Commerce Committee, which has Mr. MURPHY's measure, Mr. CROSSER said that his group has 300 bills waiting in line and "I can't get some of the members to take much action."

Blocked is House Joint Resolution 218 which would have authorized a survey of the causes of smog by the United States Public Health Service and the Bureau of Mines.

Its life was short * * * and not at all sweet. Introduced just before the Easter recess, it was shunted to Mr. CROSSER's committee—and there, apparently, it may stay for the remainder of the current congressional session.

Pigeonholed without a fair chance.

Pigeonholed, although medical records will show that islanders may trace ailments, and their aggravation, to the poisonous smog that blows over from New Jersey industry.

Pigeonholed, although island farmers can present evidence of thousands of dollars lost through crops ruined by smog.

We don't know how many of those other 300 bills are just as important, or how many will receive action, but we do know this is a terrific blow to the hopes of the island for cleaner air.

The island should fight to revive the measure.

Perhaps we were expecting too much in anticipating congressional action on a matter so vital to public health and welfare.

But the island has little alternative.

Health authorities of New York and New Jersey have stated repeatedly that they needed that study—its factual evidence and suggested remedial methods—before State legislatures could move to establish an agency to combat air pollution.

Both States now deny that they have the funds, the manpower, or the equipment to make the survey.

Do the members of the House Interstate and Foreign Commerce Committee know these facts?

Do they know that if they don't revive House Joint Resolution 218 cleaner air in the island-Jersey region is years away?

And, mind you, this is only one part of the Nation affected.

The resolution proposes no survey for the island alone, but for all sections in the country suffering from poisoned air.

Thousands upon thousands of persons must continue to breathe air dangerous enough to kill plants in a few hours.

An examination of the backgrounds of the members of the committee shows there's no lobby within it to push the measure through.

Too few of the members come from sections where smog is prevalent. Too many make their homes in small towns and cities in agricultural areas.

Mr. CROSSER, the ranking Democrat on the committee, makes his home in Cleveland, but Congressman LINDLEY BECKWORTH, the ranking Republican, makes his home on Route 2, Gladewater, Tex.

In all there are 29 Members on the committee—15 Democrats and 14 Republicans.

Somewhere within this group Staten Island must be able to find the spark for action. If Congressmen are prodded hard enough, they move.

Staten Island isn't asking much. All it wants is a fair hearing so that the measure

may be sent to the House floor for a vote. And if there's anything amiss with the resolution as it is now written, we'd like to know about it now so that it can be changed to avoid future delays.

We have asked islanders before to write to the committee. We feel another try should be made.

So that you may know whom to write, where the Congressman is from, and his party affiliation, we list the committee membership. Write to any, or all if you will, at Washington. In addition to Congressmen CROSSER and BECKWORTH the committee members are:

JOHN V. BEAMER, Republican, Indiana; JOHN B. BENNETT, Republican, Michigan; F. ESTEL CARLYLE, Democrat, North Carolina; J. EDGAR CHENOWETH, Republican, Colorado; JAMES I. DOLLIVER, Republican, Iowa; WILSON D. GILLETTE, Republican, Pennsylvania; WILLIAM T. GRANAHAN, Democrat, Pennsylvania; ROBERT HALE, Republican, Maine; LEONARD W. HALL, Republican, New York; OREN HARRIS, Democrat, Arkansas.

LOUIS B. HELLER, Democrat, New York; JOHN W. HESELTON, Republican, Massachusetts; CARL HINSHAW, Republican, California; RICHARD W. HOFFMAN, Republican, Illinois; ARTHUR G. KLEIN, Democrat, New York; JOHN A. MCGUIRE, Democrat, Connecticut; PETER F. MACK, Jr., Democrat, Illinois; JOSEPH P. O'HARA, Republican, Minnesota.

J. PERCY PRIEST, Democrat, Tennessee; KENNETH A. ROBERTS, Democrat, Alabama; DWIGHT L. ROGERS, Democrat, Florida; HUGH D. SCOTT, Jr., Republican, Pennsylvania; THOMAS B. STANLEY, Democrat, Virginia; HOMER THORNBERRY, Democrat, Texas; THOMAS R. UNDERWOOD, Democrat, Kentucky; JOHN BELL WILLIAMS, Democrat, Mississippi; and CHARLES A. WOLVERTON, Republican, New Jersey.

It's worth writing—for your health and welfare.

New Hampshire's Impression of Iowa Farm Boys and Girls

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part of a newspaper article written by Leon W. Anderson, which appeared in the Concord Daily Monitor and New Hampshire Patriot of July 20, 1951. I am pleased to know that the writer of this article was so favorably impressed with our Iowa people when they visited his great State:

THE STATE IS MY BEAT

(By Leon W. Anderson)

A big flock of Iowans poured through the statehouse yesterday morning and gave us a thrill.

We got so flustered for a time that we didn't quite know whether we were afoot or horseback, there were so many of them. But we finally swung into action, learned where they came from and where they were going, and came up with a healthy respect for Iowa.

It was probably one of the biggest delegations of nonresidents to invade our statehouse in many years. There were 74 of them, believe it or not.

We sensed from the start that they were not New Hampshire folks. There was a

freshness of purpose and looks about them which gave that impression. "Extroverts" is a good word to describe what we are trying to say.

We started trailing them as they poured through the legislative chambers and headed for Governor Adams' office.

We learned that they were members of Iowa's annual Rural Youth Tour, and belonged to the Junior Farm Bureau Federation of that Midwest State. We thought they were rather unusual boys and girls and learned that we were right. They ranged in ages from 18 to 25. Some of them are school teachers and others are getting set for duty in the Armed Forces.

That rural youth business sort of had us puzzled. They didn't look like "hayshakers" and we saw no corn husks sticking from their ears.

But steady questioning brought out they really were farm folks. It was just that they were different kinds of farm youngsters from those who have to do with our rocky soil and small, hilly fields.

We asked one of them how in heck they got so far from home and where they got the cash to do it with. This youngster appeared surprised. He explained each one financed his or her own expenses.

Gosh, we commented, that sounded like a lot of money. The young man smilingly said it was not much, being only \$150 for transportation and another \$75 for meals and the fun of picking up souvenirs for the folks back home.

So we gave up. It was the darndest bunch of farm kids we have ever seen in action. It was refreshing to meet them.

They were in charge of Mr. and Mrs. Frank Heman. He is State director of young peoples activities of the Iowa Farm Bureau Federation, and lives in Des Moines. We had a hard time, in fact, picking them out from the rest of the flock, because the Hemans looked as chipper, young, and full of eager freshness, as any of their charges.

Heman explained they were on an 11-day jaunt. They arrived in Boston by train yesterday, after a New York City stop. Then they piled into busses and came to Concord to be shown around by Director Alfred J. French, of the New Hampshire Farm Bureau, and Agricultural Commissioner Perley I. Fitts. They visited William Jordan's Kadokeadee farm on the Long Pond Road, and then set off for an overnight stop at St. Johnsbury, Vt.

Tonight they are scheduled to stay at Quebec's swanky Hotel Frontenac, no less, and then they will go to Montreal. At Buffalo, N. Y., they will entrain again and go home.

Nothing To Be Proud of

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. LANE. Mr. Speaker, here is a hard-hitting editorial that exposes the sell-out of American consumers to those who would fatten themselves at the expense of our national security.

It strips away the artifices by which special interests try to hide their "great betrayal" from the people.

It shows how they are planning to rob the American public by paying them wages in cheapened dollars.

"Stand up and be counted," it says.

Either we have real controls against inflation, or we gamble with the American economy, which is just duck soup for Stalin.

A control bill that fails to control is a bill that will encourage inflation.

No man can be for controls and against controls at the same time.

Those who engage in this deceptive juggling may profit from it. The Boston Traveler, in its lead editorial of Monday, July 23, 1951, attacks this dangerous duplicity head on.

In so doing, it is meeting the highest standards of courageous and responsible journalism. Under unanimous consent, I insert the editorial in the Appendix of the CONGRESSIONAL RECORD, as a public service:

NOTHING TO BE PROUD OF

Perhaps the best description of the House action on controls is provided by the simple fact that many Representatives did not want their names linked to amendments they had anonymously supported.

When they had to confront a roll call many solons abandoned crippling amendments they had supported in the obscurity of voice votes shouted cravenly in the House sitting as a Committee of the Whole.

The measure has finally been passed, and now goes to Senate-House conference. It has weakened the National Defense Production Act at the very time when it should be strengthened. With the consumers' dollar already reduced to 92 cents since the Korean War started and with the real inflation threat still ahead, the House deliberately blunted the weapons with which inflation can be fought.

All that apparently saved America from the almost complete rout of controls was the reluctance of the Representatives to stand up and be counted. Their shame, their fear, or possibly their better second thoughts, at least killed amendments they would have suspended price and wage controls completely for 120 days; that would have wiped out the 10-percent beef price roll-back already instituted, and that would have guaranteed profit margins on every article of trade.

But the law actually passed is bad enough. It reflects primarily a surrender to short-sighted pressures on farm and business blocs. The reluctance of Congress to extend Government control over our free enterprise system is understandable. In normal times such reluctance should be overwhelming. In the present emergency, however, the tides of run-away inflation can cripple our free enterprise system far more than emergency controls to hold inflation in check.

The alarming fact is that the House has taken sandbags off the inflation dykes when they should have piled on more. There can be no serious criticism of Congress for withholding power from the President to license industries and to finance Government plants for production. Those are extreme measures that should not be resorted to now.

The House acted stupidly and recklessly, however, in eliminating meat slaughtering quotas, the one device that gave promise of defeating the black market. Without this safeguard the House has paved the way for the collapse of food controls. Just as bad was the House's action in prohibiting imports of oil and fats, in outlawing future roll-backs and in forbidding curbs on commodity speculation. Its relaxation of some credit controls furnishes a device for accelerating the pace at which consumer goods are exhausted. It will be interesting to see if the prediction of some business interests that production can meet such heavier demand will work out as defense cuts deeper and deeper into supply.

In the final summing up the House buckled under political pressures. The broad national interest has been sacrificed to special groups. Primarily the farm lobby has been in the saddle, although for obvious political reasons Mr. Truman preferred to single out the National Association of Manufacturers for condemnation.

Nor can the administration heap all blame upon the Republicans. Such Democratic stalwarts as Senators DOUGLAS, SPARKMAN, and FULBRIGHT ducked vigorous leadership when a weakened price-control measure went through the Senate.

Congress has fallen far short of statesmanship and Mr. Truman of leadership. Events may well force a special session of Congress. It has taken the worst flood in American history to show Congress how wrong it was in yielding to the farmers in their opposition to effective flood-control measures. Another flood—inflation is now poised over our heads and Congress has weakened the levees, as it responded to the same bad counsel.

The Story of the Defense Production Act of 1950

EXTENSION OF REMARKS

OF

HON. W. M. (DON) WHEELER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. WHEELER. Mr. Speaker, under permission to extend my remarks, I am inserting a statement I had ready to make last week while we were considering the Defense Production Act. Not being a member of the committee on Banking and Currency, I was unable to get sufficient time last week to make the statement. The statement is as follows:

THE STORY OF THE DEFENSE PRODUCTION ACT OF 1950

(By WILLIAM McDONALD WHEELER)

In September of last year, when the Congress was considering the Defense Production Act of 1950, I felt that the Congress should recognize the emergency that existed by spelling out in the law the manner in which wages and prices should be controlled. If these controls were needed sufficiently to pass any law on the subject then, they were needed badly enough to have frozen both wages and prices at that time. If this had been done there would have been no necessity for the much-talked-about roll-backs that are now being considered.

Instead of facing up to its responsibility by spelling out in the law that which would be controlled and the manner in which the controls would apply, Congress passed a law, my objections and vote against it to the contrary notwithstanding, which delegated to the executive department of the Government the authority to impose controls.

In spite of the fact that he had been given authority to do so, the President failed to do anything in the way of imposing any controls. He did make some show of intent to control certain things at a later date by causing to be placed on the Federal payroll thousands of employees in a confusing mess of new alphabetical agencies. The mere existence of all these new agencies constituted sufficient threat as to lead thousands of producers, processors, and retailers to abruptly increase the prices of the goods and services in which they dealt. This was a natural reaction to the impending threat,

for it was reasonable to assume that whatever ceilings that were to be eventually imposed would be based, in large degree, on prices prevailing at the time ceilings were to be imposed.

The President's failure to take action other than that of creating a threat in the form of new agencies and his failure to do anything about the abrupt spiraling of wages last winter accounts, in large part, for the unreasonable rise in prices that the country experienced the latter part of last year and the early part of the current year.

After having waited until prices and wages had reached dangerous inflationary levels the stabilization authorities came forth with a device called the roll-back, which is clearly remuneration under due process of law, property from American citizens without fair remuneration under due process of law. This can be shown by assuming that a farmer bought some feeder cattle last December and paid 28 cents per pound for them, only to find 2 months later, and after having paid increased feeding cost both in the form of the actual feed and the labor involved in getting the cattle ready for market, that the Government orders him to sell the cattle at a lower figure than he had actually paid for them. It can readily be seen that the only way this farmer can be kept from actually losing money on the transaction would be for the Government to subsidize him by paying to him the amount lost in the transaction. This roll-back scheme is nothing more than a forerunner of the much-publicized Brannan farm plan, which calls for the taking of money from the taxpayers to pay producers the difference between that which the Government says he can sell for and that which the ultimate consumer pays. I for one want no part of such a socialistic plan, and I do not believe the American people want it.

Since the OPS and the dozens of other alphabetical agencies have been in actual operation the ceilings that have been imposed have actually become price goals instead of price ceilings. This fact alone proves that the OPS has actually contributed to the inflationary process instead of curbing it. In spite, however, of the fact that sellers have, in thousands of instances, actually increased prices in order to reach the ceiling placed by OPS, this agency has continued to issue a growing volume of orders, rules, regulations, and amendments. Most of these provide for new price ceilings, and most of the new ceilings are above current market prices.

All of the confusing and ineffective orders that are being issued are still being issued in the name of inflation and public protection. As long ago as April 8, however, Price Administrator DiSalle stated publicly, "the inflationary rises since Korea have been largely psychological." The Wall Street Journal quotes him as further stating, "Price controls would not halt or even control price rises but that they were politically necessary; for psychological reasons the Government had to convince the citizens that it was doing something about inflation." On the basis of his own statement, DiSalle sees it as his job not to control prices but to control public opinion about inflation that, as he sees it, is not an inflation at all but merely a psychological demonstration.

In view of the foregoing quoted expressions of the Price Administrator's opinion of the function he is supposed to perform, it is small wonder that a control law that was enacted last year has been poorly administered in such a way as to make it worse than ineffective. The bright so-called intellectuals, with whom the Administrator has surrounded himself, have proceeded to issue ream after ream of regulations, rules and amendments to same. As if the actual volume of printed matter were not enough to completely confuse the public to whom it

is directed, the content is so composed as to cause serious disagreement between leading lawyers of the country. It is easily seen that regulations, which defy practical definition by those who engage in the profession of law, cannot do other than enrage and confuse laymen who are subject to penal servitude and fine if compliance is violated.

Although there are many fine, conscientious, and patriotic people employed by the various new alphabetical agencies that have been set up under the Defense Production Act, experience strongly indicates that the large majority of these employees have been placed on the payroll on the basis of political consideration rather than on ability to administer in a common-sense manner the law authorizing their existence and ability to issue clear-cut, simple regulations that the average American citizen can understand.

After nearly a full year of befuddled experimentation with an effort to control the economy of this country; nearly a year of operation that has increased instead of lowering the spiral of inflation; nearly a year of ignoring the real causes of inflation, and nearly a year of half-hearted attempts to control inflation by controlling prices while totally ignoring wages that contribute so much to the cost of finished products, the administration now is urging Congress to pass an extension of the law and further urging that more powers be given the administration than are granted under existing law.

If only one reason were needed as ground for opposing the passage of the new Defense Production Act, it is the fact that no mention whatsoever is made in the pending bill of wage control. This is more than positive proof that the administration has no intention of even attempting to control wages. It is true, as night follows day, that prices cannot be equitably controlled unless wages are controlled at the same time. Of course, the reason for this disregard of the obvious necessity of controlling both prices and wages simultaneously is that control of wages is considered politically inexpedient by the administration. They continue to urge Congress to pass authority to control prices with none to control wages in the firm belief that they can continue to fool the people into thinking that a real effort is being made to control inflation.

The President is attempting, through his top-flight bureaucratic propagandists, to get the American people to write to Members of Congress urging the passage of the new control law. They are desperately attempting to sell Americans on the idea that the people can have their cake and eat it, too. They do not bother to tell the people that the only way a producer can sell his products for a high price and at the same time allow the consumer to buy the product for a low price is for the Government to pay the difference to the producer. They glibly ignore the fact that whether the difference is paid at the time of purchase or at the time the tax collector comes around it still must be paid.

In an obvious attempt to get the Brannan farm plan's foot in the door, the pending bill provides for the payment of subsidies to producers. As pressing as the current emergency is, the American people do not want the administration to reach into the tax-till for money with which to pay producers the difference between the low price they would get for their products and the high cost of producing these commodities. Without going into various reasons as to why the Brannan subsidy plan should not be authorized, since it has been well discussed in the press of the country, suffice it to say that this dishonest and ineffective approach to the problem of inflation should not be pursued.

If there can be any justification for economic control by Government edict in this

free-enterprise system of ours, it can only be found during periods of extreme emergency when we are faced with serious shortages of the goods that constitute our standard of living. In order to ascertain whether we are actually faced with shortages of a sufficiently serious nature as to justify living under strict economic controls, exercised by a power-mad administration, we should look to the record of that which we have on hand and that which we have good reason to expect will be produced for our storehouses during the current production season.

We are producing at a near record rate this year in nearly all fields. Steel production is up 10 percent above last year. We expect to produce at least 70 percent more cotton than we did last year, and with a 2,000,000-bale carry-over we should have roughly 20,000,000 bales on hand. Wheat production is expected to top last year's crop by 48,000,000 bushels and last year's crop was so large that we have millions of bushels stored as surplus. Corn production is expected to be up 164,000,000 bushels from last year, and here again we have surplus corn stored, like wheat, in facilities on which the taxpayers are paying enormous amounts in rent. These are just a few examples of the fact that we have a surplus supply of almost all food and fiber items.

Surpluses cannot condone control by Government order if we are to adequately regard the basic tenets of the free-enterprise faith on which this country was founded and grew to greatness. Experience gained during World War II should convince beyond any reasonable doubt that the only answer to inflation in the fields where shortages are found is increased production. When production is encouraged the law of supply and demand will take care of high prices. If production is hampered by confusing and inequitable controls, inflationary pressures will continue in any field. This, it appears to me, is no more than a statement of rudimentary economic fact.

Before leaving discussion of surpluses, it is worth noting that the administration is currently asking for additional billions of dollars to be spent on the ECA program. When administration spokesmen are questioned as to the wisdom of sending all these dollars, goods, and services to foreign lands, they answer by saying that our economy will not be damaged since we have so many surpluses in this country. This answer is obviously contradictory in view of their current insistence on expanded control authority based on the premise that we are suffering from shortages in almost every field. It is more than passing strange that they are able to talk so glibly from both sides of their mouths in their attempt to justify opposite conclusions on the same premise.

Most of this discussion thus far has related, in large part, to the effect of controls on agricultural products; however, the arguments made in this regard apply as strongly to many items in the so-called hard-goods field. It is very significant that Mr. Charles Wilson, head controller for the administration—and one who has spoken loudly and long in an effort to sell his control program to the people—can find that his own company, General Electric, currently has approximately 18,000 electric refrigerators stored in its Washington warehouse figuratively crying for customers to purchase them. If the number stored in the Washington warehouse is indicative, there must be thousands more stored by this one company all over the country and, if the indication holds throughout the industry, the many other manufacturers of this item must have additional thousands in storage for lack of customers. That which is true of refrigerators is true of literally hundreds of other items that have inventories swollen all over the country. A further significant fact in this regard is that

there is a reasonably weak market in many of these items that compose the swollen inventories. This weak market is reflected in the relatively low cost of such of these items as clothing, furniture, electrical appliances, and television sets. There is no denying that the stable prices on such goods are the result of a high rate of production that has more than met the demand—and not by regulations issued by the stabilization authorities.

A lot has been said by the Government propagandists, the press and the radio commentators about certain so-called pressure groups impressing their will upon Congress during the pendency of the legislation now under consideration. They would have the public believe that any Congressman who opposes passage of the pending bill has sold out or unethically yielded to pressure exerted by the NAM, the Farm Bureau, or some other group seeking selfish advantage. They religiously avoid any disparaging mention of the pressure groups that are favoring the passage of the bill such as the organized labor groups and the group of tax-paid Government propagandists of which they are members. The practice of branding all those who oppose their socialistic schemes as being selfish, unpatriotic devils is not a new device to the fair dealers who now demand more and more power to be used for the socialization of this country. Contrary to the practice of certain columnists and radio commentators, I do not propose to speak for anyone but myself, but the fact of the matter is that I had publicly expressed my opposition to the farcical control bill long before I learned of the position taken by either the Farm Bureau or the National Association of Manufacturers. And, in spite of the concerted effort on the part of many propagandists to discredit the Congress of the United States, I have faith in the integrity of my colleagues in the House to believe that they are not being unduly influenced by selfish pressure groups.

Much has been said here of late concerning the fact that the dollar is now worth only 54 cents. No argument can be raised to deny this fact; however, it is significant that very little was said on this score until time came for the administration to seek additional control power. The truth of the matter is that due largely to the fiscal policies of the administration the dollar has been worth very little more than 54 cents at any time during the last 5 years. Reference is made to the unwise and inflationary fiscal policies of the administration simply because the greatest single contributing factor to inflation has been this policy.

If it is agreed that production is the ultimate answer to inflation, then it must follow that every time the Government adds additional thousands to the payroll, thereby taking these thousands from the production line, inflationary pressure is increased. Without disparaging a single one of these employees, it must be admitted that they are providing service of one kind or another and are not producing food, fiber, or anything else except, in many cases, confusion. No single facet of the entire picture has more definitely contributed to inflation than has the hiring of thousands of Government employees.

A policy of unbridled taxation, Government spending, and the inexcusable waste attendant to this spending is another very large contributing factor to inflation. As long as the Government continues to spend billions of dollars in every field imaginable, both necessary and otherwise, and wastes billions in the process, inflation will be with us regardless of the kind of control act that is passed. As long as money is made more readily available than goods inflationary pressures will increase. All this is to say that the very administration that is pleading

so fervently for controls of all kinds and descriptions is responsible, in convincing degree, for the inflation it would have you believe controls will cure.

Administration spokesmen agree that they are opposed to controls in time of peace. They admit that these controls in time of peace would wreck our system of government and cause it to be replaced by one of socialistic pattern. While making this admission, they insist that the present control justifying emergency will, in all probability, last for as long as 20 years. By their own admission food for serious thought can be found in the question as to whether our free-enterprise economy can survive the controls they advocate for 20 years. In this regard it is worthy of note that the employees of the various stabilization agencies have been promised certain awards that can be earned after 10 years of service and certain other awards after 20 years of service. This indicates to me that the powers that be in the stabilization program envision having a job of administering this control legislation for a long time to come.

In planning to set up elaborate control machinery with which to control all prices, the planners studiously ignore the fact that prospects for crop production July 1 are as good as the best in recent years. Conditions continue to improve with aggregate crop acreage the largest since 1933. Aggregate production is now expected to top all other years except 1948. These are estimates made by the Bureau of Agricultural Economics.

The planners who advocate strong controls over every phase of American life will tell you that the bright outlook insofar as food supplies is concerned can be discounted since the Military Establishment will require foodstuffs in ever-increasing amounts. If the personnel making up the armed services were being recruited from foreign lands, this argument would stand. However, the fact of the matter is that American soldiers will consume very little more food and fiber in uniform than they would if left in civilian life. Since the military will consume very little more food and fiber, and a large part of the larger amount consumed being attributed to gross waste that could be remedied, the total food supply will not be affected greatly whether 3,000,000 or 6,000,000 men are under arms. They all must be fed, clothed, and sheltered whether in or out of the uniform.

Some of us Members of Congress are really trying to attack the problem of inflation at its source by taking action to cut all the unnecessary items from the President's budget. Many of these items can be cut drastically without endangering the security of this Nation. One large item that can stand considerable paring, if not total abolition, is the gigantic foreign-aid program for which the President is now asking \$8.5 billion. If the recipients of these global handouts are not ready to travel on their own after us having financed them since World War II, there is good ground to wonder whether there is any hope for them. Certainly no one in his right mind is still so gullible as to believe that we can buy the friendship of these people. If these recipients of our bounty have those things that we need we should buy those items in a straightforward business deal and quit this quixotic foolishness of giving everything we have away with no hope of receiving anything in return.

Certainly we should not be dishonest enough to tell the American people that we must control every phase of their lives because we are suffering from shortages and then come right along and tell them that a handout program to the rest of the world is justified as a means of getting rid of enormous surpluses we have on hand. The fact of the matter is that we could take the millions of dollars which administration of the control program will require and the

billions of dollars being requested to finance the foreign-aid program and use this money to buy from foreign countries those things of which we are short in this country. In addition to this, we could release thousands of Americans from their control jobs so that they could go to work on the production lines. By doing these three things we could acquire an adequate supply of those items of which we are short and, in view of the fact that we are short in comparatively few fields, we could rearm without completely disrupting our entire economy.

It will be found that there are more controls of people embodied in the Control Act than there are controls of prices. This is in keeping with the obvious purpose of the administration since they want to completely run this country. They have used every device and trick of deception known to the field of propaganda in their effort to set class against class in this country. They have tried to draw definite lines between consumers and producers when the truth of the matter is that producers are also consumers and those things that are good for one group are good for the others. They have succeeded in causing millions of Americans to believe that Congress is completely dominated by certain evil pressure groups composed of selfish profiteers who have no regard for the welfare of the country. This is positively not true and the administration spokesmen know it. Their willingness to bear false witness in this manner, while attempting to pressure Congress themselves, is sufficient evidence to indict their fitness to hold positions of public trust.

The administration, through its spokesmen, has been telling the American people that if they would write to their Congressmen and get them to vote for the controls; if sufficient power could be placed in the administration, it would guarantee the people security in the form of low prices. They have not suggested to the people that with this power to control prices must also go power to control people and take their liberties from them. No, the requests for power have been sugar-coated by promises of something for nothing in the full knowledge that, once the sugar-coating is melted away, it will be too late for the people to regain their freedom.

I would vote for restricted power to allocate certain strategic materials, but I will not be beguiled into voting away the freedom of American people in exchange for the empty promise of steak that be bought a little cheaper. I know that a law passed here in Congress saying that steaks could not be sold for more than 10 cents per pound would not work in such a way as to increase the supply of steak. If this could be done, then a law could be passed making everyone a millionaire. The law of supply and demand cannot be superseded by any law we pass here, but the liberties of the people can be forfeited if we choose the way of least resistance by simply giving the President dictatorial powers and telling him to solve all our economic problems for us by putting his armies of bureaucrats to work on them.

The American people can solve the problem of inflation if they are willing to pay the price of abstaining from buying those things that are priced beyond reason. We do not require steak six or seven times every week. There are a lot of things we can do without for a while. Spoiled and pampered as we are, it will require some self-restraint and self-denial, but the inescapable fact is that those who have died to purchase our freedom paid far more dearly than we are called on to pay. We can do it the way that seemeth hard or we can solve our problems by simply delegating power to the President. The way that seemeth hard will preserve for

us our hard-won freedom. The way that seemeth easy, since it is the way of least resistance, is the way weak people tread on their downward march to slavery.

Someone has aptly said, and I quote, "I had rather die on my feet than live on my knees." This quotation could very well be taken as the motto of every American today, for our liberty is just as much in jeopardy here at home as it is from external foes. As long as we are free we can eventually vanquish the outward foe, but when freedom is gone not enough difference is left between our lot and those enemies from without as to make fighting seem worth the effort and danger.

If it is old-fashioned and reactionary to believe in the American people and their ability to solve their problems without forfeiting their freedom; if it is crime to hold freedom in higher regard than all the security slavery's chains can give me; if it is wrong to believe that the economic system of free enterprise and the profit system is the best economic system ever devised by the mind of man, having given to Americans the highest standard of living ever known to man, if it be treason to prefer liberty under God to all the Utopian promises of security that the chains of slavery can hold, then I stand convicted before the bar of human justice and throw myself upon the mercy of the court.

In closing I would quote John Stuart Mill, who said: "A people may prefer a free government but if, from indolence, carelessness, or cowardice, or want of public spirit, they are unequal to the exertions necessary for preserving it; if they will not fight for it when it is directly attacked; if they can be deluded by the artifices used to cheat them out of it; if by momentary discouragement, or temporary panic, or a fit of enthusiasm for an individual, they can be induced to lay their liberties at the feet even of a great man, or trust him with powers which enable him to subvert their institutions; in all these cases they are more or less unfit for liberty; and though it may be for their good to have had it even for a short time, they are unlikely long to enjoy it." Where can a more scathing indictment be found of Americans who would now place their hope for continued freedom in the hands of those who are obsessed with desire for more and more power. God forbid that we have reached the dark day in this land when life is held so dear and indolence so sweet as to allow us to surrender our all into the hands of other humans whoever or whatever they may be.

Free the Women, by Dr. Florence A. Armstrong

**EXTENSION OF REMARKS
OF**

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MILLER of Maryland. Mr. Speaker, at a time when our thoughts and energies are focused on the international scene, let us not forget that this very condition makes it more necessary than ever before to get our own house in order. It would indeed be desirable if action could be taken with respect to the equal-rights amendment, which a number of us have sponsored, and other needed reforms at home.

Under leave, I am including herewith an article by Dr. Florence A. Armstrong, which appeared in the July issue of the Kiplinger magazine, *Changing Times*:

FREE THE WOMEN

(By Dr. Florence A. Armstrong)

In this time of national emergency, the country's resources would be greater and its morale higher if justice were done to all citizens, regardless of sex. A nation that degrades, with humiliating discriminations and hampering disabilities, half of its entire population—the women—will ever be at a distinct disadvantage among nations that give equal participation, equal rights, equal justice, and equal human dignity to all their citizens, both men and women.

For every good reason, it seems to me, the United States should grant to its women their full citizenship, now, without further harmful delay.

As with the extension of suffrage, some individuals and groups would at any time object strenuously to granting full citizenship to women, on the basis of some prejudice or because of some vested interest in the subjection of women. Organized labor and groups controlled by labor do so. Such objections, which oppose the world trend and the evolutionary trend, should no longer be permitted to deny fundamental rights to half our population.

The only practicable way to eradicate legal discrimination against women is to adopt another amendment to the Constitution.

The National Woman's Party in 1923 introduced such an amendment, popularly known as the equal rights amendment. It reads, in 1951, as follows:

"Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex."

"The Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation."

"This amendment shall take effect 1 year after the date of ratification."

The amendment is supported by about two score national groups and by innumerable individuals, both men and women. Support in Congress has increased at every session.

WHAT DISCRIMINATION?

I am frequently asked what discriminations would be removed by the equal-rights amendment. I, myself, have seen eight types of legal discriminations which seem to me most harmful to women. No doubt each person would make a somewhat different list. My own list includes the following:

1. Restrictions on hours of work. Laws covering working hours of employed women, where different from the laws applicable to men, have proved extremely troublesome to women. When introduced in New York, such laws caused thousands of women to lose their jobs overnight, according to reminiscences of a worker as told to me.

Usually this legislation limits the number of hours women may work and specifies which hours they may not work, such as after 10 p. m., and it places women at a cruel disadvantage in competition with men on the same jobs who are not so restricted. The reports, inspections, and allocation of penalties involved provide jobs for many in government—another group with a vested interest in thwarting equal rights for women.

2. Discrimination in pay. To remedy this, 12 States have passed laws requiring "equal pay for equal work," but these laws are very complicated.

3. Restrictions on property ownership. These old, unjust laws cause untold hardships and agony to women, most of whom know nothing about property laws before they marry. Most published articles on the

subject make light of these laws, using gross caricatures for illustrations, and high lighting such silly points as "Who owns the wedding ring?" The intent of such material seems to be to prevent discussion by making all discussion of equal rights for men and women ridiculous; persons in a weak position are ever especially sensitive to ridicule. Such laws, however, can easily be studied by anyone.

The Women's Bureau of the United States Department of Labor, Washington 25, D. C., publishes a pamphlet, *The Legal Status of Women in the United States (1948)*, on the laws of each State. One has only to ask for the pamphlet on one's own State. No woman should be without such data.

4. Restrictions on guardianship of minor children. The worst laws give all rights to the husband, even to the disposal, without the consent of the mother, of children unborn. The newspapers are full of conflicts over this point, in and out of the courts.

5. Occupational restrictions. Any job discrimination based on sex and not on competence is particularly harmful and cruel nowadays, when more and more millions of women—married and unmarried—are employed.

6. Restrictions on the right to sue. These laws result in very bad situations, as in cases where a husband can sue his wife if she assaults him, but the wife cannot sue the husband if he assaults her. Several States still have these restrictions. The press reports cases of juveniles who have got into trouble with the law trying to help their mothers during violent abuse by fathers. Juvenile delinquency and criminal careers frequently begin thus.

7. Restrictions on control of earnings. Under a few statutes, a woman cannot own or control her own earnings after marriage. Some States, like Iowa, have in this respect modified the old English common law (which treats women as chattels) and provide for her the right to her separate earnings.

8. Various laws now completely outmoded. Such laws, originally discriminatory, have become worse with time, even ludicrous. As an example of such is an old Iowa law: In seizure of property for debt, the husband may keep the tools of his trade, but the woman may keep only one sewing machine and \$50 worth of poultry.

PROGRESS, BUT NOT ENOUGH

Over the years some States have removed their most flagrant discriminations, in response to the efforts of organized women. Some have even put equal rights for men and women into their State constitutions. I have been told that the National Woman's Party and the National League of Women Voters were each able to get about 150 discriminatory laws removed from the statute books soon after the suffrage amendment was passed.

The Wisconsin Legislature in 1921 wisely passed a law giving to women "the same rights and privileges under the laws as men in the exercise of suffrage, freedom of contract, choice of residence for voting purposes, jury service, holding office, holding and conveying property, care and custody of children, and in all other respects."

If the same thing had happened on a national scale, the country would have benefited immeasurably in the succeeding generations.

Besides Wisconsin, three other States have equal constitutional rights for men and women: Missouri, New Jersey and Wyoming. Since some opponents of the equality principle almost shriek their warnings of the havoc it would cause, they should notice how these States move along smoothly enough!

New Jersey, for example, took care of the minimum wage law (that bugaboo of labor

and welfare workers) by simply amending it. They substituted the term "any person" for the words "a woman or minor," and thus extended coverage to all workers. Could not any of the so-called "protective laws" be so handled after the Equal Rights Amendment passes? If existing laws of that type are considered undesirable, they could just be dropped.

In one area—jury service—much progress has been made in the States. After extensive effort on the part of organized women, 40 States now provide that women may serve on juries. The latest addition to the list is Tennessee (1951). Still missing from the list are Alabama, Georgia, Mississippi, New Mexico, Oklahoma, South Carolina, Texas and West Virginia.

By way of summary, it may be said that year by year a little progress has been made. But hundreds of old, discriminatory laws still remain on the books and new ones are being added, unfortunately, not only by some States but by the Federal Government as well.

The only practical way to get rid of all these unjust and uneconomical restrictions on women is to adopt the Equal Rights amendment to the Constitution. The sooner it is done, the better.

Lawrence, Mass., Recruiters Tops in New England

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. LANE. Mr. Speaker, It is time we paid tribute to the clean-cut and conscientious young men who are recruiting the cream of American manpower for service in the Armed Forces.

Especially when the number of men—and women—they have enlisted heads the New England "parade."

Lawrence, Mass., is proud to have five leaders in this field and wants the world to know the outstanding job they are doing. The Army, Navy, and Air Force are to be commended for selecting men of such high caliber in the first place for this responsible assignment. Of greater importance is the fact that these recruiters are justifying, beyond expectation, the faith of their superior officers. All of them possess distinguished World War II records. But I believe that it is their neat appearance, their exemplary conduct, and their excellent public-relations work that is attracting so many young men to volunteer for careers in our defense team.

Under leave to extend my remarks in the RECORD, I wish to include a recent story from the Lawrence Tribune that pays deserved tribute to their recruiting accomplishments:

LAWRENCE RECRUITERS TOPS IN NEW ENGLAND

Hundreds of Greater Lawrence men who are serving in the Armed Forces today have enlisted through the local recruiting stations in this city and for the past 2 years these same subrecruiting offices have broken enlistment records in the New England area.

In January and February the Army and Air Force was tops filling more than their

quota and topping such stations as Malden and others in the Greater Boston area. The Navy office in Lawrence has been the No. 1 recruiting substation in the Boston and New England section for the past 2 years and in June enlisted the most men in the history of that office. The Marines are not to be outdone. In February and March more men enlisted through the little office in the post office building than in any other month in the history of that substation.

The men in charge of these offices have received many letters of commendation for their fine work from higher headquarters. All of the stations do not take in the Lawrence area alone. Some of the men have to canvas as far as Newburyport to seek recruits and others cover the Lowell, Haverhill, Reading, and Wakefield districts. However, it is for the number of volunteers that they have enlisted in Lawrence that they have received praise. In every other town and city in the State enlistments have fallen off due to the lag in the war in Korea. This is not so in Lawrence. The Navy, which recruited well over 70 last month, has reached the 50 mark this month. The Army and Air Force always manage to fill their quota, and the Marines, as they say, "have the situation well in hand."

If you ever decide you want to make any one of the services a career and walk into one of the recruiting offices in this city you will meet the following men, what you might call the unsung heroes of the defense effort:

Chief William E. Davis, M. M. C., and Arthur W. Jones, R. D. 1, of the United States Navy; Tech. Sgt. Samuel Griffiths of the United States Marines; Sgt. (1c) Joseph A. Boardman, station commander at the local Army and Air Force recruiting station, and Tech. Sgt. Leonard J. Cutter of the United States Air Force. All are veterans of World War II, which was needless to say in the first place, but the ribbons they carry on the left side of their uniforms tell quite a story and if the men that they have enlisted shape up in any way like the persons who recruited them then they will have reason to be proud when they wear one of Uncle Sam's uniforms.

Newspapermen Back Truman Recall of MacArthur

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. YORTY. Mr. Speaker, I should like to call attention to the following news story by Mr. Richard L. Strout. It appeared in the *Christian Science Monitor* on July 16, 1951:

NEWSPAPERMEN BACK TRUMAN RECALL OF MACARTHUR

(By Richard L. Strout)

WASHINGTON—In one of the most comprehensive surveys of the press ever undertaken the Saturday Review of Literature has received answers from 332 working newspapermen in Washington, Tokyo, and the United Nations as to what they think of the MacArthur controversy.

The weekly declares that since the end of World War II it is doubtful whether any event has been more prominently headlined and treated in the press than the dismissal of General MacArthur. It queried correspondents in Tokyo, Korea, Washington, and

the United Nations on their opinions, and the results were tabulated and analyzed by the Elmo Roper associates.

Gen. Douglas MacArthur is credited with a job well done in the occupation of Japan. On the other hand, by what editors call an overwhelming majority the reporters approve President Truman's recall of General MacArthur. Many correspondents expressed criticism of the way the recall was made while considerable controversy arose over the issue of bombing Communist air bases beyond the Yalu River in Manchuria.

TRUMAN SUPPORTED

Asked whether they believed President Truman was right in recalling General MacArthur, 85 percent of the correspondents answered they thought the President right, 13 percent thought him wrong, and only 2 percent had no opinion.

Second question was the effect of the recall on the Far East—would it help, or harm, United States influence? Here 37 percent thought it helped, another 31 percent thought it had no effect (largely because of confidence imposed in Gen. Matthew B. Ridgway) while 22 percent thought it had harmed.

The Washington press corps was asked whether it thought the episode helped or harmed America's influence in world affairs. Those who felt United States prestige was enhanced came to 58 percent, while 15 percent thought it had been damaged. A fairly large group, 27 percent thought United States influence was not affected.

Next question was, what about the reaction at home? "There was surprising unanimity over where the people will finally stand," Mr. Roper reports. "By well over a 4-to-1 count the correspondents believe the people finally will approve President Truman's action."

EFFECT ON KOREA

What about the effect of the removal on the fighting in Korea? Correspondents actually in Korea were asked this question. A majority of 52 percent said they thought morale had not changed as a result. Thirty percent thought morale had been boosted, and only 3 percent thought morale had been lowered.

In analyzing these replies, Mr. Roper explains that "at least half of those who say morale is 'unchanged' believe that the decisive change for the better in morale among the troops took place not in April when General MacArthur was removed, but in December and January when General Ridgway took over the Eighth Army." Mr. Roper added, "The war correspondents emphasized time and again the differences—from the troops' standpoint—between MacArthur and Ridgway."

On the big issue of bombing bases in Manchuria, a key point raised by General MacArthur, the working press "gives the general a divided verdict," the report states. A majority of 63 percent says the policy of bombing bases in Manchuria is right, but mostly only in terms of the Korean fighting. Of these 63 only 12 percent believe bombings would be right under any conditions. Another 32 percent are flatly opposed to the idea, and 5 percent have no opinion. Mr. Roper says this question "provoked a good deal of emotion."

JAPAN RULE PRAISED

General MacArthur gets his highest praise in connection with the occupation of Japan. The working press in Tokyo voted 91 percent in calling the occupation generally successful. A high 76 percent said that his administration went as far toward democratization of Japan as was possible for an occupying power to go.

Last big question put to correspondents was whether they felt coverage of the issue

has been fair and impartial. The Roper report says that 65 percent answered that they thought press coverage was satisfactorily handled, "while only 14 percent say a poor job was done. Another 22 percent had mixed opinions."

A variation was whether there had been "undue bias or partisanship." Some 52 percent thought the handling of news stories "fair and objective." 22 percent charged most of the press with bias, and 26 percent more picked out specific papers for charges of partisanship. Regarding the latter, "a definite pattern emerged. There was widespread feeling that the pro-MacArthur press had been most guilty of bias in reporting."

Even among correspondents who "thought most coverage was unduly partisan," Mr. Roper reports, there were several newspapers which were praised. "Chief among these," he records, "was the New York Times, but close behind in praise came the New York Herald Tribune and the Christian Science Monitor."

The wire services also were praised for impartiality, particularly the Associated Press and the United Press.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial relating to the St. Lawrence seaway and power project which appeared in the July 16 edition of the St. Paul Pioneer Press. This editorial reflects the widespread desire of the people of the Midwest-Great Lakes area for the St. Lawrence project, and their hopes that Congress will do its duty to the country by enacting pending seaway legislation into law.

NEXT SEAWAY HOPE

The House Public Works Committee held a secret session last Thursday on the Great Lakes seaway and power project at which action on a motion to kill the bill was blocked, evidently by Chairman BUCKLEY. If the fate of this great improvement hangs on the slender thread of parliamentary maneuvers, the outlook for the triumph of reason and national interest over the selfishness of some powerful industries seems dark indeed.

If this is in fact the case, the hopes of the interior States and provinces of this country and Canada will necessarily turn next to Ottawa rather than Washington.

The possibility that Canada will go forward with this improvement by itself has not been taken seriously by the opponents of the project, but there have been repeated suggestions there that this be done. One of these was made by Canada's minister of transport, Lionel Chevrier, who said last year, "If it is impossible to obtain the joint development referred to in the 1941 agreement, then consideration must be given—as indeed it already has—to an all-Canadian route."

Such a route is feasible from an engineering viewpoint. The cost would be heavy for Canada to stand alone, but on the economic side, it would be no less practical on that basis than if constructed by the two countries.

Canada has been interested in the project as an all-water outlet for its wheat and other export products, and would expect to finance it out of tolls on Canadian and American ships. Canada has large deposits of nickel, cobalt, tungsten, lead, zinc, and titanium, extensive oil formations, and great timber resources. Full development of this natural wealth has been held back by lack of an economic means of transportation.

Canada would not only gain by such stimulus to its development but the access of ocean shipping to Canadian ports, perhaps at preferential rates, would encourage industry of other types to migrate or spring up there. Canada's gain might be the United States loss, but anything that builds up the economic strength of the continental interior would be bound to work out for the benefit of the entire region regardless of imaginary boundary lines. Even at heavy tolls, American shipping would certainly use the seaway and much, if not all, of the benefit anticipated from a joint venture would accrue to the Lake States from a purely Canadian route.

The opposition to this natural and logical improvement is being shortsighted as well as selfish. The few miles of rapids that block the Great Lakes to ocean shipping will inevitably be flooded out one day, if not by this country in partnership with Canada, then by Canada alone. It would be far better were this to be an American and Canadian project rather than just Canadian, but if it can be had on no other terms then let it be all Canadian.

Our neighbors to the north can be sure that if they are obliged to move alone, they will have the cheers of the people of these States to the south of them, and also whatever material aid and encouragement it is open for them to give.

The Wool Situation

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting letter that I have received from Mr. Harold A. Bishop, president, Boston Wool Trade Association, Boston, Mass.:

BOSTON WOOL TRADE ASSOCIATION,
Boston, Mass., July 20, 1951.

HON. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR SIR: The wool situation is receiving top-level consideration at the international materials conference presently convening in Washington, and the wool trade has put forth the view that intervention through controls or allocation programs will not provide a better result to the United States military or civilian than can be provided by private industry.

Against a QMC invitation to supply one and one-half million yards of 16-ounce shirting the QMC received total offerings of 7,000,000 yards from 30 mills. The 1,500,000 yards can be obtained at prices ranging between \$3.2184 and \$3.70. When the same fabric was last purchased in March the price range was \$5.50 to \$6 per yard.

QMC invitation to supply 6,300,000 yards 16-ounce Army serge brought bids from

61 mills with total offerings of about 18,000,000 yards. This fabric cannot be compared identically with previous bids as the orders placed in March called for 18-ounce fabrics. However, market sources consider the present prices are approximately \$2.25 per yard down from the March purchases.

An interesting observation is that the largest unit in the industry, the American Woolen Co., offered to supply the entire quantity of both fabrics but their prices will not enable them to get an award. One might well conclude from this that the machinery and inventory required to fill substantial contracts are still available.

Reports from Australia indicate that the Australians are beginning to yield to the pressure from United States Government officials (acting without the support of wool growers, mills, or merchants) to arrange to make wool available to the United States on some special preemptive basis instead of by private sale as heretofore.

The facts pointed out above indicate clearly that any wool needs of this country can be fully met by private industry, and that no need exists for the intervention of the Government to procure by extraordinary means the wool supplies for this country.

Furthermore, the price of wool has now declined to a point not over 10 or 15 percent above pre-Korea levels, which removes the threat of any inflationary effect on the consumers' pocketbook.

Your cooperation in referring the above matter to the attention of the United States delegates at the international materials conference will be most appreciated.

Sincerely yours,

HAROLD A. BISHOP,
President

The Present Situation on Immigration Legislation

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. KEOGH. Mr. Speaker, I have been requested to insert in the RECORD the following address delivered by Irving M. Engel before the conference of Jewish social welfare held in Atlantic City on May 23, 1951, and which has been described as an erudite dissertation on the principles involved in our immigration law together with a description of pending legislation.

It is advisable that on such a matter as this the record be complete, for which reason I have asked permission to insert the address. It is as follows:

THE PRESENT SITUATION ON IMMIGRATION LEGISLATION

(By Irving M. Engel)

INTRODUCTION

Immigration to the United States has been a matter of concern to all social agencies from their inception. As our concept of social welfare has broadened from the initial palliative of food for the hungry and medicine for the sick, so it has grown to recognize the immigrant as a potential source of strength for the Nation. His need for aid in immigration and in adjustment is a legitimate social need. Properly planned aid, we know, pays quick dividends for the commu-

nity, for the general public and for our total economy.

In the early days—when the great American tradition of haven for the oppressed was nurtured—the immigrant's strong arms and stout heart were a welcome contribution to the rapid settlement and building of the country. Until 1875, there were no Federal immigration laws as such, although there had been passed laws dealing with naturalization of aliens. A few States had attempted legislation to regulate settlement of immigrants within their respective jurisdictions, but in 1876 the United States Supreme Court declared all such State laws unconstitutional.

BACKGROUND

An awakening public concern with health and welfare standards was reflected in the first bill of "exclusion" passed by Congress in 1875. This bill excluded known prostitutes and criminals from the country. Legislation over the ensuing 40 years kept pace with medical and social advances by adding certain contagious and "loathsome" diseases and antisocial acts to the list for exclusion.

The important fact about our immigration laws, until after the First World War, is that legal exclusion was based almost entirely on the merits of the individual case. Our laws were exclusive, but they were not restrictive. The major exception was the racist Chinese Exclusion Act, passed in 1878.

In 1917 the many immigration regulations were codified in a single statute which has since served as the basic immigration law. In addition to setting forth the many bases for exclusion of individuals, the law also clarified the status and rights of aliens by establishing reasons and procedures for deportation. In general, while the burden of proof that he is not deportable was on the alien, the courts, in one ruling after another, have in the past shown deep concern for protection of the alien's rights. I do not wish to dwell on this particular aspect of the immigration process beyond underscoring the obvious responsibility of our national and community agencies during the period prior to citizenship.

QUOTA SYSTEM AND NATIONAL ORIGINS LAW, 1924

The whole basis of our immigration laws was radically shifted, from 1921 on, in a period of vast world unrest following on the heels of the First World War. The Immigration Act of 1924, which still governs our immigration policy, was adopted at a time when the Ku Klux Klan was at the height of its power, and it represents Klan thinking, pure and simple. This act not only limited the total number of immigrants to 154,000 a year, but set up a system of preselection and restriction on a racial basis, only thinly veiled by being called a quota system. Under this law, the total of 154,000 is allocated among the countries of the world by a formula which favors the countries of northern and western Europe at the expense of the others. The system is rigid and invariable. If a given country does not use up its entire quota in a certain year, the unused portion cannot be carried over to another year or transferred to another country. As a result, total immigration has actually been only 38 percent of the number that was theoretically admissible.

All of us here will remember well the heartaches and horrors of the 1930's as we labored to rescue fellow Jews from the gathering storm in Europe and so often found ourselves blocked by restrictive quotas. It is fruitless to dwell on the many who might have been saved; on the skills and devoted talents forever lost to America by its own restrictive laws. But in these troubled times we should, at least, determine to ameliorate these undemocratic laws which have barred so many from our shores.

It is important to note that within the restrictive scope of the immigration laws, there have been from time to time amendments which served to lessen individual and family hardships. At the same time, the amendments, over the years, also bred innumerable inconsistencies. From the legal point of view, one amendment occasionally had the result of almost nullifying another, unintentionally. The law, for instance, differs from one section to another, in setting the legal age for qualification as an adult. In one place, it's 18; in others, 21.

PUBLIC INTEREST IN IMMIGRATION LAWS

Up to, and through, the last war, the general public was not particularly concerned with our immigration laws, or the concurrent provisions relating to aliens' rights and status. The laws themselves were so complicated that the average citizen could not possibly understand them. But there was a growing concern on the part of social agencies, and certainly on the part of the Jewish social agencies, that the immigration laws seem to have been frozen on an anti-social and antidemocratic level against the long-range interests and the general social standards of our country.

Perhaps the first public awakening to the whole question of immigration and alien control came in 1940 with the widespread publicity given to the Alien Registration Act. This act, incidentally, was fairly well administered, and probably helped to allay public suspicion of aliens later when the United States actually was at war. Certainly it is a fact that the neighborhood persecutions of aliens so common in the First World War were not repeated in the last war. Hopefully, some credit for this can also go to a generally deeper social understanding among Americans.

REFUGEE PROBLEM AFTER WAR

The end of the European holocaust brought home the problem of refugees, and fostered some understanding in the general public of the need for offering asylum on the mass basis actually denied by the laws. Many Americans began to learn, at first hand, what our immigration laws actually were. America, the traditional home of the oppressed, both economically and politically, they learned, had in legal effect closed its doors on most of the refugees.

TRUMAN DIRECTIVE

President Truman courageously cut some red tape with his December 1945 "Directive" which accelerated the rate of immigration, and favored DP's without actually changing the basic law. The "Directive" set up facilitative services abroad to speed visa issuance. More important, it provided for the so-called Corporate Affidavit, which, in essence, recognized and legalized the interest and responsibility of voluntary social agencies vis-à-vis government and immigrant. The social agency was no longer merely a tie between the prospective immigrant and an individual American, but a controlling factor in the immigration of the alien irrespective of individual sponsorship, responsibility, etc. For the first time in our country's history, it became possible for social agencies, with Government sanction to accept responsibility for immigration and resettlement of newcomers, and plan accordingly with local communities.

The Truman directive, and the effective work of the social agencies, created a background against which it was possible to conduct a campaign of public education leading first to the passage of the Displaced Persons Act in 1948 and then to the elimination of most of its discriminatory and restrictive provisions by amendment in 1950.

DISPLACED PERSONS ACT

It is an interesting commentary on the development of social consciousness in the

general public that, once awakened to the problem, there has been only sporadic opposition to the mass immigration resulting from the Displaced Persons Act.

And the DP's amply repaid America for her hospitality. Thousands of them risked their lives on the battlefields and many of them made the supreme sacrifice to help bring victory to the land of their adoption.

That we were the first to have the atomic bomb is due to our generosity in opening our doors to displaced persons. It was a DP—Dr. Einstein—who first suggested to President Roosevelt that we initiate a project for development of the bomb. Many other refugee scientists who had been driven out of Europe by Hitler and Mussolini worked on the project and helped to make it a success.

In many other ways, these newcomers contributed to our war effort.

Thousands of American airmen and sailors, who were forced to take to the rafts on the Pacific, escaped a horrible death from thirst by the use of the "belly" still which distills drinkable water from the sea. That still was invented by a refugee scientist.

One of the great bottlenecks in the early days of the war was the need for antennas for tanks and walkie-talkies. At that time, these antennas were being cut from cold steel. A Viennese metallurgist developed a plan for use of powdered metal and in a few weeks, from a small plant in Yonkers, he was supplying our entire Armed Forces.

On the battlefield, in the laboratory, and in the shop the men and women who, after incredible sufferings abroad, had been given haven in this country, demonstrated their gratitude and loyalty by helping America win the war.

The mass immigration of the DP's has served to awaken the public and our legislators to the necessity of codifying and liberalizing basic immigration law.

At the same time, the ramified technicalities of immigration law and procedure have made it difficult for most persons to follow what is going on and to understand the long-term implications of some suggested revisions. No one would disagree with the necessity for making our immigration laws compatible with the needs of national security, yet it is imperative that our anxiety on this score should not be permitted to result in the continuation of the negative aspects of the present laws and, in some provisions, a worsening of the legislation.

At least one step ahead of public interest in immigration—and probably a determining factor in favorable reaction to the newcomers—has gone the organized planning of our social agencies to make each immigrant an integrated part of his community as quickly as possible. Unquestionably, the favorable reaction of the American people to DP immigration has been heightened by the personal experience of seeing the new American arrive in his community and being speedily aided in adjusting to the American scene and mores long before the end of the 5-year period when he could actually become a citizen.

The Displaced Persons Act of 1948 attempted to follow the pattern of our basic selective immigration laws by also setting a selective basis for the displaced persons. It set quotas on farmers and also on countries of origin. The fallacies of this kind of preselection were quickly obvious on a mass immigration basis. In brief, it simply didn't work. The amendment of June 1950 recognized that the method was impractical by eliminating these preselective conditions.

JOB AND HOUSING ASSURANCE

In passing, and incidentally, there has been criticism of the act for its requirement that each displaced person must be guaranteed housing and a job in the United States before he is granted a visa. However,

it is important to recognize that this particular provision, whatever its intent might have been, is actually a practical liberalization of former immigration requirements. Previously it was necessary for some individual to prove that he was financially able to support the prospective immigrant for the 5-year period preceding citizenship. On a mass basis, such a requirement was obviously impossible, particularly for those many DP's who had neither relatives nor friends in this country, and who constituted the bulk of the refugees desiring to settle here. The guaranty of job and housing—which is quite broadly interpreted for accredited agencies such as United Service for New Americans—is in effect a legislative recognition of the social responsibility of our community agencies. It legally accepts their promise to aid immigrant X as against the previous requirement that John Doe prove he had enough money to support Richard Roe, in case Richard couldn't support himself once he got here.

FIRST HEARINGS ON REVISIONS OF BASIC LAWS

Two years ago the Congress of the United States decided that our immigration laws needed a thorough airing and going over. In the face of developing social trends, changed world conditions, the growth of America as a world power, and international concern for the movements of peoples, the basic immigration laws of the twenties presented some archaic and confused concepts. Hearings were held at the time, and then the matter was put in the deep freezer for seemingly more pressing problems. They have been taken out of the freezer by the Eighty-second Congress, but the world moves so fast today that the liberalizing concept of 2 years ago has again undergone a metamorphosis.

DEMOCRATIC AND SOCIAL CONCEPTS DESIRABLE

Before I discuss specifically the legislation before us today, which is the McCarran-Walters omnibus immigration bill, I would like to point up a few major positive points on which I think we can agree, as Americans, as socially conscious individuals, and, incidentally, as Jews. I say "incidentally", because since the establishment of Israel and its absorption of so many DP's, this is no longer a Jewish problem. We, as many other troubled persons in America today, are conscious of a gulf between precepts and practices; between what we say and what we do. The Voice of America calls for refugees behind the iron curtain to flee to the haven of the democracies; then our laws negate the promise offered. We, as social workers, have a particular responsibility to take leadership in bridging the gulf.

In a practicing democracy, which we aspire to be, these should be the bases of immigration legislation:

1. Nondiscrimination on grounds of race, religion, or ancestry. (This, of course, is basic.)

2. Recognition that we are big enough to absorb the immigrant and that his strength adds to our strength.

3. Recognition that the immigrant is not a commodity to be traded in on the labor market, but a human being whose skills and talents, and those of his children cannot be prejudged.

4. Consciousness of the existing threat to our national security, but a realistic awareness that it would be a tragic error to yield our democratic concepts and basic civil liberties in exchange for a nonexistent shield such as the magical thorn-hedge which protected the sleeping beauty or the wall of fire which protected the sleeping Brunhilde.

The present controversy over immigration policy is not new in our Nation's history. If we examine the CONGRESSIONAL RECORD, we note that on one occasion a Congressman from Massachusetts stood on the floor of the

House and stated that a liberal immigration policy was suitable when the country was young and unsettled, but now that it was mature and fully developed, immigration should be restricted. That Congressman was Harrison Otis, and the year was 1797.

We must face the fact that there are two basic, but conflicting tendencies today, legislatively, publicly, and often within ourselves as individuals. The worsening of tension between the western democracies and the Soviet Union has created a sentiment for controls, both internally and in terms of immigration, while at the same time, we are concerned with the imperative necessity of selling the democratic way of life abroad.

These tendencies helped to stir the sentiment for liberalized legislation. At the same time, they stirred other legislators to propose increased stringency of the laws—again internally and in terms of immigration.

Another striking inconsistency appears when we consider the case of the so-called Mexican wetbacks. These are aliens who enter the country illegally from Mexico, primarily to seek employment on the ranches and farms of the Southwest. Due to the demand for cheap labor in that area, the influx of thousands of these wetbacks every year is generally winked at, and those very Congressmen and Senators who are most vociferous in condemning the immigrant who comes in from Europe are highly indignant when an attempt is made to cut off the flow of illegal immigration from Mexico into their constituencies.

OMNIBUS BILL INTRODUCED

In the spring of 1950 an omnibus immigration and naturalization bill, S. 3455, was introduced which presumed to reflect the views and considerations that were brought out at the hearings during the preceding 2 years. No action was taken on this bill at last year's session of Congress, so that when the Eighty-second Congress opened, the bill was reintroduced under a new number, S. 716, with a number of changes, some of a more liberal nature. Meanwhile, however, during the summer of 1950, some portions of S. 3455 had been incorporated into the controversial Internal Security Act of 1950 and have thus already become part of the law of the land. Parallel with the introduction of S. 716 in the Senate, an almost identical bill, H. R. 2379, though with several more liberal features, was introduced by Representative WALTER in the House. Finally, a third omnibus bill sponsored by Representative CELLER (H. R. 2816), and more liberal in many respects than H. R. 2379, was also introduced in the House.

JOINT CONGRESS HEARINGS

In March 1951, joint congressional public hearings were held on the bills. Again, at these hearings, numerous private organizations of all kinds presented testimony, pointing out the faults and dangers of the proposed measures.

But we would be indulging in self-deception if we did not point out, at the same time, that some of the testimony itself dealt only with some single and specific provision without comment on the total bills. Some of the agencies and individuals testifying were primarily concerned with one piece of the proposed legislation that happened to affect them directly. In a few cases, they were willing to accept every other negative aspect, given the one section they cared about; in many cases, the seeming lack of concern for the total bill was actually the result of total ignorance for the immigration problem as a whole. Testimony on the bills, thus far, points up the necessity of an informed opinion and of an aroused concern for every aspect of the pending legislation. This information and this concern must be manifest now inasmuch as whatever stand-

ards are adopted as a result of these bills, will likely remain on our American statute books for many years, perhaps even for decades. The Immigration Act of 1924 has remained on our statutes for a full quarter century, and has thereby affected, directly and indirectly, in countless crucial ways, the lives of millions of human beings.

INTERNAL SECURITY ACT—EFFECT ON IMMIGRATION

Here is one of the provisions of that portion of the Internal Security Act of 1950 which dealt with immigration.

It excluded those who at any time had been members of the Communist or other totalitarian party. This blanket prohibition was quickly shown to be unworkable in its application. The letter of the law, as applied to the immigrants by the Immigration and Naturalization Service, created complete confusion and a practical reversal of the desire of Congress to eliminate mainly actual totalitarians of the left. Not only was the right also excluded, but all those who had either erred in early days or had been compelled by certain circumstances to become members of the proscribed groups, and had since recanted in entire good faith. The principle of "permanent guilt" established by this provision of the act was so obviously inequitable and unworkable that the Congress, in March 1951, was compelled to amend the law to permit the admission of former "nominal" members of all totalitarian groups.

These bills (S. 716 and H. R. 2379) would tighten our immigration, deportation, naturalization, and expatriation laws, while showing little regard for civil rights or constitutional principles of protection for the individual. The Walter bill—H. R. 2379—is somewhat more liberal than the Senate bill, although both contain many of the same basically restrictive provisions. For the purpose of this discussion I shall primarily examine the Senate bill (S. 716) since it would take hours to analyze the individual distinctions between the provisions of these two bills.

Senate bill 716 would set up a system of priorities within each quota, whereby 50 percent would be assigned to aliens or specialized skills and training, 30 percent parents of American citizens, and 20 percent to spouses and children of alien residents. Only the remaining 10 percent could be devoted to general immigration, all unused portion of the 90 percent set aside for preferred groups would be lost. In effect, this would mean that many otherwise worthy and desirable immigrants would either be forever excluded or would have to wait endless, weary years for entry visas.

As a matter of fact, the "selective" method of former immigration laws never went as far as this. Some of the most conspicuous contributions to our Nation have been made by immigrants who could not prove such specialized skills and training as S. 716 would now demand. Nor does the bill recognize that a belief in the equal worth and dignity of the individual is one of the foundation stones of American democracy. About 60 years ago Irving Berlin, at the age of 5, was brought here with his family from Eastern Europe. I am sure that no immigration inspector had the capacity to look at that group, with their strange language, queer garb, and foreign mannerisms, and forecast that among them was a child who would write the songs that America would sing in war and in peace over a period of nearly 40 years.

There are certain major provisions in the bill which I propose to detail for you. But first I want to mention a few minor provisions—minor in that actually few persons may specifically be affected by them—but important in that they highlight a general retrogression from present legislation.

SOME MINOR PROVISIONS OF S. 716

1. The bill provides that the Commissioner of Immigration and Naturalization and the Administrator of the Bureau of Passports, Visas, Security, and Consular Affairs shall be native-born citizens of the United States. No such provision exists in our country for any other office excepting that of the President of the United States. As I am sure you are all aware, the latter provision was a matter of historical expedience. It is against American tradition and experience thus to imply second-class citizenship for Government office.

2. The proposed bill would wipe out all exceptions to the literary requirement for immigration. As of now such requirements can be waived for persons who are victims of religious and racial persecution and also for close relatives of American citizens where application of the requirement would forever prevent reunion of a family group.

3. The bill would wipe out a section of the 1924 law which permitted the entry of ministers and professors outside of the quota of their country of origin. The 1924 measure recognized the value to the United States of immigrants in these professions. Under the proposed bill, ministers and professors would merely be given priority on a quota list as members of skilled professions.

4. Discretion of the Attorney General to readmit a resident alien following a temporary absence abroad is severely limited and proscribed by the new bill, which provides readmission only for an alien with "seven consecutive years of a lawful, unrelinquished domicile," who is not deemed otherwise inadmissible for political reasons. The present latitude given the Attorney General to exercise discretion based on individual cases is wiped out.

I might cite numerous other sections of the bill, where the omission, or the occasional addition, of one word serves primarily to tighten the law and restrict any authorized official from using discretionary judgment. For instance, section 101 (e) provides that "the giving, loaning, or promising of support or of money or any other thing of value for any purpose to any organization shall be conclusively presumed to constitute affiliation therewith." The inclusion here of the single word "conclusively" has the legal effect of denying an individual alien the opportunity to show what the alleged facts might be and to prove that he is innocent of any intent to affiliate with a proscribed organization. In other words, no matter how innocent, or through what error and misunderstanding the money or other thing of value was given, the word "conclusively" here prevent explanation and the exercise of discretion by United States officials.

MAJOR PROVISIONS OF BILL

There are three major categories under which the laws relating to newcomers can be divided. And I would like to give you some major points of the proposed McCarran bill under these categories, namely: (1) Immigration, (2) resident alien status, (2) deportation.

1. Immigration: It is proper to point, first, to one important advance of the new proposals over present immigration law, although the new proposal is by no means all it should be. Nonetheless, it does go a long way to wipe off our books some of the flagrantly racist sections of the present law.

RACIST CONCEPT PARTIALLY ELIMINATED

The new bill actually eliminates reference to certain racial groups as ineligible for naturalization and hence, admission. Quotas for all the Asian countries, although small, are incorporated in the bill, thus recognizing their eligibility for immigration. However—and this holds true only for Asians—the country of birth is not the determining factor for any person with 50 percent or more

Asian blood. In other words, the concept of judging by ancestry—or race—is maintained. Hence, a British citizen, born in London, of a British father and Japanese mother would be allocated to the Japanese quota, and if the small quota of 100 such persons per year were exhausted, he could not enter the United States at all as a legal immigrant.

Similarly, a limit of 100 per year is set on the number of persons born in any one colony or other dependent area which is chargeable to the quota of the governing country. The practical effect of this provision is to limit immigration from Jamaica, Trinidad, and other West Indian colonies without actually putting a basically racist concept into so many words.

NEW RESTRICTIONS WITHIN QUOTAS

The new quota restrictions provided in S. 716 can actually reduce immigration drastically. The majority of witnesses and organizations testifying on the subject before the Senate subcommittee hearings urged that the prevailing national quotas be made more flexible, and that recognition be given to national need and humanitarian considerations by allocating unused quotas to all such immigrants.

S. 716 does exactly the opposite by superimposing a new quota system on the old to establish iron-clad preference categories as we have seen. Thus, 50 percent or more of immigrants within existing quotas would have to be certified by the Attorney General as urgently needed in the United States because of high education, technical training, specialized experience, exceptional ability, and so forth.

Thirty percent of each quota would go to parents of adult United States citizens. It would seem unlikely, on the face of it, that 48,200—or 30 percent of the total 154,000 immigrants allowed annually—would have adult children who are citizens of the United States.

Twenty percent of each quota would go to spouses or children of aliens who are permanent residents of the United States—again, the round figure of 30,000 seems an unlikely estimate.

The remaining 10 percent of quota is all that would be left for immigrants not falling in the three major preferred classes. And this 10 percent is a fixed limit regardless of whether the other 90 percent has been utilized.

It is obvious that such a provision would serve, as it was undoubtedly intended, to reduce immigration to a trickle. Here again the result is being achieved by indirection. The parties who would seek to cut down on the intake of immigrants appear unwilling to present their proposal directly and have it debated in the open.

ADDED GROUNDS FOR EXCLUSION

Fourteen new grounds for exclusion of immigrants set up in S. 716, some of which I have already discussed. A variety of physical and mental conditions are specified as rendering the newcomer inadmissible or deportable. There is, in addition, considerable doubt about the meaning of such phrases as "moral turpitude" as used in the bill. One provision would bar aliens convicted of alleged felonies in their own countries, even though those countries are totalitarian and the so-called felonies would not be considered crimes under American law. For example, a Jew convicted by some Nazi court, theoretically not a political matter, and thereby incurring criminal penalties, would be forever excluded. This, in effect, is abdicating to foreign courts the power to determine who shall have the priceless privilege of entering America.

RESIDENT ALIEN STATUS AND DEPORTATION

Social agencies have a special responsibility, and play a significant role, in the newcomer's life during the 5-year period prior

to citizenship. If we fail to understand the present law and its application, all of the aid which we strive to give to the newcomer and the community in speeding his adjustment through social and cultural integration can be wasted and our work will be less effective and far less productive from every humanitarian and social standpoint.

STATUTE OF LIMITATIONS ABOLISHED

Let me point out two important general provisions of the Senate bill which govern all the other specific provisions. The statute of limitations—a principle very basic to American liberty and jurisprudence—would be abolished in relation to aliens. At any time during the life of a naturalized citizen, a decision made earlier in his favor could be upset and reversed. Further, he could be subjected to deportation on grounds newly established by the bill (and presumably succeeding bills) which were not a part of immigration legislation at the time of his entry. He would never be free from fear and never secure in his proudly acquired citizenship.

COURT REVIEW LIMITED

To compound the wrong, he could also be deprived of court protection in deportation proceedings. The Senate bill in effect removes immigration and nationality cases from the jurisdiction of the courts except through a writ of habeas corpus, and then only with respect to questions of law, not of fact. The courts may not in any form review determinations of fact or the exercise of discretionary authority by administrative officers. It is clear that tremendous power is here placed in a few hands without the right to protest against administrative error or abuse.

If the applicant is excluded, he has no recourse. If he is admitted, the Government can reopen the case regardless of the number of years which have elapsed or of his conduct during that period. There is no machinery to bring about uniformity in applying the law throughout the world nor is there any check against incompetence or dishonesty on the part of immigration officials.

ADDED GROUNDS FOR DEPORTATION

There are a good many specific additions to immigration legislation which broaden the grounds for deportation and narrow the rights of the alien and naturalized citizen. But Mr. Greenleigh is going to interpret these for you, since they most specifically affect the work of the community social agencies concerned with the welfare of newcomers.

OMNIBUS BILL SHOULD BE OPPOSED AS NOW DRAFTED

Its passage would have the practical effect of barring the door to many deserving immigrants; it would serve notice on the rest of the world that we do not actually mean what we say; it would turn into stone the bread of compassion which we offer the oppressed throughout the world.

What should be done in this critical junction?

First, of course, we must oppose the passage of the pending bill, as now proposed, and do everything in our power to alert the people to the viciousness of some of its provisions.

But this approach alone is a negative one. We must go further and seek positive remedies to revamp our immigration system so that it becomes just and fair, and in consonance with our traditions of hospitality and democracy.

OBJECTIVES FOR NEW LEGISLATION

An immediate objective should be an amendment to the law which would permit the pooling of unused quotas. Under such a provision, if any nation in a given year fails to use its entire quota, the unused portion would not be lost, but would be placed

in a pool and made available for those countries whose visas are oversubscribed. Reasonable administration of such provisions would permit the annual entry into this country of the full quota of 154,000 immigrants whose admission is theoretically provided for but who in fact never come.

But that is for the near term. Our ultimate objective must be the complete elimination of any provision in our immigration statutes by which preference is given or barriers raised on account of race, color, religion, or national origin.

Of course, the present standards of health and character would be maintained and provisions for screening against criminal and subversive tendencies would be continued.

At a time when manpower is of such vital importance and when our own birth rate is falling, we are foolish to exclude so many worthy men and women who, morally and physically, would add to our strength as a Nation.

INFORMED PUBLIC AND COMMUNITY LEADERS NECESSARY

I would like to impress on all of you the necessity of going back to your communities with an understanding of what is now before Congress and the kind of legislation we earnestly desire and must seek for our own strength as a Nation and as democratically-minded individuals. The influential citizens who make up the boards of directors of our many social agencies need to have the kind of information I hope we are giving you in this session. They need to understand the basic concepts of immigration which make it possible to recognize quickly the desirable as against the restrictive.

Through our various national agencies, geared to the task of evaluating immigration legislation and transmitting these evaluations to you quickly, you—and your community—will be kept in close touch with what is going on. It is up to you to let your community leaders know the whole story, so that when responsive action is called for, it will be forthcoming quickly, and from informed community sources which can command the respect and prompt response of our legislators.

This involves more the matter of justice and decent treatment for the immigrant. It involves more than the manpower, the skills and the talents which our country so badly needs. We are concerned here with the very soul of America. For we are endeavoring to eliminate the conflict between the great principles for which Americans have fought and died and the vicious, undemocratic concepts upon which our immigration system is based.

Let us resolve that we shall not relax our efforts until no man is barred or given preference as an immigrant because of his race, his creed or his national origin. Only when we have removed all such gaps between our professed principles and our actual practices can we hope to win the minds and hearts of men to our support in the struggle for freedom and equality throughout the world.

It Can Happen Here

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. MADDEN. Mr. Speaker, the following editorial by Harold Cross in the

Hammond (Ind.) Times reminds us that the Russian problem may eventually solve itself from within its own boundaries:

TOP COMMUNISTS' FUTURE

"All they that take the sword shall perish with the sword." This assurance from the Gospel of St. Matthew would serve as a summary of the rise and fall of the tyrannies of Hitler and Mussolini. It could happen to the present Russian despots also. There appears to be enough jealousy and intrigue in the inner circle now to make it likely that even the topmost officials will meet violent ends. In the 1920's Kamenev, Zinoviev, Rykov, Bukharin, and Leon Trotsky, cofounder with Lenin of the Bolshevik state, were the most influential figures in communism. All were killed by their colleagues. The process presumably still continues, though less well advertised. All that is known is that a prominent figure sometimes disappears, to be seen no more; when the period of silence is long enough, his fate can be guessed.

This could happen to Molotov, Vishinsky, Gromyko, Malik, and Stalin himself. Not one of these can be certain that violent death will not be his portion at any time. It happened to the leaders of the French Revolution; why not to the Russian group? This ever-present possibility may well help to explain Russian edginess and violence of speech.

To Those Who Seek Proof of Rebellion as a Result of the Voice of America Broadcasts

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. SIEMINSKI. Mr. Speaker, 300,000 Polish civilians were killed in 1944 in Warsaw because they rebelled against Nazi tyrants on a false promise of armed assistance by the Soviets.

Is the Voice of America ready to promise and carry out its promise of outside armed assistance to people who rebel against tyranny?

The bulk of United States Information and Education output to Soviet and satellite peoples is designed to foster popular dissatisfaction with Communist regimes. This is done by reminding them constantly of the conditions under which they are forced to live—denial of all personal liberty, sacrifice of their welfare to the selfish interests of their masters, police-state persecution, and so forth, as compared with conditions under which peoples of the free world live.

The purpose of this is to keep alive a realization that there is a better way of life, and that the time will come when the peoples behind the iron curtain can throw off their shackles and join other peoples in the establishment of a free society.

The "time will come" phrase is important. We do not now encourage open rebellion against Communist regimes. Peoples behind the iron curtain are potentially our strongest allies. To encourage them to premature resist-

ance—before there is a good chance of success—would be a disservice to them and to us.

It would make us guilty of murder, the same kind of cold-blooded murder for which Molotov and Stalin are now judged guilty when they incited the Warsaw slaughter of Polish civilians in August, 1944.

Is that what those who seek proof of rebellion, as a result of Voice of America broadcasts would have us charged with? Murder? I think not.

Mr. Speaker, I list below capsules to show the effectiveness of our information and education efforts:

CZECHOSLOVAKIA

Speech made by President Klement Gottwald to the Czechoslovak Communist Party on February 22, 1951:

The Voice of America broadcasts . . . distorted facts, spread untruths, intentionally harmed the economic relations of my country with others and assisted deserters and common criminals.

HUNGARY

From a Hungarian radio program, March 13, 1951:

The Hungarian peace movement must overcome often recurring sectarian shortcomings and combat enemies who attempt to weaken the movement by causing damage, sabotaging production, listening to the American radio, and by spreading rumors.

REFUGEE

A defector stated that his final decision to seek refuge from the U. S. S. R. resulted from learning via the Voice of America broadcasts that the United States did not return Soviet refugees to the Soviet authorities. The Kasenkina case played a large part in encouraging him in this belief.

POLAND

Quoted from the speech made by Bierut, President of Poland, to the Polish Communist Party on February 21, 1951:

We must not, however, blind ourselves to the fact that a few diversionists and foreign agents, hailing chiefly from the remnants of the landowner and speculator class, can do much by diversionary and whispered rumors. This is the more true in view of the fact that the radio propaganda of the imperialist, though noisy and mendacious to the point of idiocy, does reach the most backward cells of our organism. This criminal diversion must be stamped out.

UKRAINE

Excerpt from a Ukrainian displaced persons newspaper in Germany dated March 18, 1951, which says that it was announced over the Kuybishev radio that a trial against "sabotage of the Socialist construction" had just ended. The Stalingrad district court sentenced three persons to death and eight persons to 2 to 18 years' imprisonment. These persons were found guilty of sabotage of the last years distribution plan, of systematic listening to false broadcasts of the Voice of America and of spreading those broadcasts with bad intention.

HUNGARY

A quote from a Budapest radio broadcast made in April 1950. The broadcast over the Budapest Hungarian said:

The summary tribunal of the court of the Hungarian peoples republic in Gyer has pronounced the sentence of death on Agoston

Rahring, Jr., a Kulah accused of hiding arms. The accused was a regular listener to the United States imperialist radio which incites to war, and he speculated on war.

RUMANIA

Speech of the Rumanian Vice Premier Luca delivered on January 26, 1950, which attacked the Voice of America "for spreading false rumors about impending currency changes."

POLAND

A newspaper story in the Washington Evening Star of April 28, 1951:

SEVENTEEN ANTI-RED POLES ESCAPE IRON CURTAIN IN IRON HORSES

BRUSSELS, BELGIUM, April 28.—Broadcasts by the Voice of America and the British Broadcasting Corp. inspired 12 Polish rail workers to flee their Communist homeland in two stolen locomotives and seek refuge in Western Europe, it was learned last night.

With the help of a forged collective passport, the freedom loving 12 broke through the iron curtain and made a 17-day journey across Germany to Courtrai, Belgium. Not even the Russian border guards in East Germany questioned their credentials.

Five of the escapees have been given asylum in Belgium. The other seven continued on to France.

One of the railroaders, Stanislaw Oles, told newsmen this version of the escape:

Two Belgium-made locomotives broke down and Polish officials ordered them sent to Belgium for repairs. Six good Communists were supposed to take the engines, but the 12 nonconformists steamed off in them instead. And with the help of their forged passport and the connivance of a minor railroad official they made their escape without being questioned.

Oles said he and his friends, several of whom had been threatened with arrest for their opposition to the Red regime, had heard about the free labor organizations of the Western World through Voice of America and BBC broadcasts.

Oles said some 2,500 Polish railroaders are under arrest for antigovernment activity. He added:

"You can imagine how many more are taking part in the anti-Communist underground fight in Poland."

"Go to it, Voice of America. Remember, if you weren't hitting 'em where they aint, and spilling 'em on their tails, their Commie catcalls would be kisses of death. Sempre Avanti! Avancez!" Naprzod. Vorward! You are 'chop-chop' for oriental minds. Good luck."

Hold Your Hat, Here Comes Inflation

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BUFFETT. Mr. Speaker, in 1933, the Roosevelt administration deliberately adopted inflation as a governmental policy. The American people have been the victims ever since. They will continue to be, for inflation is being deliberately accelerated.

Seemingly, no scruples deter those who are engineering inflation. They are taking us galloping down the Communist road of currency destruction—and price controls are used as a tactic

of deceit to postpone public understanding of that mad purpose. The people must be kept fooled—at least the majority of them.

As we are steadily pushed toward economic chaos, the ordinary citizen can take some measures to preserve his individual economic strength. That is his patriotic duty, as well as his responsibility to his family.

For his struggle against this governmental betrayal of his freedom, the advice recently carried in the *Farm Journal* is highly constructive. The *Journal* article, by MacDonald Brown, is as follows:

HOLD YOUR HAT, HERE COMES INFLATION
(By MacDonald Brown)

Every farmer who sells anything or buys anything is affected, for better or worse, by the present and coming inflation. What ought he to do about it, if anything?

First let's be sure what we are talking about. There are other meanings of "inflation," but what we mean here is a general rise in the price average of all goods and services; or, to put it the other way around, a general fall in the value and purchasing power of the paper dollar. That is what we have been having since about 1933, and more severely since about 1939. And we are nowhere near the end of it.

WHAT CAUSES INFLATION?

What is the cause? Why do shoes, for example, cost \$9, \$12, \$16, \$25, when the standard price in 1910 was \$3.50—the best shoes only \$6. Why must you now pay a dollar or more for the same hair-cut that cost 25 cents in 1910? Why are most other things in proportion?

These things don't just happen—there is a reason: what is it? Let me state right here the general principle:

The size of the public debt is the thing that determines the price average.

The higher the public debt, the higher will be the prices of goods, of labor, and of everything else, in any country where the citizens are reasonably free to run their own affairs.

I will come back to this a little later, and explain why it works this way. But meanwhile, keep in mind the general basic fact: the larger the public debt, and the heavier the tax burden necessary to carry it, the higher will be prices and wages, and the lower the real value of the dollar.

If this is so, it is easy to see what is ahead of us. The debt of the United States Government was around \$2,000,000,000 in 1903. World War I pushed it up to about \$26,000,000,000 in 1920, from which it gradually fell to about \$16,000,000,000 in 1929. With the depression, the debt grew to around \$44,000,000,000, and after we got into World War II, the debt of course went up like a rocket. Today it is a little under \$260,000,000,000, and is going up. Now we are in a fresh burst of spending and borrowing, resulting from our anti-Communist defense program.

The necessary result of public debt is taxes. History shows that in a free country, in peacetime, the population will not pay out much more than 15 percent of their incomes for taxes. If taxes go higher, the people either vote the Government out of office, or set about increasing their own incomes. This would not be easy for any one taxpayer. But when every taxpayer and every wage earner is pushing in the same direction—up—it becomes easy.

MORE DEBT, MORE TAXES

The total public debt—national, State, and local—is now around \$300,000,000,000, and going higher. Total taxes, national,

State, and local, must be now around \$60,000,000,000 a year—and going higher. That means that the total individual incomes of all of us ought to be about \$400,000,000,000 a year, to carry the tax burden comfortably at 15 percent.

But the whole national income is now supposed to be running at the rate of only \$230,000,000,000 a year. If so, taxes are taking nearly 30 percent of it. Can that last long? It never has. No free country has ever paid that much very long. The answer must be to get incomes up, and that means higher prices on nearly everything.

In other words, more inflation is inevitable; the end is not even in sight.

THE EFFECT ON FARMERS

Assuming now that more inflation is still to come, that prices will go much higher, that the dollar will buy less and less, what will this do to farmers?

The answer is clear. Inflation will hurt badly every farmer who is not prepared for it; but the farmer is in a better position than most people to defend himself.

This is because the farmer's income is very flexible, not fixed; it can be pushed up by one means or another almost as fast as the dollar goes sour.

Prices of many farm products are now tied to parity, which means that if wages and prices of merchandise advance, farm-support prices go up, too.

You may or may not like the parity-price system. Many people think that the whole set-up is unsound. But whether it is or not, there it is. Farm prices, and consequently farm incomes, cannot under present conditions be beaten down much by the pressure of city buyers.

Every farmer, whether covered by support prices or not, must be vigilant to protect his selling prices and income to see that the consuming public, pinched by inflation, does not succeed in rolling back their losses on him.

The farmer is lucky, too, in that his capital is already invested mostly in things—land, buildings, and equipment, not dollars—and the value of things goes up during inflation.

Farm land is one of the very best of inflation defenses, and so are farm improvements. While land prices in normal times follow the course of farm incomes (and they always do, to some extent) over a long stretch land will advance as the value of the dollar falls. A productive farm, run by a good farmer, is probably the most nearly inflation-proof property there is.

But farmers must still pay inflated prices for everything they buy, and there are other pitfalls.

WHAT TO DO ABOUT IT

In particular, the farmer, like everybody else, should not have his savings in the form of dollars. No more than he can help, at least. His balance in bank, the money he has lent on a mortgage or a note, the bonds he owns, even his life insurance, all are payable to him in dollars; and he can be pretty certain that what the dollars will buy when he gets them back will be less than now.

From the standpoint of strict logic, therefore, the farmer, like everybody else in a period of inflation, ought to be a debtor, not a creditor. If he can make profitable use of borrowed money, and if he does not get in so deep that a crop failure or other bad luck could wipe him out, and if being in debt doesn't cost him too much peace of mind, he will be better off to borrow dollars worth say 50 cents in purchasing power, and pay off this debt later with dollars worth 30 cents.

Millions of people have done just that since 1939. Millions of others right now are carrying debts along, watching them get easier and easier to pay off as prices go higher and dollars get cheaper.

OWN THINGS, NOT DOLLARS

However, debt is always dangerous. And each individual farmer should study his own circumstances, and decide how much risk, if any, he can afford to take. But whatever he decides, he can at least get out of the creditor class—he can stop lending money. He should get organized as fast as possible so that he owns things, not dollars or claims on dollars.

A very good spot for savings is a part ownership in some of the great American corporations—in other words, ownership of common stocks. These are nearly inflation-proof. Beware of putting money in any one company, in any speculative business, and particularly in any new, small, or local enterprise. But savings divided among 10 of the great corporations are reasonably safe, and divided among 50 big corporations are as safe as anything can be in this dangerous age.

WHY TAXES FORCE INFLATION

Let us go back briefly to the subject of taxes and prices. How do heavy taxes force inflation?

The way it works is this (and you will see what an inevitable cause-and-effect situation we are up against): the United States Government, the State governments, the cities, counties, townships, and boroughs all borrow money. On this money they must pay interest, and usually must pay something into a sinking fund. To pay the interest and pay back the loan, they must collect taxes; the larger the debt, the higher the taxes.

Now taxes do not come out of nothing. They must be paid by individuals, by corporations, by landowners, by everybody. And these taxes quickly become a cost in the production of everything.

A corporation, for example, hardly ever really pays taxes. It must, and does, add them into the price of whatever it makes and sells. Taxes, therefore, do not come out of the company or its stockholders—they come out of the customer, and that's you. A corporation is a tax collector, not a tax payer.

Now when a corporation's tax rates are jacked up it is only a short time before its selling prices go up, too. That's how the tax is passed along to you. It can easily do this, because all other corporations are feeling the same pinch. So prices edge up a little.

PRICES UP, WAGES UP

Then consumers, workmen, and farmers and their families, finding costs of living advancing, begin to demand higher wages and higher prices. City workmen, particularly those organized in unions, always are able to get more wages. That adds a little more to the cost of goods. Then prices of goods have to be raised a little more. Then more wage demands, enforced by strikes.

And here, almost before we know it, we are in the old familiar see-saw race upward—the "inflation spiral"—wages up, prices up, wages up, and so indefinitely.

Where will it end? Who knows? Do you see any end to public borrowing, to more taxes, to higher wages, to higher costs, to higher prices? If so, where?

Will the dollar ultimately go all the way, and be worth nothing, as the German mark did in 1922 and 1923? No, that is not likely. But let's not forget France, whose paper franc was worth 20 cents in 1914, about 5 cents in 1924, and is a little more than one-quarter of a cent now. It has lost more than 98 percent of its purchasing power since 1914.

About all anybody can do is to understand clearly where we are headed, to protect himself as well as he can, and hope for the best.

Now a few words of warning. I have been speaking right along of the price average. It is the average of all prices that has gone up and will go much further.

That does not mean that the individual price of every individual product—potatoes, broilers, oranges, pork, or steel—will necessarily act the same. The law of supply and demand still holds. If there's a shortage of a given product at a particular moment at a particular place, the price will go up faster. If there is a big surplus over demand, the price of that one product will collapse, often below the cost of production.

In the long run, though, all prices will move together. Whenever supply and demand are pretty well balanced, then the price of that product will be the cost of production plus a profit.

THERE WILL BE SET-BACKS

The other warning point is this: While the end of the inflation will be somewhere away up, it is pretty certain that the upward spiral will be interrupted from time to time by set-backs and depressions. Prices may fall a little. Workmen may even accept a piddling 5-percent cut in wages, as they did in the 1930's.

If that happens, don't jump to the conclusion that inflation is licked—it is only interrupted. Keep your eye fixed on the public debt, on public spending, on taxes, and you will know what to look for when any temporary depression is over.

Finally, some brief remarks on certain incorrect ideas and false theories:

You will hear heavy taxation recommended to soak up purchasing power and so check inflation. There is absolutely nothing in that—not as a permanent thing. An individual does lose some of his purchasing power temporarily when he pays his taxes, but that only makes him struggle all the harder to push up his income for the next year. Heavy taxes guarantee inflation.

You will hear that a surplus of money in circulation, or in bank credit, causes inflation. That is partly true—they both help push up prices. Artificially low-interest rates do, too. So does the fact that we have been "off gold" since 1934. But none of these is the true cause; actually, a surplus of money is more a result of inflation than a cause.

CONTROLS DON'T CONTROL

There is much talk of Government controls of prices and wages, and this can only be called ridiculous. Even in the dark days of World War II the price controls did not control effectively. Real prices, which is to say open-market prices, which is to say black-market prices, rose in spite of laws and armies of administrators and police. In peacetime controls would be even more of a farce.

So there we are. Unless the public debt is repudiated, unless the politicians stop spending, borrowing, and taxing, unless people stop acting like human beings—in other words, unless a few miracles occur—we are in for much more inflation.

Hold your hats, folks—here we go.

Terror in Hungary

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to the following letter, written by Dr. Bela Fabian on July 8, 1951, which appeared in the New York Times of July 10, 1951, together with an editorial which appeared in that paper the same day:

TEROR IN HUNGARY CHARGED—DEPORTATIONS TO SLAVE-LABOR AREAS COMPARED TO NAZI METHODS

TO THE EDITOR OF THE NEW YORK TIMES:

The New York Times in its issue of July 6 publishes C. L. Sulzberger's report from Paris, the gist of which is a letter from Lunganary. Similar letters are being received by the thousands by American citizens of Hungarian origin since the month of May.

The Hungarian National Council (339 East Fifty-second Street, New York City) and the American Hungarian Federation (1624 I Street, Washington, D. C.) are collecting these letters, which reveal all the sad and horrible phases of eviction and deportation now taking place in Hungary. We learn from these letters that members of the middle class, newspapermen and other intellectuals, shopkeepers and handicrafts men have and are being evicted from Budapest and other Hungarian cities under the pretext that they are socially dangerous elements.

Moreover, we learn that age is no obstacle for eviction. The mother of the former mayor of Budapest, Eugene Sipöcz, aged 102; the helpless inhabitants of homes for the blind, the crippled, the aged, as well as incurable patients living in charitable institutions, have not been spared. The bodies of persons who cannot stand the strain and die on their way are simply hauled out of the train at intermediate stations. Endre Morvay, former deputy mayor of Budapest, was among those who died on a deportation train.

People who as a protest pinned the yellow star on their clothes as a reminder of Nazi times were severely beaten. The deportation trains are now leaving Budapest three times a week from a suburban station.

EVICTON OF LEADERS

It was from these letters that we learned, further, that Charles Rassay, Rudolf Rupert, and Gabriel Ugron, former leaders of Hungary's Democratic Party, which had always represented the ideals of freedom in the past, were evicted with their families. For the time being they are living in tiny villages in the eastern part of Hungary, along with the other thousands of evicted persons. These villages, however, can be considered only as transitory places on the line toward Kollma, Karaganda, Tashkent, and Alma-Ata.

There is no difference whatever between Auschwitz and Karaganda. The freezing cold of the Arctic regions, the unendurable labor in the primeval forests, in the gold mines of Kolyma, the coal mines of Karaganda, or in the cotton fields in the tropical heat of Tashkent and Alma-Ata are as murderous as the gas chambers of Auschwitz.

It took a long time for the world to learn the names of Auschwitz and Buchenwald. It may be feared that it will be too late when the opinion of the world will learn the meaning of Kolyma, Karaganda, Tashkent, and Alma-Ata.

FIGHTERS FOR DEMOCRACY

It is a tragic fact that the world is still suffering from a lack of horror in the face of horror. The Democratic Party leaders of Hungary fought for the same ideals in Hungary which were and are the ideals of President Roosevelt and President Truman, of Vice President Barkley, and of Senators Lehman and McMahon.

The Hungarian Communist newspapers say that these Democratic leaders, as well as the thousands of evicted persons, represent a fifth column in the service of the United States attempting to destroy the people's democracy.

I do not know if everyone in the United States is aware of the true meaning of communism. I do not know if everyone is aware in America that communism is a merciless enemy with whom no compromise is possible. I would like to tell those suffering from delusions that it is not only the leaders who are being deported from Hungary. The same

is happening to fellow-travelers, the quarter-masters of communism.

BELA FABIAN.

Member of the Executive Committee of the Hungarian National Council.

NEW YORK, July 8, 1951.

THE MARK OF CAIN

The letter which we publish today from Dr. Fabian, of the Hungarian National Council, is one more reminder that the time has come for our Government to do something about these Communist outrages. To gnash one's teeth, to shout protests and imprecations, to express horror and pity, or to throw up one's hands in despair will not help these victims, although it will give them the satisfaction of knowing that they are not suffering in a vacuum. We must do what we can to make certain that they will not suffer in vain.

To begin with, they must be made to understand that the United States is interested in their fate and trying to help them. It is not enough for the Voice of America to tell them so. They should have direct word from Secretary Acheson or even from President Truman. When the world learned about the Nazi extermination camps and deportations in 1943 and 1944 President Roosevelt and other Allied leaders issued warnings that such measures must stop and that the criminals responsible for them would be held to account. On March 24, 1944, the President took it upon himself to issue a special statement in which he again proclaimed "our determination that none who participate in these acts of savagery shall go unpunished." The statement was widely disseminated throughout Europe and circulated through the underground in enemy territory—and by all accounts it was effective.

In this case we are not at war with Hungary, but we did make a peace treaty with her that contained a human-rights clause, and that clause is now being flagrantly violated. The United States has protested on other occasions to the United Nations against such violations in Hungary, Rumania, and Bulgaria, and the protests were ignored or rejected. Another protest against the present deportations in Hungary would receive a similar rebuff, although it should be made for the record. But obviously some stronger method is required. The men who conduct these brutal deportations, or who carry out the tortures and mock trials of innocent men like Archbishop Groesz or William Oatis, are criminals by the standards of the civilized world. Why cannot they be branded as such by leaders of western civilization? We should name names, and with the mark of Cain on them these men will at least know that some day, circumstances permitting, they will be held to account, and their victims will know that we do not and will not forget.

Statesmanship in Our Relations With Britain

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENDER. Mr. Speaker, ever since the Battle of Breed's Hill, British governments have been ready targets for American irritation. One of the surest ways

to bring a cheer in many areas is to mention "perfidious Albion." This is sheer historical emotionalism, and it has no place in sound American statesmanship.

Today the British are on the eve of exploding their first British-made atomic bomb. This is no mean accomplishment in a land trying earnestly to raise itself by the bootstraps from two savage, power-consuming wars in half a century. England is not prepared to disappear from the list of world powers. More important to us, however, is the realization that much as Britain needs Uncle Sam's dollars and trade, we too need the use of the "permanent, fixed airplane carrier" which the British Isles represent on the European scene. We have only a small number of bombers which could fly from our shores anywhere near a potential enemy. We must have British and French bases. Without them, our atomic power is immobilized.

This is the cardinal fact in our dealings with Britain. Let us not forget it.

Creation of Missouri Valley Authority the Only Way To Prevent Repetition of the Present Disaster

EXTENSION OF REMARKS OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting my bill, H. R. 4881, to establish and develop a Missouri Valley Authority.

This would prevent for all time to come the recurrence of the horrible disaster from which the people of that area are now suffering. It would bring a new life to that entire section of the Middle West.

It would provide navigation that would be of untold value in wiping out the one-way freight rate with which the people of those Western States are now punished.

It would generate twenty or twenty-five billion kilowatt-hours of hydroelectric power every year that is now going to waste, and distribute it throughout the 10 States in the Missouri Valley area—Montana, Wyoming, North Dakota, South Dakota, Nebraska, Kansas, Missouri, Colorado, Minnesota, and Iowa—double the supply of electricity they are now using and reduce the overcharges they are now paying by \$230,000,000 a year—which in a few years would add up to more than this entire development would cost.

It would hold back the floods on the Missouri River, keep them from synchronizing with the floods on the Ohio and the upper Mississippi, and reduce the flood crest on the lower Mississippi to such an extent that it would save enough money on flood control on that

stream in a few years to pay for this entire development.

It would enable the people in that area to conserve the soil that is now being washed away, and at the same time, prevent the destruction of their homes, crops, roads, bridges, schoolhouses, and business establishments, and in that way save billions of dollars for the now unprotected people of that area in the years to come.

Mr. Speaker, I am not speaking as an inexperienced amateur in this field. I was coauthor with Senator Norris, of Nebraska, of the bill creating the Tennessee Valley Authority, and have fought its battles from that day to this. It has wrought the greatest development of ancient or modern times. It is generating every year something like 18,000,000,000 kilowatt-hours of hydroelectric power, which is being distributed at the yardstick rates and saving the people of the TVA area hundreds of millions of dollars every year on their light and power bills alone. It has also supplied a yardstick to show the rest of the country what electricity should cost them, besides originating our present program of rural electrification—the greatest thing that has ever been done for the farmers of this country.

It has provided navigation on the Tennessee River all the way from Paducah, Ky., to Knoxville, Tenn., controlled the floods on the Tennessee and its tributaries, and enabled those people to conserve their soil and protect their area from such disasters as that now being experienced by the people along the raging Missouri.

This is the only way you will ever provide adequate protection for the people in that area, develop that great wealth of hydroelectric power that is now going to waste, improve the navigation all the way up to the headwaters of the Missouri River, and provide a program of soil conservation that will save the rich lands of those States in the years to come.

This project, together with the Tennessee-Tombigbee Inland Waterway, will provide what will amount to a slack-water route from the Gulf of Mexico to Fort Benning, Mont., the head of navigation of the Missouri River, as well as to all points on the Tennessee, the Ohio, the upper Mississippi, the Illinois, and the Great Lakes, and at the same time, save the swift current of the Mississippi for the downstream traffic.

The Tennessee-Tombigbee project is already authorized, and we expect to get funds to speed up its construction right away. In fact, this route is already developed more than half the distance between the Gulf and the Tennessee River, or will be when the Demopolis Dam, which is now under construction, is completed. These two projects will be worth untold billions of dollars to the people of that great midwestern section, from Pittsburgh, Pa., all the way across, including the States of West Virginia, Kentucky, Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Nebraska, North and South Dakota, Montana, Wyoming, Colorado, and the rest of that great western country, as well as that of

Tennessee, western Virginia, western North Carolina, Mississippi, Alabama, Georgia, Florida, Louisiana, Arkansas, Oklahoma, Texas, and the other States touched by this great inland waterway system.

These two projects will not only supply the missing link in our internal waterway system, but will supply the missing link in our national defense and enable us to defend our country against any possible attack.

I sincerely hope that the Committee on Public Works, to which this bill has been referred, will report it at an early date and that Congress will pass it without delay.

We cannot afford to wait.

At this point, I am inserting the bill, H. R. 4881, to establish a Missouri Valley Authority.

The matter referred to follows:

H. R. 4881

A bill to establish a Missouri Valley Authority to provide for unified water control and resource development on the Missouri River, its tributaries and watershed, to prevent floods, reclaim and irrigate lands, encourage agriculture, stimulate industrial expansion, develop low-cost hydroelectric power, promote navigation, increase recreational possibilities, protect wildlife, strengthen the national defense, and for other purposes

Be it enacted, etc., That this act, divided into sections according to the following Table of Contents, may be cited as the "Missouri Valley Authority Act."

Table of Contents

Part A—Objectives of Missouri Valley Authority

- Sec. 2. Declaration of purposes.
- Sec. 2a. Definition of Missouri Valley region.
- Sec. 2b. Headquarters of agency to be in valley.
- Sec. 2c. Recognition of interests of the States.
- Sec. 2d. Recognition of water rights.

Part B—Organization of the Missouri Valley Authority

- Sec. 3a. Missouri Valley Authority.
- Sec. 3b. Location of principal office.
- Sec. 4a. Composition of Board of Directors.
- Sec. 4b. Terms of office of Directors.
- Sec. 4c. Vacancies on Board.
- Sec. 4d. Quorum of Board.
- Sec. 4e. Salary of Directors.
- Sec. 4f. Restrictions on public-utility affiliation.
- Sec. 5a. Duties of the advisory committee.
- Sec. 5b. Composition of advisory committee.
- Sec. 5c. Vacancies on advisory committee.
- Sec. 6a. Applicability of Budget and Planning Act of 1921.
- Sec. 6b. Disposition of net proceeds of Corporation revenues.
- Sec. 6c. Required accounting records.
- Sec. 6d. Applicability of Government Corporation Control Act.
- Sec. 6e. Financial discretion of the Corporation.
- Sec. 6f. Administrative accounts and forms.

Part C—Formulation of the plan for Missouri Valley development

- Sec. 7a. Specifications of the Corporation plan.
- Sec. 7b. Purposes to be considered in making the plan.
- Sec. 7c. Specified detail of the plan.
- Sec. 7d. Cooperation with other Government agencies in planning.
- Sec. 7e. Submission of the plan to the Congress.
- Sec. 8. Limitation of public-land law.

*Part D—The powers and duties of the Corporation**Corporate Powers*

Sec. 9. To act as a corporate entity.

Acquisition of Property

Sec. 10a. To acquire property.

Sec. 10b. To purchase materials.

Eminent Domain

Sec. 11a. To exercise the right of eminent domain.

Sec. 11b. Condemnation procedure.

Sec. 11c. Valuation procedure.

Sec. 11d. Appeal of Commissioners' award.

Sec. 11e. Appeal to circuit court of appeals.

Sec. 11f. Passage of title to the United States.

Sec. 11g. Procedure if property is owned by legal incompetents.

General Powers and Duties of the Corporation

Sec. 12a. Construction of projects.

Sec. 12b. Transfer of existing projects to Corporation.

Sec. 12c. Make agreements with non-Missouri Valley States.

Sec. 12d. Make agreements with local governments.

Sec. 12e. Readjustment of displaced populations.

Sec. 12f. Operation through other Government agencies.

Sec. 12g. Operation of Fort Peck Dam.

Sec. 12h. General limitations on Corporation activities.

Disposition of Water and Federal Land

Sec. 13a. Authority to sell water.

Sec. 13b. Authority to subdivide Federal lands.

Sec. 13c. Appraisal of affected lands.

Sec. 13d. Procedure for sale of irrigated lands.

Sec. 13e. Allocation of costs to irrigation.

Sec. 13f. Water repayment contracts.

Sec. 13g. Irrigation of leased Federal land.

Sec. 13h. One-hundred-and-sixty-acre limitation on water delivery.

Sec. 13i. Irrigation of excess lands.

Sec. 13j. Transfer of excess lands.

Disposition of Electric Power

Sec. 14a. Authority to sell surplus power.

Sec. 14b. Authority to construct and operate transmission facilities.

Sec. 14c. Priorities in disposal of power.

Sec. 14d. Sale to individuals.

Sec. 14e. Conditions of power sales.

Sec. 14f. Authority to acquire existing facilities.

Sec. 14g. Authority to determine power rates.

Sec. 14h. Definition of terms: States, counties, and municipalities.

Sec. 15. Improvement of private lands.

Extension of Credit to Local Governments

Sec. 16a. Credit for water facilities.

Sec. 16b. Credit for power facilities.

Allocation of Costs Among Multipurpose Projects

Sec. 17a. Procedure for allocation of costs.

Sec. 17b. Reporting on allocations to the Congress.

Sec. 17c. Power cost records.

Safeguarding the Missouri River

Sec. 18a. Preventing contamination or obstruction.

Sec. 18b. Enforcement of Corporation rules.

Continuing Powers and Duties of the Corporation

Sec. 19. Authorization for continuing activities of Corporation.

Sec. 19a. Conservation of resources of Missouri Valley.

Sec. 19b. Promotion of research.

Sec. 19c. Consultation with other Federal agencies.

Sec. 19d. Consultation with the States.

Sec. 20a. Access to Patent Office of the United States.

Sec. 20b. Employee inventions.

**Take Tax Assistance Payments*

Sec. 21a. Assistance payments in lieu of taxes.

Sec. 21b. Report to the Congress on payments.

Sec. 21c. Tax exemption of Corporation.

Part E—Miscellaneous

Sec. 22a. Employment policy.

Sec. 22b. Nonpartisan employment.

Sec. 22c. Compensation of injured employees.

Sec. 22d. Prevailing wages on construction work.

Sec. 22e. Use of other agency personnel.

Sec. 23a. Applicability of penal statutes.

Sec. 23b. Punishment for fraud.

Sec. 23c. Punishment for conspiracy.

Sec. 24. Separability provision.

PART A—OBJECTIVES OF THE MISSOURI VALLEY AUTHORITY

SEC. 2. In order to provide for the control and prevention of flood in the Missouri Valley region, the generation, sale, and distribution of electricity, the reclamation of public lands, and for the application and use of the waters of the Missouri River and its tributaries on the public and private lands of the area for irrigation and other useful purposes, to safeguard the navigable waters, to promote navigation, to encourage a sound agriculture, to encourage industrial development, to preserve and develop the recreational advantages, and to foster the fuller utilization of the resources of the region, all for the purpose of fostering and protecting commerce among the several States, strengthening the national defense, conserving the water, soil, and forest resources of the Nation, and promoting the general welfare of the United States, it is hereby declared to be the policy of the United States—

(a) that the Federal Government shall establish and maintain a broad program of unified water control and resource development for the Missouri Valley region, consisting of the entire Missouri River, its tributaries and watershed, as located within the following States: Montana, Wyoming, North Dakota, South Dakota, Nebraska, Kansas, Missouri, Colorado, Minnesota, and Iowa;

(b) that the administration of such a multipurpose program shall be entrusted to a Federal regional agency having its principal headquarters in the region, which shall be directly responsible to the President and Congress, with full authority and responsibility for carrying out the program herein authorized;

(c) that the interests and rights of the States in determining the development of the watersheds within their borders and likewise their interests and rights in water utilization and control, as well as the preservation and protection of established and potential uses for all purposes, of the waters of the region's rivers, shall be recognized by such a regional agency to the fullest possible extent, and that accordingly such a regional agency shall utilize to the fullest possible extent the advice, assistance, and cooperation of the people of the region and their public and private organizations, local and State, as well as the advice, assistance, and cooperation of the existing operating agencies of the Federal Government;

(d) that nothing in this act shall be construed as affecting or intended to affect or in any way to interfere with any vested right acquired under the laws of any State or Territory relating to the control, appropriation, use or distribution of water used in irrigation, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water, in, to, or

from any interstate stream, or the waters thereof: *Provided*, That nothing in this section shall limit the authority of the regional agency to acquire by purchase, lease, condemnation, or donation, real or personal property, or any interest therein, which falls within the scope of the plans formulated by the Authority, transmitted to the President and approved by the Congress, as provided in section 7 of this act.

PART B—ORGANIZATION OF THE MISSOURI VALLEY AUTHORITY

SEC. 3. (a) To carry out the purposes and policy of this act, there is hereby created a body corporate which shall be known as the "Missouri Valley Authority" (hereinafter referred to as the "Corporation") and which shall be an instrumentality of the United States.

(b) The Corporation shall maintain its principal office at a convenient place in the territory in which its activities are conducted. Upon selecting the location of its principal office, and in the event it later makes a change in such location, the Corporation shall file notice of such selection or change for publication in the Federal Register.

BOARD OF DIRECTORS OF CORPORATION

SEC. 4. (a) The Corporation shall be directed and controlled by a board of five directors, who shall be appointed by the President, by and with the advice and consent of the Senate. Any member of the Board may be removed by the President. In appointing the members of the Board, the President shall designate the Chairman. The members of the Board of Directors shall be citizens of the United States, and at least three members of the Board shall have had a legal residence within the Missouri Valley region for a period of not less than 5 years prior to appointment. All other officials, agents, and employees shall be designated and selected by the Corporation. Each member of the Board, and each of its officers, before entering upon the duties of his office, shall subscribe to an oath (or affirmation) to support the Constitution of the United States and to perform faithfully and impartially the duties imposed upon him by this act.

(b) The terms of office of the members first taking office after the approval of this act shall expire as designated by the President at the time of nomination, one at the end of the third year, two at the end of the sixth year, and two at the end of the ninth year after the date of approval of this act. A successor to a member of the Board shall be appointed in the same manner as the original members and shall have a term of office expiring 9 years from the date of the expiration of the term for which his predecessor was appointed.

(c) Any member appointed to fill a vacancy in the Board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

(d) Vacancies in the Board, so long as there shall be three members in office, shall not impair the powers of the Board to execute the functions of the Corporation, and three of the members in office shall constitute a quorum for the transaction of the business of the Board.

(e) Each of the members of the Board shall receive a salary at the rate of \$20,000 a year, to be paid by the Corporation as current expenses. Members of the Board shall be reimbursed by the Corporation for actual expenses (including traveling and subsistence expenses) incurred by them in the performance of the duties vested in the Board by this act. No member of said Board shall, during his continuance in office, be engaged in any other business, but each member shall devote himself to the work of the Corporation.

(f) No Director shall, during his continuance in office, have a financial interest in any public-utility company engaged in the business of generating, transmitting, distributing, or selling power to the public; nor in any holding company or subsidiary company of a holding company as those terms are defined in the Public Utility Holding Company Act of 1935.

THE ADVISORY COMMITTEE

SEC. 5. (a) The Board shall be assisted in the discharge of its duties by an advisory committee which shall act in an advisory capacity upon such matters of broad policy and on specific matters as hereafter designated, as may be referred to it by the Board.

(b) The advisory committee shall consist of the Governor or his designee from each of the States within the Missouri Valley region as set forth in section 2 (a) of this act, and of the principal officer or his designee of the following Federal Government agencies: Departments of Interior, Agriculture, Commerce, Justice, War, Labor, Federal Power Commission, and Board of Governors of the Federal Reserve System; and twelve persons, residents of the area of the Authority, three of whom shall be selected by the President to represent the interests of agriculture, three to represent the interests of industry and commerce, three to represent the interests of labor, and three to represent wildlife and aquatic life, conservation, and recreation, in the area covered by the Authority and activities of the Corporation. The advisory committee shall organize and choose its own officers. It shall meet in the area not less than twice each year to receive reports of progress and in one of such meetings shall receive a copy of the annual report of the Corporation. The committee may make such comments to the Corporation and to the President on the annual reports as it sees fit to make. Extraordinary meetings of the advisory committee may be called upon petition of a majority of its members, or upon written notice of the Chairman of the Board.

The advisory committee shall advise concerning the initial plan for unified development of the Missouri Valley region before it is reported to the President and Congress, as provided in section 7 (a). The Governors of the States within the Missouri Valley region shall constitute a special panel of the advisory committee to advise concerning Federal-State relationships on all matters coming under the purview of the advisory committee.

Each member of the committee, before entering upon the duties of his office, shall subscribe to an oath (or affirmation) to support the Constitution of the United States and to perform faithfully and impartially the duties imposed upon him by this act. Members of the advisory committee shall be reimbursed for actual expenses incurred in the performance of their duties. The term of office of committee members from Government agencies shall be coextensive with their terms of office in their respective agencies. The terms of office of non-Government members shall be fixed in such manner as to provide that the term of one each of the three representing agriculture, industry and commerce, labor, and wildlife and aquatic life, conservation, and recreation, shall expire as designated by the President at the time of nomination, one at the end of the third year, one at the end of the sixth year, and one at the end of the ninth year after the date of approval of this act. A successor shall be appointed in the same manner as the original member and shall have a term of office expiring 9 years from the date of the expiration of the term for which his predecessor was appointed.

(c) Any member appointed to fill a vacancy in the committee occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

SEC. 6. (a) All funds required by the Corporation in addition to those derived and expended pursuant to subsection (b) hereof shall be provided by appropriations in accordance with the procedures of the Budget and Accounting Act, 1921 (42 Stat. 20), except as otherwise provided herein. All appropriations necessary to carry out this act are hereby authorized.

(b) The net proceeds for each fiscal year derived by the Board from the sale of power and water by the Corporation, and from any other activities of the Corporation, including the disposition of any real or personal property, after deducting the cost of operation and maintenance, and an amount deemed by the Board as necessary to withhold as operating capital or devoted by the Board to new construction, shall be paid into the Treasury of the United States at the end of each calendar year. Any funds retained by the Corporation shall be devoted only to construction work of a character directly incidental to the projects authorized by the Congress except as appropriated by the Congress for specific purposes.

(c) The Corporation shall at all times maintain complete and accurate books of account. The system of accounts and books and records kept for that purpose shall be subject to the approval of the Comptroller General of the United States, as to their adequacy for the accounting purposes of the Corporation. The Corporation shall maintain its power accounting system in conformity with the Federal Power Commission's uniform system of accounts. In December of each year the Board shall file with the President and the Congress a financial statement and a complete report as to the business of the Corporation covering the preceding governmental fiscal year.

(d) The Corporation shall determine and prescribe the manner in which its obligations and expenses shall be incurred, allowed, and paid: *Provided*, That the Corporation shall be a wholly owned Government corporation within the meaning of the Government Corporation Control Act, approved December 6, 1945, and its transactions and operations shall be subject to control in the manner provided in that act except as specifically set forth in section 6 (b) above.

(e) Nothing in this act shall be construed to relieve the treasurer or other accountable officers or employees of the Corporation from compliance with the provisions of existing law requiring the rendition of accounts for adjustment and settlement pursuant to section 236, Revised Statutes, as amended by section 305 of the Budget and Accounting Act, 1921 (42 Stat. 24), and accounts for all receipts and disbursements by or for the Corporation shall be rendered accordingly: *Provided*, That subject only to the provisions of the Missouri Valley Authority Act, the Corporation is authorized to make such expenditures and to enter into such contracts, agreements, and arrangements, upon such terms and conditions, and in such manner as it may deem necessary, including the final settlement of all claims and litigation by or against the Corporation, and, notwithstanding the provisions of any other law governing the expenditure of public funds, the General Accounting Office, in the settlement of the accounts of the treasurer or other accountable officer or employee of the Corporation, shall not disallow credit for, nor withhold funds because of, any expenditure, not tainted with fraud, which the Board shall determine to have been necessary to carry out the provisions of said act.

(f) The Corporation shall determine its own system of administrative accounts and the forms and contents of its contracts and other business documents except as otherwise provided in this act.

PART C—FORMULATION OF THE PLAN FOR MISSOURI VALLEY DEVELOPMENT

SEC. 7. (a) The Corporation is hereby authorized and directed to formulate and report to the President and Congress with the utmost expedition its recommendations for the unified development of the Missouri Valley region in accordance with the purposes and policy of this act: *Provided*, That a progress report shall be made quarterly to the President and to the Congress.

Such recommendations shall include a complete plan for the unified control and utilization of the waters of the Missouri River system, which will reconcile and harmonize the requirements for flood control, navigation, reclamation, agricultural purposes, power, recreational, the recovery of archeological, paleontological, and historical remains, and other needs in such a way as to secure the maximum public benefit for the region and the Nation: *Provided, however*, That works and programs already approved by the Congress falling within the scope of river basin development as defined in this act, for which appropriations have already been made, shall be included in the plan insofar as may be practicable and continued to completion, without regard to the time which elapses between the enactment of this act and the approval of the unified plan as set forth in this section: *Provided further*, That the use for navigation of waters arising in the States lying wholly or partly east of the ninety-eighth meridian shall be only such use as does not conflict with any beneficial, consumptive use, present or future, in States lying wholly or partly west of the ninety-eighth meridian of such waters for domestic, municipal, stock, water, irrigation, mining, or industrial purposes. In formulating such a unified plan and recommendations, the Corporation shall give particular consideration to the general plans set forth in House Document No. 475 and Senate Document No. 191, Seventy-eighth Congress, second session, as revised by Senate Document No. 247, Seventy-eighth Congress, second session, subject to such modifications as the board determines to be necessary to best serve the purposes of this act, and shall conduct such additional surveys and investigations as it deems necessary or proper, and shall enlist the advice and assistance of appropriate local, State, and Federal governmental agencies, educational institutions, and private organizations: *Provided further*, That in formulating a unified plan and making recommendations the Corporation shall incorporate the programs and insure such proper participation of existing governmental agencies as it deems consistent with the purposes of obtaining the maximum river basin resources development under the unified system of planning and management contemplated by this act. Particular consideration in such a plan and recommendations shall be given to projects and activities which shall serve the following purposes:

(1) The control and prevention of floods which impair and disrupt navigation, the facilities of interstate commerce, the properties and functions of the United States, and agricultural and industrial properties and production, by, among other means, the storage, control, and disposition of flood and surplus waters, and the control and retardation of water run-off and the restoration and improvement of the absorption and infiltration capacity of the soil. Projects for such purposes shall include, but not by way of limitation, dams, reservoirs, levees, spillways, and floodways; improved methods and conditions of soil conservation, utilization, fertilization, and cultivation; and the conservation of forests and afforestation and reforestation of lands.

(2) The promotion of navigation by, among other means, the improvement of the channels of navigable rivers and their tributaries;

the prevention of siltation of such waters; the regulation of stream flow; and the development and coordination of navigation facilities.

(3) The proper utilization and reclamation of arid, semiarid, or swampy public lands by, among other means, the irrigation, drainage, development, and improvement of such lands.

(4) The safeguarding of navigable waters and their use by, among other means, the prevention and abatement of pollution of navigable streams and their tributaries.

(b) So far as may be consistent with or necessary or appropriate for the control and prevention of floods, the promotion of navigation, the safeguarding of navigable waters, and the reclamation of the public lands, as provided in subsection (a), the plan and recommendations shall incorporate the existing and partially completed structures developed pursuant to the Flood Control Act of December 22, 1944, and subsequent appropriation Acts for these purposes, and shall give due regard to the following, among other considerations:

(1) the present and future development and conservation of water for power, irrigation, and other beneficial uses;

(2) the prudent husbandry of soil, mineral, and forest resources and their conservation for recreation, the protection of wild game, aquatic life, the recovery of archeological, paleontological, and historical resources, and other beneficial uses;

(3) the restoration of the declining subsurface water table, taking account of the influence of subsoil insects, soil bacteria, and other contributing factors,

(4) the preventing of irreparable waste of the Nation's resources from droughts, winds, dust storms, and soil erosion

(5) the utilization and disposition of war and defense plants, in such manner as to encourage desirable industrial and business expansion;

(6) the establishment of a permanently prosperous and well-balanced agriculture within the region, pursuant to the policy of this act, and including a comprehensive program for provision of low-cost fertilizer to farmers;

(7) the integration and interconnection of projects and activities, the development of their multiple purposes, and the equitable distribution of the benefits thereof;

(8) equitable contributions to cost by States and subdivisions and agencies thereof benefited by the projects and activities; and

(9) such economic, social, and cultural values as may be affected or furthered by the projects and activities

(c) The plan and recommendations authorized in subsection (a) hereof shall be in sufficient detail to provide the President, the Congress, and the people and institutions of the region with reasonably specific information as to—

(1) the water control and utilization policy and program which should be established and maintained;

(2) the nature, scope, and general location of the projects and activities recommended, including present recreational advantages or development, and the estimated cost and benefits thereof;

(3) the order of preference and priority which should be followed in the construction and carrying out of such projects and activities in the light of the conditions existing and anticipated at the time of the report.

(d) In formulating such plan and recommendations, the Corporation shall give due consideration to existing surveys and plans relating to water control and resource development for various purposes, shall conduct such additional surveys and investigations as it deems necessary or proper, and shall enlist the advice and assistance of appropriate local, State, and Federal gov-

ernmental agencies, educational institutions, and private organizations.

(e) The plan and recommendations formulated by the Corporation and submitted to the President and Congress as provided in subsection (a) hereof shall be submitted to both Houses on the same day and to each House while it is in session, and shall remain available for the consideration of the Congress during the session in which it is introduced but in no case for less than a period of 90 calendar days. If not affirmatively disapproved by the Congress by concurrent resolution, or if no action is taken by the Congress to extend the time of consideration, said plans and recommendations shall be deemed to be effective upon the adjournment sine die of the Congress. If the Congress adjourns sine die before the expiration of the 90-day period, a new 90-day period shall begin on the opening day of the next succeeding regular or special session. A similar rule shall be applicable in case of all subsequent adjournments sine die before the expiration of 90 days. Additions to and modifications of the plan and recommendations may be submitted to the President and Congress in the same manner and shall be subject to approval on the same conditions as the original plan and recommendations.

Sec 8. This act recognizes the existence of an important body of law affecting the public lands, irrigation, reclamation, grazing, geological survey, national parks and monuments, historical and archeological resources, mines and mineral holdings of the United States Government, and forest land.

The Authority is hereby directed to take such law into account in formulating its plan for the unified development of the Missouri River Basin. It is further authorized and directed to make such contracts with the appropriate agencies of the Government administering these laws as will preserve effective participation of these agencies in the unified development of the Missouri River Basin and other proper administration of the laws in question to the fullest extent deemed practicable by the Corporation.

PART D—THE POWERS OF THE CORPORATION CORPORATE POWERS

Sec 9 Subject to the provisions of this act, the Corporation—

(1) shall have succession in its corporate name;

(2) may adopt and use a corporate seal, which shall be judicially noticed,

(3) shall have power to enter into such contracts and agreements, and to exercise such powers and do such things, as may be necessary or appropriate to carry out the powers now or hereafter conferred upon it by law,

(4) may sue and be sued in its corporate name and may settle and adjust claims held by it against other parties or persons and by other parties and persons against it, except claims cognizable under the Federal Tort Claims Act;

(5) shall be held to be an inhabitant and resident, within the meaning of the laws of the United States relating to the venue of civil suits, of any judicial district lying wholly or in part within the Missouri Valley region as defined in section 2 (a). The district courts of the United States shall have original jurisdiction of all proceedings against the Corporation or against any Director, officer, employee, or agent thereof by reason of his being such Director, officer, employee, or agent; and the Corporation or any such Director, officer, employee, or agent thereof who is a defendant in any such suit may, at any time before the trial thereof, remove such suit from a State court into the district court of the United States for the proper district by following the procedure for the removal of causes otherwise provided by law.

ACQUISITION OF PROPERTY

SEC. 10. The Corporation is hereby authorized—

(a) to acquire, by purchase, lease, condemnation, or donation, or by transfer under section 12 (g) hereof, such real and personal property and any interest therein, and may sell, lease, or otherwise dispose of any real and personal property and any interest therein, as in its judgment may be necessary in carrying out the purposes of the Corporation under this act. Title to all real property or interest therein, whether acquired by condemnation or otherwise, shall be taken in the name of the United States of America, and thereupon such real property shall, for the purposes of this act, be entrusted to the Corporation as agent of the United States. The Corporation shall not dispose of any real property on which is located a permanent dam, hydraulic power plant, or munitions plant heretofore or hereafter constructed by or on behalf of the United States or the Corporation. In accomplishing the purposes of this section, every effort shall be made to preserve existing recreational values. The provisions of section 355, Revised Statutes (40 U. S. C. 255), as amended, shall be inapplicable as respects acquisitions by the Corporation. All condemnation proceedings shall be had pursuant to the provisions and requirements hereinafter specified: *Provided*, That nothing contained herein or elsewhere in this act shall be construed to deprive the Corporation of the rights conferred by the act of February 26, 1931 (46 Stat. 1421),

(b) to purchase and acquire such materials and other personal property as may be required to carry out the purposes and policy of this act. All purchases and contracts for supplies or services, except for personal services, made by the Corporation shall be made after advertising, in such manner and at such times sufficiently in advance of opening bids, as the Board shall determine to be adequate to insure notice and opportunity for competition: *Provided, however*, That advertisement shall not be required when (1) the Board determines that an emergency requires immediate delivery of the supplies or performance of the services; or (2) repair parts, accessories, supplemental equipment, or services are required for supplies or services previously furnished or contracted for; or (3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed \$500; in which cases such purchases of supplies or procurement of services may be made in the open market in the manner common among businessmen: *Provided further*, That in comparing bids and in making awards the Board may consider such factors as relative quality and adaptability of supplies or services, the bidder's financial responsibility, skill, experience, record of integrity in dealing, and ability to furnish repairs and maintenance services, and the time of delivery or performance offered.

EMINENT DOMAIN

SEC. 11. (a) The Corporation shall have power in the name of the United States of America to exercise the right of eminent domain, and in the purchase of any real estate or the acquisition of real estate by condemnation proceedings, the title to such real estate shall be taken in the name of the United States of America, and thereupon all such real estate shall be entrusted to the Corporation as the agent of the United States to accomplish the purposes of this act. Any proceedings under this section shall be instituted in the United States district court for the district in which the property with reference to which the power of eminent domain is being exercised, is located.

(b) Upon the filing of a petition for condemnation and for the purpose of ascertaining the value of the property to be acquired,

and assessing the compensation to be paid, the court shall appoint three commissioners who shall be disinterested persons and who shall take and subscribe an oath that they do not own any lands, or interest or easement in any lands, which it may be desirable for the United States to acquire in the furtherance of said project, and such commissioners shall not be selected from the locality wherein the land sought to be condemned lies. Such commissioners shall receive a per diem of not to exceed \$25 for their services, together with an additional amount of \$10 per day for subsistence for time actually spent in performing their duties as commissioners.

(c) It shall be the duty of such commissioners to examine into the value of the lands sought to be condemned, to conduct hearings and receive evidence, and generally to take such appropriate steps as may be proper for the determination of the value of the said lands sought to be condemned, and for such purpose the commissioners are authorized to administer oaths and subpoena witnesses, which said witnesses shall receive the same fees as are provided for witnesses in the Federal courts. The said commissioners shall thereupon file a report setting forth their conclusions as to the value of the said property sought to be condemned, making a separate award and valuation in the premises with respect to each separate parcel involved. Upon the filing of such award in court, the clerk of said court shall give notice of the filing of such award to the parties to said proceeding, in manner and form as directed by the judge of said court.

(d) Either or both parties may file exceptions to the award of said commissioners within 20 days from the date of the filing of said award in court. Exceptions filed to such award shall be heard before three Federal district judges unless the parties, in writing, in person, or by their attorneys, stipulate that the exceptions may be heard before a lesser number of judges. On such hearings such judges shall pass de novo upon the proceedings had before the commissioners, may view the property, and may take additional evidence. Upon such hearings the said judges shall file their own award, fixing therein the value of the property sought to be condemned, regardless of the award previously made by the said commissioners.

(e) At any time within 30 days from the filing of the decision of the district judges upon the hearing on exceptions to the award made by the commissioners, either party may appeal from such decision of the said judges to the circuit court of appeals, and the said circuit court of appeals shall upon the hearing on said appeal dispose of the same upon the record, without regard to the awards or findings theretofore made by the commissioners or the district judges, and such circuit court of appeals shall thereupon fix the value of the said property sought to be condemned.

(f) Upon acceptance of an award by the owner of any property herein provided to be appropriated, and the payment of the money awarded or upon the failure of either party to file exceptions to the award of the commissioners within the time specified, or upon the award of the commissioners and the payment of the money by the United States pursuant thereto, or the payment of the money awarded into the registry of the court by the Corporation, the title to said property and the right to the possession thereof shall pass to the United States, and the United States shall be entitled to a writ in the same proceeding to dispossess the former owner of said property, and all lessees, agents, and attorneys of such former owner, and put the United States, by its corporate creature and agent, the Corporation, into possession of said property.

(g) In the event of any property owned in whole or in part by minors, or insane persons, or incompetent persons, or estates

of deceased persons, then the legal representatives of such minors, insane persons, incompetent persons, or estates shall have power, by and with the consent and approval of the trial judge in whose court said matter is for determination, to consent to or reject the awards of the commissioners herein provided for, and in the event that there be no legal representatives, or that the legal representatives for such minors, insane persons, or incompetent persons shall fail or decline to act, then such trial judge may, upon motion, appoint a guardian ad litem to act for such minors, insane persons, or incompetent persons, and such guardian ad litem shall act to the full extent and to the same purpose and effect as his ward could act, if competent, and such guardian ad litem shall be deemed to have full power and authority to respond, and to conduct or maintain any proceeding herein provided for affecting his said ward.

GENERAL POWERS AND DUTIES OF THE CORPORATION

SEC. 12. (a) The Corporation is hereby authorized and directed to construct, acquire, operate, and carry out such projects and activities in the Missouri Valley region described in section 2 (a) as will serve to control and prevent floods, to reclaim the public lands, to promote navigation, and safeguard the navigable waters, and so far as may be consistent with such purposes to generate and distribute the maximum amount of electric power, having due regard to the preservation of natural recreational advantages and values: *Provided, however,* That nothing contained in this act shall be interpreted as authorizing the Corporation to exercise the powers herein granted in any public park or monument without express consent of Congress or the State by which said park or monument was established. The Corporation shall have such powers as may be necessary or appropriate to effectuate the purposes, policy, and program authorized in this section, including, but not by way of limitation, the power—

(1) to acquire, construct, operate, maintain, and improve dams, locks, reservoirs, levees, spillways, floodways, fishways, conduits, powerhouses, steam-generating plants, transmission lines, rural electric lines, and substations, canals, roads, roadways, docks, wharves, terminals, and recreation facilities, and structures, equipment, and facilities incidental thereto;

(2) to acquire, construct, operate, maintain, and improve such machinery, equipment, structures, and facilities, for the storage and transportation of water or for the generation and transmission of electric energy as the Corporation deems necessary or appropriate to supply existing and potential users or markets;

(3) to develop and provide such methods and conditions of water and land utilization as the Corporation deems necessary or appropriate to prevent and abate floods and droughts.

In order further to effectuate such primary purposes in the construction and operation of dams for projects entrusted to it, the Corporation insofar as practicable, shall make provision, in the construction of any dam, for such foundations, sluices, pen stocks, and other works as may be necessary or appropriate to prevent the waste of water power at such dam and to make possible the economical future development of water power at such dam.

(b) The President is authorized, whenever in his judgment the purposes of this act and the interests of economy and efficiency will be served thereby, to transfer to the Corporation the use, possession, control, and operation of any dam or water-control project, together with appurtenant works and transmission facilities, constructed, under construction, or hereafter constructed by or in behalf of the United States or its instrumen-

talities in the Missouri Valley region, and of such other real or personal property of the United States, or any agency thereof, as he may from time to time deem necessary or proper to carry out the purposes and policy of this act. In connection with any such transfer, the President shall make such provision as he deems necessary or appropriate for the transfer to the Corporation of unexpended balances of appropriations available for use in respect of such dam and other water-control projects, appurtenant works, transmission facilities, and of such other property, together with personnel equipment, and any powers, duties, and obligations pertaining thereto. Nothing in this section shall constitute an order of transfer to the Authority of any moneys in the reclamation fund.

(c) The Corporation is hereby authorized to negotiate agreements with States or their instrumentalities adjacent to the Missouri Basin States as enumerated in section 2 (a) to effect mutually satisfactory transmountain diversions of water. Such agreements shall be reported to the President and to the Congress.

(d) The Corporation is authorized to negotiate, execute, and carry out contracts with States, counties, municipalities, and all State agencies and with railroads, railroad corporations, common carriers, and all public-utility commissions and any other person, firm, or corporation, for the relocation of railroad tracks, highways, highway bridges, mills, ferries, electric-light plants, and any and all other properties, enterprises, and projects, whose removal may be necessary in order to carry out the provisions of this act. The Corporation is further authorized to exercise the power of eminent domain to carry out the purposes of this subsection.

(e) The Corporation is authorized to advise and cooperate in the readjustment of the population displaced by the construction of dams, the acquisitions of rights-of-way, and other necessary acquisitions of land, in order to effectuate the purposes of this act; and may cooperate with Federal, State, and local agencies to that end.

(f) The Corporation is authorized, if in its judgment the interests of economy and efficiency will be served thereby, to construct or operate any project or conduct any activity entrusted to it through, or in conjunction with, other departments and agencies of the United States, or in conjunction with States or subdivisions or agencies thereof, including local levee and drainage districts, or other public or cooperative agencies. The departments and agencies of the United States are hereby authorized to participate in the construction or operation of such projects or the conduct of such activities on terms mutually agreeable to such department or agency and the Corporation.

(g) The exclusive use, possession, control, and operation of the Fort Peck Dam across the Missouri River in the State of Montana, together with its appurtenant works, powerhouse, transmission lines, and all equipment, lands, and buildings, in connection therewith, are hereby transferred and entrusted to the Corporation for the purposes of this act.

(h) All the projects and activities authorized pursuant to this section shall be constructed, operated, and carried out in accordance with the purposes and policy of this act and from the effective date of the plan and recommendations provided for in section 7 hereof, in accordance with the more precise terms thereof.

DISPOSITION OF WATER AND FEDERAL LAND

SEC. 13. (a) The Corporation is authorized to contract for the delivery of water for any purpose with individual water users, organizations of water users, irrigation districts, conservancy districts, associations, corporations, or other public or private agencies. The contract shall be in conformity with

the provisions and policies of this act and may include such terms, conditions, rules, and regulations as in the judgment of the Board may be necessary to carry out the purposes of this act. In case of noncompliance with the terms, conditions, rules, or regulations included in any contract for the delivery of water the contract may provide that it shall be voidable at the election of the Board and it may also provide for discontinuing the delivery of water thereunder.

(b) Whenever any lands in Federal ownership are to be benefited by the application of water under the authority of this act, the Corporation shall survey, plat, and analyze the land and divide it into farm units. Wherever necessary to the orderly development of the whole area to be benefited, the area may be divided into irrigation blocks consisting of groups of units or areas defined by natural boundaries to which the waters shall be applied at substantially the same time and by means of the same general distribution system, each unit shall be offered for occupancy or sale as hereinafter provided. No units shall include more than 160 acres of irrigable land or the adjusted acreage above the 160-acre limitation hereinafter set forth. Nothing in this section shall limit the right of ownership of any quantity of nonirrigable land, or land to which water could be made available under the provisions of the Corporation but is not delivered.

(c) All public-domain lands to be benefited by waters developed by the project shall be impartially appraised by the Corporation without reference to or increment on account of the construction of the project. Such lands as shall have been purchased by the Corporation, or by other agencies of the Federal Government and thereafter transferred to the Corporation, shall likewise be appraised without reference to or increment on account of the construction of the project and without reference to the price for which said lands were purchased by the Corporation or by other agencies of the Federal Government. Such appraisals shall take into consideration the value of any land improvements and/or structures or other improvements erected on the property and such appraisal shall constitute the sales price of the units created from said lands.

(d) When lands in Federal ownership are ready for occupancy and water is available for delivery thereto, the Corporation shall publish a plat of said farm units and a notice of its intention to sell such farms upon application, giving the general conditions of sale, including credit terms and qualification of applicants. Said notice shall be published once each week for three successive weeks in a newspaper of general circulation in the county or counties in which the units or any portions thereof are located and copies of said notice shall be sent for posting or other publication to such persons, organizations, or agencies of the States or Federal Government as the Administrator of Veterans' Affairs shall direct. In the disposition of any land which the Corporation may have available for sale, preference shall be given to applications by veterans otherwise qualified under tests prescribed by the Corporation, who are found eligible on account of service for any of the benefits of the Servicemen's Readjustment Act of 1944, as amended.

(e) In addition to determining under section 17 (a) the portion of the total costs of any project to be allocated to the various purposes for which the project has been constructed or to which it may be devoted, the Corporation shall also determine the reimbursable portions of the construction costs to be allocated to irrigation. Such reimbursable construction costs allocated to irrigation shall then be equitably apportioned to the lands to be benefited on a per unit basis according to the measure of benefits, char-

acter of the soil, topography, and all other pertinent factors. Immediately upon filing notice thereof in the office of the county recorder of deeds or other appropriate county official, the portion of the construction charge allocated to each unit shall become a lien against said unit until repaid. The reimbursable portion of the total construction costs allocated to irrigation purposes shall be determined by the Corporation after careful consideration of the prospective normal earning capacity of the lands and the ability of farm families of average size, ability, and industry to pay the purchase prices of said farms, maintain a satisfactory standard of living, and pay the operation and maintenance charges for the water and the proportion of the construction charges to be allocated to said farm units.

(f) The reimbursable construction costs allocated to irrigation purposes, as determined in subsection (e) above, together with the annual costs of operation and maintenance of the project and distribution system shall be recovered, whenever practicable, from the water users under repayment contracts. Such contracts may be entered into by the Corporation with individual water users, or, wherever practicable, with organizations of water users, irrigation districts, conservancy districts, associations, corporations, or other public or private agencies having sufficient power to enforce the collection of charges against its members or the lands within its boundaries.

Said repayment contract shall provide (1) for the repayment of the reimbursable construction costs apportioned to said unit, with or without interest, over such period of time and in installments of such amounts payable on such dates as the Corporation may deem advisable; (2) for the establishment of a lien against the land to secure the repayment of said construction costs and such operation and maintenance charges as shall be assessed from time to time and for the enforcement of such liens in accordance with the laws of the State within which the property is situated. The contracts may also include such other terms, conditions, rules, and regulations as in the judgment of the board may be necessary to carry out the purposes of this act. In case of noncompliance with the terms, conditions, rules, or regulations included in any contract for the delivery of water, the contract may provide that it shall be voidable at the election of the Corporation and also for discontinuing the delivery of water.

(g) No water made available by any project constructed under the authority of this act may be delivered to any of the lands to be benefited, or to any of the lands within an irrigation block where such irrigation blocks have been established, until a repayment contract or contracts shall have been executed as hereinabove provided, except that water may be applied to lands owned by the United States under lease arrangements providing for a fair rental and an amount sufficient to pay the reimbursable construction costs which would be required to be paid during the period of the lease under a contract of repayment.

(h) Except as provided in subsections (1) and (j), water shall not be delivered from, through, or by means of the project works to or for use upon lands in the ownership of any one landowner holding in excess of 160 acres of irrigable land until a public hearing has been held before the Corporation in which the landowner affected has been given an opportunity to testify concerning his need of the land in question as an indispensable part of the unit within his ownership. The Corporation may find in favor of the applicant, permitting him to own and operate irrigable land in excess of the 160 acres, but in no case shall this exceed a minor fraction of a second 160 acres. The landowner must have been in possession of

the land subject to this provision of the act for a period of not less than 3 years prior to application for a hearing on the enforcement of this provision. All irrigable lands in the ownership of one landowner in excess of 160 acres or the adjusted acreage above the 160-acre limitation shall be considered excess land.

(i) A landowner holding excess lands as hereinabove defined may secure the delivery of water to a designated unit within his ownership, upon entering into an agreement with the Corporation, or any water-distributing agency approved by it, to dispose of said excess lands within a reasonable period of time and for the appraised value of said lands without reference to or increment on account of the construction of the project. The appraised value of said lands shall be determined as the Corporation may provide. In case of disagreement between the landowner and the Corporation with respect to the appraised value of "excess land" provision shall be made for the selection of an impartial arbitrator to determine said appraised value. A reasonable period of time may be allowed the landowner to dispose of said excess lands, not more than 5 years, during which period of time water made available by the construction of the project may be delivered to the owner's 160 acres, or less, of irrigable land, or the adjusted acreage above the 160-acre limitation as allowed by the Corporation under the terms of an applicable repayment contract. Should any unusual economic condition drastically depress farm-land values, or other circumstances develop to prevent the disposal of existing land within the 5-year period, the Corporation, upon showing of diligence on the part of the holder of excess land in complying with this section, may extend the 5-year period after a formal hearing. As used in this act the term "landowner" denotes any person, corporation, joint-stock association, or family, and the term "family" denotes a group living together and consisting of either or both, husband and wife, together with their children under 18 years of age, or all of such children if both parents are dead. The term "their children" includes the issue and lawfully adopted children of either or both husband and wife. Lands shall be deemed to be held by a family if held as separate property of husband or wife, or if constituting a part or all of their community property or the property of any or all of their children under 18 years of age.

(j) In the event that excess lands shall be acquired by a landowner, subsequent to the execution of a repayment contract, through foreclosure or other process of law, by conveyance in satisfaction of mortgage-secured indebtedness, by inheritance or by devise, the Corporation may continue the delivery of water to the lands of the said landowner upon his entering into an agreement with the Corporation to dispose of said excess lands within a reasonable period of time, not to exceed 3 years, and for the appraised value of said excess lands determined in the same manner as under subsection (1) hereof. Should any unusual economic conditions drastically depress farm land values, or other circumstances develop to prevent the disposal of existing land within the 3-year period, the Corporation, upon showing of diligence on the part of the holder of excess land in complying with this section, may extend the 3-year period after a formal hearing.

DISPOSITION OF ELECTRIC POWER

SEC. 14. (a) The Board is hereby authorized to sell surplus power generated by it, to States, counties, municipalities, corporations, partnerships, and individuals, according to the policies hereinafter set forth.

(b) To encourage the widest possible use of available electric energy, to provide adequate markets and outlets therefor, and to

prevent the monopolization thereof by limited groups or localities, the Corporation shall acquire, construct, operate, maintain, and improve such electric-transmission lines, rural-electric lines, substations, and other structures and facilities as it deems necessary or appropriate to bring electric energy available for sale, from its projects to existing and potential markets, and to interconnect such projects with other public or private projects for the disposition or interchange of electric energy. To provide for emergencies, break-down relief, and increased safety and economy in operations, the Corporation may enter into contracts upon suitable terms with public and private power systems for mutual interchange of electric energy and reciprocal use of transmission facilities.

(c) To insure the disposition of the electric energy developed at a project for the benefit of the general public, and particularly of domestic and rural consumers, the Corporation shall, in disposing of electric energy, give preference and priority to States, districts, counties, and municipalities, including agencies or instrumentalities thereof or of two or more States (in this Act called public agencies), and to cooperative and other organizations not organized or administered for profit but primarily for the purpose of supplying electric energy to their members as nearly as possible at cost (in this Act called cooperative agencies). In the event of competing applications by public or cooperative agencies (whether or not formally organized) on the one hand, and other persons or agencies on the other hand, the Corporation, in order to preserve and protect the preferential rights and priorities of such public and cooperative agencies, shall allow to people and communities, when within such distance from such project as to render practicable the transmission of power therefrom, reasonable opportunity and time to acquire, purchase, or construct the necessary facilities for the use or distribution of such electric energy, including reasonable opportunity and time to create and finance such public or cooperative agencies under the laws of the several States.

(d) Subject to the provisions of this act, the Corporation may enter into contracts for the sale at wholesale of electric energy whether for resale or direct consumption, to public and cooperative agencies and to private agencies and persons; and may sell electric energy directly to farms and in rural communities which the Corporation finds are not adequately serviced with electric energy at reasonable rates. The Corporation shall make every endeavor to sell its electric energy to cooperatives operating under Rural Electrification Administration contracts. Failure to make such satisfactory arrangements shall not prevent the Corporation from the selling of electric energy directly to farms and rural communities, but before doing so the Corporation shall set forth the record in the case before the advisory committee for its advice. Contracts entered into under this subsection shall be binding in accordance with the terms thereof and shall be effective for such period or periods, including renewals or extensions, as may be provided therein, not exceeding in the aggregate twenty years from the respective dates of the making of such contracts. Such contracts shall contain appropriate provisions, to be agreed upon between the Corporation and the purchaser, for the equitable adjustment of rates at appropriate intervals. In the case of contracts with private agencies or persons who resell the bulk of the electric energy purchased, the contracts shall contain appropriate provisions authorizing the Corporation to cancel the contract, in whole or in part upon 5 years' notice in writing whenever in its judgment there is reasonable likelihood that part of the electric energy purchased under such contract will be

needed to satisfy the preferential rights and priorities of public or cooperative agencies under this Act.

(e) Any contract for the sale of power may include such terms and conditions, including reasonable, nondiscriminatory resale rates, and provide for such rules and regulations as in the judgment of the Board may be necessary or desirable for carrying out the purposes of this Act. In case of dispute over proposed power contracts respecting terms, contracts, and rate schedules, prospective purchasers may ask for an advisory committee opinion as to whether the proposed contract is in keeping with the purposes of this Act; and in any such case the contract shall not become effective until the opinion of the advisory committee has been obtained. In case the purchaser shall fail to comply with any terms and conditions agreed upon, or violate any rules and regulations, said contract may provide that it shall be voidable at the election of the Board.

(f) In order to supply farms and small villages with electric power directly as contemplated by this section, the Board in its discretion shall have power to acquire existing electric facilities used in serving such farms and small villages.

(g) Rate schedules for the sale of electric energy by the Corporation shall be prepared from time to time by the Corporation. Subject to the provisions of section 17, the Corporation shall fix such rate schedules as it finds necessary or appropriate to provide adequate markets and outlets for electric energy and to encourage the widest possible use of electric energy, having regard (upon the basis of the application of such rate schedules to the capacity of the contemplated electric facilities of the Corporation or of a project of the Corporation) to the recovery of the cost of generating and transmitting such electric energy, including appropriate reserves for maintenance and upkeep and the amortization of the capital investment over a reasonable period of years. In order to distribute the benefits of an integrated transmission system and to promote the equitable distribution of electric energy, rate schedules shall provide for uniform rates, or rates uniform throughout prescribed transmission areas.

(h) The term "States," "counties," and "municipalities" as used in this act shall be construed to include the public agencies of any of them unless the context requires a different construction.

IMPROVEMENT OF PRIVATE LANDS

SEC. 15. The Corporation is also authorized to enter upon privately owned lands to be benefited by the application of water from projects developed under the authority of this act pursuant to contracts with the owners thereof for the purpose of improving and developing said lands by land leveling and other soil improvement and conservancy devices, for the construction of farmstead buildings and improvements, and for the development of ground waters for domestic purposes. The cost of said work shall be reimbursable in full, with or without interest, within such period of years and upon such schedule of repayments as the Corporation may deem reasonable and proper.

EXTENSION OF CREDIT TO LOCAL GOVERNMENTS

SEC. 16. (a) In order to facilitate the distribution of water in accordance with the provisions of this act, the Corporation is also authorized to advise and cooperate with States, counties, municipalities, and nonprofit organizations within distance permitting practicable utilization of water stored and available at any work or facility of the Corporation and to extend credit to such agencies and organizations and to assist them in acquiring, improving, and operating existing canals, conduits, laterals, pipelines, ditches, and incidental works and

facilities, or in acquiring any interests therein.

(b) In order (1) to facilitate the disposition of the surplus power of the Corporation according to the policies set forth in this act; (2) to give effect to the priority herein accorded to States, counties, municipalities, and nonprofit organizations in the purchase of such power by enabling them to acquire facilities for the distribution of such power; and (3) at the same time to preserve existing distribution facilities as going concerns and avoid duplication of such facilities, the Corporation is authorized to advise and cooperate with States, counties, municipalities, and nonprofit organizations situated within transmission distance from any dam where such power is generated by the Corporation and to extend credit to such agencies and organizations and to assist them in acquiring, improving, and operating existing distribution facilities and incidental works, including generating plants and interconnecting transmission lines, or in acquiring any interest in such facilities, incidental works, and lines.

ALLOCATION OF COSTS AMONG MULTIPURPOSE PROJECTS

SEC. 17. (a) The Corporation shall make a thorough investigation of the cost or value of each dam, steam plant, or other similar improvement hereafter constructed by or turned over to the Corporation for its management and control for the purpose of allocating such cost or value among the various purposes served by the improvement, such as navigation, flood control, irrigation, power development, or other types of development, as the case may be. Costs of facilities having a value only for one purpose shall be allocated to that purpose; costs of facilities having a joint value for more than one purpose shall be equitably allocated among such purposes in such manner as the board deems necessary or appropriate to encourage the widest possible economic use of water for irrigation and of electric energy for domestic, rural, and industrial needs, and to avoid the imposition upon any one purpose of a greater share of joint costs than such purpose should fairly bear. The Corporation shall also determine the appropriate periods and rates of amortization to be applied to the capital investment allocated to a revenue-producing purpose. The Corporation shall make this allocation of costs and periods and rates of amortization only after formal public hearings held at some designated point within the area affected by the decision. It shall make its findings and decisions known to the advisory committee. The committee shall in turn record the committee's views in the manner with the board and with the President of the United States. The allocation of costs and the periods and rates of amortization so determined by the Corporation, if not disapproved by the President of the United States, shall be final and shall be used thereafter in keeping the books of the Corporation.

(b) The Corporation shall, within 3 years from the date of enactment of this act, file with Congress a statement of its allocation of the value of all such properties constructed or turned over to said Corporation and which have been completed prior to the end of the preceding fiscal year, and shall thereafter in its annual report to Congress file a statement of its allocation of the value of such properties as have been completed during the preceding fiscal year.

(c) For the purpose of accumulating data useful to the Congress in the formulation of legislative policy in matters relating to the generation, transmission, and distribution of electric energy, and to the Federal Power Commission and other Federal and State agencies, and to the public, the Board

shall keep complete accounts of its costs of generation, transmission, and distribution of electric energy and shall keep a complete account of the total cost of generating and transmission facilities constructed or otherwise acquired by the Corporation, and a description of the major components of such costs according to such uniform system of accounting for public utilities as prescribed by the Federal Power Commission, with such modifications as may be deemed by the Corporation and the Federal Power Commission to be necessary or desirable by reason of the nature and character of the Corporation and its operations, together with records of such other physical data and operating statistics of the Corporation as may be helpful in determining the actual cost and value of services, and the practices, methods, facilities, equipment, appliances, and standards, and sizes, types, location, and geographical and economic integration of plants and systems best suited to promote the public interest, efficiency, and the wider and more economical use of electric energy. Such data shall be reported to the Congress by the Corporation from time to time with appropriate analyses and recommendations, and, so far as practicable, shall be made available to the Federal Power Commission and other Federal and State agencies which may be concerned with the administration of legislation relating to the generation, transmission, or distribution of electric energy. It is hereby declared to be the policy of this act that, to make the Corporation's power projects self-supporting and self-liquidating, as soon as practicable the surplus power shall be sold at rates which, in the opinion of the Corporation, will produce gross revenues in excess of the cost of production of said power; and the Corporation shall file with each annual report a statement of the total cost of all power generated by it at all power stations during each year, the average cost of such power per kilowatt-hour, the rates at which such power is sold and to whom, and copies of all contracts for the sale of power.

SAFEGUARDING THE MISSOURI RIVER

SEC. 18. (a) To insure the integrated and coordinated promotion of navigation, control and prevention of floods, safeguarding of navigable waters, reclamation of the public lands and protection of property of the United States, no dam, appurtenant works, sewer, dock, pier, wharf, bridge, trestle, landing pipe, building, float, or other or different obstruction or polluter affecting navigation, the use of navigable waters, flood control and prevention, the public lands or property of the United States shall be constructed and thereafter operated or maintained over, across, along, in, or into the Missouri River or any tributary stream of said river or any tributary of such stream, except in accordance with plans for such construction, operation, and maintenance approved by the local office of the Corporation. The Corporation shall draw up and make public rules and regulations under which incidental, temporary, or minor construction, in the categories referred to in this paragraph, may be made by private citizens, corporate or public bodies without prior approval of the Corporation. Such structures of a semi-permanent or permanent character shall be listed with the Corporation. The requirements of this section shall be in addition to the requirements of all other applicable laws of the United States or of any State; and any approval, license, permit, or other sanction required by any provision of any such law or laws for the construction, operation, or maintenance of any such obstruction or polluter of any part thereof (except such as may be constructed, operated, or maintained under this act or other law of the United States by the Corporation) shall be required as in such law provided.

(b) The Corporation may bring appropriate proceedings in a district court of the United States to enjoin any violation of this section within the territorial jurisdiction of such district court, or to require the removal of any obstruction or polluter constructed, operated, or maintained within such jurisdiction in violation of this section; and upon a proper showing a temporary or permanent injunction or decree shall be granted without bond.

CONTINUING POWERS AND DUTIES OF THE CORPORATION

SEC. 19. In addition to formulating the plan and recommendations required by section 7 of this act, the Corporation is hereby authorized to engage in the continuing activities, more particularly defined below:

(a) To aid the proper use, conservation, and development of the natural resources of the Missouri Valley region, and with a view to the coordination and integration of programs, projects, and activities of agencies having an interest in developing the resources, including wildlife and aquatic life, archeological, paleontological, and historical remains of the region for the purpose of increasing efficiency and eliminating waste and duplication of effort, and to provide for the general welfare of the citizens of said region, the Corporation is hereby authorized, by such means or methods as it may deem proper, to make such surveys, investigations, studies, and plans for the Missouri Valley region as may be useful to the President, the Congress, and the several States in guiding and controlling the extent, sequence, and nature of development that may be equitably and economically advanced through the expenditure of public funds, or through the guidance or control of public authority, all for the purpose of fostering an orderly and proper physical, economic, and social development of said region.

(b) The Corporation is further authorized to undertake such engineering and economic research and demonstrational work as it deems necessary or appropriate (1) to develop its studies and plans; (2) to test or demonstrate the feasibility of such plans; (3) to promote the wider and improved use of electric power and water for irrigation purposes, agricultural and domestic use, and for small or locally owned industries; and (4) more efficiently to develop or carry out any project or activity authorized under this act or entrusted to the Corporation under any other act or administrative order. In order to carry out such activities, the Corporation is authorized to acquire, construct, operate, maintain, and improve such laboratories and experiment stations as it deems necessary or appropriate.

(c) In carrying out the activities authorized in subsections (a) and (b) hereof, the Corporation shall have the power to study the plans, projects, and activities of the several Federal departments and agencies having an interest in resource development in the Missouri Valley region. The Corporation, insofar as practicable, shall consult and cooperate with the field offices and services for any information or data relevant to such plans, projects, and activities, and it shall be the duty of such departments and agencies to have their field offices and services take such action as may be necessary or appropriate to cooperate with the Corporation in carrying out the provisions of this paragraph.

(d) The Corporation, insofar as practicable, shall consult and cooperate with the States and with public and cooperative agencies in the making of studies, the collecting of information and data, the development of plans, and the research, demonstrational, and educational work authorized for carrying out the purposes of this act. The Corporation may make available to the departments and agencies of the United States and

to the States and the people thereof, and to public and cooperative agencies, such information, studies, and recommendations as it deems necessary or appropriate, and such other information and studies and such recommendations for State legislation as the Corporation deems advisable to aid in carrying out the purposes of this act. The Corporation shall, from time to time, as the work provided for in the preceding subsections progresses, recommend to the President and Congress such legislation as it deems proper to carry out the general purposes stated in subsection (a) hereof.

USE OF PATENTS

SEC. 20. (a) The Corporation, as an instrumentality of the Government of the United States, shall have access to the Patent Office of the United States for the purpose of studying, ascertaining, and copying all methods, formulas, and scientific information (not including access to pending applications for patents) necessary to enable the Corporation to use and employ the most efficacious and economical processes in the course of its operations. Except as provided in subsection (b), any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the Corporation shall have as the exclusive remedy a cause of action against the Corporation, to be instituted and prosecuted in the appropriate district court of the United States for the recovery of reasonable compensation for such infringement. The Commissioner of Patents shall furnish to the Corporation at its request and without payment of fees, copies of documents on file in his office.

(b) Any invention or discovery made by virtue of and incidental to service to the Corporation by an employee of the Government of the United States pursuant to section 22 (e) of this act or otherwise, or by any employee of the Corporation, together with any patents which may be granted thereon, shall be the sole and exclusive property of the Corporation, which is hereby authorized to grant such licenses thereunder as shall be authorized by the Board: *Provided further*, That the Board may pay to such inventor such sum from the income from the sale of licenses as it may deem proper.

MAKE TAX ASSISTANCE PAYMENTS

SEC. 21. (a) In order to render financial assistance to those States in which the Corporation carries on its operations and acquires properties previously subject to State and local taxation, the Corporation is authorized and directed to pay to said States during each fiscal year a sum in total not less than the revenue lost to the State and political subdivision affected by the Corporation's removal of property from the tax rolls formerly subject to State and local taxation. The first payment to be made by the Corporation to the States and political subdivisions affected shall be based on the then prevailing tax rate. Subsequent annual payments shall be made according to the property tax rates effective for the major portion of the year for which payment is due. The determination of the Corporation of the amounts due hereunder to the respective States shall be final.

(b) The Corporation shall, not later than 5 years after the enactment of this act, submit to the Congress a report on the operation of the provisions of this section, including a statement of the distribution to the various States hereunder; the effect of the operation of the provisions of this section on State and local finances; an appraisal of the benefits of the program of the Corporation to the States receiving payments hereunder, and the effect of such benefits in increasing taxable values within such States; and such other data, information, and recommendations as may be pertinent to future legislation.

(c) The payments authorized under this section are in lieu of taxation, and the Corporation, its property, franchises, and income are hereby expressly exempted from taxation in any manner or form by any State, county, municipality, or any subdivision or district thereof.

**PART E—MISCELLANEOUS
EMPLOYEES OF THE CORPORATION**

SEC. 22. (a) The Board shall without regard to the provisions of civil-service laws applicable to officers and employees of the United States, employ a general manager and such other managers, assistant managers, officers, employees, attorneys, agents, and consultants as are necessary for the transaction of its business, fix their compensation, define their duties, require bonds of such of them as the Board may designate, and provide a system of organization to fix responsibility and promote efficiency. Any employee of the Corporation may be removed in the discretion of the Board. Officers and employees of the Corporation shall be classified and remunerated in conformity with the Classification Act and pay scale of the United States civil service, except as specifically exempted by this act. By a majority recorded vote of the Board, particular contract, short-term, or expert employees of the Corporation may be exempted from the Classification Act and pay scale of the United States civil service. Subject to the provisions of this act and of other laws of the United States, the Corporation may deal collectively with its employees through representatives of their own choosing and is authorized to enter into written contracts with such employee representatives.

(b) In the employment, selection, classification, and promotion of officers and employees of the Corporation, no political test or qualification shall be permitted or given consideration, but all such employments and promotions shall be given and made only on the basis of merit and efficiency. Any employee of the Board who is found by the Board to be guilty of a violation of this subsection shall be removed from office by the Board. It shall be unlawful for a member of the Board to make or assist in the making or cause to be made any employment, selection, classification, or promotion of any officer or employee of the Corporation on the basis of or because of any political qualification or test, and any member of the Board who violates this provision shall be guilty of an offense against the United States and, upon conviction thereof, shall be fined not more than \$5,000 or imprisoned not more than 1 year or both.

(c) The benefits of the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916, as amended, shall extend to persons given employment under the provisions of this act, subject to the provisions of the Federal Tort Claims Act.

(d) All contracts to which the Corporation is a party and which require the employment of laborers and mechanics in the construction, alteration, maintenance, or repair of buildings, dams, locks, or other structures or facilities shall contain a provision that not less than the prevailing rate of wages for work of a similar nature in the vicinity shall be paid to such laborers or mechanics. In the event any dispute arises as to what are the prevailing rates of wages, the question shall be referred to the Secretary of Labor for determination, and his decision shall be final. In the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees. Where such work as is described in this subsection is done directly by the Corporation,

the prevailing rate of wages shall be paid in the same manner as though such work had been let by contract.

(e) The Corporation is authorized to request the assistance and advice of any officer, agent, or employee of any executive department or any independent office or agency of the United States, to enable the Corporation the better to carry out its powers successfully, and as far as practicable shall utilize the services of such officers, agents, and employees, and the President shall, if in his opinion the public interest, service, or economy so require, direct that such assistance, advice, and service be rendered to the Corporation, and any individual that may be by the President directed to render such assistance, advice, and service shall be thereafter subject to the orders, rules, and regulations of the Board, and the Corporation shall reimburse such department, office, or agency for the compensation of such individuals while serving pursuant to such direction.

MISAPPROPRIATION OF FUNDS

SEC. 23. (a) All general penal statutes relating to the larceny, embezzlement, conversion, or to the improper handling, retention, use, or disposal of public moneys or property of the United States shall apply to the moneys and property of the Corporation and to moneys and properties of the United States entrusted to the Corporation.

(b) Any person who, with intent to defraud the Corporation, or to deceive any director, officer, or employee of the Corporation or any officer or employee of the United States, (1) makes any false entry in any book of the Corporation, or (2) makes any false report or statement for the Corporation, shall, upon conviction thereof, be fined not more than \$10,000 or imprisoned not more than 5 years, or both.

(c) Any person who shall receive any compensation, rebate, or reward, or shall enter into any conspiracy, collusion, or agreement, express or implied, with intent to defraud the Corporation or wrongfully and unlawfully to defeat its purposes, shall, on conviction thereof, be fined not more than \$5,000 or imprisoned not more than 5 years, or both.

SEPARABILITY PROVISIONS

SEC. 24. If any provision of this act or the application of such provision to any person or circumstances shall be held invalid, the remainder of the act and the application of such provision to persons or circumstances other than those to which it is held invalid shall not be affected thereby.

Michelangelo of the United States Capitol

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, today more than at any other time the great works of the "Michelangelo of the United States Capitol," Constantino Brumidi, have finally come to be evaluated on the simple basis of the actual greatness of his works. There is not the slightest doubt that his decoration of the Capitol is one of the masterpieces of world art. I give thanks to the American people for affording this distinguished gentleman the privilege of performing this work. I wish to thank Dr. Myrtle Cheney Murdock who so zeal-

ously spearheaded the recognition of this masterful artist. In a small measure of tribute I include the article from the *Evening Star* of July 26, 1951:

**MICHELANGELO OF THE UNITED STATES
CAPITOL**

(By Jack Jonas)

It took the Nation 70 years to recognize Constantino Brumidi, dogged by criticism, but a never-defeated artist who labored a quarter of a century to decorate the Capitol with his murals and other paintings.

Although countless visitors have viewed the results of his efforts, until recently his name remained obscure, relegated to brief references in Washington histories and to his seldom-seen signature, "C. Brumidi, artist, citizen of the United States."

Today, beneath the fresco the Italian-born artist painted on the Capitol dome, ceremonies honor his memory on the one hundred and forty-sixth anniversary of his birth.

The fact that he is even now gaining notice is due to the persistence of Dr. Myrtle Cheney Murdock, wife of Representative MURDOCK, Democrat, of Arizona. It was through her efforts that Congress authorized last year a bronze marker for Brumidi's grave in Glenwood Cemetery. The marker is to be placed later. Dr. Murdock also has written a biography of Brumidi.

Brumidi was born in Italy, but his early history is as vague as were previous mentions of him.

He came to this country in 1852, and soon after his arrival was busy with his painting. He painted the Crucifixion for St. Stephen's Church in New York and The Holy Trinity in the cathedral at Mexico City.

Then he was hired by Capt. Montgomery C. Meigs to decorate the room of the Committee on Agriculture at the Capitol, and his career as the "Michelangelo of the United States Capitol" began.

After he had been commissioned, in 1855, to decorate the Capitol, he remarked:

"I no longer have any desire for fame or fortune. My one ambition and my daily prayer is that I may live long enough to make beautiful the Capitol of the one country on earth in which there is liberty."

His brush was busy in succeeding years. He painted symbolic figures of history, geography, mechanics, commerce, the arts and the sciences, and war, portraits of Benjamin Franklin, Thomas Jefferson, Alexander Hamilton, John Fitch, Robert Fulton, Samuel F. B. Morse, and many others.

His pay at first was \$8 a day. Later the figure was raised to \$10 a day. When he did his 3 years' work on the canopy and frieze of the Capitol rotunda, he was paid a lump sum of \$30,000.

His life was far from serene.

His appointment to paint the Capitol pictures had been bitterly opposed by American artists. Congressional leaders, goaded by the resentful American artists, continued to plague him through the 25 years that he worked.

Three years after he was hired, a group of artists called for a House committee to pass "intelligent and unbiased adjudication on embellishments in all national buildings."

The committee was set up, and issued its report, and without naming Brumidi, severely criticized his work.

"A plain coat or two of whitewash is better, in the opinion of this committee, than the tawdry and exuberant ornaments with which many of the rooms and passages are being crowded," the report stated.

And again, after he had been at work 4 years, the committee reported:

"Far greater sobriety should be given to these halls in their general effect, so as to render them less distracting to the eye."

His private life was unhappy, too. He battled against ill health and the unhappiness caused by estrangement from his lovely wife, Lola Germon, nearly 40 years his junior.

She had served as the model for the women in his fresco.

Brumidi was 60 when he finished the painting in the Capitol dome. When he was past 72, he began work on the encircling frieze in the rotunda.

While at work on the frieze, he suffered the injuries that led to his death 4 months later. He slipped and fell on the platform high above the Capitol floor.

In the ensuing 4 months, he continued to work at home, busy with sketches for completion of the frieze. On his death bed, he turned the sketches over to Filippo Costaggini and designated him to complete the work. Costaggini worked until the sketches ran out, but the frieze was never finished. The sketches were not complete. Brumidi died February 19, 1880.

At his death, Congress changed its tune and paid him lavish tribute. But his name gradually slipped into obscurity, to remain there until Mrs. Murdock accidentally discovered his unmarked grave in Glenwood Cemetery and began her campaign for his recognition.

Last year, Congress approved a bill appropriating \$500 to place a bronze marker on Brumidi's grave. The marker now is being executed. Mrs. Murdock said, and will be placed on the fence-enclosed grave at a later date.

Brumidi's prophetic realization that fame and fortune had passed him by is pointed up by the fact that when he died he was so poor that Congress had to appropriate money to pay for his burial.

One Hundred and Forty-sixth Anniversary of the Birth of Constantino Brumidi

EXTENSION OF REMARKS OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Senator JOHN O. PASTORE, on July 26, 1951, at the exercises commemorating the birth of Constantino Brumidi:

Briefly, the purpose of these exercises, authorized by the Congress, is to commemorate the one hundred and forty-sixth anniversary of the birth of Constantino Brumidi, the artist who spent many years decorating the Capitol Building of the United States, and died as the result of a fall while working on the frieze above us.

In welcoming you to these ceremonies, I do so with the knowledge that no more appropriate setting could be found to honor this great artist, whose love of these, our United States of America, is reflected in his artistry that is found not only in this rotunda but throughout the Capitol Building.

This was his sanctuary, his haven of peace, far away from inequity and intolerance, for here Constantino Brumidi toiled in a work of love for this, his adopted country.

It is not my intention to outline in detail the life of Constantino Brumidi; other speakers will do that. But I would like to reflect on Brumidi's thoughts as he drew from the fire of his artistic mind and hands.

At the age of 47, when most men have established themselves in their community, Constantino Brumidi was banished from his native Italy—a political exile. He sought asylum in America.

Here, indeed, he found a lively experiment in full liberty. Here liberty was to him a living thing.

Brumidi was thrilled with this liberty and with freedom of opportunity, for here he found that the Pilgrims, the Puritans, the French, the Dutch, the Germans, the Irish, the Italians, and many, many others, had brought their measure of culture. All these were poured into the melody of the American scene—the sterling qualities of each people in this melting pot of America.

This was in 1852. Constantino Brumidi was in love with his adopted country. Citizenship became his primary objective. Freedom of opportunity that this new land offered came to him when he was engaged to adorn the walls of this very building with his glorious artistry.

The Capitol became his island of peace. His paintings and figures were to flower as a memorial to our debt of the past and our destiny for the future. From history, religion, and legend, he worked in decorating this shrine of continuing history. Constantino Brumidi felt that this was the citadel of the country's ancient history—ancient only in the terms of the newness of this New World.

On and on Constantino Brumidi worked in telling the tale of this shrine that is the enduring triumph of America.

Brumidi's work flourished for more than 25 years until his tragic fall from the frieze just above us. His enthusiasm and his work grew with the years, but his greatest triumph came in 1857 as he finished a mural in the Chamber of the House of Representatives. Only his signature remained to be done.

With typical Brumidi style, he wrote the epitaph of a true American: "C. Brumidi, artist, citizen of the United States."

Federal Employees Answer Criticism—American Federation of Labor Lodge No. 1286, Ashland, Ky., Sends Letter to Ashland (Ky.) Independent

EXTENSION OF REMARKS OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. RAMSAY. Mr. Speaker, one of our most maligned groups of citizens are our Federal employees. By and large they are loyal, efficient, and hard-working, yet they are constantly made targets of criticism. Members of Lodge No. 1286 of the American Federation of Government Employees sent the following letter to the Ashland (Ky.) Independent, setting forth their views on the leave situation.

ASHLAND, KY., JULY 10, 1951.

AN OPEN LETTER TO THE ASHLAND (KY.) INDEPENDENT AND PUBLIC

As Federal Government employees, most of whom entered the Civil Service with the distinct printed agreement that 26 days annual leave was part of the "hiring bargain," the members of this union—Ashland Lodge No. 1286, American Federation of Govern-

ment Employees, A. F. L. affiliated—feel justified in the following comment on the "26 to 20" editorial that appeared in the July 4 issue of the Independent.

Among other remarks that editorial expressed jubilation over the United States Senate's "Rob Peter to pay Paul" action in voting to cut us to 20 days leave so that they could bring the postal workers up to the same amount and still make some saving to the Government. It also made the doubtful statement that most Americans get no more than 2 weeks' vacation a year.

In answer to this we could advance the following refutation:

1. We could state that the Independent's editorial writer must have been thinking of the near sweatshop pay and working conditions of some of Ashland's stores and small businesses when he stated that most Americans get no more than 2 weeks' vacation. The overall national vacation picture shows up a little differently.

2. We could state that a few years ago the postal worker had the choice between a pay raise and a leave raise. They chose the pay raise. Now their sponsor, Senator DOUGLAS, of Illinois, wants to give them the leave raise also—at our expense. Our quarrel here is with their sponsor, not with our sister union, the Postal Workers. The Independent seemed to neglect this point.

3. We could point out that industrial employees have received from two to four pay raises since we have received any. This, and the defense effort have raised living costs so high that many Government employees are now living "mighty low on the hog." Some so low that they are using their leave on odd jobs about town to try to keep ahead of the sheriff. For them there is no real vacation.

4. We could tell the story of the many Government wives who have felt it necessary to go back to work to help with the family budget.

5. We could state that we Americans boast that our Government has never repudiated an obligation. We are happy to agree that in large and international matters that is true. Unfortunately, in smaller matters involving Government employees, particularly Immigration and Bureau of Prisons employees, this present possible leave repudiation will be only one of more than one discrimination. One case actually involves an infraction of the 8-hour law by the Government itself.

6. We could remind the public that Government workers are also taxpayers—just as interested in real Government economy as any other taxpayer. This is a point that editorial writers everywhere in taking their many "cracks" at all public servants seem to want the public to forget. They talk to the public in a tone that implies that public servants are some sort of a parasitic, non-taxpaying second group unrelated to the taxpaying public. For instance, the chief phraser of this letter, together with his working wife and daughter made \$7,500 last year. Out of that was paid well over \$1,000 in direct taxes alone, to say nothing of several hundred dollars in hidden taxes. Why shouldn't he be interested in real Government economy?

7. We could state that our national union headquarters has many hardship cases on file indicating that we in the field are probably better off than many Government employees in Washington. Crowded, expensive Washington forces many low-bracket girl clerks to commute as high as 20 miles to and from work, and, to save money, club-up two and three in a hot, stinking room for which with rent controls riddled, they often pay enough to have rented an entire house a few years back. These, too, often use their leave to make extra money.

8. In making their criticisms of public servants editorial writers are fond of reminding them of their patriotic duty in the defense effort. In fact, in Washington right now there is much talk that in the national interest we should agree to a reduction to 15 days leave for the duration. Probably we do need reminding. We've been so lax in patriotism in the past. In 1918 and 1943-44, while many editorial writers we know were patriotically using their 2 weeks' vacation—that somehow lasted from November to April—on the dangerous end of a fishing pole in Florida waters and elsewhere, the very great majority of the members of this union local were "enjoying" 26-days-plus vacations in such highly exciting vacation spots as the Argonne, Chateau Thierry, Tarawa, Guadalcanal, and Iwo Jima.

As we said above, we could, as Government employees, claim the above points; but we will not. We waive them—ask the public to set them down as figments of our imaginations, and as brother taxpayers go along with us in commending Colonel Forgey's editorial writer for his valiant stand on Government economy. Government employees should be cut in every way possible.

How else are we ever going to get economy started? We must start somewhere, and it always has been good, safe, statesmanship to start the ax in the lower brackets—among people with the least resources to whack back. It makes for fewer expensive court of claims suits, fewer expensive lawyers hunting loopholes, and other irritating high-bracket boomerangs.

And, unless we whack this possible \$200,000,000 off the Government employees, how are we ever going to reduce taxes? With a possible national budget of \$60,000,000,000—300 times \$200,000,000—that just possibly might reduce our taxes the sizable one-third of a cent on the dollar, unless, of course, some enterprising editorial writer induces his community to put the heat on Congress for some \$200 pork-barrel project for their local community, or some foreign nation, which is dally cutting our national throat in the United Nations, wants another \$200,000,000 gift.

In conclusion, permit us to state that Government workers never have been the pampered set some would have you believe. Our fight is, and always has been, not to get ahead of the high cost of existence, but to try to keep up with it. We've heard criticism of the shiny new cars a fortunate few of us drive to work. Don't let that fool you. Those are mostly the fortunate few who have had sizable promotions or have other sources of income besides their Government pay check—working wives, inheritances, etc. The great majority of Government workers cannot afford the garage rent on a good car, let alone buy one.

To those who do not believe our statements we extend the invitation to take the civil-service tests, join us, and find out for themselves. But do not stay in the service more than 10 years or you will find yourselves so stuck with high, nonreturnable investments in such things as retirement that, in fairness to your families, you can't get out. And, in any case, don't stay in past the age of 40. If you do, you will find that you must spend the rest of your life varying degrees behind the cost of living. And, most certainly, while you are frantically chasing that cost of living, you can expect to have conservative publishers, editorial writers, Senator BYRDS, Senator DOUGLASSES, and Westbrook Peglers nipping at your heels.

JOHN D. WINSETT,
President, Acting.
ROBERT L. GROOMS,
Secretary.
M. C. SHEPHERD,
Treasurer.

Death of Admiral Forrest P. Sherman

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared in tribute to Admiral Forrest P. Sherman, who died suddenly in Naples, Italy, a few days ago, and an editorial from the Manchester Union Leader of July 25, 1951.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BRIDGES

The sense of shock I feel in the realization that Admiral Forrest P. Sherman has met an untimely death is heightened, I suppose, because of the close personal bond which has always existed between us.

Forrest Sherman was born in Merrimack, N. H., on October 30, 1896. He distinguished himself as a student at Massachusetts Institute of Technology and later at the Naval Academy, where he graduated in 1917.

His career as a fighting sailor in World War II is well known. But his greatest service to his Nation probably took place during the period from January 21, 1950, up until the day of his death. He became Chief of Naval Operations during one of the great periods of crisis in the history of this Nation.

By his zeal, his enormous capacity, his penetrating knowledge, and his ability to lead men he performed near miracles in fostering the morale and fighting qualities of the United States Navy during the last 18 months. His whole life was devoted to defending America by means of sea power. When our Nation was called on to fight in Korea in June of 1950 we found the Navy was ready for the war. It went into action in accordance with the highest traditions of our naval history and no small part of the morale of our Seventh Fleet. I can testify as a member of the Armed Services Committee, was due to the unremitting efforts of Admiral Sherman.

Admiral Sherman was a great naval commander. He was a man who shunned the spotlight, but always allowed his actions to bespeak the job he was doing.

Just last week in Spain, Admiral Sherman proved the enormous capacity of his ability and character. He undertook one of the most delicate diplomatic efforts of our postwar history and, as always, he accomplished his objective.

America can ill afford to lose a man of the attainments and the ability of Admiral Sherman. He was one of New Hampshire's greatest contributions to the America which he loved so well. I have lost a warm personal friend. The United States Navy has lost a courageous and competent chief. The United States has lost one of its most trustworthy leaders.

[From the Manchester (N. H.) Union Leader of July 25, 1951]

ADMIRAL SHERMAN'S LOSS

The sudden death of Admiral Forrest P. Sherman in the midst of critical deliberations is a source of deep regret.

Catapulted into the job of Chief of Naval Operations after the firing of Admiral Denfeld in November 1949 in the unification squabble, Admiral Sherman won the confi-

dence of the men of the Navy by his quiet fairness, and a place in the Nation's counsels by his diplomatic skill.

Born in New Hampshire of an old New England family, Admiral Sherman shared the New England tradition of seamanship. From the beginning his naval record was one of unbroken proficiency. He was not satisfied to simply follow naval tradition, which has had a paralyzing effect on the record of so many seamen. He sought to keep abreast of the times by familiarizing himself with the weapons and strategy of modern combat. When naval aviation became an integral part of naval operations, he mastered flying and became known as the flying admiral.

He played an important role in World War II in the Pacific, and was in command of the aircraft carrier *Wasp* when she was sunk in the Solomons. It is not unlikely that his sudden death from heart failure at the early age of 54 may be traced to some of the strenuous circumstances of incidents like this. For after maneuvering his shattered ship into a position where the escape of his crew became possible, Captain Sherman was the last man to leave the ship, and spent 2 hours in the water before he was picked up.

As Chief of Naval Operations, Admiral Sherman was largely responsible for working out a compromise in the controversy over unification. Large sections of the Navy had been bitterly opposed to unification, charging that domination of the Joint Chiefs by the Army and Air Force was whittling away the Navy's combat strength. Not only has this opposition died down today, but by his quiet influence Admiral Sherman reversed the trend of the Louis Johnson economy program, and the Army Air Force domination, so that the Navy today is coming into its own.

Admiral Sherman seems to have been largely responsible for the last mission on which he was engaged at the time of his death. He had long stressed the necessity of bases in Spain against the arguments of the State Department and the other Joint Chiefs. His position was that military necessity must supersede all political objections.

This position undoubtedly is sound, and it was logical when the State Department and the other chiefs were won over to it, that Admiral Sherman should be sent as an emissary to General Franco. His inability now to report on his talks with Franco will probably cause some delay and make additional talks necessary. But it is hoped that the effects of his mission will in no way be nullified, and that the delay occasioned may not be too great. The problem of integrating Spain into the western defense is urgent and important.

Attorneys General Ask Lands Return

EXTENSION OF REMARKS

OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dallas Morning News of July 24, 1951:

ATTORNEYS GENERAL ASK LANDS RETURN

The National Association of Attorneys General is urging support for the Walter-Gossett bill (giving the States quitclaim

title to what has always been assumed to be their own offshore lands until the remarkably unreasoning opinion of four United States Supreme Court Justices, acting as a temporary minority, held otherwise). It is an even-tempered and reasoned document in which the committee representing the attorneys general present their case against legalized theft. It is difficult for anybody else to preserve his temper in discussing it and, off committee status, few attorneys general can. The rape of the tidelands would be a legal absurdity were it not a legal travesty on the common sense and justice of the law.

Every contention that the committee places before Congress this week has been presented to the unreasoning court. Not one has been refuted in any language the Court has used to express its opinion. The theft of the tidelands rests solely upon an entirely new conception of Federal power, created by the current Court and contrary both to the original thinking in the Constitution and the holding of this Court's predecessors for almost a century and a half.

This is the reason why justice is obtainable only at the hands of Congress, whose act can set the Court's arrogant self back on its heels. This is the reason why States' attorneys general must patiently explain to the representatives of all the people that the extraordinary expropriative theory set up by the Court can operate to seize any State land. Paramount rights has nothing to do with oil or tidelands or offshore areas per se. It sets up a contention that affects all. Nor can any assurance by the President that he has no intention to apply the paramount right to seizure to anything else have any value. His predecessors did not seize the tidelands. Truman did. The next Truman, or the present one in what seems to him emergency, would seize again.

The attorneys general are to be commended also for restressing the fact that the blatantly repeated assertions that this is an oil-lobby law and an oil-lobby fight are a flat lie. The men who so state know that what they say is not true. They use the statements to lull into security a public that needs in its own interest to be alarmed. If the public is so lulled, Congress will not act. If the public is alarmed, Congress will act.

Happenings in Washington

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD program No. 45 in my broadcasts to the people of Pennsylvania in the series I call Happenings in Washington. This program was broadcast on July 16, 1951.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON—PROGRAM No. 45

This is Ed MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of Happenings in Washington.

When the Federal Government closed its books on June 30 for the fiscal year 1951, its financial affairs were in a confused and muddled state.

We entered the new fiscal year without any determination as to how much the Government will spend and without any decision as to how the money is to be raised.

In other words, no appropriation bills had been enacted into law by the June 30 deadline and the new tax bill was still far from completion.

Under these circumstances it became necessary for Congress to resort to stop-gap legislation so that the various Federal departments and agencies could continue to function. In a last-minute rush both Houses of Congress voted for an emergency measure authorizing the Federal agencies to continue expenditures through the month of July. It provided that the rate of spending during July must not exceed the average monthly rate for April, May, and June, the last 3 months of the fiscal year 1951.

This action, according to Congressman JOSEPH W. MARTIN, Republican leader of the House, will cost the American taxpayers an extra \$100,000,000 in July alone.

It will be impossible to complete congressional action on all the appropriation bills in the remaining 2 weeks of July. Therefore, another emergency extension will be needed and more millions will go down the drain.

I agree with Representative MARTIN's statement in which he called this situation an "incredible financial mess." He declared that the "whole pattern of Government spending is in a state of chaos, unprecedented in the history of the country."

In my opinion, the blame must be placed on the stubborn refusal of the administration leaders to cooperate with those of us in Congress, of both parties, who are fighting for economy.

The people who work for a living are paying a high price for government and they are not getting their money's worth.

The Truman administration has brought its full force and power into a determined effort to put a higher price tag on government—to spend more and more—and to reach deeper into the pockets of the taxpayers.

Since June 28, when the Senate Finance Committee began hearings on the new tax bill, the big guns of the Truman administration have been aimed in that direction.

Let us look at the tax-and-spend picture as it now appears.

You will recall that when President Truman sent his budget message to Congress last January he asked for \$71,500,000,000 to run the Government during the next fiscal year, beginning July 1, 1951. He asked Congress to increase the tax bill of the American people by an additional \$10,000,000,000, and said he would later ask for another increase to raise \$6,500,000,000 more.

Subsequently he abandoned his recommendation for the additional \$6,500,000,000. The President predicted that on June 30, when the fiscal year 1951 closed, there would be a deficit of \$2,700,000,000.

But the President was wrong. He was mistaken by \$6,000,000,000. Instead of a deficit the fiscal year ended with a \$3,500,000,000 surplus.

It would appear, therefore, that with all its reckless extravagance, its waste and inefficiency, its lavish handouts of subsidies and loans, Mr. Truman and his spendthrift crew were unable to get rid of all the money they had taken from the taxpayers.

But, I regret to say, there is no reason for rejoicing in that surplus. It will disappear very quickly. Secretary of the Treasury Snyder made that very plain when he announced the surplus. Increased spending by the Department of Defense, now running at the rate of nearly \$3,000,000,000 a month, would not only wipe out the surplus, he said, but would create a deficit of \$3,500,000,000 by September 1.

When President Truman's request for \$10,000,000,000 in additional taxes was submitted to the House it was given very careful study by the Ways and Means Committee. With the Democratic Party in control of Congress, that committee, of course, has a Democratic majority. But despite all the pressure from administration sources, they refused to accept the President's figures. The new tax bill, as approved by the committee and passed by the House, reduced the \$10,000,000,000 tax increase proposed by the President to approximately \$7,200,000,000.

As passed by the House the bill is the largest single tax measure in the history of the country. It would boost the total of tax increases voted by Congress since June 1950, just a year ago, to \$17,000,000,000.

This figure seems almost unbelievable when we look back only 20 years and find that the total cost of operating the Federal Government, including the Army and the Navy in 1930, was less than \$3,500,000,000.

The bill passed by the House has been widely criticized. Much of the criticism appears to be justified. I am sure the Senate Finance Committee, of which I am a member, will make many changes.

It may even become necessary to take a fresh start and rewrite the whole bill.

But I can assure you that certain objectives will be placed foremost. We will make every effort to spread the next tax load so that the burden will not impose unwarranted hardships upon any class of taxpayers.

We will keep in mind the continuing need for expanded defense preparations, even though hostilities in Korea are halted.

We will demand that no additional taxes be levied for nondefense purposes that can be curtailed or eliminated.

We will give careful consideration to the destructive inflationary pressure generated by unrestricted spending, whether by the public or by the Government.

I think I can safely predict that when the Senate Finance Committee is ready to report the bill the tax increase will not only fall below the President's \$10,000,000,000 request, but will be cut under the \$7,200,000,000 figure in the House bill.

In any discussion of taxes it is important to remember that every dollar collected and spent by Federal, State, or local government, is taken from the earnings of the people.

Every tax dollar, no matter whether paid by individuals, corporations, or in the form of excise payments, comes out of the pockets of the American people. And the heaviest burden falls upon the great middle class—the working men and women—and all others who live on wages, salaries, and other fixed incomes.

It is this great class of citizens, the solid backbone of our Republic, with whom I am principally concerned. Look at what has happened to the salary of the teacher, the office worker, the clerk, the salesman, the man who delivers your milk and bread, the little fellow who fills your gas tank, and all others who work for a fixed salary.

What has happened to the thousands of retired workers living on a pension earned after many years of service in the schools, in the church, on a railroad, with the police or fire department, or in industry?

What has happened to the worker who has invested his life savings in real estate, insurance, Government bonds, or an annuity, in order to provide a fixed income in his later years?

What has happened to the disabled veteran who must live on benefit payments from the Government and the dependents of those who died in the service of their country?

Let me tell you what has happened to this great body of Americans.

In plain language, they have been robbed.

They have been robbed through excessive taxation and unsound Government policies which have destroyed the purchasing power of every dollar they receive.

Yes, they have been robbed—and the effect is just the same as though they had been held up at the point of a gun.

More than half of their earnings have been taken away—partly by excessive taxation and partly by inflation resulting from unsound Government policies.

In view of this dangerous situation we must proceed with extreme caution in framing a new tax bill. We must avoid adding to the heavy burden under which these Americans are now struggling.

One administration spokesman who testified before the Senate Finance Committee argued in favor of the Truman \$10,000,000-000 tax increase because, as he said, "It takes more from the lower groups."

He contended that any tax increase must reach into the low brackets because much of the national income available for spending is with that group. This argument was presented as a means by which inflation could be checked.

Now I ask you, what difference does it make, as far as the inflationary effect is concerned, whether the taxpayer spends his own money, and perhaps saves a part of it, or whether the Government takes away a substantial part and spends it, leaving the taxpayer no opportunity to save?

You may be sure the Government will spend every dollar it gets its hands on.

In some quarters it is regarded as good politics to advocate what is called soaking the corporations. But don't be fooled by that kind of deception. That method hits the little fellow just as hard, because taxes paid by corporations are added to the price of goods they produce and in the end the consumer—that is the American people—pay the whole bill.

No matter what kind of tax program is adopted, the money comes out of the same pocket—the pocket of the buying public.

Inflation cannot be cured by Government spending. It can be cured by saving—by the Government as well as by the individual citizen.

In order to keep taxes at the lowest possible level, consistent with the needs of national defense, we must have every possible economy. And the Government must set the example.

Every expenditure not related to preservation of American freedom must be cut to the bone. Every nondefense project must be thoroughly examined in order to decide whether it can be curtailed, postponed, or eliminated.

The American people would have greater confidence in the tax program if they saw some evidence of willingness by the Truman administration to economize wherever possible.

I can assure you that the Senate Finance Committee is working toward an objective, and that is to write a tax bill that will be fair and equitable and will maintain our national economy at its greatest strength.

We are guided by the warning of that great Chief Justice, John Marshall, who laid down the principle that the power to tax is the power to destroy.

Our purpose is not to destroy but to build for greater progress and a more productive and more dynamic America.

In closing let me give a word of warning. Out of our desire to keep taxes at the lowest possible level we must not curtail or neglect our preparations for defense against Communist aggression.

Truce in Korea will give no assurance of a peaceful future.

Until the Communists abandon their ambition for world conquest, we must constantly increase our national strength—militarily, financially, and spiritually.

This is Ed MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Superiority in the Air

EXTENSION OF REMARKS

OF

HON. BLAIR MOODY

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. MOODY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Let's Face It—We're in a Jam," by our colleague, the junior Senator from Massachusetts [Mr. LODGE], published in this week's issue of the Saturday Evening Post. In my judgment the Senator from Massachusetts has presented in eloquent and forceful style a situation which neither the Congress nor the American people can afford to ignore.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S FACE IT—WE'RE IN A JAM

(By United States Senator HENRY CABOT LODGE, Jr.)

It is seldom that the fate of so great and complex a Nation as the United States hinges on one great decision being correctly made. But, in sober truth, the decision which we Americans make in the next few months on whether we will or will not create air superiority will have fateful consequences for us and can spell life or death for the people of Western Europe.

The reason for this can be simply stated: since the end of World War II and the utter disintegration of our Armed Forces at that time, the greatest single deterrent to Soviet aggression has been the strategic air force with its capacity to deliver bombs on the vital centers of the Soviet Union. In a matter of a few years—how few no one knows—that advantage will disappear. We can at that time hope to defeat an onslaught of the Red army only if the armies of the free world are properly supported by aviation, if our own air defense at home is strong enough to protect our vital centers from Soviet air attack, and if our strategic air force can retaliate with deadly effect on the Soviet's vital points—even though it has lost its former monopoly in long-range bombing.

Yet the truth is that on balance we have not got air superiority over the Soviet Union today. This comes as a shock to those of us who have assumed throughout these tense years that while the United States could not match the mass armies of Red Russia and her satellites man for man and gun for gun, we not only could be but were superior in the mechanized branches of warfare—notably the Air Force. Except for our waning advantage in strategic air power, we find ourselves outclassed not only by the Soviet's ground armies but also by Soviet tactical aviation and air defense.

Military air power has three principal functions, the first of which is air defense, which is a Nation's ability to defend its homeland—its industrial power—against enemy air attack. The biggest potential source of military power on earth today is the United States industrial plant, and the United States is now, and for some time to come will be, unable to defend it adequately, even against the enemy's presently limited ability

to strike with atomic attack. Of course, our most effective defense against this danger in the long view is a counteroffensive aimed at the centers of Soviet power.

The second principal function of military air power is the strategic air attack aimed at the war-making installations of the enemy. The most encouraging aspect of the relative position of United States air power versus the Soviet is our ability to wage an atomic air offensive. Clearly the essential reason why the Soviets have not dared to gamble on world war III rests with our power to drop atomic bombs on their homeland. Yet, even our strategic air offensive is not so formidable as it should be, and each day our relative superiority over the Soviets in this one element of strategic air power diminishes. We face an urgent responsibility for greatly increasing the weight of our strategic air power—first, in order to retain the capacity for overcoming the steadily improving enemy defenses and, second, to be able to destroy both the enemy's industrial capacity and his long-range bombing force. Even the B-36, invaluable though it is, cannot retain indefinitely its present position as the world's only bomber of truly intercontinental range. The seesaw contest between the defense and the offense moves for supremacy so rapidly, and the advantage of the one over the other changes so frequently, that no nation can afford to rest its military power on a single article of military equipment. As the Red Queen said, "Now here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that."

The third function of military air power is tactical air power, by which a nation protects its own field forces and harasses the field forces of the enemy. As Secretary Pinletter said, "In war our tactical air units have the job of destroying the enemy's air force and attacking the enemy's ground army. Both of these operations give support to our own ground forces. In building our tactical air forces we must be sure that we have the tactical air strength necessary to defeat the enemy's air force, because loss in the air could lead to disaster on the ground." It has been clear for some time that while tactical air cannot alone defeat an enemy on the ground, no ground force can win against hostile tactical air superiority unless it is prepared to mass tremendous weight of numbers and accept fantastic casualties. Our forces in Korea are massively outnumbered by the Chinese Reds. Yet so far they have been able not only to hold but also inflict staggering casualties on the Chinese, about 50 percent of which, as of January 1, 1951, are directly attributable to our great local air superiority. All this would change overnight if the Soviet Union threw in its great weight of tactical air power, as the commanders of our forces in Korea have clearly warned.

The Senate recently overwhelmingly voted approval for sending four additional divisions overseas, provided always, of course, that the Joint Chiefs of Staff certify that sending these divisions is an essential step in strengthening the security of the United States and that the nations of Europe are making their own full and realistic effort. But the whole idea of the North Atlantic Treaty defense is based on the assumption that the troops on the ground will have really adequate tactical air support, so that a smaller number of ground soldiers at decisive locations in Europe can canalize a Soviet attack, forcing it to concentrate and thus making it a target for a massive tactical aviation. A glance at the map of Central Europe reveals many broad rivers, estuaries, mountains, swamps, and densely wooded areas. Trained troops constantly on station at these points could undoubtedly compel an aggressor to attempt his advance

through a few "gaps" and along a few open roads where he would be subject to bombardment. On this assumption a North Atlantic force of 60 divisions could stand off whatever the Soviets would be able to launch in attack. Whoever is interested in the welfare of these troops must be equally interested in seeing to it that an adequate tactical air force is in existence to protect them. Unless there is massive tactical aviation, the strategy for defending America and Europe in Europe will fail.

The strongest recent statement on the question of the importance of air power in the ground battle was made by General Bradley in the Saturday Evening Post, October 15, 1949, when he said:

"Let's forget the axioms and take a fresh look. Europe abounds in natural barriers and powerful defensive positions, as every American who fought through there can testify. It is true that the Germans swept swiftly westward across this land at the beginning of the war, and that our Allied forces rolled eastward at the end. But—a big but—in each case the advancing forces had superiority in weapons and mobility and tremendous superiority in weapons and mobility, and tremendous superiority in the air. Reverse this situation. Give the defensive forces superiority in fire power, in mobility, and in the air—an advantage well within the industrial ability of the Western World—and the entire picture changes. The defenders will then be able to turn back invaders far superior in numbers."

This is also the opinion of leading French and German military chiefs.

In order to decide how large the tactical air force in Europe ought to be, we must first have an estimate of how big the Soviet tactical air force is. Published figures which are quite generally accepted estimate the Soviet tactical air force at 16,000 to 20,000 planes. Of this total, some are needed in other parts of the world, and it is probably not too wide of the mark to say that 9,000 Soviet tactical planes are available for attack on the west.

It is widely acknowledged by military authorities that the ground forces of the North Atlantic Treaty nations cannot hope to cope with the Soviet mass armies, unless the air forces of the North Atlantic Treaty nations are strong enough to win the air battle against the Red air force. Winning this air battle will require that the air forces of the North Atlantic Treaty nations have at least a 2-to-1 air superiority over the Red air force in Europe. If we assume that the North Atlantic Treaty nations should have at least a 2-to-1 air superiority to meet the Soviet mass armies—which is not lavish if truly massive tactical aviation is our objective—it follows that the tactical air force of the North Atlantic Treaty powers should consist of at least 18,000 planes. This total should not include whatever British or French planes are used in air defense for the protection of places such as London and Paris against bomber attack.

If we assume that the United States would contribute 20 percent of the North Atlantic Treaty tactical air force, that would mean 3,600 planes, or about 50 tactical air groups, leaving 14,400 planes to be flown and operated by the other North Atlantic Treaty nations. Bear in mind, of course, that the United States will in all probability supply a substantial number of the planes to be manned and operated by the North Atlantic countries, assuming always that these nations make their own full and realistic effort in the air as on the ground. If they do make their full effort, it appears that a figure of 6,000 planes to be supplied to these countries by the United States is a reasonable estimate, considering the state of the plane-manufacturing industry in Europe. To the total of 3,600 planes manned by United States personnel must, therefore, be added 6,000 planes for operational use by the North

Atlantic countries, or a rough total of 10,000 planes. This total does not include the extra planes which are required due to wartime attrition. Nor does it include whatever American tactical planes may be needed in other parts of the world.

The appropriation bill for the coming fiscal year should, therefore, appropriate enough dollars to provide 50 tactical air groups of 3,600 manned planes and 6,000 planes for operation by the member nations of the North Atlantic Treaty.

This is a tremendous figure. It must be at the least about three times as large as the tactical air force which is said to be contained in the administration's present 95-group program. But the fact that we may soon have six of our own divisions in Europe leaves us no choice whatever. If we are to have six United States divisions in Europe by the beginning of 1952, then we must have an adequate amount of tactical aviation which can give them a real protective umbrella. To send troops overseas without adequate tactical aviation is just exactly the same as sending them into battle without rifles, tanks, or artillery. Remember that in April 1945, General Eisenhower had under his command a ground force of 86 combat divisions and air forces containing 11,500 combat aircraft and 1,150 transport aircraft. Long before, the German air force had been defeated. Ever at the beginning of the invasion in June 1944, the German air force contained only 5,000 to 5,500 planes for all fronts. Against General Bradley's Twelfth Army Group of 48 divisions and General Vandenberg's Ninth Air Force of 31 combat groups containing about 2,000 combat planes the Germans could muster only about 500 combat-operational planes. Of the 16,000 to 20,000 planes which the Soviets are believed to have, 9,000 would be for Western Europe alone.

In addition to the immediate responsibility of voting funds for an Air Force of 50 tactical groups, as a minimum protection to our soldiers in Europe, Congress should vote funds for 38 groups for air defense, consisting of fighters and interceptors to defend vital installations here and our bases abroad, and for 62 strategic groups consisting of long-range and medium bombers and fighter escorts.

Remember that there is enormous interchangeability among these various categories. In fact, heavy bombers have actually often been used to provide tactical support just as, in the early days of the tank, long-range artillery designed for indirect fire was often used to fire point-blank at armored vehicles. Remember, too, that each of these fighting groups must have its medical, its base and its maintenance and supply units, and that training and transport facilities will also have to be provided in proportion. Remember, finally, that the Air Force must have latitude to change these proportions as the situation changes. In this article only rough proportions can be set down.

The present over-all objective of 95 groups by the end of 1952—of which 15 would be air transport—actually envisages an Air Force half equipped with obsolescent planes, and means that in terms of modern planes, which are the only ones which can successfully match Russia in the air, we would be building only the equivalent of a 50-group Air Force for all purposes—tactical, air defense and strategic, or a third of what is really required. Under present conditions of partial mobilization, even this inadequate objective cannot be achieved in less than a year and a half. That gives some idea of the "jam," as a Nation, we are in.

It all boils down to the fact that our objective is not big enough, that our proposed rate of attainment is not fast enough, and that unless we increase our objective and step up our rate of national achievement, we court national disaster. To be bru-

tally frank—and we must not be anything less—the requirements of our own national security cannot be met with "guns-and-butter" appropriations. It takes money. At recent Senate hearings I asked General Spaatz, who commanded our wartime air forces in Europe with such great success, how many combat air groups would be necessary to carry out our national commitment to help defend America in Western Europe in case of an attack by the Soviet Union. He said the number which we had in World War II, which is 240 groups. Surely General Spaatz qualifies as an authority, since we are talking about the theater of potential air combat which he commanded in history's greatest war so far. Of course, General Spaatz had in mind the Air Force we would need to fight a war to a successful conclusion, and the force required to be in being on the first day of such a war would be smaller than the ultimate force. What I am recommending is a readiness force of sufficient strength to support our position overseas and protect against air attack the mobilization potential of the United States. And I am suggesting that this force must contain at least 150 groups.

Let us come now to the question of dollars. It is estimated that the Air Force which I have here outlined will cost \$32,000,000,000 for the fiscal year ending June 30, 1952. Of this amount, \$22,000,000,000 has already been requested for the administration build-up to 95 groups. For the fiscal year ending June 30, 1953, the cost is set at \$27,000,000,000 and for June 30, 1954, at \$37,000,000,000. In manpower this force will require 1,800,000 officers and men as compared with 1,061,000 for the 95-group force and the 727,000 officers and men who are in the Air Force at the present time. There are two bottlenecks which inevitably retard the building of this force. One is due to the large number of men who must be in fighting units here and in various parts of the world, and consequently cannot be used as teachers. This inevitably slows up the number of young men who can be taken into the Air Force. Another bottleneck is the lack of installations—"housekeeping" facilities, and so on—to handle this increased activity.

These dollar figures represent the best opinion of professionals in the executive branch. It is impossible for a layman to know whether the figure is high or low. Certainly it is a figure of such magnitude that if it were adopted it would drastically change all the fiscal arrangements of the Government. It, therefore, deserves not only the careful scrutiny of the Appropriations Committees in both Houses of Congress; it justifies also the creation of a body, similar in general character and intent to the Hoover Commission, to make sure that in an expenditure of this colossal size, affecting as it does every segment of our economy, there is absolutely no waste. When people ask, as they do with increasing and justifiable frequency: "What happens to the billions of dollars that we appropriate for our Armed Forces?" there must be absolutely definite and satisfactory answers. To exercise constant vigilance over such gigantic expenditures demands time and special training which Congress has not got. A committee of experts created and paid by Congress and independent of the executive would create public confidence and would be clearly within the spirit of the Constitution.

The adoption of such a program requires an end to the guns-and-butter attitude of mind. This means not only economy and efficiency in the operation of the Government but the ruthless elimination of nonessential activities. In this field of general government a congressionally sponsored commission could effectuate large savings.

Many other things are also vital. There must be sea power so that the supply lanes

for this Air Force—and for the Army overseas—will always be kept open; and testimony of Admiral Sherman gives us the assurance that this sea power is equal to the task.

There must be land power. We look to the Army to force the aggressor into certain channels where the air can hit him—or, depending on one's point of view, we look to the Army to hold the overseas air bases from which the enemy is pounded. Clearly, the Army is one activity in which allies are a particularly vital necessity. We cannot provide the overwhelming proportion of men for the air and sea efforts and provide an overwhelming number of the troops on the ground as well. It will be disappointing if ultimately we supply much more than 10 percent of the troops for the defense of the free world in Europe. If we take full and imaginative advantage of the potentialities of countries both in and out of the Atlantic Pact and utilize to the full the services of all the stateless anti-Communist young men from behind the iron curtain who will be willing to fight as volunteers for freedom, the American percentage might even be below 10 percent. The United States Army, therefore, appears today as the spark plug for the ground forces of the free world, and we have the assurance of General Collins that it is currently big enough for that purpose. Undoubtedly every professional Army man will agree that a tactical air force is vital to an army's survival. It is therefore no belittlement of either the Army or the Navy to say that at the moment air power is the point of the spear.

Ever since the end of World War II we have been plagued by lack of foresight and tragic miscalculations. We lacked foresight when, in 1945, we started to demobilize our Armed Forces and scattered our supplies and equipment to the four winds. We miscalculated tragically at Yalta. We erred grievously in June 1949 when we evacuated Korea and announced to the world that it was no longer essential to our defense. In order to understand our present dangerous situation as regards air power, we should allow our minds to go way back—back, first, to 1945, when the present occupant of the White House took office. At that time we had a power for peace which was unequalled in history and for which we had suffered almost 1,000,000 casualties. Today, after 6 years, we seem to have thrown away the power for peace for which these thousands were killed, wounded, and captured.

We are now in an arms race and, therefore, the question of whether we are ahead or behind depends upon what the other fellow is doing. If he puts on more speed, we must match him. One thing we know: We now have the second most powerful air force in the world—apart from the strategic air arm, in which the Soviet Union is catching up. And the second most powerful air force is not good enough. We must establish leadership and then keep it. This means constancy of purpose. We must outlast the Soviets, regardless of our politics and regardless of our changing moods.

There are those who will say—and with many good reasons—that this program will strike a heavy blow at our economy. They will point out—and with much justification—that it consequently strikes a blow at our political system, which is so closely meshed with our competitive economy. They will, therefore, say that such a large expenditure as this endangers that democratic way of life which it purports to defend and that by making such expenditures we so drastically change our own country that we actually play the Soviet game.

This argument has the ring of sincerity. It would have the ring of truth if one did not contemplate the alternative to the policy which I propose. That alternative is to muddle along for another 10, 15, or 20 years, as we are now doing, with the second most

powerful air force in the world. We thereby carry most of the drawbacks of a heavy military program with none of the advantages of decisive action and regained initiative for durable peace which a really strong military force can provide. We may well wonder how the intensity of our American national temperament and the free institutions of this country will weather 15 years of indecisive and hugely expensive muddling.

On the other hand, we have always been able in our history to rise to the occasion, make a major effort and meet the issue, no matter how difficult the issue was. It is better, therefore, to build strength quickly, thereby regaining the initiative quickly and thereby being able quickly to put enough diplomatic pressure on the Kremlin to do the following things: call off the aggression in Korea; agree to real disarmament accompanied by international control and inspection; and adopt a generally cooperative and civilized behavior in the United Nations.

The program here proposed is the opposite of a program for preventive war. It is a program to build strength so that we can end the war we are in and prevent world war III from overwhelming us. It is a program to keep faith with a small group of young Americans in Korea who are sacrificing their all while we muddle along in an atmosphere of politics as usual and of every man for himself. It is a program to give us more than the "shoestring Air Force" which, General Vandenberg testified, was inadequate to enable us both to support our troops in Korea and to deter the Soviets from direct aggression on America.

Churchill said "For good or ill, air mastery is the supreme expression of military power." This leads squarely to the conclusion that to continue with a one-shift air force for 1 second more than is absolutely unavoidable can lead only to our destruction and defeat.

Peace Propaganda From the Kremlin

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely and challenging article entitled "Danger of Red Peace Propaganda Offensive Pointed Out—Could Slow Defense Effort," written by Raymond P. Brandt, chief Washington correspondent of the St. Louis Post-Dispatch, and published in that newspaper on July 22, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANGER OF RED PEACE PROPAGANDA OFFENSIVE POINTED OUT—COULD SLOW DEFENSE EFFORT—REAL PEACE CAN BE ASSURED ONLY WITH STRENGTH, UNITED STATES LEADERS DECLARE—WARN AGAINST RELAXING NOW—SOME CONGRESSMEN INDUCED TO WEAKEN ANTI-INFLATION MEASURES AS A RESULT OF KOREAN CEASE-FIRE TALKS

(By Raymond P. Brandt)

WASHINGTON, July 21.—The Kremlin has started a third peace propaganda offensive which State Secretary Acheson this week warningly described as just another note in a Russian lullaby to induce the United States and its allies to relax on their defense programs.

The latest Politburo maneuver is the publication of a fortnightly 32-page magazine in English called "News" that purports to seek Russian friendship with the Anglo-Saxon nations. The propaganda is obvious but American officials are fearful that the unformed—even a majority of Congress—may be caught off guard by a hidden ball play that will fit into the Kremlin's broad strategy for world domination.

The new magazine appears to be a follow-up on Jacob A. Malik's speech that started the negotiations for a Korean armistice. It may be a part of a bigger propaganda effort and diplomats are wondering what is coming next.

The White House, the State Department, and the Pentagon are looking at the Russian offerings but are not buying anything yet. The new Red zig-zag fits in too neatly with Russian plans to be accepted at face value and Acheson told reporters that he could not imagine a more stupid or dangerous thing for the United States to do than to be lulled by such moves.

A sizable group in Congress, however, has been influenced already by the Korean armistice talks. This was foreseen by the White House and a concerted countereffort was immediately started by President Truman and his highest officials to warn the country and the Congress of the danger of falling for soothing Russian words instead of going ahead with the administration program until the Kremlin had demonstrated its good faith by positive deeds. Others in addition to Truman and Acheson who have urged that we go ahead with the defense program until Russian offers something solid include Defense Secretary Marshall, Defense Mobilization Administrator Charles E. Wilson, Economic Stabilization Administrator Eric Johnston, Price Administrator Michael D. Salle, and several administration Senators and Representatives.

Nevertheless, a conservative Republican conservative Democratic combination in the House has let the Korean armistice negotiations weaken the pending anti-inflation control legislation. If this attitude prevails on other important legislation, such as military and foreign aid appropriations and on increased taxes, it may turn out that the Reds won a great victory in the Korean war.

Acheson foresaw the present congressional danger as early as June 29, when he made an off-the-record speech to a group of magazine and book publishers that was later released for publication.

In that talk, he urged that present problems be viewed in the light of history. His theme was that "there is no substitute for strength," both in the United States and the United Nations, and he noted that the Korean negotiations were possible because we had proved ourselves strong.

He continued, "May I say right here in connection with this business of creating strength at the center, we must not for one second allow any development which may occur in Korea to lull us into a belief that now we have turned the corner, and now things are going to get better, and therefore we do not need to make the effort which we have been making."

"If we allow ourselves to be lulled by Korea, I can assure you that, just as certainly as you are sitting here, we will be hit within the next 6 months to a year with a much tougher blow somewhere else. If we do not make the effort now, we will be unprepared for that blow. We may completely deter it if we now all bend together every effort we can to going forward with the program."

"Another point is that we must believe that time is on our side. I concede to you that in saying this there is an element of faith. There is an element of faith because I believe that we are people who act. Time is not on our side if we merely sit in the

shade and fan ourselves. Time is on our side if we go to work. We can do much in time. We can strengthen ourselves, we can strengthen our allies. We have a vast productive power which is now not harnessed, much greater than those opposed to us. We can harness it. There is much we can do and, if we will do it, time is on our side. If we don't do it, it is not."

The current Russian propaganda effort is a rightward zig from the leftward zags of the two previous offensives, the first of which was the so-called Stockholm appeal for outlawing the American atomic bomb and the second the so-called World Peace Council effort for a pact of peace to be written by the five great powers, the United States, the United Kingdom, France, the Soviet Union, and the Chinese Communist Government. At the same time the Kremlin was engineering these two crusades, the Soviet Government was using the United Nations organizations and the Conference of Deputy Foreign Ministers at Paris as forums to shout warmonger at the United States.

There were slight hints this spring that the Politburo and the Cominform might change their tune—their diplomats became a little more affable and four-power peace talks were resumed in Berlin on contraband shipments between East and West Germany.

American officials who have dealt with the Russians over the years do not think the switch in the propaganda line means a switch in the Kremlin's over-all objective of world domination. As our experts see the present situation, the change resulted from the failure of the Stockholm and the World Peace Council appeals, the military situation in Korea, the growing economic and military strength of our allies and friends in Europe and—perhaps—growing discontent in the Soviet Union and its satellites.

The immediate Russian objectives, as seen from here, are:

1. To create dissension in the North Atlantic Treaty Organization and block the rearmament of Western Europe, particularly of Western Germany
2. To slow down European economic recovery, which is making the rearmament possible and is causing defections from the Communist Party in many nations.
3. To snarl up the almost completed negotiations for a Japanese peace pact.
4. To gain time to catch up with the American A-bomb stockpile and to increase the military forces of Russia and its satellites.
5. To weaken the American defense effort by trying to show that the United States and Great Britain have nothing to fear from the Soviet Union.

On the last-named point, it is interesting to note that some political observers think the new Moscow magazine is designed to appeal to the conservative isolationists in this country and to the labor radical Bevanites in Great Britain. From London press dispatches, the British Government was no more favorably impressed by the News than was Washington.

Many elaborate speculations are advanced by our experts for the timing of the Kremlin change from a warlike to a peace-like role. They concede this is crystal-ball gazing and it is likely that the true answer is a combination of factors.

The two other propaganda offensives, although ostensibly labeled peace movements were essentially antagonistic to the United States. The Stockholm petition began with a meeting of intellectuals in Paris in 1948 and when it ended in November last year, its sponsors claimed they had collected 450,000,000 signatures, of which 385,000,000 were in Russia and the satellite countries.

It is revealing that just before the Reds launched their military attack against South

Korea in June 1950, more than half the North Korean population was reported to have signed this document.

While the petitions were being circulated, the Cominform established the World Peace Council. The announced objective was to get signatures to a resolution designed to create a movement of public opinion powerful enough to force discussion and formal conclusion of a five-power peace pact. This proposal ignored the United Nations. No Allied government took it seriously.

Its true nature was exposed by the fact that of the 262 Peace Council members, 85 percent were Communists and fellow travelers. All but 2 of the 27 members of the executive committee, according to Assistant Secretary Hickerson, were either Communists or fellow travelers. The chairman was Joliot-Curie, who was fired from the French Atomic Energy Commission because of the doubt about his primary loyalty to France. Paul Robeson, the Negro singer, was the American member of the executive committee.

The last step in the leftward zag was the meeting of the Foreign Ministers deputies in Paris from March 5 to June 22 which the Russian Gromyko used for a sounding board for Communist propaganda against "American warmongering."

The Kremlin had asked in November for a Big Four foreign ministers' conference and the deputies tried to work out an agenda for such a conference. They held 74 sessions and ended without final agreement. At these sessions, Gromyko revealed that the Kremlin had two immediate objectives. To stop the rearmament of Western Germany and to create dissension in the North Atlantic Treaty Organization.

The other deputies were impressed by one odd fact. Some of Gromyko's speeches were printed in full in French Communist press and not in the Russian papers; others were printed in full in Moscow and not in Paris. From this they deduced that the Kremlin had been forced to do some unusual propagandizing in its own territory.

Now American diplomats are impressed that the English articles in the "News" are being translated into Russian for publication in Moscow newspapers. This apparently means that there is to be some sort of a propaganda switch in the Soviet Union itself.

Another fact that impressed the State Department was that Alexander M. Troyanovsky, Russian ambassador to this country in the 1930's, had been brought out to dress up the magazine with his recollections of American efficiency, creative energy, and democratic spirit.

Troyanovsky, who began his political career as a Social Democrat and not as a Communist, was highly regarded in Washington for forthrightness and—for a Soviet diplomat—courage. The Russian Government has kept him in obscurity for more than a decade. Now that he can serve its purposes, he is put on display.

The popular former Ambassador is the personification of the changes in Soviet foreign policy. If he can be brought out of obscurity, he can be put back in obscurity.

That is not to say that the White House, the State Department, and the Pentagon are not hopeful that a workable agreement can be reached with the Kremlin. Much will depend on what settlement can be made on the Korean situation, militarily and politically. If the Reds give evidence of good faith in deeds in Korea, the next phase will be the Japanese peace treaty. If agreement is reached on that, other steps toward peace may be possible.

Even then, however, the administration will try to keep up the long term defense program, on the belief that in dealing with the Kremlin "there is no substitute for strength."

The School System of Pasadena

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent for the insertion in the Appendix of the Record of a statement by Catherine C. Hallberg and Louise H. Padelford on the Pasadena Story.

The preservation of this statement in the Record seems to me worth while because of the fundamental issues that are presented, and the obvious sincerity of these earnest and patriotic Americans, who are profoundly disturbed over certain existing tendencies in education.

My interest was attracted not only since I myself am a product of the American school system of a somewhat earlier date, and a public school teacher for a short period, but as a result of my acquaintance with Mrs. Louise H. Padelford, the worthy daughter of a distinguished sire, our former beloved colleague, Senator Albert W. Hawkes, of New Jersey.

Mrs. Padelford has long shown her deep sense of civic duty in her leadership of Pro America, a group of women devoted to the public welfare with no thought of self.

At this distance I would not presume to express an opinion on the merits of this highly publicized controversy that has attracted national interest and concern, but it seems to me most desirable that the point of view and the considerations which moved some of those concerned in this dramatic struggle might well be available for interested Americans.

In the general loosening of standards that is so tragically evident in the world today, it may be well for Americans to pause and consider whether we have not moved too far from the woodshed in the development of our youth.

I have been informed by the Public Printer that the cost of printing this statement will be \$225.50.

There being no objection, the statement was ordered to be printed in the Record, as follows:

THE PASADENA STORY

(By Catherine C. Hallberg and Louise H. Padelford)

"The enemy in Pasadena" Those words have headlined three separate articles in national publications recently. The authors mean us. It has been charged that we are "against the public schools." It's almost a Believe It or Not by Ripley sort of thing. Dr. Harold Benjamin, at the National Education Association convention last summer warned: "The enemy is trying our lines with a number of local, probing raids, attempting to find out where we are weak or strong, testing his methods of attack, recruiting and training his forces, building up his stockpiles." And to this statement a very left-wing lawyer added: "The issue shaping up in Pasadena was likely to be the test engagement." That sounds positively formidable, or perhaps funny, when we know our

interest arose solely from our having small children in the local schools

If you parents should make the faux pas we did in accepting seriously the invitation of the educators to take an active interest in your schools, you too may be branded as Public Enemy No. 1. We're expected to concern ourselves about government, and if need be, to criticize our administration; that is not only our right but also our duty as good citizens. But when we exercise the same right and duty in concern about our schools, supported by our taxes for our children, educators and many well-intentioned lay persons will rise with fanatical, almost religious zeal, to defend the schools against all questioning. We certainly are not against public education—we know of no one who is.

People today are concerned only about the philosophy and methods currently employed in the schools under the name, "modern education." Or perhaps it is called more descriptively "modern pragmatic education" since the term "pragmatic" indicates emphasis on what is practical or useful at the moment; truth is that which works. Thus we are concerned about this materialistic philosophy stemming from the John Dewey belief that there are no basic principles and no lasting truths. And we are concerned, too, about methods used to promote such a philosophy.

Before we attempt to describe the events that led to our Pasadena situation we should like to identify our beliefs by referring to the excellent report, General Education in a Free Society, made by the Harvard committee. Some of you interested in education may know it. It recognizes the educational task in America today is "to preserve the ancient ideal of liberal education and to extend it as far as possible to all members of the community." In this age of specialism, which we all recognize, the basic problem, the Harvard committee believes, as do we, is "how to save liberal education and its values within a system where specialism is necessary." And in pleading for the opportunity of a liberal education for every American child we'd like it to be thoroughly understood that we recognize the usefulness of modern teaching techniques such as audio-visual aids, some educational trips, etc. There is no thought nor need for sacrificing them, nor is there any desire, as is often foolishly charged, to return to the little red schoolhouse.

As we progressed through a sometimes distasteful situation we learned that the problem was far more than local. In Eugene, Minneapolis, Denver, Los Angeles, Bethesda, parents, even though belatedly, were daring to examine and appraise what was happening to their children in the public schools under modern pragmatic education. This wide complaint isn't surprising, for most of the teacher-training centers in the iron-bound system producing accredited teachers today have been greatly influenced by Teachers College of Columbia, the "vatican of the cult," as Albert Lynd so aptly described it. To this mecca of education teachers from every part of the United States have made pilgrimages and carried back to their schools methods and philosophies dominant there. These have in turn produced the results protested far and wide.

This is what we saw happen in Pasadena:

In 1948, after 20 years of service, our Pasadena superintendent retired, and Willard E. Goslin was brought here from Minneapolis to replace him. Many parents hoped that this move would mean a change from the so-called progressive education we had in our schools. We discovered, however, that under the new name of "modern education" much the same process was not only continued but accelerated. How we came to that unhappy conclusion we shall attempt to show by relating chronologically significant events, digressing only long enough to explain what we didn't like and why.

In 1949 a man who is known as one of the great teachers of modern times, a leader of "modern pragmatic education," Dr. William H. Kilpatrick, was brought to Pasadena from Columbia Teachers College for a series of conferences with certain of our teachers. A report of his lectures was published in booklet form under the title "We Learn What We Live" and distributed to all teachers and interested members of the public. From this we parents learned much about the modern in modern education.

We learned that the purpose of modern education is the good life, as determined by group action, with the good varying pragmatically from place to place, from time to time. "Good life" is a nebulous phrase, something everyone believes in, from Plato's concept to Christ's. The purpose of "modern pragmatic education," moreover, is to train into all the students the kinds of personalities and character traits which can make it possible for everyone to live the pragmatic educator's concept of the good life. That, certainly, wasn't what we believed the purpose of education to be; rather, we believe its purpose is to develop those traits of mind and character necessary for a full and responsible life in our society, namely, "to think effectively, to communicate thought, to make relevant judgments, to discriminate among values." Those actual words, expressing our thoughts more ably than we, are from the Harvard committee's report.

Expressed another way, the liberal educator believes that to have a good life one must be free—be able to judge and plan for himself in order truly to govern himself—and to achieve these ends one must have the mind development mentioned above. This wisdom, acquired through a liberal education, is quite different from the training of the pragmatic educator which looks to skill as its outcome.

Our first opposition to Dr. Kilpatrick, therefore, was fundamental—getting right down to the purpose of an education. Then, as we read further in Dr. Kilpatrick's conference report, we were startled by many new proposals, as well as by many terms heretofore unknown to us. Listen yourself to some of the vocabulary in your schools and inquire into its meaning and ramifications—experience curriculum (an outgrowth of the project method), core program (subjects mixed together and not taught separately), mass promotion, reading-readiness, personal evaluation, subjective rating, etc.

Dr. Kilpatrick proposed that our children "learn what they live" by means of an experience curriculum. To our astonishment he stated that there is to be no subject matter as such, and no set program of instruction. There would be no periods of the day devoted to the teaching of subjects. In fact, reading, writing, spelling, grammar, arithmetic, history, etc., aren't to be taught separately at all. Instead, the children are to select what they like as projects upon which to work. With this new approach to teaching go the proposals of avoiding any system of marks or report cards. There would be no examinations. There would be no promotion as such. It was suggested that children remain with a given teacher for a few years, working on classroom projects which grow from the pupil's own interests. This would give rise to incidental learning rather than imposing upon the child any systematic learning of basic skills and fundamental information.

It wasn't hard for us to imagine that a really superior teacher might conceivably inject into certain projects the basic information that traditionally has been offered to children as specific subjects taught in regular class periods. But with equal ease we realized how average teachers might fail to achieve even a fraction of the basic training needed. We thought of one sample project, which has been carried on in a seventh grade classroom.

"Making the most of myself: How can we have a happier home life? How can we make better friends? How can we improve our health? How can we get rid of superstitions and funny ideas? How can we have a happier school life?" Again, we imagined a superman could inject into these topics some basic English, history, and arithmetic, but the whole idea is alien to the purpose of education in which we believe.

This sort of an "experience curriculum" was proposed as a full program for the elementary level, declining to 50 percent of the senior high school program. This and Dr. Kilpatrick's other plans for "remaking education" would not have concerned us Pasadenaans so much had not the following signed statement by our superintendent appeared in the foreword: "In company with other leaders, Dr. Kilpatrick has had opposition to some of his views. However, parents, teachers, and other citizens who have taken the time to study and understand his proposals have very generally supported them." We saw this endorsement as an indication that pragmatic education was being greatly accelerated in Pasadena.

Appropos of the experience curriculum and its emphasis on the present, the Harvard committee writes: "There is a variety of aim and method in education. The solution that recognizes a spirit of change centers on contemporary life", and eliminating subjects taught as such, "tries to organize knowledge around actual problems and questions which young people may be expected to meet in mature life—health, vocation, family, social issues, private standards and the like. The difficulty here is a somewhat naive dismissal of the fact that a great many people have contributed over a very long time to human knowledge which calls for respect. Moreover, since conditions change, what assurance is there that the problems which students study will resemble those that they will meet?"

About the time we were delving into the intricacies of the experience curriculum, a series of training courses for our teachers was announced by the administration. Learning about them through our PTA activities, some of us parents undertook to attend in order to learn more about "modern education."

The experience curriculum, grade evaluation, the camping program, and several other subjects were covered by separate groups of teachers using the "group dynamics" technique. Dr. Kilpatrick's theories and proposals were discussed with apparent approval by many of the participating teachers. And with a statement by the administration encouraging the teachers to adopt such methods so soon as they were willing, it seemed obvious that "modern pragmatic education" was being energetically furthered in Pasadena.

The central theme of one teacher training group was the frequently expressed aim of modern educators, namely, the education of the "whole" child, physically, mentally, and emotionally. It is true that physical and mental health are important qualities in addition to intellectual ability. "Our point is that in a proper scheme of liberal education", reads the Harvard report, "the man will acquire the capacity to meet various problems in matters of health, human relationships, and the like. In this view the education of the mind leads to a maturing of the whole person. On any other view, the obvious danger is that schools will set for themselves so inclusive an objective" that they will fall far short of their man-goal. "The schools cannot do everything. When they attempt too many tasks they sometimes fail to do any of them well."

There are other well-qualified institutions, such as the churches, Scouts, and similar character-building groups, not to mention the family, which are vitally concerned with helping to develop the complete man.

In still another training course, the grade evaluation group, the teachers were asked to consider Dr. Kilpatrick's idea of having no grade or report cards. Some teachers reported that grades had already been abolished in their schools. Where grades were still the practice, the teachers favored subjective grading, or measuring the pupil's work only in relation to his own ability (if that be possible to determine). The parents in the group, however, felt it was better to measure a child's achievement against a standard; not only for the purpose of giving the parent knowledge about the child but more important, of providing an incentive for the child himself. Many of the teachers were more concerned about frustrating the few incapable pupils than with providing the great majority of average students with the incentive for betterment, and providing the superior students with the reward for good work. "One of the most damaging of all modern theories is the belief that children should be kept out of every situation that might give them a sense of inferiority—for example, that children should not be given definite marks for their school work, because a poor mark will make its recipient feel inferior. This delays the child in his discovery of the realities of life." That comment is from an article in the March Reader's Digest, written by Psychologist Henry C. Link.

Dr. Henry M. Wriston, president of the Association of American Universities, disapproves of abolishing grades for the following important reason: "Learning by hard work and by foresight to escape failure is one of life's greatest lessons, and to short-circuit that lesson by abolishing failure by edict is to give a false definition of success and to lend an illusion of achievement where none exists."

And as the well-known and highly regarded superintendent of schools in Topeka states, "Personally, I am not one to label everyone as a Communist simply because he does not think as I do. However, when one calls for the abolishment of all competition in the classroom, and doing away of rewards for superior effort, etc., he is merely advocating for the childhood level the same things that the Communists are demanding in our society for the adult level. If this policy is carried to the extreme in the childhood years, it seems obvious that it prepares children to fit better into a communistic regimentation than it does into a society championing democracy and free enterprise."

As the reader no doubt has noted, we have mentioned our beliefs about the philosophy of education only in contrast to the philosophy of modern pragmatic education, which we have in our schools. It is possible that this article would be more constructive if we were to explain more thoroughly our beliefs about the purpose of education and our concepts of method, but this has been done more ably than we could do it in writings by Mortimer Smith, Gustav Mueller, Jacques Maritain, Bernard Iddings Bell, Albert Lynd, Dr. William Bagley (and many issues of School and Society), Dr. Robert Hutchins, Dorothy Thompson, and by the Harvard committee's report. In the sincere hope that we may aid in clarifying a most confused and grave problem throughout our Nation, we intend merely to list the course of events that led to our Pasadena situation and to explain our objections to some of the methods and philosophy.

One deep objection is to the contention of many educators that some students are incapable of and should not be offered a liberal education. In this regard all parents would do well to consider Dr. Robert Hutchins' argument that "either we should abandon universal suffrage or we should give every citizen the education that is appropriate to freemen. We cannot say that we

are for democracy and at the same time protest the impossibility of preparing all the citizens to take their part in a democracy. In a democracy the people rule and are ruled in turn for the good life of the whole community. If democracy is to work, every citizen must have the education that rulers ought to have. If we do not know how to give every citizen this kind of education, we shall have to find out. Liberal education is the education appropriate to freemen. Since it originated at a time when the few were rulers, it was originally an aristocratic education. [The educators] most undemocratically assume that the mass of the people are incapable of achieving a liberal education, but they have no evidence for this, because the mass of the people have never had an opportunity to achieve it. It is true, that as large numbers have come into the American educational system, education has deteriorated and liberal education has almost vanished. But this is the result of the indolence and inattention of educators rather than the ignorance and incapacity of students. To teach a boy who does not care about being educated how to read, write, figure, and understand the ideas that have animated mankind, is hard, it is far easier to forget that he is going to be a citizen and set him to learning or to think he is learning, a trade."

Of course, the modern educator often states that his program is the education and training necessary for the future citizens of our democracy. It becomes important, therefore, to learn what they mean by "democracy." As it is defined by various key figures of the American Education Fellowship, it differs rather amazingly from the concept agreed upon by the founders of this Republic. Here we might remind you that the American Education Fellowship is the name adopted in 1944 by the former Progressive Education Association founded in 1919. At the later date it became politic to discard the term "progressive education" which had fallen into disrepute. As the reader has noted, "modern education" now is the preferred term.

The American Education Fellowship puts out a monthly magazine entitled "Progressive Education." On the back of most issues in 1950 was listed the twofold purpose of the organization as follows: (1) "to channel the energy of the educators toward the reconstruction of the economic system," and (2) "the establishment of a genuine world order, an order in which national sovereignty is subordinate to world authority, an order in which world citizenship assumes at least equal status with national citizenship."

These statements of policy may explain some of the reasons and purposes behind current changes in curriculum and teaching methods. We were particularly sensitive to this philosophy in Pasadena for two reasons: (1) We had Dr. Kilpatrick expounding his views in person, heartily endorsed by our local superintendent, and (2) our assistant superintendent in charge of curriculum was a director of the American Education Fellowship, which, as we said, recommends reconstruction of our economic system and the establishment of world government.

We could quote many, to us alarming, statements by American Education Fellowship leaders. In holding the belief that schools are the rightful agencies for political change, these leaders differ with Dewey who says that educators should not act politically. For example, we were amazed at John L. Childs' declaration that frank commitment to the "welfare state" is essential; at George S. Counts' statement that the day of individualism in the production and distribution of goods is gone, and that teachers should deliberately reach for power and then make the most of their conquest; and at many other proposals discouraging individ-

ualism and individual initiative, including the convictions of the well-known textbook writer, Harold O. Rugg.

Because we knew something of the policies of this organization and of many of its most influential members, we were not happy to have one of the directors of the American education fellowship in charge of curriculum for our school system. Also, in February 1950 its representative to the parent international organization, one Dr. Theodore Brameld, was brought to our town. We had read his belief that "teachers and parents holding restated democratic purposes must join with other forces in the community who conceive of public schools as rightful agencies of social change as well as mere stability." We know too of his book, *Design for America*, a report of his experiment in Floodwood, Minn., to indoctrinate junior high school students with collectivism. For these reasons we questioned his being hired to speak in Pasadena to our teachers and parents. He, however, was stoutly defended by our superintendent as well as by the president of our PTA council because of his experience in the field of interracial relations. Neither they nor any member of our school board gave evidence of concern about his advocacy of collectivism.

Since the interest in schools appeared to be growing and hence newsworthy, early in 1950 one of our local newspapers began printing its subscriber's letter on the subject of schools. The comments, of course, embodied an accumulated reaction to the progressive education which Pasadena schools had taught since it was introduced in the early 1930's. There were hundreds of letters by parents complaining that their children couldn't read or spell or do simple arithmetic adequately. Employers complained of these same basic weaknesses in new employees. One father decried the lack of geographical knowledge, stating that his child could describe the present composition of the United Nations but had no concept of where the participating nations' countries lay.

Another serious worry expressed in parents' letters was the evidence of statism in the social studies textbooks used by their children.

Now again parents were complaining that textbooks in the social studies classes were tending to be so current in nature that essential history was being neglected in lieu of fair deal policies. For example, one textbook in use is *Living in the People's World*, by Roth, Hobbs, and Greenleaf. This book deals with an unbelievable list: nationalism, internationalism, geography, meteorology, production of food and minerals, transportation, communication, the American economic system, government, the traits of individuals, how to get a job, and a host of other matters; all in 767 pages. In stressing the proposition that today's world is new, ever changing, and swiftly shrinking, the hint is strong that such fluidity must and should lead to political internationalism. In dealing with world citizenship, the authors, like the American Education Fellowship, proceed from the basic assumption that world citizenship is our goal. They leave no room for consideration of the wisdom of such a policy.

Looking through this junior high-school social-sciences text, *Living in the People's World*, which appears to be a study of current affairs, we could not forget the warning in the Harvard report that "it is educationally dangerous to require students to form judgments without evidence. It follows that they must be given experience in gathering and weighing historical evidence." To talk about and pass judgment on isolated current events without studying the historic background may serve to teach only the imperfections of our society. Since current problems are almost invariably the

product of "tradition and inherited ideas," the present should be studied and interpreted through knowledge of the past. How well we know that current problems and issues which are absorbing today may seem trivial or quite forgotten a few years hence.

At a recent American Historical Association meeting charges were made which throw some light on some of the modern social-sciences textbooks that cover "current history." Several prominent historians charged that the "court historians" subsidized by the administration in recent years have simply prevented any rewriting of history in the light of hindsight. Such rewriting, even when archives and records can be obtained, is largely excluded from publication. In short, as was charged by Dr. Harry E. Barnes, well-known author and former professor of history at Columbia, Smith, and Amherst, history as a science is threatened by a black-out.

When leading members of the American Historical Association object to the pro-administration slant of recent history books, obviously, no one will be surprised to find works praising the welfare state in our schools. We believe our education should emphasize the study of American history and its philosophy of freedom and leave current affairs largely alone until they are shaken down and judged in the light of time. Our children then would receive the background of knowledge necessary for intelligent judgment of whatever problems they will face as "current" in their time. As the well-respected columnist William Henry Chamberlin recently wrote concerning Alger Hiss' generation, "The Russian Revolution won converts because the American Revolution was not adequately understood."

This lack of history and perspective was only one of the complaints in the hundreds of letters. Then parents all over Pasadena began comparing notes and questioning what to do next. There had been an organization set up in the spring of 1949 for the purpose of backing certain candidates for election to the school board. After the election the organization, called the school development council, had continued in existence in a somewhat desultory fashion. It proved a ready-made vehicle for hundreds of protesting parents to submit their complaints and proposals in a constructive, organized, and orderly fashion. Thus in March 1950, a reorganization meeting was held, a new steering committee appointed, and in April at a large meeting, members were still questioning how their criticisms might best be met by the schools, when an election was announced, to be held within a matter of a relatively few weeks. The school board was asking voters approval to increase the allowable elementary school tax by 50 percent. This placed the council in a quandary. They already didn't like what they were buying and now, before they could do much about it, they were being asked to buy more of the same. In fact, members of the school development council objected to acquiring more of Dr. Kilpatrick's theories in the form of modern education workshops and a proposed camp program. Therefore, instead of being able to operate constructively to correct the weaknesses, they were forced immediately to wage an opposition fight to the tax levy increase. They did so on the grounds of the increase not being necessary for the kind of basic, liberal education which they considered more desirable for our community than the modern extras being suggested. But for many people the prime reason for opposing the tax increase was that it seemed the only way of halting and correcting the school practices and programs under criticism. After a brief but bitter battle, with excessive statements hurled from both sides, the tax levy was defeated

by 2 to 1, with an exceptionally large vote of 32,000 for our town.

During the course of the election battle, the school development council had made the mistake of ordering and distributing at one meeting copies of a pamphlet which one of its members had discovered. Because the contents of that particular pamphlet stated many of the parents' contentions about the unprofitable results of progressive education, it seemed convenient to have it in print. In the speed and furor, the amateurish council had not checked on the background of the writer of the article. This was an unfortunate oversight. It seems that despite the outstanding national citizens listed as directors of the organization publishing the pamphlet, there had been unpleasant claims made against the author and these were skillfully transferred to the school-development council in an attempt to discount the effectiveness of that group. Avoiding an answer to any statement in the pamphlet, the opposition made completely untrue allegations that the council was a part of a sinister national organization's plan to destroy the schools. One of our leading ministers preached a sermon about the author who was unknown to the council but about whom the minister mysteriously had acquired information. This was later reproduced in a full-page advertisement in both of our newspapers, despite the fact that no answer nor reference was ever made to any argument in the bitterly criticized pamphlet. This is the well-known smear technique of "guilt by association."

Soon after the tax levy increase was defeated by the 2 to 1 vote, a statistical research firm conducted a public-opinion survey for a teachers group, the Pasadena Education Association. Although the survey was hailed widely as proof in their favor by the administration supporters, the sampling was not well done. The survey reported that of the actual voters interviewed, about the same proportion voted for the tax measure that voted against it (34.7 percent pro—37.8 percent against). That, of course, means the results were weighted, because if the sampling had been accurate the survey would have reported interviewing persons in the 2-to-1 ratio of the actual vote instead of that 50-50 showing. Yet, despite the fact that the survey covered more "yes" voters, relatively, than it should have to be fair (probably due to the inclusion of a large number of teachers), it was most interesting to note that of the interviewees asked opinions as to whether enough time is spent on teaching the fundamentals 50 percent thought not, about 35 percent thought "yes," and about 15 percent didn't know.

Another interesting fact about teaching the fundamentals was revealed. In a breakdown in age-group answers, the largest opposition to current results and methods was reported in the 30- to 39-age group, the group which is apt to have immediate contact with schools through their children. Often critics of modern education are dismissed lightly as being very old persons whose judgment is distorted by failing memory or tightening of purse strings.

Needless to say, the tax fight brought forth many derisive and uncomplimentary charges about persons unfairly labeled as opposed to public education. Oddly enough, we noted that many backers and defenders of our school administration were left-wingers. This was first evident during a rezoning move by the school administration earlier in the spring. The official reasons for the rezoning were the usual technical ones, with which there could be little reasonable objection. On the other hand, during the hearing before the school board there was a packed-meeting demonstration that was altogether objectionable. There were many fervent and impassioned speeches pleading

for the rezoning on the basis of democracy, for the abolition of Jim Crowism. Some of the persons who were key figures in this demonstration were recognized as local Wallace workers, that is, Independent Progressive Party members. Oddly enough, before the actual day of one meeting, the Peoples World, Communist newspaper of Los Angeles, reported with accuracy who was to speak at the school-board meeting, even mentioning the arguments to be used.

One wonders why the left-wing crowd are backing up strong supporters of modern pragmatic education. They add loud and aggressive voices in denunciation of those of us who believe education has been taken off the track, and who would like to see it become the type of education that performs one of the true purposes of the word—to supply the intellectual power the community requires.

Our reporting cannot be complete without mention also of our superintendent's resignation last November at the request of the school board. He had previously offered to resign if the board so desired. Thus, in the hope of avoiding an awkward situation which threatened the superintendent upon his return from an eastern trip and in the further hope of offering him the opportunity while away of making other arrangements quietly, the board sent a confidential telegram asking to take advantage of his earlier offer to resign. The superintendent's decision to make the telegram immediately public resulted in arousing sympathy for him because of what seemed on the surface to be unfair treatment. Promptly a citizens' group formed protesting the action of the school board. As this and other groups interested in the schools evolved, we noticed how many of the same radical interests were represented—with the usual window dressing of solid citizens.

This, in brief, is our "Pasadena Story." We have tried to be factually explanatory. Where it has been necessary to allude to our philosophical beliefs, we have used quotations from professional persons in the educational field. It is encouraging to learn how many great minds in our country have spoken out in favor of a liberal education for all our citizens, combining where necessary with the specialism important to our age. Such comment is directly opposed to modern pragmatic education.

As we tried to bring out, in a somewhat chronological form, we learned that our school system sponsored one of the leaders of modern pragmatic education. We studied the record of Dr. Kilpatrick's conference in Pasadena. We attended teacher-training courses that carried on his philosophy. We saw hundreds of parents protesting the results of modern education as evidenced in their children, and we heard parents protesting the content of some of the current courses and the textbooks used.

In the course of events we made another significant discovery. Political left-wingers in our town are the strongest backers of modern pragmatic education and the most vociferous denouncers of persons who dare to question some of its practices. As we went into the philosophy and backgrounds of some of the key functionaries of modern pragmatic education, we became increasingly concerned.

The latest link in the left-wing portion of the Pasadena story has been an article written in the Christian Century, a national publication directed toward the ministers of our churches. That article, denouncing "the enemy in Pasadena," was written by one Carey McWilliams, a lawyer who has been listed as a member of many Communist-front organizations.

Because another national publication which recently denounced us roundly, is a school "trade publication" which has our

ex-superintendent as an editorial consultant, perhaps part of its ire could be considered loyalty to one of its own.

We strongly believe that the public school system should have everyone's fullest support. Because the physical plants of many schools in the country badly need improvement and because in many sections teachers are grossly underpaid, local citizens' or parents' groups are working throughout the Nation to correct these inadequacies through public tax support. The National Citizens Commission for the Public Schools is one of these organizations, urging that we "arouse in the community the intelligence and will to improve our public schools." While we endorse such action heartily, we suggest that even more important is the consideration of what methods and philosophy are taught within the school buildings. We believe that the obligation to examine what is taught, and by what methods, goes hand-in-hand with the good citizen's financial support. It is important to listen when a growing number of intelligent men make remarks like those recently made by Dr. Wallace Sterling, president of Stanford University. He said that our schools have become little more than vocational centers to educate all at a low level at the expense of the intelligent. "American education pays too much attention to preparing students for earning a living, too little to problems of teaching them to think, hence to function as intelligent citizens."

We have tried to show how important it is, again in the words of the National Citizens Commission, to make the best in education available to every American child on completely equal terms. Education, as we have indicated, should have as its purpose mind training and judgment formation, and not the pragmatic purpose of training for skill and adjusting only to current environment. The ability to think logically, combined with a knowledge of the heritage of the past, will provide a mature mind able to cope with any and all current problems, and able not only to adjust to his environment but what is equally important, to improve his environment.

Furthermore, our public schools are charged with the responsibility of teaching the principles and traditions of our great country and its constitutional form of government. Those who know only the present and not much of the past, who learn (only) what they live, may have to experience many of the tragedies of the past. Happily we not only learn what we live, as the pragmatists say, but we can live a great deal of what we learn from history in all fields. And although science and psychology are offering many aids and helpful viewpoints, to teachers, they should not change the goal of offering all children a liberal education as opposed to modern pragmatic education. We contend this liberal education is due every American child on completely equal terms if the strength and spirit of our Nation are to be maintained.

Government Employees—The American Way of Life

EXTENSION OF REMARKS OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Thursday, July 26, 1951

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the

XCVII—App.—296

RECORD a letter to the editor, published in the Washington Evening Star of July 24, 1951, under the headline "The American way." It refers to Government employees.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE AMERICAN WAY

By congressional action, Government employees are set up by grades from bottom to top, according to qualifications, with provision for promotions and advancement to higher levels from time to time—the American way of life. This permits them to live on gradually higher levels—i.e., have better homes, better apartments, better furnishings, better education and a chance for some savings, with the necessary accompanying higher costs, higher expenses, higher rents, increased taxes, employment of additional help, obtaining more services, and larger contributions to the Community Chest, Red Cross and other charities. Each advancement permits a little higher standard of living. Each employee lives within his respective income with the aim to advance and live a little better.

Consequently, when living costs rise skyward, such change strikes all these grades of employees alike. It reduces their respective standard of living substantially in proportion to their incomes or salaries. If it is desired to maintain these respective standards of living in the American way of life, the salaries should be increased somewhat in proportion to the respective salaries which they already receive as set up by congressional procedure.

If, however, as the costs of living soar, Congress wishes to reverse its long-established procedure and refuses to grant proportionate percentage pay raises except for the first few grades, it will force the better-paid employees and those who have earned promotions to seek cheaper apartments, sell their homes and go back to less expensive quarters, wipe out their savings, withdraw their children from college and pay institutions, diminish their means of aiding charitable causes and distressed neighbors, reduce such employees to the lower standard of living and the abandonment of the American way of life.

Inasmuch as the President, the Civil Service Commission and the Senate, as well as a substantial number of the House Members, favor the salary increases on a percentage basis for the various grades, I concur in this principle and urge the enactment of a substantial pay raise on a percentage basis, and strongly oppose any flat raise in dollars for the Government employees across the scale of grades.

GEORGE A. RAUSCH,
American Federation of Government
Employees.

World-wide Cartel in Tin

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Thursday, July 26, 1951

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Sees Victory Over Cartel in Tin," by William S. White, which appeared in the New York Times yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES SEES VICTORY OVER CARTEL IN TIN—SYMINGTON SAYS PRICE GOUGING IS ENDED—NATION NEARLY SELF-SUFFICIENT IN RUBBER

(By William S. White)

WASHINGTON, July 24.—The United States has struck a hard blow at what it considers to be a world-wide cartel, or pool, in tin and now feels strong enough to end forever all price gouging in that strategic material.

Moreover, with its legislative and executive branches working in close concert on the whole problem of the prices of foreign-produced commodities indispensable to war, the Government now is approaching self-sufficiency in rubber.

This was brought out today before the Senate Preparedness Subcommittee, which months ago started efforts in this field, by W. Stuart Symington and Jess L. Larson, the two administration officials responsible for carrying out the campaign.

They warned foreign producers and combines that the actions that had beaten down exorbitant prices in tin and rubber could be used in other raw materials. Already they said, the United States had enough of both commodities to be certain that it could never lose a war for want of either.

AGREEMENT WITH BOLIVIA

Mr. Symington, the one-man directorate of the Reconstruction Finance Corporation, disclosed also that the United States now had reached an agreement in principle with Bolivia, one of the great tin sources, to buy at \$1.12 a pound metal that cost about \$2 a pound a few months ago.

Last March the subcommittee which is headed by Senator LYNDON B. JOHNSON, Democrat, of Texas, asserted that this country was being gouged by some of its allies in its efforts to assemble stockpiles necessary to defend the Western World.

It recommended that the Reconstruction Finance Corporation become the sole importer of tin, for whatever purpose, and that it stop all purchases until a better price was found from a world cartel declared to be controlled by British, Dutch, Belgian, and Bolivian interests.

Reporting on this experiment, which he called a test case to decide whether this country can acquire needed critical materials at fair prices, Mr. Symington told the subcommittee that it had been a success.

The United States, he declared, has no intention of paying a penny more in future that it now has agreed to pay Bolivia. A few months ago, because of the war in Korea, speculators were acquiring tin to be sold at \$4 a pound.

The Bolivian arrangement, Mr. Symington said, is regarded as a fair contract that need not disturb the economy of that country, in whose welfare the United States recognizes a strategic interest.

He said it still was true that cartel pressures were keeping the best grades of tin from the United States, although this country consumed about half of the world's production.

The RFC head declared that there was no longer any possibility of holding up the United States. He said this country now had enough reserves to be able, if necessary, to control the world tin market simply by halting purchases again, breaching, if not destroying, the cartel.

Mr. Larson, head of the General Services Administration, the housekeeping agency of the Government, testified that foreign rubber interests already had "priced themselves out of business for all time to come" in normal circumstances.

The United States, he declared, was now buying natural rubber on the world market

at 45½ cents a pound, as against 85 cents a few months ago, and had so developed synthetics that in a few years it was "going to be completely independent of natural rubber."

As to tin, he said, experimental work in cheap aluminum has given promise that foreign producers may soon lose the great bulk of their tin market in this country unless they maintain reasonable prices.

He said that United States soldiers soon might be eating field rations out of aluminum, rather than tin, containers.

"I should like to say to the tin areas of the world," he observed, "that this procedure of rigging the price of vital materials is cutting off their nose to spite their face."

"What has happened is an indication of what this Government can do to a rigged economy. This country is not going to stand and take this sort of thing."

Republican members of the subcommittee congratulated Mr. Symington and Mr. Larson for introducing what Senator STYLES BRIDGES, of New Hampshire, called "a little Yankee trader touch" to their enterprises.

It was understood that Mr. Symington's agreement with the Bolivians, whose economy depends on tin, had been approved by the State Department, which was eager to avoid any instability in that country. The accord is scheduled to be initialed soon by the Bolivian Ambassador.

The steps taken by the subcommittee and the administration on tin, Mr. Symington said, already have saved this country half a billion dollars.

Minnesota Wants St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 25, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article appearing in the July 22 edition of the Minneapolis Tribune relative to the results of a State-wide public poll on the St. Lawrence seaway. This poll shows that 84 percent of all Minnesotans favor the construction of the St. Lawrence seaway and power project.

Most Minnesotans who know about the proposed St. Lawrence seaway are personally in favor of the Great Lakes-to-Atlantic waterway project. But less than half of them expect the seaway to be built within the next 10 years.

These are Minnesota poll findings in a State-wide survey in which a representative cross section of the adult population was interviewed.

Though the St. Lawrence seaway has been discussed for years, many of the State's residents do not know about the project, the poll finds.

Interviewers asked everyone questioned in the survey:

"Do you know what is meant by the St. Lawrence seaway project? What is it?"

Forty-six percent gave correct explanations; 5 percent gave vague or wrong answers; and 49 percent said they didn't know.

Further questions were asked only of those who gave correct answers.

One question was:

"Do you favor or oppose the St. Lawrence seaway project?"

The replies:	Percent
Favor it	84
Oppose it	4
Qualified or undecided	12
	100

Interviewers also asked:
"Do you think the seaway will be built some time in the next 10 years, or will not?"
The answers:

	Percent
Will be built in next 10 years	41
Will not	30
Qualified	7
No opinion	22
	100

Most people giving qualified answers said that would depend on the world situation and if we stay out of war.

College-educated men and women are best informed about the seaway project (more than three-fourths of them know what the plan involves) and are most strongly in favor of it (88 percent approve).

The project, cost of which has been estimated at more than \$800,000,000, to be paid jointly by the United States and Canada, envisions a series of channels and locks through which oceangoing vessels could journey from the Atlantic through the St. Lawrence River to Great Lakes ports. Hydroelectric power would be developed through a number of dams along the seaway.

"It would put more men to work and make freight costs cheaper," a Minneapolis man said. "On the whole, it will improve the whole Midwest," an Ely man said. "It would provide a better outlet for farm crops from the Midwest," a Crookston farmer said.

Six Months of Congress

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1951

Mr. GAMBLE. Mr. Speaker, under leave granted by the House, I present for inclusion in the CONGRESSIONAL RECORD an editorial which appeared in the Daily Times, published at Mamaronck, N. Y., entitled "Six Months of Congress":

SIX MONTHS OF CONGRESS

If the number of laws passed indicates activity, it might be worthy of note that the Eighty-second Congress in its first 6 months of existence passed 70 laws. The Eightieth Congress, which President Truman classified as "do-nothing," passed 145 new laws during its first 6 months. There is as yet no public record as to what Mr. Truman thinks of the Eighty-second Congress.

But if our present Congress didn't do much legislating, it did a tremendous amount of investigating. To date major congressional committees have disclosed to the public the situation on our military weaknesses, the background of General MacArthur's dismissal, the policy—or lack of it—in our foreign relations, crime conditions in our larger cities, questionable procedures in the Reconstruction Finance Corporation, and the low standards of morality by appointed and elective Federal officials.

But for important legislation there have been lengthy delays. Such postponed bills include those on the military budget, the foreign-aid program, tax legislation, and anti-inflation controls for more than a tem-

porary period. As for the first half year ended, not one of the regular appropriation measures had been sent to President Truman.

If the next 6 months don't produce a better legislative record, we tremble to think what the President might call this Congress.

Bipartisanship in Foreign Relations

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. WILEY. Mr. President, we hear so much talk these days of interparty and intraparty strife that I feel that it is incumbent upon us to point out as often as the situation justifies that there are many issues on which men of good will of both political parties can rise above petty differences and see eye to eye. Certainly, in the face of the common peril of world communism, this is no time for petty party politics as usual.

For that reason I was particularly delighted that the New York Herald Tribune editorial page chose to comment recently on an exchange of friendly correspondence which I had had with Secretary of State Dean Acheson. While I have not always agreed with the Secretary of State, for that matter, have had quite a number of differences with him, I did feel that his cooperative activity and that of his subordinates genuinely merited praise on my part. The particular occasion for my letter to the Secretary was a splendid discussion which we of the Foreign Relations Committee had held with our United States ambassador to Manila, Hon. Myron Cowen, an able representative of our Government, who, incidentally, is now working night and day with leaders of the Philippine Government in connection with problems which have arisen over the Japanese Peace Treaty.

We are fortunate to have able public servants at home and abroad, and I for one feel that when they have been doing and are doing praiseworthy work, in whole or in part, commendation should be appropriately rendered to them.

I might incidentally mention, Mr. President, that on my return from my recent trip to Europe one of the very first things I was happy to do was to praise the splendid job which State Department officials at home and in Europe had performed in facilitating the two-week review which our committee members made of the problems of Western Europe.

I ask unanimous consent that the text of the Herald Tribune editorial of Wednesday, July 11, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOTNOTE TO BIPARTISANSHIP

The CONGRESSIONAL RECORD has been described as a repository of secret and hidden things; and certainly there will have been

few who unearthed from its voluminous pages the surprising exchange of compilations in recent correspondence between Senator ALEXANDER WILEY, of Wisconsin, and Secretary of State Acheson. Senator WILEY is not usually among those who have kind words for Mr. Acheson. But on this occasion the Senator from Wisconsin had been exploring some interesting channels for increasing communication between the top officers of the State Department and the Senate Foreign Relations Committee; he had been conducting a small but significant experiment in bipartisanship. The success of his efforts is recorded for the historian in the exchange of letters now embodied in the RECORD.

It had been Senator WILEY's idea that regular procedures for bringing returning ambassadors and other high officials into contact with the Senate Foreign Relations Committee would be advantageous. The first essays along this line worked well, it seems, with the controversial Kem amendments being viewed under a fresh and instructive light, and leaders of both parties coming close to friendly accord. Senator WILEY was so pleased with the response of the State Department to his initiative that he wrote of his pleasure to Mr. Acheson, who replied a while later in terms of equal cordiality. A fruitful experiment has thus gotten under way. As for the letters, they stand like a touch of calm and sweet reason amid the turbulence, the passion, and the stormy emotions which cloud so many pages of the volume of our political history.

Lack of Reserve Planning Serious

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1951

Mr. KEATING. Mr. Speaker, the entire program of call-up of reserves in the Armed Forces since the beginning of the Korean war has been characterized by haste, lack of planning, and injustices to the individuals involved. A recent editorial in the July 17 issue of the Rochester Times-Union deals very ably with this subject. The conclusion drawn that a national plan is urgently needed to cope with either partial or total mobilization is, in my opinion, inescapable. The world has been living on the brink of disaster too long for anything else to be justifiable by the Department of Defense planners.

The editorial from the Rochester Times-Union follows:

LACK OF RESERVE PLANNING SERIOUS

Lambasting of the armed services by a House subcommittee for the injustices it found in their call-up of reserves since Korea is probably deserved. But the problem is much broader than that and one that should have immediate national attention.

The committee found that many men were called to arms at a cost of closing up their businesses and breaking up their homes while young, unmarried men in organized Reserve units were left to pursue their ordinary civilian way of life.

College men in unorganized reserves had to quit school at once and join the colors while their classmates with no service record

were protected from callups by draft exemptions for education.

Enlisted men with multiple dependents—in one case, a man with 10 children—were ordered to duty while single men remained behind because of their membership in an organized reserve unit.

Other inactive reservists in essential employment were called up when they should not have been.

The committee partly excuses the armed service for the pell-mell race to fill ranks. Their pressing need was for individual men and officers to fill regular units or as replacements. As a result, inactive reservists were called first, while organized reserve units were ordered to duty only as a last resort.

However, it seems to us that the fundamental failure here—apart from the great personal injustice in thousands of individual cases—was a lack of a national plan both for partial and for total mobilization.

This Nation should have both. The years since the war have been long enough to provide both. Yet when the decision was made last July against total mobilization, the services were left to a helter-skelter scramble for men to fill the gaps in skeleton organizations, without regard to or a record of the personal situations of the men called and the minor tragedies that ensued.

Men join the reserves because they have a greater regard than average for national defense. That regard is the most precious commodity a republic can have. It should be husbanded and strengthened by the knowledge that as reservists they will be fairly and equitably treated by their Government.

Defense Production Act

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. FURCOLO. Mr. Speaker, I deeply regret that this bill, in its final form, is going to be pitifully weak and inadequate. A good strong bill that will do the job is needed and it will be a tragedy for this country if such a bill is not enacted. For that reason, I strongly believe that the present bill should be re-committed so the committee can report a good bill in about 2 weeks.

If re-committed, a new bill can be reported out in less than 2 weeks' time. During the period of 2 weeks, the newspapers, radios, and other media of information, will be able to fully inform the public about the amendments that have been offered and about the entire bill. At the present time, the general public does not have the faintest idea of what has been happening during this debate. It does not realize that some of the amendments practically guarantee inflation and high prices.

If the public is given time to study those amendments, I am sure that the people of the Nation will let their Congressmen know in no uncertain terms just how they feel about such amendments. In order to give the people time to get such information and then to express their opinion to the Congressmen,

it is of the utmost importance that a final vote on this important bill be delayed for at least 2 weeks. The only way that can be done is by recommitting the bill.

I am going to vote for recommitment in the hope that, in that way, a good strong bill will come before us 2 weeks from now. In that way, many of the parts of this bill and many of the amendments which are so harmful to the public and particularly to that section of the public which cannot afford to pay more will be eliminated.

In other words, I believe we should vote to recommit as an expression of our opinion that—

First. The present bill is not nearly as good or as strong a bill as it should be.

Second. We want a bill that will give better and fairer treatment to the great majority of people who have been harmed so much by the increased cost of living.

Third. We can get a good bill in less than 2 weeks if we recommit the present bill.

If the vote to recommit does not carry, of course we must all vote for the present bill, even though it is weak and inadequate. It is at least better than nothing and, in addition to that, there is always the hope that when this bill gets to conference, the conference committee may improve it somewhat.

I have been assured that there will be a motion to recommit and, if that fails, a vote on the final passage. I intend to vote for the motion to recommit and, if the bill is not recommitted, I shall then be compelled to vote for final passage. I strongly hope, however, that the motion to recommit will carry so that we will be able to vote for a good strong and adequate control bill 2 weeks from now. I believe it is far better to delay this matter for 2 weeks in order to have a good bill than to be compelled to take a poor bill at this time.

Price-Control Bill

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. PHILBIN. Mr. Speaker, I will support this amendment of the gentleman from Ohio [Mr. Bow].

It is designed to check a proposed order by the Petroleum Administration for Defense freezing all installations of gas appliances anywhere in the United States according to its own choice and dictation.

The proposed order is based on two major claims: First, that there is a definite shortage of natural gas; second, that there is a critical shortage of steel and possibly other materials used in natural-gas pipes and space appliances.

I would not dispute categorically either of these claims. Shortages exist and make urgently necessary Government

regulation and control to insure expeditious conduct of the defense effort.

But the fact is that companies engaged in building natural-gas facilities and manufacturers and distributors of heating appliances are already presently in possession of large quantities of steel and large numbers of these appliances.

This amendment will not limit control over allocations and priorities in any way. It will permit those business units which have steel and appliances on hand to use the steel and install the appliances provided regulatory bodies of their several States permit it.

The amendment would retain control over public utilities in the several States in accordance with present law and practice.

If PAD proceeds with its proposed order, many sections of the Nation now working on expansion of gas facilities will be severally affected.

In my own State, for example, pipeline construction which would bring natural gas to Massachusetts consumers might be stopped or curtailed. Installation of gas heaters and appliances for consumers would be prohibited. Householders and business would thus be deprived of essential services. Industry would be seriously curtailed and unemployment would ensue.

Because I deem the effects of the proposed order violative of our constitutional system regarding regulation of public utilities, harmful to the interests of consumers, business and workers in my district and State, as well as the national economy, I will vote for this amendment and urge Members of the House to do likewise.

The No. 1 Question

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JACKSON of Washington. Mr. Speaker, during the debate on appropriations for the State Department on Tuesday, July 24, some questions were raised about the trip to the Far East sponsored by the State Department of Mr. Norman Cousins, editor of the Saturday Review of Literature. I have known Mr. Cousins for some time and consider him one of the ablest editors of our day. I think it is particularly noteworthy that he recognizes clearly that arts and letters cannot be divorced from what goes on in the world. Mr. Cousins has written a number of brilliant pieces, which include "Modern Man Is Obsolete," published in August 1945, immediately after the dropping of the first atom bomb. The current issue of the magazine dated July 28 contains an editorial by Mr. Cousins relating an experience in Pakistan on his recent trip there. Its title is "The No. 1 Question."

I hope that every Member of the House of Representatives—especially those whose doubts have been raised in the recent debate—will take the trouble to read this very fine analysis of one of the most perplexing problems that face America today. Under unanimous consent, I include this editorial in the Appendix of the Record.

THE NO. 1 QUESTION

At a junior college in Lahore, the university city of Pakistan, I ran into trouble. In the question period following my talk a student of perhaps 19 or 20 demanded the floor, then leveled a long and accusing finger at me.

"You have come to the wrong place if you expect us to believe your propaganda about America," he said in a tense and angry voice. "We know the truth about America, and we students protest your use of the platform of this college to try to pass off dishonest and untruthful stories about the United States. Since you have already spoken, it is too late to do anything about it. We can, however, enter a protest with the principal of the school for having invited you to speak. And we can demand that a representative or a supporter of the Soviet Union be permitted to come here and talk to us about conditions in that country."

As the student spoke the head of the college, seated at my right, was visibly disturbed. He got up and walked to the front of the platform, interrupted the student, then began to apologize to me publicly for what he described as an "unfortunate outburst."

"I ask that the speaker ignore this demonstration of bad manners," the principal said. "Here in Pakistan we give honor and not insults to our guests. I am sure I speak for the large majority of the students here in admonishing our ill-tempered and ill-mannered member."

It appeared from the general applause at this point that most of the students agreed with the principal. I regretted, however, that he had disciplined the student openly. Actually, the student was not to blame. I had set the stage for his protest by expressing the hope that everyone would feel completely free to take issue with anything I said during my talk. My purpose in coming to Pakistan was to have the fullest possible exchange of views. Accordingly, I assured the principal that I didn't feel that what the student said reflected in any way upon the hospitality of the college, and that I was anxious to have the student enlarge on his remarks. What, in particular, did he object to in my talk as being propaganda?

The student seemed reluctant to get to his feet, and I asked the principal to assure him that it was entirely in order for him to continue to speak as openly as he did a moment ago. The principal seemed a little dubious at first about my request, then instructed the student to comply with the wishes of the speaker.

"I am sorry if what I said was regarded as an insult," the student began, "and I am sorry if I seemed angry. But you can understand how disturbing it is to hear things that we believe to be false and how unfair it is not to be able to hear at first hand about the Soviet Union if we are officially assembled to hear about the United States."

"You have asked me what it is in particular I disliked about your talk. Much of what you said about the United States was very general. You tried to give us confidence in America's intentions in the world. Frankly, I believe you to be an apologist for the American people at a time when America is committing great crimes in the world. If you really wanted to be honest with us"—

and here his voice took on the same tenseness and harshness it had when he had spoken the first time—"you would have admitted all the ugly things you do to people in America who do not happen to have a fair white skin."

At this point there were staccato shouts of approval and a short burst of applause. This emboldened the student, and he raised his voice.

"In America there are 20,000,000 people who are called citizens but who are not citizens at all. They have been condemned as inferior beings and they are not allowed to participate in what you call your democracy. They do not enjoy the same protection under the laws you give to white people. If a colored person commits a crime, however minor that crime may be, he is apt to be seized by crowds. Your lynchings are the purest form of mob justice in the world."

"If a colored person becomes ill does he have available to him the same hospital and medical facilities as does the white? If he wants to travel somewhere is it not true that he is compelled to sit in a specially designated section, so that he will not contaminate the pure white travelers? Can the colored person sit down at the same school desk, at the same dining table, or register at the same hotel? Why do you insult the intelligence of the world by calling yourself a democracy when 20,000,000 of your people are forced because of the accident of skin coloration to live in slums and eat inferior food and go to inferior schools and work at inferior jobs? Is this what you mean when you say that in a democracy the individual must be given every opportunity to develop himself and to fulfill his highest potential? Those are just words. Stupid, dishonest words, and you do no credit to yourself when you say them."

The principal stood up and once again started to reprimand the student when I asked that he be allowed to complete his statement.

"I am grateful to you for your courtesy," the student said, "but I want you to know how I feel. Everyone of us sitting here feels the same way about your wicked and cruel race prejudice in the United States [loud applause from the audience] and every time we read about a lynching or about that very distinguished American, Ralph Bunche, not accepting a high position in the American State Department because he would have to live in Washington, where he would have to stay out of the best hotels and restaurants and accept the status of an inferior person in the very capital of the country he was called upon to serve—when we read about this, we shake our heads, sadly, then we shake our fists, because what you do is not only an insult to a great human being like Mr. Bunche, but a direct insult to all people in the world who do not happen to have white skins like yourself."

"Often we read about members of our Government and their families who have gone to the United States on official business and how they are openly insulted in the streets by ignorant and evil Americans and how they are turned away from hotels or deprived of seats in public transportation carriers or made to feel inferior. The chairman speaks of hospitality. You are entitled to it. But no country in the world offends the others with its lack of hospitality as does America. We are fully aware of the embarrassment felt by our people when they visit your so-called great democracy."

"Well, we will tell you one thing. We are not inferior. There is the entire Moslem world that is involved in this. And there are the peoples of India and China and Indonesia and Japan and South America. One day you are going to discover that you and

your stupid prejudices are alone in the world and that the overwhelming majority of the world's peoples have decided that they have put up long enough with your fancy talk of superiority and your fancy airs and your evil discriminations."

The atmosphere in the small auditorium seemed supercharged. Under the whiplash of the student's emotional outburst the audience was being transformed into an angry entity. He had touched off something powerful and harsh in the group, producing a mass countenance of vengeful bitterness. The principal saw it and moved quickly to head it off.

"A question period is for questions," he said strongly. "If you have a question, ask it, but no speeches."

"I intended what I said to be a question," the student said. "Does the speaker deny that race discrimination and prejudice exist in the United States, and if so, how does he reconcile it with his general statements about democracy in America?"

The student sat down and smiled triumphantly in response to the murmuring approval of his fellows. Though the majority of the students may not have agreed with the tone and temper of his remarks, they seemed to be generally sympathetic to his basic argument. This did not surprise me. By the time I came to Lahore I had spoken perhaps 50 times at various public meetings in the Far East. And each time I had spoken, without exception, the issue of race prejudice in the United States came up. Out of the countless hundreds of questions that were asked me everywhere this was by all odds the one asked most frequently. Indeed, you could almost count on it to lead off any general question period, no matter what the particular subject matter of the talk happened to be. If I spoke about education in the United States or about journalism or about books or about American foreign policy, the first question was apt to be about lynchings or segregation. Nor did the auspices under which I spoke make much difference. Whether it was a gathering of conservative businessmen at a Rotary session in Bombay, or a small meeting of Government officials in New Delhi, or a conference of editors, writers, and publishers in Calcutta, or a teachers' college for women, or a convention of theologians, the question unfailingly came up. Generally, of course, it would be asked with far more tact and moderation than had just been shown by the young Lahore student, but it was just as deep and insistent.

Before leaving the United States I had been warned that this was something I could expect to encounter almost everywhere I went, but not until I had to contend with it day after day was I able to comprehend how strong and basic it is in the thinking of the eastern people. I had thought from what I had read that our identification with the British in Asia or our own far-eastern foreign policy would be the chief targets of criticism. These were of concern, certainly, but they were small matters compared to the criticism against us on color grounds. You were conscious of it in almost everything that happened. Day after day the local newspapers would play it up prominently on the front pages. Frequently the news would be distorted or exaggerated, and sometimes news items ostensibly having nothing to do with the problem of the Negro in America would carry some strained reference to it. The question would come up in polite and sometimes not-so-polite conversation. People seemed to have all the details about the exclusion of a colored applicant from a southern university the day before, or the complete account of what happened when

Indian or Pakistan individuals appearing in American public thoroughfares in their own national dress were insulted or accosted as freaks or dangerous foreigners. Not infrequently these critics claimed a great deal more information about the color problem than actually existed. I was astounded at the weird misconceptions of the nature and extent of the color problem in America. It was not unusual to find well-educated persons thinking in terms of the problem as it existed perhaps 50 years ago, making generalizations about the whole of the United States that were only true regionally.

It should be obvious, of course, that color is the biggest telling point in Communist propaganda against America. The revolution in Asia today takes different forms in different places, compounded generally of the struggle for freedom from outside domination, of the longing for basic justice and opportunity, of the so-far losing fight against disease and enfeeblement. But through it all runs something constant and powerful. It is the quest for self-respect, a revolution of pride. It is the deep determination to end the age of indignity. This is a mighty and growing natural force which the Communists are putting to their own use. Forget everything else the Communists are doing or saying about us in their propaganda. Forget for the moment about the charges of atomic diplomacy, warmongering, aggression, and all the other stereotyped nonsense. All this is easily enough answered. The one argument we have yet to meet effectively is the one that touches Asian peoples where they are most sensitive and where they have a personal sense of involvement—color.

I should have been very much surprised, for example, if there was no direct connection between the patent pro-Soviet feeling of the Lahore student and his mountainous resentment against America on color grounds. One might suppose that the natural antagonism between communism and the deeply felt religion of the Moslems would act as a bar to Communist propaganda activity. Yet in Pakistan I found a surprising disposition in some quarters to accept at face value many of the rosy interpretations of life and politics in the Soviet Union, with a corresponding tendency to believe the worst about America. Behind these attitudes was usually the conviction that the Soviet was the champion of equality while the United States was the global headquarters of race prejudice.

What do we say when we are confronted with these attitudes and arguments? In my own case, during the early part of my trip I think I made a serious mistake in attempting an answer, I think I was overly circumspect, overly cautious and diplomatic, overly concerned about stepping on sensitive toes. After a while, however, I realized I would have to be completely direct and blunt, almost to the point of seeming militant. By the time I got to Lahore I was pretty well tuned up for the challenge.

I began in my reply by saying that, certainly, race prejudice exists in the United States and is a serious problem here. Having said that, it was important to make a distinction between the problem as it actually existed and the problem as presented by Soviet propaganda and as generally reported in the press, not excluding the influential Times of Pakistan. The condition of the American Negro was bad enough, but it did not even remotely resemble the deliberate exaggerations and distortions that were concocted for propaganda purposes and that were, unfortunately, so widely accepted.

Yes, race prejudice existed, I said, but did the students suppose that nothing was being

done about it? Did they suppose that the overwhelming majority of the American people were not aware of the problem and were doing nothing about it? Did they know anything about the work of such organizations as the National Association for the Advancement of Colored People under Walter White, a Negro himself and one of the most respected and influential American citizens? Were they familiar with the reports of the NAACP, which made it clear that greater progress had been made in the past 15 years than in the previous 50? Were they aware of inspiring advances which indicated that America was well on its way toward eliminating the evil of segregation? A slow but steady integration was taking place—without widespread violence. Educational opportunities were increasingly in evidence. Many States had prescribed penalties against job discrimination on racial grounds. The hideous denial of the ballot box to colored American citizens was being abolished. In town after town throughout the South Negroes were being elected and appointed to public office. Old taboos against Negroes in professional sports were practically extinct. The Nation's finest prize-fighters were Negroes. In baseball the man who was probably the most popular player in the game today was a Negro. In literature, science, philosophy, religion, music, the dance, Negroes were making outstanding contributions and enjoyed the esteem of their fellow Americans.

Now this progress wasn't fast enough or deep enough—admittedly—and it could never be fast enough to suit many millions of Americans who were aware of the challenge and who had been working for many years to meet it and who would not be content until it was completely solved. But the important thing was that they were at work on it, that historic progress was being made. The important thing, too, was that the Government itself was not a party to the crime or the party behind the crime, as happened in Germany with respect to race and religious prejudice under nazism. Indeed, the executive branch of the American Government had been in the role of prod to get action by Congress and the States in removing racial barriers.

But the problem of prejudice, I went on, was not a uniquely American problem. It was a human problem. It existed inside people. It was the problem of inferiority and superiority. It was that corrupting and corroding experience that took place inside a person when he arrogated to himself certain privileges which he denied to others on the basis of what he liked to think were nature's own laws. I was deeply disheartened, for example, by the prejudice and discrimination I had seen on the Indian subcontinent. In the leading hotels of Bombay, owned and operated by Indians, was posted the sign, "South Africans Not Admitted." Among Indians themselves, I frequently found discrimination according to color and caste as severe as any I had observed in the United States. National laws had been passed against the inequities of Untouchability, yet many of the evils persisted. What was worse, many of the Untouchables were willing parties to the social contract of prejudice. In Pakistan, and I hoped that those present would correct me if I was wrong, I had found evidence of religious intolerance and prejudice. This was nothing official, so far as either state or theology was concerned, but it was there just the same. There was an unfortunate attitude of superiority of religion that inevitably made for prejudice. So far as minorities were concerned, there was a distinct prejudice against Sikhs.

I brought this up not by way of admonition, nor even by way of using the glass-house theory to obtain immunity from criticism. I brought this up only by way of indicating that the problem of prejudice knew no national boundaries. To a large extent it was a common problem. Perhaps all peoples working together inside the United Nations might be able to contribute to the self-understanding that would have to go into the making of any basic attack on the problem of prejudice—racial, social, religious, economic, political. Perhaps such a common effort might be more constructive than the destructive and often ill-informed criticism that served only to enlarge misunderstanding and therefore prejudice.

This was my attempt at an answer which would be neither apologetic nor self-righteous. I was gratified by the response of the students, especially when it led to a friendly post-lecture discussion with the student who had asked the question in the first place. He said he was satisfied with the answers but felt that we were at fault for not making our story known all over the world. There was certainly no argument about that.

Defense Production Act

EXTENSION OF REMARKS

OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1951

Mr. STAGGERS. Mr. Speaker, I appreciate having these few minutes to submit my protests to the National Production Authority controls bill recently passed by the House of Representatives. It is an unjust piece of legislation, designed and executed solely for the benefit of the processors, the packers, and the big-business men of this Nation. It is not a measure to protect and assist the greatest consumer in this country, the average American family. This controls bill assures the big fellows of their profits, but it denies the workingman's family a well-balanced diet at a fair price, or needed improvements for his home or farm.

When farmers, glassworkers, miners, school teachers, and the harried housewives of my district ask me to do something about high prices, I am indeed put to shame when this controls bill is discussed. I must admit to them that Congress is too wrapped up in special interests to heed the cries of the consumers.

I am of the working people, and for them I have endeavored to see that right prevails. Having once been a farmer, I know of the problems he faces. He may get good and fair prices for some of his produce, but his overhead is so stupendous that profits are soon gone. At no time in our history have the prices of farm machinery, feed for stock, and farm labor been so high. The American farmer provides the world's breadbasket, and this is no time to jeopardize the horn of plenty. The farmer must be protected and helped. His profits must

be maintained at a level that will permit full operation and production of his land. Today, as it was in Biblical times, the welfare of a nation is gaged by its farmers. Where there are prosperous farmers, there is a strong nation.

Before it is too late, I urge you, my colleagues, to reconsider and strengthen this legislation so that all Americans, especially the farmer, will be helped. Prices to consumers must be controlled. The defense of our Nation must come before everything else.

The Struggle for Control of China— Excerpts From the Statement of Secretary of State Acheson, June 4, 1951

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. GRANGER. Mr. Speaker, on June 27, 1951, I introduced, as an extension of my remarks in the CONGRESSIONAL RECORD, excerpts which I had selected from Secretary Acheson's extended review of American relations with China. That review, as you may recall, was presented—extemporaneously as I understand it—to the joint Senate committee then conducting hearings on the dismissal of General MacArthur.

The initial group of excerpts had been selected from the Secretary's description of events in China through the period ending with VJ-day. I have now completed a selection of excerpts describing the period from VJ-day to the collapse of Nationalist military resistance on the China mainland.

I feel compelled, however, to stress again, as I did on the earlier occasion, the difficulty I have encountered in attempting to abbreviate Secretary Acheson's splendid statement. For those who would criticize my selection of statements from the larger whole, I can only repeat the earnest suggestion that everyone read Secretary Acheson's testimony in its entirety.

It is only when we are armed fully with facts that we may understand and debate reasonably and without bias or passion issues which are of great moment to our democracy. The 2,000,000-word record taken by the joint Senate committee provides a factual basis from which reasonable and intelligent discussion may proceed. For those who desire to base their judgment on reason and fact, and who wish to avoid opinions which float on emotion and prejudice, the facts are available.

And to that body of fact, Secretary Acheson made a monumental contribution in his clear and detailed testimony. He, and the other great witnesses who appeared before the Senate committee, have provided us full assurance that the men responsible for maintaining the security of this country are of the high-

est caliber of leadership, ability, and loyalty. His statement follows:

THE STRUGGLE FOR CONTROL OF CHINA—EXCERPTS FROM THE STATEMENT OF SECRETARY OF STATE ACHESON, JUNE 4, 1951

PART II. DECLINE OF NATIONALIST POWER

Choices in 1945: Stay, pull out, or fight

Shortly after VJ-day, the United States Government had three choices open to it.

One choice was to pull out of China. That was an impossible choice to make because of the presence of 1,235,000 armed Japanese troops in China, exclusive of Manchuria, and of another 1,700,000 Japanese civilians. There was a Japanese force and a Japanese influence so great in China that, by throwing its weight to either side in this civil war, it could have taken over the administration of the country, and Japan in defeat would have found itself in actual control of China—a result which we could not, of course, help to bring about.

The second choice was that the United States Government might have put into China unlimited resources and all the necessary military power to try and defeat the Communists, remove the Japanese, and remove the Russians from Manchuria. That was a task so great and so repugnant to the American people that the Government could not undertake it, and it was one which was not in accord with American interests.

The third choice—and the one which was chosen—was to give important assistance of all sorts to the Chinese Government and to assist in every way to preservation of peace in China and the working out of the agreements which were so necessary to enable the Chinese Government to reestablish itself in those parts of China where it had been before and to get, for the first time, into areas of China where it never had been.

General Marshall's objective: To avert civil war

After the agreements between the Chinese Nationalists and the Chinese Communists that I have spoken of in 1945, October 11, 1945, armed clashes broke out again between the two parties. Both the Chinese and American Government authorities were gravely disturbed that civil war would break out.

If there was civil war going on in China between the Government forces and the Communist forces, all possibility of removing the Japanese either disappeared or was gravely diminished. The possibility of occupying North China became much dimmer. The possibility of moving into Manchuria became nonexistent. And the possibility of really getting any reforms in South China or any other part of China would be greatly diminished.

So the peace became a major objective of both the Chinese Government and the United States Government in its efforts to help the Chinese Government.

It was in that situation that General Marshall was asked by the President to go to China at the end of 1945.

The Marshall mission: The early days were hopeful

General Marshall arrived in China at the very end of December 1945. By February 1946, three major agreements had been reached between the Chinese Government and the Communists. These grew out of the earlier agreements of October 11, 1945, which discussed the general principles.

The agreements of January and February 1946 carried into considerable detail how this should be done.

The first agreement provided that all fighting should cease, and provided for the setting up of an executive headquarters in which there would be American chairman-

ship and National and Communist representation. Tripartite teams were set up which went to every area where there was any clashing between the troops, and together they brought that fighting to an end.

This worked very well until the two parties fell apart—then nothing worked.

The second agreement was for government reorganization and for a constitutional government. It provided that there was to be an interim state council that was to function as the supreme organ of the state. The Kuomintang Party was given 20 of the 40 seats in this National Council. The other 20 seats were distributed among the Communists and the other parties and to some nonparty people. It was provided that Generalissimo Chiang Kai-shek as President of China, should select all members of the council—from his own party and those from all the other parties, including the Communists. It would also leave him with a veto over any action of this council.

The temporary government was to continue until the constitution was to be agreed upon on May 4, 1946, and it was hoped that at an early date, sometime in 1946 or 1947, I believe it was, there could be an election, and they would then set up a regular constitutional government.

The third agreement was for a military reorganization and the integration of the Communist forces into those of the Nationalist Government. It was provided that there should be a great reduction in forces on both sides, because China could not support the tremendous military establishment which existed on the Nationalist side and on the Communist side together. The army was to consist of 60 divisions—50 National Government divisions and 10 Communist divisions. The divisions were to be stationed in certain numerical strengths in various parts of China.

The important thing here about the agreement, as we look back on it, was that so far as Manchuria was concerned there should be 15 divisions—14 National Government divisions, and 1 Communist division. If that could have been carried out, the whole situation might have been very different.

By the end of 1946 we had removed 3,000,000 Japanese, just a few thousand under 3,000,000, from China to Japan—one of the great mass movements of people. To do that, we landed 50,000 marines in China. The marines had to go in there, hold coal, which was the heart of the industrial life of China, hold the seaports so that they would not be captured by Communists, and then receive the Japanese and put them on ships and take them back to Japan.

At the same time, our Armed Forces airlifted whole Chinese Nationalist armies from South China into the areas which were being evacuated by the Japanese. Now that was a tremendous undertaking, most skillfully carried out, which permitted the Chinese Government to get back into areas of China which it would have had the utmost difficulty in even getting into without that colossal effort.

Failure of the 1946 agreements

In 1946, the situation of comparative peace which had been brought as a result of the agreements in the early part of the year began to deteriorate. Fighting broke out in many places.

When this fighting broke out, General Marshall was acting as mediator. He called on both sides to stop the fighting. Both professed to want to do it, but did not do it. One side or the other would believe that it could gain an advantage by capturing this or that city or area, and believed it could strengthen itself in the negotiations, and would start an attack.

Therefore, General Marshall asked for and obtained from this Government an embargo

on the shipment of combat matériel into China. That embargo lasted from the time it was imposed in August 1946 until May 1947. During this time, the Nationalists were winning the battles, but they immobilized themselves.

General Marshall left China in January 1947 to return to Washington. The effort to mediate came to an end with his departure. From then on we go into the military period of the struggle between the two governments.

Civil war: Overextension and collapse

The Nationalist Government reached a peak of its military holdings toward the end of 1948. In the middle of 1948 it had approximately 3,000,000 men under arms, opposed by something over 1,000,000 Communist troops, of whom about 400,000 were guerrilla troops.

Until the end of 1946 and the early part of 1947 the military gains made by the Nationalist Government appeared to be impressive, but in fact they were not. General Marshall repeatedly pointed out to the Government that what it was doing was overextending itself militarily and politically, since it neither had sufficient troops to garrison this whole area, nor did it have sufficient administrators to administer the areas that it was taking over. It was not giving the people of the occupied areas what they had been led to expect when the National Government came in, so politically it was doing itself harm, and militarily it was doing itself harm.

Nationalist lines got pushed way forward; finally the troops at the end take up defensive positions behind some kind of walls, a long line of communication has to be guarded, which is eventually cut, and over and over again the troops at the end of the line either go over to the side of the enemy without firing a shot, or sufficient of them do so that those who want to fight can't fight.

That was the story of the war from 1946 on. At first it looked very successful—lots of areas occupied, important cities taken—but the armies all go to garrison, they become immobilized, and maneuver and initiative are left with the Communists.

American aid after the Marshall mission

After General Marshall returned, in the summer of 1947, the President sent General Wedemeyer to China on a fact-finding mission. General Wedemeyer went to China and returned. He recommended assistance of economic and military equipment for a 5-year period, which would require congressional authorization.

The Secretary of State, General Marshall, then had prepared, and with the approval of the President sent to Congress a recommendation for aid to China, \$570,000,000 in economic assistance over a 15-month period. It was not recommended that we should take measures of military aid which would lead to United States military intervention in China or direct involvement in the civil war.

This recommendation was considered by the Eightieth Congress in 1948. The Senate bill reduced the period of time from 15 months to 12 months, and split the appropriations and recommended \$338,000,000 for economic aid and \$125,000,000 as a special grant to be used at the discretion of the Chinese Government. However, when it came to the appropriation process Congress only appropriated \$275,000,000 for economic aid and \$125,000,000 for military aid. So a total was actually made available by the Congress of \$400,000,000 as against \$570,000,000 requested.

There was already a United States Military Advisory Group in China, established in 1946, and in 1947 the commanding officer of this group had been authorized to give ad-

vice on a confidential basis to the generalissimo, advice of a strategic nature, but the United States was not willing to assume responsibility for the strategic direction of the war.

General Marshall, in a message to General Barr, pointed out one reason why. He said: "I know from my own experience that advice is always listened to very politely but not infrequently ignored when deemed unpalatable."

Therefore, we did not take responsibility for the strategic direction of the war, nor did we recommend that American officers should be with troops in combat areas.

Internal weakness of the Nationalist Government

We have talked from time to time here about the great necessity for reform in China. General Marshall, during his mission, stressed that over and over again with the Generalissimo, pointing out that the whole possibility of any kind of armed action against the Communists must at last rest upon a belief in the country and their own belief that they had something which was worth fighting for, and was progressive and good, and that if we did not have reform in China, we were never going to get this spirit which was necessary to fight and defeat the Communists.

General Wedemeyer stressed over and over again that there must be political, economic, and social reforms in order that the Chinese Government might put itself at the head of this great demand for improvement, which was existing in China, and not allow the Communists or anybody else to take that advantage away from them.

The real collapse of the Nationalist Government in a military way began in the latter part of 1948. The first large-scale defection and collapse occurred in September 1948 with the fall of Tsinan, where government forces without any effort at all went over to the other side and surrendered with all their matériel.

In mid-November 1948 General Barr, who was the head of the military mission to China, reported:

"I am convinced the military situation has deteriorated to the point where only the active participation of the United States troops could effect a remedy. No battle has been lost since my arrival due to lack of ammunition or equipment. Their military debacles, in my opinion, can be attributed to the world's worst leadership and many other morale-destroying factors that led to a complete loss of the will to fight."

By the end of 1948 the struggle in North China had virtually ended with the complete collapse of the Nationalist armies. Eighty percent of all the matériel we had furnished, both during the war and after, to the Nationalist Government, was lost; and 75 percent of that is estimated to have been captured by the Communists.

IN SUMMARY

Now, at the very end of my remarks here, I briefly sum up some of the things, material and otherwise, which the United States did in aid of its policy in China.

Speaking, first, of things on which it is impossible to put a dollar value, first is the aid rendered by the United States forces in China in planning and in carrying out the movement of the Chinese Government forces into areas occupied by the Japanese.

Second is the evacuation of the Japanese troops from those areas.

Third is the aid rendered by the United States Marines in North China; in occupying key areas and maintaining control for the Government of essential railway lines until the Government was able to take over.

Fourth, the aid provided by the United States military advisory group.

Apart from this, the United States Government, in the period from VJ-day until early 1949, authorized grants and credits to China totaling approximately \$2,000,000,000, of which approximately \$1,600,000,000 were grants; and \$400,000,000 were on credit terms.

This total is divided almost equally between military and economic aid. The amounts do not include United States surplus property, except where the sales were on credit terms.

Surplus property, with a total estimated procurement cost of over a billion dollars, has been sold to China for the agreed realization to the United States of \$230,000,000, of which \$95,000,000 were on credit terms.

By the spring of 1949, the military position of the Chinese Government collapsed to the point where the Chinese Communists controlled the major centers of population, and railways from Manchuria south to the Yangtze. The military collapse of the Chinese Government had, for the most part, been the consequence of inept political and military leadership, and a lack of the will to fight on the part of its armies, rather than inadequate military supplies.

It was at that time the considered judgment of responsible United States Government observers in China that only the extension of unlimited American economic and military aid involving the use of our own troops and operations which might require the extensive control of Chinese Government operations would enable the Nationalist Government to maintain a foothold in South China.

It was believed that United States involvement in Chinese civil war under the existing conditions would be clearly contrary to American interests.

One further observation I think is important, and that is that American aid cannot in itself insure the survival of a recalcitrant government or the survival of a people that this government is trying to help against aggression.

What our aid must do and can do is to supplement the efforts of that recipient government and of that people itself. It cannot be a substitute for those efforts. It can only be an aid and a supplement to them.

The United States Government, in aiding another government, does not have power of decision with that country or within that government. That power of decision remains with the government, the people in it.

Those are thoughts I think we should have in mind.

Time To Send Him Back?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1951

Mr. KEATING. Mr. Speaker, Mr. Paul Martin, Washington bureau chief, Gannett News Service, has made a brief but pungent suggestion which appeared in a recent editorial in the Rochester (N. Y.) Times-Union. It might be classified as a footnote to history.

The editorial follows:

TIME TO SEND HIM BACK?

President Roosevelt sent General Marshall to China in 1946-47 to get Chiang Kai-shek to accept the Communists into a coalition government.

When Chiang refused to play ball, the State Department cut off United States aid

to the Nationalists, and China subsequently fell to the Communists.

Maybe it's time now to send General Marshall back to insist that the Communists accept the Nationalists into a coalition government.

The MacArthur Affair: Bomb or Boomerang?

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. GREEN. Mr. Speaker, when General MacArthur was suddenly and dramatically relieved of his command it evoked national comment that frequently produced more heat than light. Only now are we getting the well-measured words that come with time.

At this late date Writer John E. Sawyer gives us an exceedingly accurate and fair appraisal of the situation in the July 24 issue of the Reporter. Under leave to extend my remarks, I include this article in the RECORD of today:

THE MACARTHUR AFFAIR: BOMB OR BOOMERANG?

(By John E. Sawyer)

For 3 months now the main cry of the neo-isolationists and bigger-war groups in the Republican Party has been that the Truman-Marshall-Acheson policy could only mean an endless and indecisive war in Korea. Today the limited-war policy seems about to produce a cease-fire under conditions offering reasonable hope that the United States has led the United Nations in a collective military action that has halted and reversed Communist aggression. As this same wing of the party now rushes in with a new line—denouncing as a defeat the very termination of hostilities that they earlier had either demanded or proclaimed impossible except on MacArthur's terms—they might well pause to assess the wisdom of their behavior during the phase just passed.

For even before the prospective termination of hostilities the conclusion of the hearings before Senator RICHARD RUSSELL's joint committee posed the question. "How did the political 'pros' of right-wing republicanism who seized upon a MacArthur affair with shrieks of impeachment and roars of victory make out? Did they in fact launch a bomb or a boomerang?"

The fact that the main tent was set up in the Senate gave senatorial Republicans the ringside seats and the chance to play most of the leading roles. But it's now time to throw the spotlight back on to the minority leader of the House, the chunky little man from North Attleboro, Mass., JOSEPH W. MARTIN, JR.

JOE MARTIN deserves this belated attention twice over. He was, after all, the first to get into the act in a big-time way—a fact that the subsequent crowding upstage should not be allowed to obscure. Whatever the role that his now-celebrated letters actually played in precipitating the affair, it will be a long time before he'll have to abandon all claim to having been the man who actually got the show on the road with his maneuverings-by-mail.

More important, JOE MARTIN is a symbol of a group within his party that has repeatedly thrown over the traditions of responsible Republicanism reaching from Alexander Hamilton to Henry L. Stimson

and Arthur H. Vandenberg, and has determinedly sought to make partisan capital out of our foreign problems. While many men in many parts of the world contributed to the build-up of this crisis, there is considerable evidence that General MacArthur quite consciously forced a showdown, and that behind his increasing provocative actions and communications lay more contact with extremist Republicans than has yet been disclosed. Of this wing of the party MARTIN is a far more powerful representative than many men who took the stage as the show went on.

General MacArthur clearly has meant many different things to many people. The man and the symbol have either attracted citizens or repelled them for reasons ranging from the great issues of American foreign policy down to the basic emotions aroused by any such display of masculine power, decision, drama, action, and arrogance.

On the Congressional stage, motives have been equally mixed. Many political leaders in both parties have been trying to establish policies that can best serve the national interest. Even those who disagree most with the Formosa-First Republicans should recognize that some among them act on sincere conviction about the national interest rather than simply on calculations of partisan advantage.

There is little in JOE MARTIN's record, however, to suggest that such concerns have weighed heavily upon him. Few figures in public life have burned with a more purely political flame throughout a long career. Few have so rarely allowed considerations of national welfare to interfere with party politics, so resolutely resisted the temptation to think in terms other than those of the grab for power.

Whatever the MacArthur affair may have meant to others, it seems safe to assume that to MARTIN and his crowd it meant one thing above all else: a political weapon that at worst would enable the neo-isolationists to regain control of the Republican Party, and perhaps of United States foreign policy as well, and that at best might hit the administration where, supposedly, it was weakest, and blow it out of office in 1952.

GAIN OR LOSS?

Viewed in these terms how did the affair come out? Final results, of course, will not be in until a year from November, but there is quite a lot of evidence that must already be worrying the political "pros" who started it. The problem can perhaps best be sharpened by setting up some of the results that seem to be emerging against the goals and expectations of the first roaring days. Ten points, while by no means covering the whole impact of the case, should give MARTIN and his friends something to think about.

1. The attempt to raise a colorful military hero into the role of policy-maker over the heads of the properly constituted authorities has been repudiated by military and civilian opinion alike. The constitutional limits of the field commander's function have been clarified. At no time since the Second World War has the subordination of military to civilian authority been so clearly understood all around.

2. The attempt to set up the Joint Chiefs of Staff—the men, their office, and their judgments—in opposition to President Truman and Secretary Acheson, has produced instead an extraordinary show of unity. While voicing individual differences of opinion, the military and political advisers have shown broad agreement, not only about relieving MacArthur, but about the basic foreign policies of the Republic as well.

3. The subsequent attempt to discredit the Joint Chiefs as stooges of the President or as

distant desk officers has instead led to renewed support of these officers and their functions. Even critics of their policies, such as General Wedemeyer, and, on occasion, General MacArthur himself, have stated that United States global military policy must rest in their hands and have urged the Congress to follow their counsel. In exchanges that pitted a General Bradley against Senators like WILEY, CAIN, and KNOWLAND, it was not Bradley who came off second best in the eyes of the public.

Further, the military competence of the Joint Chiefs and their chosen field commanders has done much to undo the "authority" of MacArthur's criticisms. Somewhat reluctantly, the military witnesses revealed that the Joint Chiefs had warned MacArthur of the perilous gap on the left flank of X Corps through which the Chinese later poured; the quiet effectiveness of the Ridgway campaign has told the world its own impressive story.

4. The attempt to brand the Korean intervention—our first action to halt overt aggression—a monstrous folly was first spiked by the hero himself. General MacArthur, though "not consulted," upheld the President's decision, declaring that this action not only "[restored] at one stroke the enormous prestige of the United States. It confirmed the people of the Far East that we were not going to let them slide into slavery." He further agreed that the "psychological effect of withdrawing from Korea [now] would collapse the confidence, not only of the Far East, in our strength to carry out an obligation which we have announced, but throughout the world." These statements and policies, repeated by the various Presidential advisers as well, cannot have been without effect on millions of Americans who had been in honest doubt about the need and purpose of this action.

5. The alternative attempt to plunge America into an ever-increasing commitment of resources to the Asian theater forced General Marshall, and those who followed, to present to the American people the most explicit and comprehensive brief for our present policy to date. To some extent the Senators from Formosa themselves have made the Asia-first policy ridiculous. (People began asking themselves whether Formosa was really a fourteenth state that the founding fathers had in mind.) To a still greater extent their policy went under before the massive evidence about "the wrong war at the wrong place, at the wrong time, and with the wrong enemy", and before the massive arguments for recognizing the priority of industrial Europe, and for using time to build up our strength here and abroad.

6. The attempt to make Truman (and the internationalists of both parties) bear the political costs of the hateful waste and casualties of war seems to have failed. The war-with-China and the war-with-Russia-now Republicans let Mr. Truman off this hook. By a prodigious effort they jockeyed themselves and their party into the position of wearing the war-party label for the next election, while Mr. Truman will be widely identified with a policy of resisting aggression with the least possible losses. The termination of hostilities might really make the new label stick.

7. The attempt by the neoisolationist wing of the party to take control of Republican foreign policy, to defeat Vandenberg bipartisanship, seems to have backfired. Its irresponsible tactics, its talk of impeachments and contempt, as well as the contradiction of wanting a bigger war with a smaller defense budget, have served to discredit it. TAYLOR's inconsistencies got far less attention than usual, and on the critical vote half of WILEY's fellow Republicans opposed him.

MacArthur himself significantly struck out at the isolationist position, protesting against

"strait-jacket formulas" on the disposition of troops and specifically stating that "we should make every possible effort to assist Western Europe in her defense," with ground forces as well as air and naval forces. The discomfiture of the fumbling Formosa firsters as compared with MOORE's effective showing may aid the reemergence of Republican voices that, without a courageous leader, had lately retired into the back-ground.

8. The attempt to disrupt the United Nations front and to separate America from its allies has led to repeated assertions from many sides of the value and importance of preserving that front. Even General Wedemeyer's testimony reiterated this theme. The demonstration that we are willing to try to operate within commonly agreed-on policies and that United States arms are subject to responsible civilian control has reassured European allies fearful of headlong generalship. It has helped deprive our critics abroad of their main argument against assuming further burdens in the effort to halt Soviet aggression; it has increased our bargaining power in asking for wider commitments; it has increased our influence in the U. N. and among wavering people on the margins of Soviet power.

9. The attempt to fix upon the administration, and upon Acheson in particular, the historical responsibility for the spread of communism in Asia has given the defendants a unique opportunity to go back over a cloudy, complicated history and explain their case. In an exceptionally able presentation, Acheson has set Yalta in its pre-atomic perspective and analyzed more persuasively than ever before the reasons why Chiang Kai-shek failed. The spotlight was also thrown for a minute on the China lobby and its activities, which are of a kind Americans do not like. Finally, General Wedemeyer, introduced as a major witness for the prosecution, asserted that the Communists could have been stopped at the Yangtze "with broomsticks" if the Nationalist regime had had the will to do it. He also revealed that at a time when he felt seven American divisions might have halted the Communist tide and saved even Manchuria he was refused these divisions by none other than General MacArthur—an other decision presumably understandable in the conditions under which it was made.

10. The attempt to split the Democratic Party over foreign as well as domestic policy has, instead, produced Democratic solidarity rare in recent years. A southern Senator, no particular friend of Mr. Truman's, has conducted the inquiry in a way that has commanded general respect, and as the issues have unfolded the Democratic membership in and out of Congress has come to understand and support the administration's foreign policy to an extent not recently known. The Democrats also show signs of headiness over the slow discovery that the Republicans are committing themselves to a campaign in the area where Truman is actually strongest—his foreign-policy record—rather than in such areas of Democratic political weakness as mink coats and mediocrity.

THE BALANCE SHEET

These 10 points are obviously not the whole story. Large numbers of people will remain convinced that a great soldier has not only been wronged but can say or do no wrong. Large numbers will forever bitterly oppose anything Mr. Truman does. Larger numbers still will remain ignorant or confused about the issues and choices before us.

But these 10 points should be enough to worry JOE MARTIN. Of those not irrevocably committed in any event, we would hazard two guesses: That the number of people who will now support MARTIN and company are not only notably fewer than this group earlier hoped but fewer than before the af-

fair; and, second, that the policy of a sober assumption of our responsibilities in the twentieth-century world is now more widely supported than before, not only in the country at large but in the parties that must act upon that policy. Another question remains: How long are Republicans going to let the Martin-Taft-McCarthy wing dominate the party's public stand on foreign policy?

Czech Puppets Dance to Moscow's Tune

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HELLER. Mr. Speaker, the once proud Republic of Czechoslovakia, founded by the late great Thomas Masaryk and nurtured to full democratic development by that able European statesman Eduard Benes, has come upon sad and tragic days. Under the yoke of communism, everything remotely resembling freedom and true democracy in Czechoslovakia has been totally destroyed. Freedom of the press is one of the latest victims, for Communist Czechoslovakia no longer desires to have the world know what is going on in that unhappy land and it no longer wishes to have its people maintain any contact with the free world.

How else can one explain the arrest, the trumped-up charges, the phony trial, and the conviction of the American news correspondent William N. Oatis by the Czech Communist authorities? Mr. Oatis was merely trying to do his job fairly and accurately as an honest newspaperman, but to the Communists this only means reporting slanders and lies, carrying on espionage and activities hostile to the Czech state. The transcript of the trial, as released recently by the State Department and published in the United States press, does not bear out these charges. Oatis merely carried on the normal activities of any newspaperman in the course of his news gathering functions. The Communists found this to be a "crime" and sentenced him to 10 years in prison.

The Oatis case differs from other cases involving trials of foreigners in iron-curtain countries in one major respect—the defendant was found guilty of doing well the job to which he had been assigned and for which Czechoslovakia permitted him to come into the country. Other than that, we have the usual pattern of false charges, the confession, and the travesty of justice so characteristic by now in Communist-dominated countries.

Several suggestions have been made for American reprisal for the treatment given to Oatis by Czechoslovakia. Among these suggestions are the following: To sever diplomatic relations with Czechoslovakia; to bar reporters for the Communist press in Eastern Europe from gathering news in this country; to break off trade relations with Czechoslovakia; to withdraw the trade

privileges which we have extended to Czechoslovakia in the American zone of Germany; to bring the matter to the attention of the United Nations, and other proposals.

Whichever of these steps is finally taken, it should be done in a manner to make it unmistakably clear to Communist Czechoslovakia, to the other Communist-dominated countries, and to their Communist overlords in the Kremlin, that persecution of American nationals for the sole reason that they are Americans will not be tolerated, that false arrests and phony trials of peaceful and loyal American citizens must cease, and that unless these iniquitous acts are stopped immediately and men like Oatis are released to return to their homeland in freedom, we shall be compelled to retaliate in kind.

Mr. Speaker, we cannot allow the name of America to be shamefully degraded and humiliated by Communist satraps and satellites acting as puppets for Moscow.

An interesting editorial on the subject appeared in the Brooklyn Eagle, July 23. It reads as follows:

UNITED STATES SHOULD END ALL TRADE WITH CZECHS TO FORCE FREEING OF OATIS

The unjust imprisonment of William N. Oatis, Associated Press correspondent at Prague, has again brought home to the American people the outrageous mistreatment of our citizens in the Russian satellite states.

Responsible for this were the Red rulers of Czechoslovakia who dance obediently when the Kremlin calls the tune. We have seen the Hungarian puppets handle a similar case in an equally high-handed manner when they threw an American businessman, Robert Vogeler, into jail on trumped-up charges and kept him there for 17 months. He is now free only because our Government virtually paid blackmail to get him out of the clutches of the Commies.

This is no way to handle such incidents. It is high time that our Government took a tough position when its citizens are subjected to this kind of mistreatment by these upstart Commies who in this case disgrace the name of Czechoslovakia, once one of the best governed and most prosperous of democracies.

There is no question that Oatis has been jailed on trumped-up charges of "spying." The whole proceeding in Prague has been a travesty on justice as we know it.

Our Government should break off all relations with the puppet regime in Prague, both diplomatic and commercial. This would be a serious blow to Red Czechoslovakia. America could get along without the Czech trade, whereas the goods we send there are vital to the economy of that nation.

Since the State Department seems to be unwilling to take the drastic steps needed, Congress should act. There are already resolutions in both Houses to suspend trade with Czechoslovakia until Oatis is freed. The authors are Senator HERBERT R. O'CONOR, Democrat of Maryland, and Representative JOHN V. BEAMER, Republican of Indiana. Those resolutions, or something similar to them, should be passed promptly.

The Czechs are bluffing. Their leaders think we do not have the nerve to defend our own citizens. If we acted with the strength at our command, we believe they would back down at once.

And we should let the world know that this would be our general policy on all incidents of this sort.

Postal Salaries Must Be Adjusted Upward

EXTENSION OF REMARKS OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. McGRATH. Mr. Speaker, it is urgent that salaries be adjusted upward to provide adequate incomes for postal employees. The postal service is the blood stream of our economic system, but this stream is no longer flowing freely. Low pay for mail carriers and the resulting poor morale and high turn-over in personnel are the reasons for the erratic mail deliveries we are experiencing today.

Although food costs have increased 15 percent in the past year, and the general cost of living has increased 10 percent, postal workers have received no increases in more than 2 years. Consequently, Federal salaries are falling behind the level of private industry and the Government is finding it impossible to retain the services of its most competent persons. The annual turn-over among postal employees is as high as 40 percent in some areas. The general average of turn-over is 25 percent. This means, from the standpoint of comparable personnel policy in private industry, that the postal service is being managed poorly by the Government. The results are reflected in inferior services, and also in higher costs of operation. It has been stated that it costs the Government twice as much to train new employees as it would to grant cost-of-living increases.

Not only have postal employees lost income because of the increasing cost of living but they have lost still more through increased taxes, Federal, State, and local. In addition, further increases in Federal income taxes are imminent.

Many faithful postal workers are no longer able to buy necessities of life for themselves and their families on their postal salaries. To cope with the situation, many employees have taken outside jobs. Wives of the postal workers have in many cases been forced to find work. In spite of this, the postal employees must finance their own pensions by paying 6 percent of their salaries to a retirement fund. They must provide their own bonds. They must pay for their own badges and maintain their uniforms. Their grossly inadequate salaries are reflected in the increased number of loans granted by the postal employees' credit unions.

Postmaster Donaldson has recognized this unjust situation and has recommended that salaries be adjusted to remedy it. Specifically, the Postmaster General recommended that the four lower postal grades be eliminated entirely so that the entrance salary would be sufficient to permit the Post Office Department to obtain the help which is now being hired by private industry. Mr. Donaldson pointed out that entrance pay for postal employees is \$1.32 per hour, while that for most industries is

\$1.50 per hour. Mr. Donaldson also recommended that postal salaries be reclassified so that supervisory personnel be given the monetary recognition they deserve. In addition, the Postmaster General recommended a general increase in accordance with the present-day cost of living.

It is essential that postal employees be given increased salaries so that they can meet normal living expenses. It is equally essential to maintain and to increase the efficiency of the service. This fact has been recognized by the Wage Stabilization Board which has ruled the postal workers can have a pay raise.

I will wholeheartedly support legislation which would grant an increase to postal workers.

Address at Two Hundredth Anniversary Banquet at New Braintree, Mass.

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article:

Speaking at the two hundredth anniversary banquet at New Braintree last night Congressman PHILIP J. PHILBIN, of Clinton, lauded the dauntless spirit of the American founders which made possible the realization of free government and free enterprise in the Nation.

"It was in communities like this," said PHILBIN, "that liberty was carefully nurtured, individual responsibility developed and free institutions made a living reality."

"For more than 175 years our great Republic has endured by virtue of the sacrifices of succeeding generations of Americans and their determination vigilantly to guard the precious values which underlie the philosophy and practice of democracy. This town bears mute but eloquent testimony to that fact."

"Each generation has met the challenge to its freedom just as our citizens must meet it today. Armed strength and material power of themselves are not enough to safeguard our liberty. We must exemplify and practice the basic spiritual values of integrity, freedom, and justice which form the foundation stone of our democratic system. Just as we enjoy the rights and privileges of free men and women, so must we live up to the responsibilities which go with that freedom."

"The Nation is merely the collective whole of which we all are a part. Each community must meet its responsibility to the Nation and each individual must be prepared to meet his or her responsibility to the Nation if democracy is to survive in this world of ruthless violence, conspiracy and deceit, and grave threat to our security."

"If thoughtless indifference to what is happening in the world, in the Nation, in the community, in the public service is substituted for positive individual responsibility to guard liberty and free enterprise, we shall ground on the shoals of socialism and become the slavish subjects of the rigid superstate our potential enemies seek to fasten upon us."

"The national security must ever be our greatest concern in these days of threat and

danger. We must boldly face the critical problems of defense and war and try our best to solve them by peaceful means.

"But we cannot be craven or weak before the forces of godless hate. We must stand firm and steadfast by our American principles and for our American interests never fearing or retreating before diabolical enemies of our freedom at home or abroad.

"This crisis will require sacrifice and hardship. But if our governmental affairs are handled with courage and prudence it should not require the abandonment of additional democratic patterns. With intelligent public action and patriotic popular support, there is no reason whatever why we should not be able to protect the Nation during this period against further inflation, decreased dollar values, and excessive costs of the necessities of life. We cannot and should not tolerate from any government fiscal extravagance and bounding prices of commodities that would in short time, indeed, destroy the American standard of living.

"The people rule this Government. They will get in time the kind of government they want. We all must realize the dangerous trends in which we live. Let us strive for security, for balance, for order, and for peace and prosperity under free institutions through strength, restraint, and willingness to pay the price which our freedom demands.

"Let us keep it vividly in mind at all times that democracy and prosperity can be destroyed more surely by unwise and unsound economics right here in our own country than they can be by foreign aggression.

"This vital decision must be made by the people themselves who have it in their own power, depending on what policies they pursue, to preserve or to destroy the greatest sanctuary of human liberty in the world.

"May God grant us wisdom to see the light which illumines the paths to peace, security, prosperity, and national well-being."

The Late Philip Hicky

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. GATHINGS. Mr. Speaker, Philip Hicky's passing on July 9, 1951, is a great loss to his city, his State, and the whole Midsouth region. He was an outstanding business and civic leader in his home city of Forrest City, Ark., where he had lived for more than 30 years.

Due to ill health Mr. Hicky retired in 1949 and spent his remaining days at his country estate near Forrest City that he loved so well. At the time of his retirement he was general manager of Armour & Co.'s cotton-oil mills at Forrest City, Memphis, Pine Bluff, and Jackson, Tenn.

Fred McCallum, publisher of the *Forrest City Daily Times-Herald*, wrote a splendid tribute to Philip Hicky. I include the full text, as follows:

[From the *Forrest City (Ark.) Daily Times-Herald* of July 10, 1951]

As We See It

(By the editor)

The tragic and sudden death of Philip Hicky at his beautiful home near the city yesterday afternoon removed one of those who have done more than their part to make Forrest City the desirable city it now is.

Until his retirement a few years ago and the failure of his health, he was a worker who accomplished what he started.

His able management of the huge industries entrusted to his care show his ability. The beauty of his home grounds, the well-kept orchards and vineyards about his home, the beautiful lake which played an unwilling and unwitting part in his death, and the substantial lines of the home itself show that he had the touch of an artist, as well.

The closely knit ties of the home he established testify that he was a good father and husband. Many of the city's most enjoyed and substantial improvements came into being partly through his guidance and leadership.

Men of his ability and character have left their imprint on the communities in which they lived from the Stone Age on up to the present time; and it is due to their efforts that civilization has slowly but surely been able to continue to advance upward.

Philip Hicky led an active and useful life. He lived to almost the allotted time of three score years and ten. His accomplishments were sufficient. Idleness, inactivity, or helplessness would have galled his proud spirit. We think since his strength was used up, he would have preferred to go as he did—quickly, and we hope, without pain, in the setting of the parkway by the lakeside he loved so well, his spent frame cradled by the waters he caused to be there to receive him as he expired.

To those grieving members of the family he left so suddenly we can but repeat the immortal lines of Kipling:

"When earth's last picture is painted and the tubes are twisted and dried,
When the oldest colors have faded, and the youngest critic has died,
We shall rest, and, faith, we shall need it—lie down for an aeon or two,
Till the Master of All Good Workmen shall put us to work anew."

Remembering the parable of the Good Steward, we know he will be most joyously welcomed in his new home.

And may his faithful helpmate, who has called us often in the past to compliment us on articles appearing in this column, find the message we thought so fluently but wrote so feebly today, and may it strengthen her, the better to enable her to bear her grief and sorrow at his passing.

The Quaker Technique

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 26, 1951

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix to the *Record* an article entitled "The Quaker Way Wins New Adherents," from the *New York Times* magazine for Sunday, June 17, 1951, written by the distinguished engineer and chairman of the President's Water Resources Policy Commission, Mr. Morris Llewellyn Cooke.

Mr. Cooke's temperate review of the values and growing use of the "sense of the meeting" method for making group decisions takes on added significance in the light of his own varied experience in public life and in the face of the clear

need for developing greater tolerance, understanding, and teamwork in the execution of the Nation's business.

There being no objection, the article was ordered to be printed in the *Record*, as follows:

THE QUAKER WAY WINS NEW ADHERENTS—THIS OLD TECHNIQUE FOR WORKING OUT DIFFERENCES IS INCREASINGLY USED IN AFFAIRS OF HIGH POLICY

(By Morris Llewellyn Cooke)

To persons who are not initiated in politics, a decision reached by the processes of debate and majority vote acquires an aspect of sanctity as the ultimate expression of democracy. But those in Washington who deal with the complex problems of statecraft inevitably come to see grave shortcomings in the honored old way of settling issues. Increasingly these men and women are resorting to a subtle and effective method long used by the Quakers to arrive at essential unanimity in their business sessions—the process known as taking "the sense of the meeting."

The technique is being adopted by numerous directors of public and private organizations in various parts of the country. It has in recent years helped to settle policy on several national issues of great consequence. Already one can detect the small but significant beginnings of this approach in some actions of the United Nations. Doubtless quite a few of those who are starting to employ the technique are not even aware of its Quaker origin, but they are all too familiar with unfortunate results developing from the great reliance on the reaching of decisions by majority rule.

The faults of the conventional parliamentary procedure arise from its basic assumption—that there exists a divergence of interests rather than a common purpose. The introduction of a resolution for a yeas-and-nays vote is conceived as a kind of contest between opposing forces, each going into battle armed with fully formed conclusions which it then attempts to put over on the other side. If a group cannot force acceptance of the whole program, then it proceeds, by a process of barter, to swap point for point—often without regard to the right or wrong of the individual points.

The outcome of the vote, then, is a victory for one side and a defeat for the other, which leads to grudges. It is likely to represent no group decision based on the intrinsic merits of the case but a sort of ledger sheet showing the result of bargaining negotiations. And it imposes on the minority a course of action in which they do not concur and which they may positively resent. At its most extreme the tenor of this method may be described in the words of a prominent businessman in the 1920's, who told a stockholders' meeting, "We will vote first and discuss later."

The Quaker practice of "taking the sense of the meeting," on the other hand, is a combination of free discussion and quiet thinking. "The Quaker form of church government," says Howard H. Brinton, director of Pendle Hill, Friends' Graduate School at Wallingford, Pa., "is the most complete democracy ever devised. Not only do the Quakers refuse to admit the imposed authority of any individual. They do not even admit the authority of a majority. All decisions must be made on the basis of unanimity, reached by a process that considers the opinion of every person, both expert and inexpert. Therefore, a Quaker committee sometimes appears to be amateurish and time consuming."

It is well worth this time, in the Quaker view, to develop in a group the willingness to accept unanimously what appears to be the balanced judgment of the majority or the best informed.

First, according to this procedure, a subject is introduced not by presenting a resolution but by "reading a query." This is usually done by the chairman—or "clerk of the meeting," as he is known in Quaker groups. Such a departure from parliamentary order is by no means a petty one, for by this simple device, the issue seems to come from the group as a whole instead of being sponsored by one faction within it.

Various points of view on the subject are expressed by individual members—whoever wishes to contribute. But strong words, provocative language, and repetitive discourse are taboo; members are encouraged to speak just once on a given point, and only after careful thought. And, most significant of all, the individual speaks not simply as a man expressing his own conscience but as the voice of the group addressing itself to the issue at hand. If a contrary viewpoint is raised, it is considered as if it were one's own for the purpose of treating it objectively. "Getting under the weight" of the other man's doubts is the term the Quakers sometimes use to describe this attitude of respect for a minority viewpoint.

If conflict at any point becomes so heated as to make an agreement doubtful, the clerk may halt discussion and ask the members to consider the subject for awhile in thoughtful silence. The value of such a deliberative period was shown during World War II, when a group meeting in a midcity Philadelphia office attempted to settle a troublesome strike. All interests were represented. The president of the concern was high in the councils of the Episcopal Church. The discussion having become bitterly deadlocked, he said: "My partner is a Quaker from Delaware County and I propose that after the manner of friends we settle down to a period of silence and see if we cannot get some light on these troublesome differences."

After 5 minutes of a profound silence the meeting was called to order and the discussion resumed in a different atmosphere. In a very short time an agreement satisfactory to all was reached.

There is never any voting. When a positive program of action appears to have been indicated by the evidence brought to bear on the subject, the clerk sums it up by "presenting a minute," expressing what he takes to be the sense of the meeting—the consensus, the course of action which would take into account the most significant pieces of evidence contributed by all the members. At that certain point "you can almost hear the meeting click," as one experienced clerk describes this phase of the proceedings, "and that's the clue for the clerk to present his minute."

The sense of the meeting stands as the group's decision unless some challenge is made by an unsatisfied individual. In this case the clerk may suspend the subject for the time being—true unanimity obviously being out of the question—to permit more careful consideration and perhaps to gather more facts. A committee may be appointed for research and to prepare a report for the next meeting, when a new attempt is made to attain unity.

Much of the success of this technique depends on the skill and the character of the clerk. He must not only be acute, intelligent, sensitive to the meanings expressed by the members, but he must take care to refrain from being domineering; in fact, must frequently suppress his own attitudes. From the membership as a whole the system requires thorough frankness, sincerity, and a cooperative spirit.

Beyond these there are two principal elements in the practice. There must be a belief on the part of all or most of the participants in the meeting that agreement is desirable. Secondly, the belief must be enter-

tained that in any decisions taken the way should be left open for the unconvinced, or for the skeptics, eventually to join in the view reached by the main body of the group.

If these two convictions are held by a substantial number of those present in the meeting, the Quaker practice has been known to surmount very great initial differences of opinion.

How successful is this temperate method when serious differences exist? The best answer lies in a recital of some important cases where agreement is, or has been, attained by the Quaker principles of unanimity.

1. The President's Water Resources Policy Commission, recently published under its report under the title "A Water Policy for the American People." The findings were concurred in unanimously by the seven Commissioners. The Commission, of which I was Chairman, never took a vote and no record was kept of its proceedings. The report itself is its record. Even though its assignment from President Truman involved reaching decisions on many highly controversial questions affecting water and land, everything was talked out in conference until a meeting of minds was arrived at.

2. The Acheson-Lillenthal atomic energy report was drafted by a group which tried to operate after the Quaker fashion. A helpful factor in creating the necessary deliberative quiet was that meetings were held in a storage warehouse on the outskirts of Washington, and no one but the participants knew of the project until the work was completed.

3. The Joint Committee on the Organization of the Congress in 1948-49, commonly known as the La Follette-Monroney committee, drafted—without taking a vote—the voluminous report on the basis of which Congress was fundamentally reorganized.

4. The present Senate Republican conference, of which Senator MILLIKIN is chairman and to which all Republican Members belong, takes no votes and such conclusions as are reached are stated by the chairman to be his interpretation of the committee's joint thought.

5. The International Monetary Fund operates in accordance with this bylaw: "The chairman will ordinarily ascertain the sense of the meeting in lieu of a formal vote" unless a vote is specifically called for. Frank Coe, the secretary of the fund, tells me that during the 4 or 5 years since it was organized decisions have been reached on over 1,000 issues and that on only 12 or 13 of them have votes been taken.

6. The Committee on Economic Development, one of the major organizations studying public finance, carries on its discussions and frames its findings Quaker-fashion. At the conclusion members of its committees are recorded as voting for or against, with the opportunity accorded for explanatory footnotes.

7. Finally, because it is frequently said that the Quaker method can be used only where relatively small groups are concerned, it is worth while to note that the First National Conference on Aging held in Washington during August 1950, under the auspices of the Federal Security Agency, with an attendance of 816, used the group process of discussion and decision. Clark Tibbetts, who acted as chairman of one of the principal committees, thinks that the success of the several sections was "almost in direct proportion to the use made of the group method."

For all these striking examples, it would be false optimism to conclude that the "sense of the meeting" technique could be applied successfully to the deliberations of major political bodies, such as a Congress in full session. Here the limitations of the method must be acknowledged. For by its very definition it requires not only utter frankness, sincerity and mutual trust but also a sup-

pression of any personal, factional, partisan or sectional interests.

There is no room in the Quaker practice for unreasoned obstinacy in the face of sound evidence, nor for resistance to unity on a particular issue based merely on traditional antagonism. Some Friends themselves go as far as to say that the practice cannot be applied with much hope of success in any group composed of elected representatives who must report back directly to a constituency, for often the constituency holds some minute but unshakable special interests that are contrary to the interests of the group as a whole.

This also raises the question whether anything can be gained from the Quaker method in the way of peaceful and effective deliberations among the United Nations. It must be recognized that the necessary frankness and trust between eastern and western nations are unfortunately lacking at present. We could not feel sure, for example, that evidence presented by the Soviet Union and her satellites would be anything more than a disguise for her real purposes or a calculated move undertaken for propaganda value.

Still there is a direct relationship between the Quaker practice and methods of securing agreements on disputes before the U. N. Assembly, once these disputes have been handed over to conciliation commissions or to mediators. Because it is possible for these commissions to operate in private, without the glare of press and radio publicity and without the necessity for individual members of the commissions to record their points of view, the way seems open for utilization of the Quaker practice.

In the case of the U. N.'s subsidiary agencies, those smaller nonpolitical organs in which a group of nations represents the total membership, there is also good opportunity for using the sense of the meeting, for in these cases the members are not expected to reflect only their own national interests. The Economic and Social Council the Trusteeship Council, and their subcommissions are examples in point. There have been occasions in each of these bodies when the chairman has been able, because of the thorough discussion that has taken place, to make voting a perfunctory step.

Do these instances of successful use of the Quaker method, and examples of public bodies which might try it, indicate a wider usefulness for the sense-of-the-meeting technique in the future? That they do. If the executives of organizations dealing with public affairs, from the municipal level up through the councils of the United Nations, will test this technique they will find that important decisions can be arrived at with less partisanship, more harmony, and with greater faith in the results achieved. That much, in these irascible times would be a great deal.

Constantino Brumidi

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following address delivered by me at services commemorating the one hundred and forty-sixth anniversary of the birth of Constantino Brumidi, the Capitol artist,

held Thursday morning, July 26, in the rotunda of the Capitol:

Today, after a silence of more than 70 years, we commemorate—we remember—a humble immigrant who came to our shores 99 years ago—Constantino Brumidi. He brought with him the genius of a Michelangelo. Here, as we stand in this historic rotunda of the Nation's Capitol, he speaks to us through his matchless art—a gift from God himself.

The unnumbered millions who have visited this shrine of all Americans, and walked its spacious halls and historic rooms, have been thrilled by the beauty he left behind on its painted walls. Death stayed his skilled and unerring hand in 1890.

Here he labored with the eye and hand of a master for a quarter of a century. Only an inspired soul could leave such a priceless gift to a mighty nation and unborn generations who may visit here.

Constantino Brumidi came to America from Italy in 1852. My own father succeeded him, by the brief space of 2 years, in 1854. Freedom beckoned them, and the countless thousands who followed after, to this, our beloved land of opportunity and privilege, where "the air is full of sunlight and the flag is full of stars."

When Brumidi landed in America, he at once sought citizenship within the provisions of our laws. The law required him to remain 5 years before he could accomplish the longing of his grateful heart. Within 3 days after the allotted years had passed, he became a citizen of the United States.

Among the first of many masterpieces he produced thereafter was the painting of a mural in the Chamber of the House of Representatives, showing Cornwallis at Yorktown. So proud was he to become a citizen of the land of his adoption that he signed his name, on the lower right-hand corner of that mural "C Brumidi, artist; citizen of the United States."

We do well to remember this genius of paint and brush, belated as it is and forgotten as he was. Recently he was rescued from oblivion by the patriotism and untiring efforts of a great and noble woman, Mrs. Myrtle Cheney Murdock.

We honor ourselves today by honoring the man who has moved multitudes. They have come here and gazed in awe and rapture at the creations of his faultless skill. America gave him opportunity. He gave to America richly, in return, that rare talent and ability with which he was endowed. Thus he expressed his gratitude for citizenship.

This month we celebrated the one hundred and seventy-fifth birthday of our Republic, the signing of the Declaration of Independence. Our thoughts turned and our hearts warmed with sentiment and patriotism, to the 55 men who pledged their lives, their fortunes, and their sacred honor when they affixed their signatures to that famous document. Had their cause failed, death would have been their portion.

Such was the danger and travail that attended the hazardous beginning of that freedom, opportunity, and privilege which invited Brumidi to our shores, and which we enjoy today as citizens of the finest country in the world.

Do we appreciate America? Are we as proud and conscious of our citizenship as was this humble immigrant, Constantino Brumidi, whose name and fame we commemorate today in the very presence of his lovely and exquisite achievement?

With a world on fire, and liberty in danger everywhere, may we take home with us today a greater appreciation of his incomparable legacy to America and, from the lesson he taught, a deeper reverence and love for the land we call home.

Constantino Brumidi

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. ANFUSO. Mr. Speaker, this morning in the rotunda of the Capitol we celebrated the anniversary of the birth of Constantino Brumidi, the artist who spent many years decorating the Capitol Building of the United States and who died as a result of a fall while working on the rotunda frieze, his last assignment in the Capitol.

Many notables attended this ceremony as well as the Members of the Senate and House of Representatives. It was a dignified and deserving tribute to the man who by his artistry and genius fused with his great love and devotion to the land of his adoption, depicted with the skill of Michelangelo, America as the land of democracy and freedom.

This ceremony under the historical and allegorical scenes so deftly depicted in print and plaster by that great artist was enriched by the angelic voice of Miss Lois Hunt, beautiful soprano of the Metropolitan Opera Co., who sang the Star-Spangled Banner as it had never been heard here in the Capitol. Miss Hunt also left her audience spellbound, not only by her voice, but by her masterful manner of delivery as she sang an aria, *Un Bel Di*, from Puccini's *Madame Butterfly*.

Another great artist who thrilled the capacity audience was Pvt. Vic Damone, popular cinema and radio star. His rendition of *Sorrento* and *God Bless America* as he proudly wore the uniform of the United States Army, won the genuine plaudits of the multitude present.

And now last but not least, I wish to place on the RECORD the entire speech of Dr. Myrtle Cheney Murdock, wife of our distinguished colleague, the gentleman from Arizona (Mr. MURDOCK), whose inspiration it was to pay this fitting tribute to the Michelangelo of America, Constantino Brumidi.

Before doing so I should like to pay proper respects to the joint committee of the Senate and House: Hon. John O. Pastore, chairman, Senator from Rhode Island; Hon. Theodore F. Green, Senator from Rhode Island; Hon. Clinton P. Anderson, Senator from New Mexico; Hon. Margaret Chase Smith, Senator from Maine; Hon. James H. Duff, Senator from Pennsylvania; Hon. George A. Dondero, secretary, Representative from Michigan; Hon. Foster Furcolo, Representative from Massachusetts; Hon. Peter W. Rodino, Jr., Representative from New Jersey; Hon. Victor L. Anfuso, Representative from New York; Hon. Albert P. Morano, Representative from Connecticut; David Lynn, adviser, Architect of the Capitol.

The speech follows:

CONSTANTINO BRUMIDI

One hundred and forty-six years ago today a babe was born in Italy, a babe whose des-

tiny was to be linked with yours and mine. From his father came the name, Brumidi, but it must have been his Italian mother who first called him Constantino. She might have remembered the old Roman Emperor, Constantine, but I would rather believe that she laid store by the word, Constantino—meaning—constant, steadfast, faithful.

We know next to nothing about the life of this child in Italy, as a child or as a man. But we do know that as a man he landed on the shore of America, an Italian refugee, hunting liberty at the age of 47.

I hold in my hand an old Bible of great worth. It fixes the date of this Italian's birth and the date of his American landing. On a page reserved for family record we have among other precious data in Brumidi's own handwriting these words, "Constantino Brumidi, born in Rome, July 26, 1805." And on the inside front cover is this record, "Constantino Brumidi, from Rome, Italy. Arrived in New York, America, on the 18th of September, 1852. Presented to me by the American Bible Society."

And now will you imagine yourself in this Capitol Building of the United States in 1852. Your Senate was at home just north of this rotunda in what is now a vacant shrine and show place. The Chamber of the House of Representatives was then what is now Statuary Hall, just south of the rotunda. Remember, the Senate and House extensions as they are today were barely begun by 1852. This rotunda must have been in its unadorned state, much the same as it would be today in its unadorned state, with this exception, that above us was a low, uninteresting wooden dome, the present cast-iron dome having been built between the years 1856 and 1865.

Brumidi stood, we think, in this rotunda soon after taking out his preliminary naturalization papers, even before the close of 1852. His brilliant, active mind dreamed of a frescoed frieze in imitation bas relief, encircling these rotunda walls that would picture for all posterity the stirring story of this young Republic. But, midst the confusion of building and preparations for a change of Presidents, the Italian artist came and went without incident. However, he took with him the dream for a rotunda frieze.

We find him next in Mexico City making beautiful a cathedral for the Mexican people. And during those years in Mexico he remembered the rotunda frieze in the United States that he wanted some day to paint, so he sketched many of the scenes in Mexico.

How do we know? We have in our possession the original working sketches for this frieze—a scroll more than 30 feet long and 13 inches wide, in sepia water color done on Manila wrapping paper frequently spliced, signed and dated by Brumidi. Influenced by this sojourn in Mexico, by evidences of ancient Aztec culture found there, the artist made use of the Aztec Calendar Stone in the second group on the North wall of the frieze—Cortez and Montezuma at the Mexican Temple.

With the preliminary sketches drawn so early we can but wonder how it happened that the frieze was actually Brumidi's last work in this Capitol.

Brumidi's first work in the Capitol Building of the United States, his sample, if you please, was in the old House Agricultural Committee Room, finished in 1855. There he demonstrated his ability to do real fresco on ceilings, and his artistry on side walls with oil paints on dry plaster at a wage of \$8 a day, and at first, I believe, he purchased his own supplies. Remember, though, from the beginning Brumidi worked for more than money.

When asked that first year what his wage demand would be, he is recorded to have said, "I am no longer interested in fame or fortune. My own ambition and my daily prayer

is that I may live long enough to make beautiful the Capitol of the one country in the world in which there is liberty." And Brumidi's American-born son said of his father 60 years later, "All labor was given freely out of pride in the Capitol Building of the United States and love for the land of his adoption."

Since we know all this we should not even be amazed at the tremendous amount of decorative beauty this Italian artist left on the walls and ceilings of this Capitol. Twenty-five years he painted here. He came during the administration of Millard Fillmore and he stayed on during the administration of six other Presidents: Franklin Pierce, James Buchanan, Abraham Lincoln, Andrew Johnson, U. S. Grant, and Rutherford B. Hayes.

Exquisite decorations adorn six committee rooms in this Capitol—five in the Senate extension and the one we have already mentioned in the House extension. Today two of these Brumidi rooms are reserved for the District of Columbia Committee of the Senate, and two for the Appropriations Committee of the Senate, and one for the Senate Foreign Relations Committee.

Brumidi is responsible for the complete design and execution of the President's Room in the Senate Annex—having labored with love for 6 years on that room—the Senate Reception Room—beautiful and restful, where the Senators still receive their constituents, and the large mural, Washington and Cornwallis, that was a part of the House of Representatives Chamber for 93 years—finished in 1857 and signed, "C. Brumidi, artist Citizen of the U. S."

At the age of 60 this steadfast friend of American liberty, finished the almost unbelievable task of painting the huge fresco in the top of this dome above us—to be exact, 4,664 square feet of concave fresco, figures that had to be 15 feet in height up there in order to look life-size to you and me down here, 180 feet below. Well, at this point you should have Brumidi's own definition of fresco:

"Fresco derives its name from fresh mortar, and is the immediate and rapid application of mineral colors diluted in water to the fresh mortar just put upon the wall, thereby the colors are absorbed by the mortar during its freshness and repeating this process day by day until the entire picture will be completed."

According to letters saved by the Department of the Interior and preserved in the National Archives, negotiations with Brumidi for painting this dome canopy began in 1862. On December 3, 1864, Architect Walter reported that the canopy for the picture over the eye of the dome was ready for the artist, and that Mr. Brumidi was "about to commence work." On November 1, 1865, Architect Clark reported that the picture over the eye of the dome was all painted in but that Mr. Brumidi was unwilling to have the scaffolding removed until he could "cover the connections of the pieces of plaster put up in sections day by day," and until the plastering was thoroughly dry and the colors would have no more "change-ment."

The truth is that Brumidi was finally persuaded that the scaffolding should be removed at that particular time for public exhibit, but with the understanding that later the scaffolding would be rebuilt and the artist would be allowed to smooth over the connections of the pieces of plaster. That smoothing-over process was never ordered, but today we are glad that it happened so, because those connections between the pieces of plaster which you can easily see from the floor of this rotunda make up the surface proof that the canopy above us is real fresco.

Brumidi signed a contract with the Department of the Interior which promised

the artist \$40,000 upon the completion of the dome canopy. If you were to tabulate today the old vouchers signed by Brumidi that are preserved in Architect Lynn's office in this Capitol you would find that the vouchers for the dome canopy total \$39,500. It was Senator Voorhees, of Indiana, on the floor of the Senate a few days after the death of Brumidi who explained the missing \$500. Senator Voorhees introduced an amendment to an appropriation bill that day asking for \$700 for Brumidi. He explained that when the scaffolding had been removed from beneath the canopy of the dome in 1865 before Brumidi was given time to smooth over the connections of the pieces of plaster, the Government could not pay the full price for an uncompleted picture, so \$500 was retained. "And," said Senator Voorhees, "we saved \$200 by not rebuilding the scaffolding, so I consider that that \$200 also belongs to Brumidi." Not a Senator voted against this \$700 appropriation.

I am sure some of you Congressmen and Senators are wondering how that \$700 was spent after the death of Brumidi. It was the Department of the Interior again that saved the record. In an old Department expenditure book now in the Archives is an itemized statement of the checks written on the \$700 appropriation. Two hundred and fifty dollars went to Elena Brumidi, the artist's Italian-born daughter, in Rome. Two hundred and fifty dollars went to Laurence Brumidi, the artist's American-born son in Washington, and the extra \$200 paid Brumidi's funeral expenses.

But I believe the fact that I want most that you should remember about the dome canopy is this: Brumidi painted that 4,664 square feet of fresco over the eye of the dome, a painting with a concavity of 21 feet, in exactly 1 year's time, and he was 60 years old at the time. Almost incredible.

And still America's steadfast friend, the faithful lover of liberty, never forgot that early dream of 1852. Remember? That frescoed belt around this rotunda? For some reason no appropriation was ever made by Congress for the rotunda frieze while Brumidi was here. He finished the dome canopy in 1865. He finished some oil portraits on the walls of the ground-floor corridors in the Senate Annex in 1870. In 1875 and 1876 he was at work on a frescoed ceiling in the old Sergeant at Arms Office in the Senate Annex. In 1877 Brumidi took the initiative. He said to Capitol leaders, "All right; I will do the rotunda frieze for the daily wage."

So at the age of 72 our Italian artist began his last fresco, and he began just above this platform with the Landing of Columbus. He worked almost with desperation in his determined effort to leave a completed procession of American historical scenes around this rotunda, but time gave the artist no help. At the midpoint over there where the light floods the fresco of William Penn and the Indians the old artist collapsed on the scaffolding. The chair on the platform tipped beneath him, throwing him over. He held by his bare hands to the round of the ladder with a part of his body on the platform until a Mr. Lammond came from the top of the dome down to him, and some other workmen came from the rotunda floor up to him and rescued him. His work in the Capitol Building of the United States was done. He died 5 months later—February 19, 1880.

At Glenwood Cemetery here in Washington the grave of Constantino Brumidi has been unknown and unmarked by the Government of the United States, but Congress has recently voted a bronze tablet for the resting place of our Capitol artist which will be sealed to a low granite headstone with appropriate ceremony at a later date.

Back in 1880, 4 days after Brumidi's death, two Members of the United States Senate paid tribute to the Capitol artist. Senator Morrill, of Vermont, as he closed his eulogy to his friend from Italy, said: "Brumidi's great desire was that he might live to complete his last great work. So long had he devoted his heart and strength to this Capitol that his love and reverence for it was not surpassed by even that of Michelangelo for St. Peter's."

Senator Voorhees, of Indiana, on that same day back in 1880, after he had suggested the \$700 amendment, said this: "Mr. Brumidi was engaged at the time of his death on what he regarded as the greatest work of his life. He was unfolding with the magic of genius in the rotunda of the Capitol the scroll of American history, from the landing of Columbus to the present day. He earnestly desired to live long enough to complete this vast conception. But he has left an empty chair and his great design unfinished, as others have done and will continue to do in other places."

"At no distant day some memorial will be erected in some appropriate place in this Capitol to his memory. He who beautifies the pathway of life, who creates images of loveliness for the human eye to rest upon, is a benefactor of the human race. He will be crowned by the gratitude of his own and of succeeding generations. In the older countries of Europe, where the profession of art has a higher rank than here, Brumidi would have had a public funeral and his remains would have been deposited in ground set apart for persons of distinction. In England he would have had a place and a tablet in Westminster Abbey."

"It matters little, however, whether we or those who come after us do anything to perpetuate his memory. The walls of this Capitol will hold his fame fresh and ever increasing as long as they themselves shall stand."

Today, 71 years after the artist's death, another tribute in words has been paid Brumidi, this time by Mr. C. F. W. McCready, of Pennsylvania, not a Member of Congress, not an Italian-American, but simply one of the rest of us. He pays so just a tribute to Brumidi as to make it almost a dedication. I shall read his tribute as your tribute and my tribute to the Michelangelo of the United States Capitol. Shall we not stand?

"We are assembled here to honor the memory of a great man, an Italian refugee in whose heart burned the eternal spark of freedom; in whose mind was the purpose to serve his adopted country, in whose hand was the skill of a Michelangelo; in whose soul was the love of the beautiful—Constantino Brumidi, artist, citizen of the United States."

"As we stand in the rotunda of this Capitol, and as we gaze in wonderment at the historical and allegorical scenes so deftly depicted here in paint and plaster, we pause in our admiration to say, 'Truly a great man worked here.' As long as the frescoes shall live Brumidi is not dead. His soul speaks to us from the very walls and ceiling of this rotunda. A spell of magic enchantment pervades this spot. The past merges with the present. Time is of no account."

"Here is a spot to which politicians and statesmen and all the rest of us may come to draw inspiration, to cleanse our souls of pettiness, and to get a vision of our high calling from the loftiness of the dome above."

"Here may inspiration take wing and be translated into new horizons of achievement."

"His work alone is a sufficient memorial to the fame of this great artist. But that succeeding generations may know his name, we pay official tribute on this occasion to Constantino Brumidi, artist, citizen of the United States."

America's Socialists**EXTENSION OF REMARKS**

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JONAS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the *Record* an editorial from the Chicago Sunday Tribune dated July 22, 1951, entitled "America's Socialists."

AMERICA'S SOCIALISTS

The Communist Party in the United States has taken to cover. Eleven of its leaders have been convicted, seven of them are in jail, and four are in hiding. Seventeen others have been indicted. The missing ones are believed to be directing the movement from underground while the heat is on.

Meanwhile, it is full steam ahead in the United States with the other branch of Marxian radicals, the Socialists. In Britain, trade unionists were the hard core of the Socialist movement which adopted the name Labor Party, sought to elect a body of their members to Parliament, and eventually took over the government.

The Labor Party here is the CIO. Unlike the British Labor Party, this Socialist organization in the United States is not content to bide its time by electing a few candidates to constitute an element in a congressional minority. The CIO moved in on the Democratic Party, and upon the death of Franklin Roosevelt took over the White House. Harry S. Truman became President only because he was approved as Vice President in 1944 by Sidney Hillman of the CIO hierarchy.

The CIO's man in the White House, although nominally a Democrat, has proved to be more of a Socialist than Ramsay MacDonald, Britain's first Socialist Prime Minister. MacDonald actually turned out to be a moderate, with the result that a large part of the Labor Party turned against him and he was maintained in office by the support of the Conservative Party. Truman on the other hand, though retaining the Democratic label, has never failed to do the bidding of the Socialists who placed him in a position to succeed to the Presidency.

Clement Attlee, the British Prime Minister, in his book "The Labor Party in Perspective," says that although socialism is a universal movement, "an examination of the Socialist movements throughout the world will show their form is conditioned by their circumstances." In promoting socialism in this country with the backing of President Truman, the CIO has departed in only one important particular from the program of the British Socialists. They have not yet sought Government ownership of the means of production.

This is probably only a matter of timing, and springs from a conviction that by concentrating upon other parts of their program they can so burden private enterprise that it will fall of its own weight. Similarly, the Labor Party was in office in 1924 and again in 1929, but nationalization did not begin until it came into power for the third time in 1945.

The CIO hopes to make this a Socialist country by destroying the roots of capitalism. The first step consists in increasing Government expenditures for so-called social-welfare purposes. To the schemes already in effect, the CIO, with full backing of the man in the White House, adds a call for medical care for everyone available at public expense; vast new public housing projects; Federal grants to education and expendi-

tures for recreation. As if these items were not enough to overload a budget, the CIO enthusiastically indorses any scheme for spending money to raise standards of living all around the world. It also backs huge military expenditures both at home and abroad.

As expenditures on such a scale create a bull market for labor and drive up prices, the CIO wants its man in the White House to have the authority to pay subsidies to farmers so that the Treasury will pay part of everybody's grocery bill. It wants the President to have the power to control prices without simultaneously controlling wages, confident that their man will let their pay go up while prices are kept down. It demands that the revenue to pay for the vast budget be obtained by raising taxes on corporations and persons in the higher-income brackets, in spite of the fact that such taxes have been raised again and again and are higher than ever before.

The CIO Socialists are not unaware of the consequences of the measures which they urge. They know that an expanding economy, such as we have known, requires an endless stream of new capital, that this can come only from retained profits they seek to prevent corporations from earning, or from new investment funds of individuals they mean to prevent from saving. The Socialists know that by cutting off new capital from private enterprise they can bring about the stagnation which, as in England, will make the nationalization of the instruments of production acceptable or perhaps inevitable.

The CIO is the expression in the United States of an economic system which has ruined England. Of the three branches of our Government, the American Socialist movement dominates the executive branch and substantial segments of the legislative and judicial branches. The free Members of Congress should reflect upon the full significance of the Socialist economic controls and of the Socialist tax proposals that are urged upon them by the CIO and the Socialist in the White House.

When Will Dean Acheson Resign?**EXTENSION OF REMARKS**

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the *Record*, I include the following editorial from the *Peoria Star* of July 24, 1951:

WHEN WILL DEAN ACHESON RESIGN?

It is not easy now to remember how long rumors have predicted the resigning of Secretary of State Dean Acheson. Certainly they have persisted since the conviction of Alger Hiss when Acheson shocked the Nation with his statement that he would not turn his back on Hiss.

To speak of Acheson resigning is, of course, to compromise the truth to some degree. It is commonly understood that the decision will rest with President Truman. If and when the day comes, during the Truman administration, that Mr. Acheson leaves the office of Secretary of State, the timing and the manner of his departure will be determined by the President.

Since, up to this time, Mr. Truman has been adamant in his refusal to remove Mr. Acheson, in spite of appeals from prominent members of his own party, it is difficult to

imagine a change of the President's attitude that does not reflect the exigencies of the 1952 campaign. For the last month or two, it is reported that many worried Democrats high in party councils have been going to the President to beg for Dean Acheson's removal. Senator CONNALLY of Texas is one of those who have stiff reelection battles ahead and anticipate that Mr. Acheson will be a serious handicap. Mr. Truman is too much of a party man to brush such appeals lightly aside.

Mr. Acheson has been the most controversial figure in the office of Secretary of State in twentieth-century American history. For 2 years he has been the chief political target of Republicans in Washington. Many Americans blame him for the dismissal of Gen. Douglas MacArthur. His Far East policy is condemned by many as the principal cause of the loss of China to the Communists. His vacillation on such major issues as Formosa and Chinese representation in the United Nations has cost him the confidence of many of his own party. Some Democrats, while believing that he is a competent public official, feel that no person who has become the center of so much bitter controversy should remain in the Cabinet.

Recently there seem to be more rumors that the President will allow Mr. Acheson to resign in time to get away from the center of public attention before the 1952 campaign. It may be a cynical comment on American politics, but if Mr. Acheson should be replaced by the end of this year, he might be pretty well forgotten by the time of the November 1952 election.

Petaluma River—An Important Waterway**EXTENSION OF REMARKS**

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the *Record*, I include an editorial from the *Argus-Courier*, published at Petaluma, Calif., dated July 19, 1951, and entitled "River Dredging."

One of the main commercial waterways in northern California is the Petaluma River, which provides a water route from the highly productive inland areas of central California. The grain crops of the Sacramento Valley must be shipped into Sonoma County to support the large poultry and dairy industries, so essential to the economic welfare of our entire economy. Barges and tankers haul in excess of 200,000 tons of freight over this river annually, comprising agricultural products, construction materials, petroleum, wool, and many others.

According to the California State Senate fact-finding committee, the Petaluma River carries the largest tonnage of any Federal waterway in the immediate North Bay section.

However, due to silting in of the river bed and dangerous shoaling conditions that develop, barges and other shallow-draft vessels can ply the river safely only at high tide. As a result, the maximum of this navigable stream has not been attained because of the inability to maintain regular schedules,

and has developed a hardship to the industry in not having the advantage of the low rates of water transportation.

The chamber of commerce of the city of Petaluma, as well as the Sonoma County Board of Supervisors, have adopted resolutions urging allocation of Federal funds to maintain this waterway at project depth. The shoaling of sections of the canal create the present conditions which interfere with the regular movement of freight shipments.

Until recently the river was dredged every 4 years, but we are now informed that funds are not available for continuation of this operation. The last dredging was conducted in 1947, at a cost of around \$50,000. The river is silting in very rapidly, and there is a definite need for dredging to maintain the minimum channel depth of 4 feet.

Increased food production and stepped up manufacturing demand convenient and low-cost transportation to meet the needs of our growing population, as well as requirements of the military. The North Bay counties are recognized as being among the leading agricultural producers in California. Industrial development has shown a rapid increase since the end of World War II, and the percentage of population growth is among the highest in the State.

Proper maintenance of the Petaluma River will facilitate movement of goods and produce, and increase the tonnage of freight shipments and stimulate the economy in general. I call upon the Army engineers to allocate enough money to maintain such projects until the funds are available to make improvements commensurate with the growing demands.

The editorial in reference above lends emphasis to the need and is as follows:

RIVER DREDGING

If the Petaluma River is to be maintained as one of our main transportation arteries, dredging will have to be done to remove dangerous shoaling conditions and to make the river safe for transportation. Tonnage passing up the river in the past few years has been reduced, but recently there has been renewed activity and interest in the waterway. New developments in handling bulk feed shipments have made the feed companies interested again in using the river.

At the present time the river has more tonnage passing over it than any other Federal waterway in the immediate North Bay section. The potential tonnage, if the river is dredged and again made safe for transportation, is much greater.

Members of the Petaluma group meeting last week in San Francisco with the Army Corps of Engineers received little encouragement or help from the Federal Government in dredging the river. They were told that Federal funds were being directed to defense and other vital needs, and that it would be difficult to show a definite need for river dredging on a defense basis.

The chamber of commerce, quite naturally, is not content with this report. The directors have passed a resolution, which will be forwarded to the Army Corps of Engineers, as well as to our Representatives in Washington, urging that the necessary funds be appropriated to carry out the needed dredging work as soon as possible.

There are a number of good arguments which favor resumption of dredging on the river. Agriculture is strongly tied in with the defense effort. Armies as well as defense workers have to eat. Poultry and dairy products are an essential part of our diet.

Petaluma is a large and productive poultry and dairy center. If the river can bring us feed for our chickens and cows at a cheaper rate, then it is to the advantage of the defense effort that the river be dredged so that it can be used with safety.

Moreover there are other potentials along the river for the defense effort. There are a number of firms which may receive defense contracts, and if they do the river might prove to be a cheap transportation artery for them, too.

We have not yet reached our peak in the defense effort. As production steps up, and we reach that top, every mode of transportation is going to be taxed to provide the swift flow of goods to the necessary centers. No way of transportation can afford to be overlooked, be it railway, highway, or waterway.

Missouri's Intellectual Cousins

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks, I include the following statement by George S. Reuter, Jr., of Henry County, Mo., concerning the great contributions in educational careers of Dr. C. A. Phillips and Dr. H. A. Phillips:

MISSOURI'S INTELLECTUAL COUSINS

(By George S. Reuter, Jr., former superintendent of schools, R-VIII, Henry County, Mo.)

Few citizens become outstanding in life. Rarely are these noted people related, or are their contributions during the same era, or in the same State, or in the same profession. Missouri has such an exception in Dr. Claude A. Phillips and Dr. Harry A. Phillips, the intellectual cousins, who are actually cousins.

Dr. C. A. Phillips, who was born at Chapel Hill, Mo., in 1871, was graduated with a master of arts degree from the University of Chicago in 1910 and doctor of philosophy degree from George Peabody College for Teachers in 1919. Dr. H. A. Phillips, who was born in Lafayette County in 1875, received his master and doctorate degrees from Cornell University in 1919 and 1920.

Both have held prominent places in Missouri education. Dr. C. A. Phillips was a member of the faculty of Central Missouri State College from 1906 to 1924, and he also served as dean from 1913 to 1924 there. Since 1924 he has been professor of education at the University of Missouri, and he has been director of training there. Dr. H. A. Phillips was a member of the faculty of Central Missouri State College from 1908 until he recently retired.

While both are educators, Dr. C. A. Phillips has been particularly interested in elementary education, while Dr. H. A. Phillips is a professional geographer and authority in agriculture. Both have written books in their fields that have become noted.

Both have found time to be leaders in the Presbyterian Church. Dr. C. A. Phillips was president of the Missouri State Teachers Association in 1914. He was president of the board of education when the present Warrensburg high school building was erected in 1923. Dr. H. A. Phillips has been president of the Johnson County Historical Society, a citrus-farm owner in Texas, and a long-time member of the board of directors of the Citizens Bank of Warrensburg.

Those of us who have had the honor to sit in the classes of these intellectual cousins are certain that Missouri and America owe them a vote of thanks for their many contributions to mankind.

Planned Economy—A Case History

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. POULSON. Mr. Speaker, a prominent midwestern banker and distinguished economist has written a case history of a striking example of the planned economy that is menacing this country today.

He is Towner Phelan, vice president of the St. Louis Union Trust Co., of St. Louis, Mo. The example he uses is the proposed multi-million-dollar Central Arizona project—S. 75 and H. R. 1500—which the Bureau of Reclamation has fully supported both in the Congress and with widespread publicity.

In the St. Louis Union Trust Co. letter for July 1951, Mr. Phelan documents the fantastic structure of this project and presents facts which show that it is a serious threat to basic economy of the entire United States.

I feel certain that the Members of Congress will not only wish to read this case history but will wish to preserve this factual information, so they may be fully informed of how speculators and selfish interests are seeking to undermine our economy only for their own gain.

Mr. Phelan's report, which is entitled "Planned Economy—A Case History," follows:

PLANNED ECONOMY—A CASE HISTORY

(By Towner Phelan, vice president, St. Louis Union Trust Co.)

The basic idea underlying a planned economy is faith in the superman. It is a conviction that the individual is incapable of managing his own affairs and that supermen in Washington, London, or Moscow are qualified to plan and direct the lives and activities of all the people. Let us examine the myth that, when an individual in Washington or Moscow is clothed with a little temporary authority, he becomes infallible and endowed with wisdom which ordinary mortals do not possess.

The best way to show how economic planning works is to examine a specific case history like the central Arizona irrigation project. This project has been recommended by the Reclamation Bureau and the Department of the Interior, and a bill (S. 75) authorizing it has been approved by the United States Senate. It is a project to divert water from the Colorado River to provide irrigation for farm land in central Arizona. To do this, water must first be raised to a height of nearly 1,000 feet by pumping and then transported some 300 miles to central Arizona by canals and pipelines. Demand for this project arises because more land is being irrigated in central Arizona than the present water supply can support. As a result, underground water supplies are being depleted by excessive pumping, and the Bureau of Reclamation estimates that 152,500 acres of

land now being farmed will revert to desert wasteland unless more water is provided.

The central Arizona project is a rescue project to prevent this land from going back to desert. It also will provide sufficient water to irrigate 73,500 additional acres. Thus its whole purpose is to provide water for 226,000 acres of land of which only 162,500 are now being farmed.¹

From the standpoint of costs in relation to expected benefits, possibly nothing more fantastic than the central Arizona project has ever been proposed. It is combined with the Bridge Canyon Power project because the proposed dam on the Colorado River will be used both for irrigation and for the generation of power.

Based upon Senate bill S 75, the estimated construction cost of the entire project is \$708,000,000. Of this amount, \$415,000,000 is allocated to the irrigation project; and the balance to power, municipal water supply, flood control, and wild life conservation.²

What the final cost will be no one can tell, but past history indicates it will far exceed current estimates. The \$708,000,000 estimate of construction costs for the entire project was based on July 1, 1947, prices. Meantime, costs have risen greatly. Quite aside from the rise in construction costs, history shows that in most cases the initial cost estimate of a Government project is very low, later estimates much higher, and the final cost higher still. The Hoover Commission gives many such examples, among them the Hungry Horse project in Montana which was originally estimated to cost \$6,300,000 but actually cost \$93,500,000.³

"BAMBOOZLING CONGRESS" BY FALSE ESTIMATES

Leslie A. Miller, chairman of the National Resources Committee, Hoover Commission, and former governor of Wyoming, says of the cost estimates of both the Bureau of Reclamation and the Army Corps of Engineers:

"In their indecent zeal to extend their empire, both agencies are guilty of underestimating—apparently deliberately—the cost of the projects they propose to build. This underestimating has the effect of bamboozling Congress."⁴

Even if we assume that the final construction cost of the Central Arizona project will be no more than the estimate of \$708,000,000, the total cost to the taxpayer will be nearly three times that figure. On May 12, 1950, the House Committee on Public Lands passed a resolution asking for certain information on this project from Interior Secretary Chapman and the Bureau of the Budget. Among the questions asked was: "How much interest on the national debt occasioned by the project will be borne by the Nation's taxpayers, assuming a 75-year repayment period and a reasonable construction period?" Secretary Chapman and the Budget Bureau replied that the net interest to be borne by the Nation's taxpayers because of the proposed Arizona project would amount to a total of \$2,075,729,000.⁵ This estimate is based upon S. 75 (the Senate bill which has authorized the project), an estimated construction cost of \$708,780,000, an interest rate of 2.5 percent on Federal obligations, an 8-year construction period, and a 75-year financing period. In other words, the true cost to the taxpayer will not be merely the construction costs, but a figure 2.9 times as great.

¹ Central Arizona Project, 81st Cong., H. Doc. No. 136, March 22, 1949, p. 70 f.

² Reply of the Department of the Interior and Bureau of Budget Regarding Central Arizona Project, June 28, 1950, p. 2.

³ Hoover Commission Report, p. 266.

⁴ The Battle That Squanders Billions, May 14, 1949, p. 4.

⁵ Reply of Department of the Interior and Bureau of the Budget, op. cit., p. 9.

As previously noted, \$415,000,000 of the estimated construction costs is allocated to irrigation. But if we assume that the estimate of Secretary Chapman and the Budget Bureau is correct, the total interest cost to the taxpayer of the irrigation portion of the project will amount to \$1,203,000,000. This is more than four times the total value of all farm land and buildings in the State of Arizona which were listed by the United States Agricultural Census for 1945 at a total value of \$288,000,000.⁶

What are we getting for this huge sum? The acreage now under irrigation which the project will prevent from reverting to desert wasteland amounts to 152,500 acres. But the project will also permit irrigation of 73,500 additional acres of land, making a total of 226,000 acres to be benefited. If we divide the \$415,000,000 construction cost and the \$1,203,000,000 interest cost by 226,000, the construction cost for each acre benefited amounts to \$1,836 per acre and the interest cost to the taxpayer amounts to \$5,323 per acre.

Who would get the benefit? We quote from the official report and findings on the central Arizona project:

"The project area contains an estimated 6,000 farms. . . . An estimated 7 percent of the farms are 500 acres or larger in total acreage and contain an estimated 55 percent of the irrigated land."⁷

SUBSIDY \$1,575,000 FOR EACH OF 420 FARMERS

Seven percent of 6,000 is 420. Thus, 55 percent of costs allocated to irrigation will be spent for the benefit of 420 farmers. This is an average expenditure of \$543,000 per farm for construction costs. But the total interest cost to the taxpayer will amount to \$1,575,000 for each of these 420 large landowners.

What if the cost of the project turns out to be double or triple its estimated cost, as the past performance of the Bureau of Reclamation in grossly underestimating costs strongly suggests that it will be? Then the cost of the project to the taxpayer could amount to 8 to 12 times the value of all farm land and buildings in Arizona. This would cost the Nation's taxpayers from three to nearly five million dollars for each of the 420 farmers who will reap the major share of the benefits. In this connection, we repeat the words of Leslie A. Miller, chairman of the National Resources Committee of the Hoover Commission, who said, "Both agencies [the Bureau of Reclamation and the Army Corps of Engineers] are guilty of underestimating—apparently deliberately—the cost of the projects they propose to build. This underestimating has the effect of bamboozling Congress."

According to Barron's weekly, the Bureau of Reclamation had five power projects under construction in 1935-39, the estimated costs of which were approximately \$300,000,000. By 1950, the estimated costs of these projects had multiplied five times and amounted to \$1,546,000,000. Eight additional projects started in 1940-44 were originally estimated to cost \$184,000,000, and this figure has now jumped to \$468,000,000.⁸ In view of this record, the final cost of the central Arizona project is likely to be at least two to three times present estimates. This would double or triple interest cost to the Nation's taxpayer, now estimated to be \$5,323 for each of the 226,000 acres benefited and \$1,575,000 each for 420 large farms. Nonetheless, the Interior Department's report on the central Arizona project has the brazen effrontery to assert that "the benefits exceed the cost by 50 to 60 percent."⁹ The report of

the Senate Committee on Interior and Insular Affairs is equally unrealistic and calls the project "urgently necessary."¹⁰

Perhaps the only reason that this fantastic project has not already been authorized by Congress is the opposition of California and Nevada who fear that diversion of water from the Colorado River for irrigation purposes will deprive them of water they need. For this reason, President Truman and the Budget Bureau originally opposed the project but have since modified their position. We quote Budget Director Pace:

"In spite of the announced position of opposition contained in my letter of February 4, the President would reconsider his position if the Congress, by affirmative action, should settle the water-rights controversy."¹¹

The central Arizona project is too strong for the stomach of even such an ardent left-wing advocate of welfare-statism as Secretary of Agriculture Brannan. Secretary Brannan criticized the phony estimates by which the Bureau of Reclamation sought to prove that the central Arizona irrigation project is economically justified. He also pointed out the danger that there may be a repetition of the overexpansion of acreage under irrigation that caused this problem to arise. Secretary Brannan said:

"So far as we can determine, once the new water supply became available there could be a repetition of the unfortunate overexpansion that gave rise to the present problems of the central Arizona area."¹²

The minority report of the Senate Committee on Interior and Insular Affairs quotes the Department of Agriculture as stating:

"The contemplated reservoirs will be rendered useless by sediment within a comparatively few years if nothing is done to reduce erosion. It seems clear from the foregoing that the proposed central Arizona project must be supported by projects and activities not contemplated in the report; in particular, by upper basin reservoirs and a program of land treatment."¹³

Why did the report not include the upper basin reservoirs, and so forth, without which the project "will be rendered useless by sediment within a comparatively few years"? Was it to minimize the estimated cost and thereby "bamboozle" Congress and defraud the taxpayer with phony figures and false estimates? The minority report also states:

"All departmental reports except that of Interior are highly critical of economic and engineering features of the project. . . . Furthermore, there is no assurance that there will exist the extremely important element of a substantial quantity of Colorado River water available for diversion to central Arizona for irrigation and other purposes."¹⁴

Although the project would impose an interest burden of at least \$2,000,000,000 on the taxpayer—mainly for the benefit of 420 farmers—"there is no assurance" there is water sufficient to give Arizona farmers the relief promised. The minority report of the Senate committee says:

"The central Arizona project can only have a water supply for the new use which is proposed by taking it from some other project."¹⁵

Thus it is proposed to saddle the American taxpayer with an interest burden of at least \$2,000,000,000 for a project that may not even be feasible. Two billion dollars is almost half the total expenditures of the Federal Government in the last fiscal year before Roosevelt. If the actual cost of the project proves to be several times the estimated cost,

¹⁰ Bridge Canyon Project, 81st Cong., S. Rept. No. 832, August 3, 1949, p. 3.

¹¹ Central Arizona Project, op. cit., p. 7.

¹² Ibid., p. 103 f.

¹³ Bridge Canyon Project, op. cit., p. 31.

¹⁴ Ibid., pp. 19, 32.

¹⁵ Ibid., p. 27.

as appears probable from past underestimates of the Bureau of Reclamation, then the interest cost to the American taxpayer could exceed the total expenditures of the Federal Government in any single peacetime year prior to Mr. Roosevelt.

The central Arizona project sets a dangerous precedent. Government power projects heretofore have been set up on the assumption that the interest cost will be recovered in the sales price of power. In irrigation projects, the interest costs are borne by the taxpayer. In the central Arizona project, however, the interest recovered in the sales price of power will be used to subsidize the irrigation feature of the project. Thus the taxpayer must bear the interest burden not only on the irrigation part of the project but also on the power part of the project. If this principle is applied to other Government power projects, it will enormously increase their cost. The tax foundation says that if the Columbia River Basin program is treated in the same manner, interest cost to the taxpayer would amount to \$4,500,000,000.¹⁴

How serious this interest component may ultimately be, may be realized if one assumes that the Arizona project treatment of interest will be applied to other Government projects. Lt. Gen. Raymond A. Wheeler, recently retired Chief of Engineers, has made an analysis of what various Federal agencies (Engineers, Reclamation, Department of Agriculture, and Federal Power Commission) had spent and were planning to spend on water-resources development.¹⁵ The figures are:

Works already completed.....	\$4, 779, 700, 000
Projects under construction..	4, 593, 000, 000
Projects definitely planned..	18, 983, 900, 000
Projects planned for the long-range future.....	29, 152, 600, 000
Total.....	57, 506, 200, 000

These figures are for construction costs alone. If the central Arizona project is taken as a criterion, the interest cost to the taxpayer would triple these cost figures. Then if the estimates prove to be much lower than actual costs there will be a further huge expansion in costs. Therefore, (1) if these projects are carried out, (2) if the taxpayer must bear the interest costs, and (3) if the actual construction costs exceed estimates to the extent that past history suggests, then these projects could cost the Nation's taxpayer as much as \$500,000,000,000. Such is the stratospheric financial vista that opens up as we contemplate merely one segment of planned economy and its corollary of welfare-state spending.

Planned economy as an abstract idea has an irresistible appeal to the academic mind. It enables the planner to ignore completely hard realities and human nature in order to prepare a dream-world blueprint for Utopia. But these Utopian blueprints can never work in practice because they never come to grips with actualities. They are a form of daydreaming which permits the planner to live in the unreal world of his imagination. Planned economy likewise has an irresistible appeal to the bureaucrat—but for a different reason. To bureaucrats, planning is an excuse "to expand their empires," to increase their spending, and thus to become bigger and more important bureaucrats. The most effective way to appraise economic planning is to show how it actually works in practice.

The central Arizona project is merely one of many examples of how economic planning really works. It illustrates many of the basic weaknesses that make a planned economy unworkable. Perhaps the greatest of these weaknesses is that governmental planning

always is political planning. If the State does the planning, it necessarily is guided primarily by political considerations—not economic ones. Arizona has a population of only 749,587 (less than half the population of the St. Louis metropolitan area) but has two United States Senators.

THE TEST OF THE MARKET

The second basic weakness of a planned economy is that it does not have to meet the test of the market. In a market economy, manpower and resources are used to produce those things that the people want most as determined by their buying or nonbuying. A planned economy diverts manpower and resources from producing what consumers will buy to producing things they would never buy. Does anyone believe that the 420 farmers, who will get 55 percent of the benefits from the Central Arizona Project, would pay \$1,575,000 each for irrigation? Does anyone believe that the crops produced by these 420 farmers would sell in the market for a price that would provide \$1,575,000 per farm for irrigation? The Central Arizona Project represents a gigantic waste of manpower and resources that would be impossible under a market economy. It can and does occur in the Government-planned segment of our economy because Government planning does not have to meet the test of consumer acceptance in the market.

The third great weakness of a planned economy is that planners cannot plan. The free market can determine far better than some bureau in Washington, for example, how many pairs of shoes should be manufactured in 1951 and how they should be divided as to sizes, styles, qualities, etc. The evidence that planners cannot plan is overwhelming. For example, after V-J Day, OPA economists predicted that unemployment might reach ten million by June of 1946. The War Mobilization and Reconversion Office predicted 8,000,000 unemployed by the spring of 1946. These false predictions were responsible for Mr. Truman's 1945 program of increasing wages while holding the line on prices—a blunder which was largely responsible for our postwar spiral of inflation.

The fourth great weakness in economic planning is that it undermines individual initiative and responsibility. It tries to substitute centralized bureaucratic planning for the planning of millions of individual businessmen, farmers, etc., which makes our enterprise system the most productive in the world.

What the economic planners said in the 1930's seems utterly ridiculous today. Professors Alvin H. Hansen of Harvard, Glenn E. McLaughlin and Ralph J. Watkins of Pittsburgh University, and other economists testified before the Temporary National Economic Committee in 1939 to the effect that the United States had become a mature economy, that its period of growth was over, and that we had an enormous overcapacity in industry which we could never use. The TNEC said that our steel industry was overbuilt and advised scrapping plants. It is ironical that today's planners bitterly condemn the steel industry for not having expanded enough and advocate that the Government enter the steel business. The gloomy prophecies of our economic planners in the thirties are reminiscent of the following statement made by Carroll D. Wright, Commissioner of Labor, in his 1886 annual report:

"The nations of the world have overstocked themselves with machinery and manufacturing plants far in excess of the wants of production. . . . The day of large profits is probably past."

Examples of the failure of economic planning are almost endless. They include farm price supports and acreage limitations; price controls; Mrs. Roosevelt's Arthurdale, W.

Va., housing-job plan for miners which cost \$5,000,000 and was later abandoned and sold for \$50,000;¹⁶ the Lustron prefabrication housing fiasco; and the malodorous RFC deals.

FREE DENTURES BUT ALMOST NO MEAT

In Great Britain, economic planning has provided free dentures but almost no meat for them to chew. It caused the disastrous 1947 shutdown of industry due to a coal shortage. It is responsible for many fantastic schemes on which the taxpayers' money was wasted. For example, according to a Reuters news dispatch, the British Government has given up a scheme to provide England with eggs from a state-run chicken ranch in Africa. The news dispatch says:

"It has so far cost British taxpayers \$2,300,000 and has produced almost no eggs. . . . The collapse of the scheme—one of the biggest colonial development schemes launched by the Government—follows 4 months after the east African peanuts scheme was abandoned last January. That failure led to \$100,000,000 being written off."¹⁷

Planned economy never works because its basic assumption is that a few experts can sit in an "ivory tower" and measure and weigh all the multiple forces that affect our economy and make wise decisions for its over-all control. Even if this ridiculous assumption were true, planned economy still would not work because it would be impossible to plan on a basis of objective facts and without regard to political pressures. The late Mr. Justice Holmes believed that law is arbitrary force expressing the will of the stronger part of society. Whatever the merits of this view as applied to the law, it is certain that economic planning is no more than arbitrary force expressing the will of the stronger part of society as represented by political pressure groups. In actual practice, economic planning is the worst kind of power politics. The London Economist has long been an advocate of economic planning but it has had ruefully to admit that: "Planning as practiced by the present Government is now clearly bankrupt."¹⁸

It is folly to believe that men in Washington, London, or Moscow, vested with a little temporary authority, suddenly become supermen endowed with superhuman intelligence and the ability to control the lives of all the people better than can the people themselves.

Progress Report on Camp Adair

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I include as part of these remarks the lead editorial which appeared in the Oregon Daily Journal Saturday, July 21, 1951, entitled "Adair Progress Report." The editorial follows:

ADAIR PROGRESS REPORT

Adair Village hasn't been saved from the wreckers.

Not yet.

¹⁶ St. Louis Post-Dispatch, March 21, 1951, p. 8B.

¹⁷ St. Louis Globe-Democrat, May 10, 1951, p. 1A.

¹⁸ Economist (London), August 16, 1947, p. 266.

¹⁴ Washington Report, March 20, 1951.

¹⁵ The Battle That Squanders Billions, p. 9.

But, at the Journal's request, demolition of this \$3,000,000 facility—the former camp hospital remodeled into dormitories for GI students of Oregon State College—has been halted until the proper authorities can determine whether it is usable for other purposes.

The State Board of Higher Education has ordered Oregon State College to withhold sale of the buildings for 30 days.

Secretary of Defense Marshall has referred the matter to Secretary of the Army Pace for his consideration. It was General Marshall, remember, who took the decisive action that determined the location of Camp Adair in the first place.

Governor McKay and the State board of control have canvassed the situation to determine whether the State can acquire and use the Adair facilities. The Governor, who served at Camp Adair during the war and is fully acquainted with its facilities, says he can find no way for the State to utilize the former Army hospital.

The Salem, Corvallis, and Albany Chambers of Commerce have actively sought to find industries that could profitably use Camp Adair facilities. But so far they have been unsuccessful.

Corvallis and Albany editors have taken an active interest in the problem. J. H. Gallagher, Corvallis engineer, who is sometimes called the father of Camp Adair, has prepared engineering studies of facilities remaining at both Camp Adair and Camp White and is trying to interest both the Army and Veterans' Administration in making beneficial use of the \$10,000,000 worth of buildings and services still remaining at Camp Adair.

All the angles are being explored.

But there isn't too much time.

Edgar W. Smith, president of the board of higher education, who issued the order postponing sale of Adair Village, points out that it is costing OSC \$4,000 a month to maintain, guard, and protect the Village properties. That cannot go on indefinitely.

Here is a suggestion:

Let the Army, Veterans' Administration, and Selective Service name a joint survey team to resurvey the Camp Adair situation.

If, after they look over the property and confer with the Governor and board of higher education, they determine that no beneficial use can be found for the former Army hospital, we'll shut up and let nature and the wreckers take their course.

Meanwhile, we insist it's worth trying.

Three-million-dollar Government facilities don't grow on trees. Ask any taxpayer.

Tax Exemption for Permanently Disabled

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. RHODES. Mr. Speaker, while the need for workers in almost every line of endeavor increases daily, yet, operation of our present Federal income tax laws, paradoxically, is driving many of our citizens away from employment.

The reason for this is, there are many physically handicapped people who are so severely disabled that they are obliged to use individual taxes, in going to and from their places of work. These peo-

ple are in wheelchairs, or on crutches, and cannot avail themselves to use of trains, busses, or streetcars.

These handicapped cannot afford to pay the additional increases in taxi fares which have been imposed, across the country, and many of them state that they will stop work entirely, and, instead, be obliged to go upon relief, because they cannot meet their present expenses.

Also, there are many persons who are supporting handicapped who are so severely disabled that they cannot care for themselves, and the Federal Government, although thus relieved of expense of caring for such handicapped, on public assistance, yet denies the persons who support these disabled an equitable exemption in income tax to meet their additional expense.

To meet this situation I have introduced H. R. 4748, a bill to grant additional income-tax exemptions and deductions to taxpayers who are permanently disabled, and to allow additional income-tax exemptions to taxpayers supporting dependents who are permanently disabled.

I urge every Member of Congress to join me in getting H. R. 4748 passed with further delay.

Under unanimous consent to extend my remarks, I include a copy of the bill itself and a statement of Paul A. Strachan, President, American Federation of the Physically Handicapped, explanatory of the bill:

[H. R. 4748, 82d Cong., 1st sess.]

A bill to grant additional income tax exemptions and deductions to taxpayers who are permanently disabled, and to allow additional income tax exemptions to taxpayers supporting dependents who are permanently disabled

Be it enacted, etc., That section 23 of the Internal Revenue Code (relating to deductions from gross income) is hereby amended by adding at the end thereof the following new subsection:

"(cc) Transportation of disabled individuals to and from work: In the case of a disabled individual, expenses paid during the taxable year for transportation to and from work to the extent that such expenses do not exceed \$600. For the purposes of this subsection, the term 'disabled individual' means an individual who is blind (as defined in section 25 (b) (1) (C) (iv) or who has lost the use of a leg, of both legs, or of both arms, to such an extent that he is unable during the entire taxable year to use, without undue hardship or danger, a streetcar, bus, subway, train, or similar form of public transportation, as a means of traveling to and from work."

Sec. 2. (a) Section 25 (b) (1) (C) of the Internal Revenue Code (relating to additional exemption for the taxpayer if he or his spouse is blind) is hereby amended by inserting at the end of clause (ii) the word "and", by redesignating clause (iii) as clause (iv), and by inserting after clause (ii) the following:

"(iii) an additional exemption of \$600 for each dependent who is blind, if the taxpayer is entitled to an exemption under subparagraph (D) with respect to such dependent. For the purposes of this clause the determination of whether a dependent is blind shall be made as of the close of the taxable year of the taxpayer, unless the dependent dies during such taxable year in

which case such determination shall be made as of the time of such death;"

(b) Section 25 (b) (1) of the Internal Revenue Code (relating to exemptions of a taxpayer) is hereby amended by striking out the period at the end of subparagraph (D) and inserting in lieu thereof a semicolon, and by inserting after subparagraph (D) the following new subparagraphs:

"(E) (i) An additional exemption of \$600 for the taxpayer if he is a disabled individual at the close of his taxable year; and

"(ii) An additional exemption of \$600 for the spouse of the taxpayer if the spouse is a disabled individual and if the taxpayer is entitled to an exemption, under subparagraph (A) for such spouse; and

"(iii) An additional exemption of \$600 for each dependent who is a disabled individual if the taxpayer is entitled to an exemption under subparagraph (D) with respect to such dependent;

"(iv) For the purposes of this subparagraph the term 'disabled individual' means an individual who is permanently incapacitated in connection with normal remunerative employment or work by reason of a medically demonstrable chronic sickness or a physical defect or infirmity (whether congenital or acquired by accident or illness) except that such term shall not include an individual who is blind as defined in subparagraph (C) (iv). The determination of whether the spouse or a dependent of the taxpayer is a disabled individual shall be made as of the close of the taxable year of the taxpayer, unless the spouse or dependent dies during such taxable year, in which case such determination as to the decedent shall be made as of the beginning of such taxable year."

Sec. 3. (a) Section 1622 (h) (1) of the Internal Revenue Code (relating to withholding exemptions) is hereby amended by adding at the end thereof the following new subparagraphs:

"(F) One additional exemption for himself, if on the basis of facts existing at the beginning of such day, there may reasonably be expected to be allowable under section 25 (b) (1) (E) (i) (relating to disability) for the taxable year under chapter 1 in respect of which amounts deducted and withheld under this subchapter in the calendar year in which such day falls are allowed as credit.

"(G) If the employee is entitled to an exemption under subparagraph (E) with respect to any dependent of the employee, the employee shall be entitled to any exemption to which such dependent is entitled (or would be entitled if such dependent were an employee receiving wages) under subparagraph (C) or (F), but only if such dependent does not have in effect a withholding certificate claiming such exemption."

(b) Section 1622 (h) (1) (D) of the Internal Revenue Code (relating to withholding exemptions in respect of the spouse of the employee) is hereby amended by striking out "(B), or (C)" and inserting in lieu thereof "(B), (C), or (F)."

Sec. 4. The amendments made by sections 1 and 2 of this act shall be applicable with respect to taxable years beginning after December 31, 1950, and the amendments made by section 3 of this act shall be applicable with respect to wages paid on or after the first day of the first month which begins more than 20 days after the enactment of this act.

STATEMENT BY PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED

1. We respectfully point out, if such deductions as would be permitted under this bill are not allowed, many handicapped, now employed—for the most part on small salaries

or wages, and because of their severe disabilities, obliged to travel by individual taxi, instead of regular bus, street car, or train, faced with the rapidly increasing cost of living and transportation—will be obliged to give up work, entirely, go upon relief, and thus cause the Government loss in two different ways; one, Government income from present taxes paid by these handicapped; the other, Government additional loss, by virtue of requiring increased relief appropriations to meet such situations.

2. There are many persons in moderate circumstances, financially, who are compelled to remain in nursing homes, hospitals, etc., for continuous and continual treatment and care. They are not, under present laws, allowed a fair deduction in taxes, and this bill is an effort to abate, somewhat, the heavy drain upon such persons' financial resources.

I mention, particularly, those who are confined because of strokes of paralysis, cerebral hemorrhages, arthritis, poliomyelitis, multiple sclerosis, muscular dystrophy, cardiac troubles, and other severely crippling ailments, injuries, or congenital defect or deformity.

3. One of the saddest situations today is, that of parents, relatives, or others who are compelled to support children who are totally, or at least, severely handicapped. A case in point, known to me, is that of a young woman in her early thirties, whose husband is a disabled veteran of World War II, and the total income of the family is \$3,800 per year. The couple have two small children, a girl, 3½ years old, and a boy, about a year and a half older.

The girl is victim of cerebral palsy and epilepsy. Her medical care in an institution, and which care is absolutely essential, costs not less than \$250 per month, and the young and distracted parents, having no means other than the husband's earnings and his small disability allowance, are forced to follow the course of putting the girl into this institution; letting her stay in a couple of months; then, taking her out until they can save up enough money to reenter her, and so on, ad infinitum. There are many such instances to my knowledge, and certainly, the Federal Government does not wish to impose undue stress and tribulation upon these otherwise willing and hard-working, patriotic American citizens.

4. There are cases where, a single man or woman takes upon himself, or herself, the support of a totally or severely disabled person—generally relatives. This single man or woman is not given tax allowance sufficient to meet the amounts expended for such assistance to these handicapped people. Since support, which, necessarily, today, would be quite expensive, is in itself, an aid to Government, as such people, thus are not on relief, or dole, it is unfair that the person affording such support is not allowed a sufficient tax offset to cover this additional expense.

In conclusion, H. R. 4748 is an effort to deal more equitably with handicapped who, today, in the face of rising costs of living, cannot meet expenses, and since the American people have declared that it is essential that all citizens who can do any kind of work, in this grave emergency, be afforded opportunity for suitable employment, that, of course, includes the physically handicapped. But, when they cannot, because of need of using wheel chairs, or crutches, use streetcars, busses, or other ordinary means of transportation, and are forced to use the more costly taxes, under present laws, the Federal Government denies these handicapped tax exemption for such expense. This bill will go a long way toward rectifying that inequity.

Also, the supporters of those who are so severely handicapped that they cannot care for themselves, should be afforded sufficient

Federal tax exemption to afford them tax relief.

Congress should immediately approve of this bill, not only as a means of furthering employment of handicapped, and affording some relief to parents and others who support helpless handicapped people, but as an economic and humanitarian move to benefit the whole Nation, as well.

The Fight Is Ours

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. LANE. Mr. Speaker, I want to bring to your attention the city of Lawrence, in Massachusetts, as an example of a community that has courage and enterprise. It does not "cry-baby" and depend on Federal hand-outs to take care of its own responsibilities.

Lawrence has the largest woolen-worsted mill in the world. This is an industry troubled by the lack of nearby raw materials and in the throes of a technological revolution. A variety of new industries will have to take up the slack caused by the decline or migration of an old industry. To a city that was originally built around textile mills and geared to the manufacture of one major product this represents a serious test.

Other communities, faced by a similar challenge, have thrown themselves upon the charity of the Federal Government in bootlicking dependence or have given up the struggle to become ghosts of their former selves.

This cannot be said of Lawrence. Hit hardest by the recession of 1949, it bounced back, fighting the problem with the skill and determination of a city that has spirit. A labor-industry committee is battling to get new business for Lawrence. It will not be easy. But a community that refuses to be licked will not be licked.

Its get up and go wins the admiration of all those who believe in the American way. Even the New York Times has singled out Lawrence to give it an A for conspicuous effort.

Under leave to extend my remarks, I wish to include in the RECORD an editorial from the Evening Tribune of Lawrence, under date of July 20, 1951, showing how Lawrence believes in itself by proclaiming that "The fight is ours":

THE FIGHT IS OURS

Lawrence is flattered to note that the good gray pages of the New York Times have spoken appreciatively, and even a little flatteringly, of Lawrence's efforts to make manifold its claims upon industrial prosperity. Citing Lawrence as a typical one-industry city, the article, written by Mr. John H. Fenton, depicts Lawrence as aggressively seeking in every way possible to keep what it has while, at the same time, casting about for ways to expand employment opportunity within the city. It is not necessary to go into the details of it, which are familiar to most Lawrencians, but the fact that Lawrence has been represented as a community which is determinedly fighting its limita-

tions is, we feel, excellent publicity for Lawrence.

It does not harm to have it get around that there is in Lawrence a resolute confidence that Lawrence is not going to fall by the wayside—if human effort, human courage, and human intelligence can do anything to prevent it. This is, of course, the sort of atmosphere that is highly regarded by all people of energetic disposition, because such people thrive best in an atmosphere where the emphasis is on positive values, rather than on negative values. In other words, if it is Lawrence's purpose to interest new industry in Lawrence, a prospective settler would find small encouragement to identify his future with ours if he encountered the sort of bleak defeatism which refuses to admit that the sun exists because it has been temporarily obscured.

It isn't necessary to strain after analogies. Of two men of equal merit, both down on their luck, which one would you prefer to give a berth on your team—the shortsighted one with the long face or the one with the fire in his eye? It's pretty much of a rhetorical question, of course, because, obviously, there isn't much of a market for gloom. So we feel that the Times has done us a good little favor by calling attention to the fact that, while Lawrence has had its share of ups and downs, its buoyancy is undiminished.

Because its name has long been identified with textiles, Lawrence has had assessed on it a larger share of the New England regional problem than other manufacturing communities. This imposes upon Lawrence a greater obligation to face the problem squarely and unflinchingly. Men can alter circumstances to suit their hopes and ambitions by applying themselves diligently to the task at hand and not leaving it to remote agencies whose interest in a local problem must of necessity be related to many other interests and considerations. In this instance anxiety is in inverse ratio to distance, if official Washington knows Lawrence as a dot on a map about which it can be very objective, Lawrence knows Lawrence as home. It therefore follows that the people who are best qualified to argue the virtues of Lawrence are the people who have the most to lose if Lawrence sustains an economic loss. And that means everyone in Lawrence. If the enemy were at the gate everyone in Lawrence would subordinate every other concern to the more clamorous issue.

The enemy may not be at the gate at this very moment, but he is not so far away that we can delude ourselves that we are invulnerable. Our vulnerability is dramatically attested by the fact that our total prosperity could be struck a grievous blow by one decision. This is something which we must face. This is something which will not wait. We should now, this instant, alert our every faculty and focus their combined vigor on the issue. Our local government and our legislators, our businessmen and our professional men, our labor leaders, the people who work in the mills, and the people who work in the stores and factories should manifest by their concern that they have a full and deep awareness of the gravity of the situation. The pressure thus generated will at least call attention to the fact that Lawrence has a substantial equity in the country's industrial economy—an equity which it does not want to relinquish without a fight.

If Lawrence is now regarded as an aggressive community, and if this attitude of mind has won us favorable opinion outside of Lawrence, does it not follow that a greater aggressiveness, deriving its authority from a greater zeal, would inspire an even greater regard from what Lawrence has to offer? It is now nothing short of mandatory upon all of us to boost Lawrence in every way

possible. It is not something which we can afford to give a mere perfunctory attention. We have had our warning. When people see smoke in the distance they take note of it. If the smoke comes from the burning enthusiasm of Lawrenceans for the good city of Lawrence it would mean that here, at least, was a city where civic cohesiveness prevailed over independent concerns, where unity of purpose was embarked upon a creative attempt to safeguard its economic integrity. It could not fail to be impressive and it could not fail to have good results.

Tidelands

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. LARCADE. Mr. Speaker, under authority granted to extend my remarks in the Appendix to the RECORD, I wish to submit a statement by the gentleman from California [Mr. YORTY] in regard to the tidelands question, as follows:

SANTA MARGARITA WATERSHED, CALIFORNIA

Mr. YORTY. Mr. Speaker, I desire to take this moment just to ask the Members of the House to interest themselves in a lawsuit pending in California that has national implications.

In our State the attorneys for the Lands Division of the Department of Justice are in the process of serving complaints on every person who owns land in the whole Santa Margarita watershed, asserting that the rights of the Government are paramount to the rights of every other user of water in that area, and asking that the title of the Government be quieted to the water which it asserts it owns by virtue of the national defense establishment at Camp Pendleton and by virtue of having acquired a ranch there called the Santa Margarita ranch.

Those people who have scoffed at the implications of the so-called tidelands decisions and failed to see the ultimate end of the theory of those cases; those who have felt that the theory would not be extended to other types of property; those people who have thought heretofore that the tidelands fight was merely some kind of a dispute between the Federal Government and the big oil companies; those who have failed to understand that a fundamental question of the sovereignty of our States is involved as well as the constitutional prohibition against taking private property without paying for it—those people had better wake up and examine this water suit in California.

Mr. Speaker, I also include in these remarks an article by Mr. Kimmis Hendrick, chief of the Pacific news bureau of the Christian Science Monitor, published in that paper on Saturday, June 16, 1951, as follows:

ARMS BASE STIRS WATER-RIGHT FIGHT IN WEST—FARMERS SEE FEDERAL INTERVENTION

(By Kimmis Hendrick)

FALL BROOK, CALIF.—Is the United States, under the guise of military necessity, attempting to usurp water rights which California farmers long have claimed?

Is the United States, indeed, attempting to confiscate what amounts to private property here, as one important western newspaper editorially contends?

These are burning questions in California at the moment. They are inspired by a water-rights suit filed in the United States

District Court at San Diego by the Office of the Attorney General of the United States, naming Fall Brook and other water users as defendants.

If the answer to either question is yes, it could mean that the United States is attempting to establish, in this obscure back country village, a revolutionary precedent. For many decades water rights have been regarded as under State, not Federal, sovereignty.

GROWERS WARY

Specifically and repeatedly, the United States is saying that it has no such intention. But the fear that it has persists in these parts, and California interests strongly opposed to Federal intervention in State affairs are echoing the fear far and wide.

The Government's complaint says it seeks to determine the water rights of its great marine base, Camp Joseph H. Pendleton, as riparian to the Santa Margarita River. In Fall Brook this is being taken as tantamount to an assertion of right to all the water in the river, to the annulment of rights locally claimed.

At the moment, because the case has yet to be tried, the only thing that can be done objectively is to report what both sides say and describe the background.

Fall Brook is a tiny place, friendly and beautiful. Tucked at the foot of coastal mountains, it is some 50 miles north of San Diego and inland about 20 from Oceanside. The village and its surrounding valley have perhaps 10,000 residents.

VITAL MINORITY

It may sound callous to say so, but nobody can call Fall Brook anything but a very small pebble in the pool of world affairs—especially when compared with Camp Pendleton in these days of defense urgency. Nobody, that is, except one who remembers, as the men of Fall Brook do decidedly, that in the American system small pebbles often rightly make big precedents.

Throughout the semiarid parts of the West, of course, any question of water rights can easily become a major issue. Here is land where water has to be husbanded drop by drop. When it is, deserts turn to rose gardens and dry valleys yield fabulous crops.

In little Fall Brook, enterprising men have turned one such valley to real riches. It is superb for avocados and lemons. A new avocado grove in this area may pay its taxes the third year. One 25-acre grove, perhaps better cared for than most, is netting \$2,000 an acre annually. The average comes closer to \$1,000. Lemons are almost equally profitable.

CLAIMS BIG SHARE

Can the Government develop Camp Pendleton as it wants to currently without taking away the water these growers, most of them small operators, require? The Government claims 35,000 acre-feet of water from the Santa Margarita, one of the growers' three sources of supply. This is more, actually, than the river's actual annual flow, which makes the suit, a civil action, look extraordinarily menacing to people hereabouts.

It appears that the defendants, including water users far up the river, run to from 12,000 to 16,000 in number. The chief defendant is the Fall Brook public utility district. Although it is reported that the Government may wish to excuse many of the defendants, it is generally understood that they must all respond, or they lose their water rights, however the case turns out.

COSTLY LEGAL TEST

It costs from \$50 to \$100 in legal fees for the individual to respond, Fall Brook people say, and whichever sum is multiplied by 12,000 or 16,000 defendants, the case promises to be an expensive proposition.

The suit has been represented as an attempted grab by the Government.

The influential Los Angeles Times, which thinks it is, quotes the opinion that it may become "California's biggest lawsuit." The Times sees the Government's claim—the complaint asserts "a paramount right"—as "an assertion of authority so sweeping that the upholding of it would result in the destruction of the private rights and negation of the fifth amendment."

SEE FIXED MENACE

Although some might find it difficult to read any such menace into the complaint, the fear has a certain plausibility in current western thought.

California is exceedingly disturbed by the Federal Government's assumption of tidelands sovereignty. Important interests also are disturbed by evidence that, in many places, the Federal Government is trying to establish a new concept of water rights which would put them under Federal instead of State jurisdiction.

In the West, the position always has been that who held the water controlled the land, and State water law, through long precedent and interpretation, has established such a pattern of ownership and control.

That is why many people regard the Fall Brook case as crucial. They also are concerned about it for a further reason. For years, in California, the military has been careful to put civilian needs foremost, and this looks like a reversal of that policy.

HUGE INVESTMENT

Camp Pendleton, its United States naval hospital, and the United States naval ammunition depot here occupy sites acquired by the Government during 1941-43, including the old Rancho Santa Margarita. They cover approximately 135,000 acres. They represent Federal investment in land and facilities exceeding \$100,000,000.

The property was selected, the Government says, because there was no other site on the entire west coast so suited to the need. It had land enough on which to house and train men, ocean beach enough for practice in amphibious warfare, and—or so it adds—water.

Fall Brook would find Pendleton a very congenial neighbor were it not for the problem involved in factor three. It is the Fall Brook position that the Government ought to go elsewhere for the water.

President Roosevelt said as much on November 29, 1944—that "an emergency exists in the water supply of Camp Pendleton" and "the Colorado River offers the only available source."

In 1949, marine officers and Fall Brook citizens sat down to confer on the whole matter and reached what lawyers call a memorandum of understanding.

NAVY PLAN UPSET

It provided for certain mutually satisfactory exchanges of water between the marine base and local water users. It assumed that extra water for the military would come from an addition to the aqueduct now bringing Colorado River water to San Diego.

Some time after the 1949 conference, the Department of Justice objected to the exchanges. It said the Navy could not give away water rights it had acquired by purchase of Rancho Santa Margarita.

Hence the current suit. More fundamentally, the Government says the reason for the suit is that it is not certain what its rights to the Santa Margarita are, and wants them determined.

Should the Fall Brook assumption prove correct that the Government wants more than this, it still remains a significant fact that the decision rests with the findings of a court of law.

It is not pleasant, naturally, for Fall Brook people to have to go to court, especially against their Government. Their widely known attorney in the case, Phil D. Swing, accurately refers to the plaintiff as "the most powerful antagonist in the world."

WANTS AIM CLARIFIED

In legal language, what is the problem from the Fall Brook view? On May 9 in San Diego, when Jacob Weinberger, presiding judge of the district court, heard and denied certain motions by the defendants, another defense attorney, Jesse R. O'Malley, put it like this:

"These landowners have to know whether they are faced with a claim that will wipe out their holdings or a claim for correlative rights. * * * (In other words, is the Government asking for all the water, or just its share?)

Speaking for the Government, which has sole jurisdiction over Camp Pendleton land under both California and Federal law, William H. Veeder, special assistant to the United States Attorney General, made these statements of record:

"We claim that the measure of our rights is the rights which we purchased from the Rancho Santa Margarita and the measure of our rights will fix our interests as they relate to all others on the stream. That is why we are here. * * *

"We readily admit that one of the most trying questions that will occur in this case is whether the United States, having bought a riparian right from the Santa Margarita River, may now use it for military purposes. We submit that we can. We say that Congress and Congress alone has the power in regard to those waters and that the laws of the State of California do not pertain to them."

GRAB DENIED

Then Mr. Veeder declared: "All that the United States is seeking here is to have its rights adjudicated as they pertain to other rights, and we are not seeking to take any rights from anyone."

This seems plain. Local reaction to it implies a fear that it does not mean what it says—else that the court could find that no one but the Government has rights, or that some long-claimed local rights are not valid.

This anxiety is measurably offset by the knowledge people around here have that Judge Weinberger knows the region—and is a jurist of marked humanitarianism. He found no reason to grant the defendants' motions to the Government's case, but he made this promise: "This is not to say, however, that the Government will be excused from making full disclosures and I am sure it has no desire to be excused."

That is to say, if the United States has a subtle purpose in this case, the judge will get it out in court. Which promise, certainly, should reassure the Fall Brook farmers.

CITE SAFEGUARDS

The Fall Brook farmers make it plain, by the way, that they are not wanting to keep their water rights just so they can be extravagant. They are in the forefront of San Diego County's fight to use every drop of water carefully during these drought years.

"We impound every drop of rain we can and put it down to replenish our wells," says George Yackey, chief engineer and general manager of the Fall Brook Public Utility District. He points to the small earth dams reared across little ravines and gulleys for that purpose.

The Fall Brook men cherish freedom as they cherish their valley. One recent Thursday noon when a typical group of them met for a Rotary Club luncheon, with the water problem much to the fore, they showed this heartily as they sang the first verse of America before they sat down. The familiar words were no mere sentiment; under the circumstances they sounded like the battle cry of justice:

"From every mountain side
Let freedom ring."

Inflation and Deflation

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. BURDICK. Mr. Speaker, inflation has about run its course in this country. It was due to the following causes:

Following World War II, when we should have started the process of paying the cost of that war and getting our own house in order, our leaders, through the so-called bipartisan policy of reviving the world, instead of this country, started on the most extravagant foreign policy any country has ever known. Our tax money was scattered to the four winds of the earth in rehabilitating foreign countries and building the United Nations Organization and the Atlantic Pact to protect the world against what these leaders called the enslavement of the world by the forces of the Russian dictators. The power of communism was enlarged upon, and with it went a genuinely planned war scare, implying to the people of this country that we could not hope to prevent communism from overrunning this Nation unless we had the help of other countries. We were told how weak we were, and that as a last clear chance we must unite with other countries if we hoped to survive. This scared the people more, which was the planned intention.

We scattered billions around the world; we were strong enough for that, but too weak to defend ourselves, so we were told. This money—this gift money—was used in this country by foreign governments in the purchase of goods and munitions of war, and the price to those countries meant nothing, as it was gift money. Prices of everything ran up. For example, the British outbid us \$30 per thousand on our surplus war lumber, and our own dollars were used by foreign countries right here, which had the effect of boosting prices. There was no limit to our spending and furnishing money for foreign governments to spend. It meant nothing to them, as they were using our money, and not theirs. Dollars began to shrink in value, and the more the dollar shrank the more dollars we furnished.

As I see the situation, we have reached the peak of the inflation, no matter what controls are voted by Congress. What will naturally follow this busted spiral of prices? Deflation—not inflation—will be our worry from now on.

For several months now merchants in the large centers have put over installment buying to the limit, and as a result the working people are mortgaged up for months ahead. They bought on time and that kept business going. Listening to the radio, we can hear daily right now, "Come in and buy—make your own terms. A dollar down and as

much time as you want to pay the balance." Stores are loaded up with goods, but one of these days there will be no buyers and the buying power of the people is gradually drying up.

Taxes are the highest ever known in this country, and it was announced by the administration leaders that high taxes would stop inflation. This defies all economic laws. High taxes will cause deflation, but high taxes never stopped inflation.

If this bubble of skyrocketing prices is about to burst and we start on the decline, high taxes sap the buying power of the people. What they scrape up and hand over to the Government to squander on its wild-goose chase to convert the world to our ideas of democracy leaves just that much less for the people to use in buying what they need.

Installment buying will keep up a front for a time, but it will make the collapse that much more severe when real deflation hits.

Already the farmers of the United States have lost billions in buying power. In North Dakota alone the average wheat crop today will bring one hundred and forty millions less than it did when we started this system of tailing up every country from Dan to Beersheba. All other crops have lost buying power in proportion. The first symptoms of the deflation period will be discovered when manufacturing plants cannot sell—and when these plants cannot sell, they will close. When they close, men and women will lose their jobs. This process has already started and if it were not for war-plant business we would be up against it right now. I lived through just such a period in Congress following World War I. I have seen the time when 15,000,000 people were out of work in this country. They had no buying power, and worse than that, they could not obtain food and sufficient clothing and housing. I have seen mothers with hungry children trailing through the congressional offices asking for food.

Every sign points to a repetition of this sad experience. Nothing but a reversal of our foreign policy and the giving of some attention to conditions in this country will prevent a financial disaster. When this depression hits and people are not in debt they can stand quite a shock, but if they are in debt those debts cannot be paid and foreclosures and dispossessions will come thick and fast.

There is no country on earth—and some of them have received billions from us for nothing—that will come to our rescue—for two reasons: First, they will not be able to help us, and, second, we have been advertised throughout the world as a Santa Claus and no country will think we need help. We will be right up against it, as we are in Korea. The United Nations is a great organization, with 58 or 59 countries supposed to be linked up. In Korea, where the action is supposed to be supported by this great organization, 52 of those other countries have not supplied one man or one dollar. We have lost 20 men to 1 man lost by the entire number of other

nations engaged in that war, excepting South Korea.

The sooner we discover that we are living on this earth and not in the clouds, the sooner we quit this policy of going wool-gathering to every corner of the world to establish for others the famous "four freedoms," the sooner we quit spending our blood and resources in such an asinine adventure, the better we shall be able to protect this country from an enemy, or all the enemies this country has. We have many enemies. Human nature runs in nations as it does in individuals. If you want to lose a friend loan him money.

Suppose we had put 25 percent of the money we have spent on foreign countries into the building of our own defenses, does anyone with common sense feel that we need fear any country? Suppose we had put half of that staggering some eight hundred billions into the defenses of the United States in the air, on the sea, and on our land, would we now say that we cannot defend ourselves without the assistance of a fictitious United Nations?

So far as I am able to do it, I propose to advise the people of this country what we are up against now, and what we will be up against when the sharp talons of a depression hit us. Would it not be advisable to keep a few dollars on hand for our own defense?

Many millions of our people have been frugal enough to put money into savings bonds to aid them later in life. Do you not think we are getting close to the bottom of the tax barrel when we demand in a tax bill 20 percent of the interest on those savings bonds? The tax bill as written demanded interest on savings accounts, no matter how small—but the administration was shamed out of that, and the demand was given up.

According to the college advisers of the administration, a tax on savings bonds and accounts would stop inflation. I have been charged with many things, but I have never been charged with being a professor of economics. I do know absolutely, however, that to take interest on savings bonds away from the people will destroy their buying power, and loss of buying power brings on deflation.

Need for Flood Control

EXTENSION OF REMARKS OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the *Norborne* (Mo.) Democrat-Leader of July 13, 1951:

DAM THE RIVER AND DAM IT NOW

It is impossible to estimate the damage to this community by the recent floods but it will run into thousands and thousands of dollars. Multiply this situation by the many communities of the Mississippi and Missouri

Valley and you arrive at a figure that even Washington would respect.

Many plans have been offered to control the rivers of the valley but none can be agreed upon. The most feasible plan is the one offered by the Army engineers to build a series of dams and reservoirs along the Mississippi and Missouri Rivers to hold and store this surplus water. Whether politics, big business, or both, are mixed up in this no decision affair should be ascertained.

We can, and are, sending billions of dollars to Europe under the Marshall plan in the hope it will make friends and influence people and prevent them from going Communist.

There is no danger of the Middle West going Communist but the people out here are getting tired of toting sandbags in an effort to hold a weak levee only to see their crops and homes go floating down the river.

The time has come to find out the views of your Representatives in Congress. We suggest you make inquiry of Senator JAMES P. KEM, Senate Office Building, Washington, D. C.; Senator THOMAS C. HENNING, Senate Office Building, Washington, D. C.; Representative MORGAN M. MOULDER, House of Representatives, Washington, D. C.; Representative PHIL J. WELCH, House of Representatives, Washington, D. C. Tell them dam the river and dam it now.

General MacArthur's Address Before the Massachusetts Legislature

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. Douglas MacArthur before the Massachusetts Legislature:

In this historic forum I recall vividly and reverently the memory of those great architects and defenders of liberty who immortalized the Commonwealth of Massachusetts. To this section of the country men point as the cradle of our freedom.

For here was established more than three centuries ago a declaration of rights from which ultimately came the constitutional mandate guaranteeing our civil liberties. Here men arose militantly in protest against the tyranny of oppressive rule of burdensome taxation. Here men engaged in formal combat to sever the distasteful bonds of colonial rule.

Here men etched the patriot's pattern which all races who harbored in their hearts a love for freedom have since sought to emulate. Here men, by their courage, vision, and faith, forged a new concept of modern civilization.

Before the descendants of these early American patriots I am honored, indeed, to address this legislative assembly in response to its thoughtful and kind invitation. I do so with neither partisan affiliation nor political purpose.

But I have been warned by many that an outspoken course, even if it be solely of truth, will bring down upon my head ruthless retaliation—that efforts will be made to destroy public faith in the integrity of my views—not by force of just argument but by the application of the false methods of propaganda. I am told in effect I must follow blindly the leader—keep silent, or take the bitter consequences.

I had thought Abraham Lincoln had pinned down for all time this ugly code when he declared: "To sin by silence when they should protest makes cowards of men."

I shall raise my voice as loud and as often as I believe it to be in the interest of the American people. I shall dedicate all of my energies to restoring to American life those immutable principles and ideals which your forebears and mine handed down to us in sacred trust. I shall assist in the regaining of that moral base for both public and private life which will restore the people's faith in the integrity of public institutions and the private faith of every man in the integrity of his neighbor.

I shall set my course to the end that no man need fear to speak the truth. I could not do less, for the opportunities for service my country has given me and the honors it has conferred upon me have imposed an obligation which is not discharged by the termination of public service.

MATERIAL SUPERIORITY CITED

Much that I have seen since my return to my native land after an absence of many years has filled me with immeasurable satisfaction and pride. Our material progress has been little short of phenomenal.

It has established an eminence in material strength so far in advance of any other nation or combination of nations that talk of imminent threat to our national security through the application of external force is pure nonsense.

It is not of any external threat that I concern myself but rather of insidious forces working from within which have already so drastically altered the character of our free institutions—those institutions which formerly we hailed at something beyond question or challenge—those institutions we proudly called the American way of life.

Foremost of these forces is that directly, or even more frequently indirectly, allied with the scourge of imperialistic communism. It has infiltrated into positions of public trust and responsibility—into journalism, the press, the radio, and the schools.

It seeks through covert manipulation of the civil power and the media of public information and education to pervert the truth, impair respect for moral values, suppress human freedom and representative government and, in the end, destroy our faith in our religious teachings.

This evil force, with neither spiritual base nor moral standard, rallies the abnormal and subnormal elements among our citizenry and applies internal pressure against all things we hold decent and all things that we hold right—the type of pressure which has caused many Christian nations abroad to fall and their own cherished freedoms to languish in the shackles of complete suppression.

As it has happened there it can happen here. Our need for patriotic fervor and religious devotion was never more impelling. There can be no compromise with atheistic communism—no half-way in the preservation of freedom and religion. It must be all or nothing.

We must unite in the high purpose that the liberties etched upon the design of our life by our forefathers be unimpaired and that we maintain the moral courage and spiritual leadership to preserve inviolate that mighty bulwark of all freedom, our Christian faith.

LIKENED TO TEA-PARTY ERA

It was the adventurous spirit of Americans which despite risks and hazards carved a great nation from an almost impenetrable wilderness; which established the pattern for modern industrialization and scientific development; which built our own almost unbelievable material progress and favorably influenced that of all others; which through the scientific advance of means of communication closed the international geographic gap to permit rapid and effective trade and

commerce among the peoples of the world; which raised the living standard of the American people beyond that ever before known; and which elevated the laborer, the farmer and the tradesman to their rightful station of dignity and relative prosperity.

This adventurous spirit is now threatened as it was in the days of the Boston Tea Party by an unconscionable burden of taxation. This is sapping the initiative and energies of the people and leaves little incentive for the assumption of those risks which are inherent and unescapable in the forging of progress under the system of free enterprise.

Worst of all, it is throwing its tentacles around the low income bracket sector of our society, from whom is now exacted the major share of the cost of government. This renders its paper income largely illusory.

The so-called forgotten man of the early thirties now is indeed no longer forgotten as the Government levies upon his income as the main remaining source to defray reckless spendthrift policies.

More and more we work not for ourselves but for the state. In time, if permitted to continue, this trend cannot fail to be destructive. For no nation may survive in freedom once its people become the servants of the state, a condition to which we are now pointed with dreadful certainty. Labor, as always, will be the first to feel its frightful consequences.

It is quite true that some levy upon the people's earnings to pay the cost of government is unavoidable. But the costs of government, even discounting extraordinary military requirements, have risen at an accelerated, alarming, and reckless rate.

Nothing is heard from those in supreme executive authority concerning the possibility of a reduction or even limitation upon these mounting costs. No suggestion deals with the restoration of some semblance of a healthy balance. No plan is advanced for easing the crushing burden already resting upon the people.

To the contrary, all that we hear are the plans by which such costs progressively may be increased. New means are constantly being devised for greater call upon the taxable potential as though the resources available were inexhaustible. We compound irresponsibility by seeking to share what liquid wealth we have with others.

In so doing we recklessly speak of the billions we would set aside for the purpose, as though they were inconsequential. There can be no quarrel with altruism. Such has ever been a predominant quality making up the nobility of the American character. We should do all in our power to alleviate the suffering and hardship of other peoples, and to support their own maximum effort to preserve their freedom from the assaults of Communist imperialism.

But when this effort is carried beyond the ability to pay, or to the point that the attendant burden upon our own people becomes insufferable, or places our own way of life and freedom in jeopardy, then it ceases to be altruism and becomes reckless imprudence. I have yet to see evidence that such vast outlays were preceded by the slightest concern for the ultimate effect it will have upon our own liberties and standards of life.

NO WAY OF REPLENISHMENT

This Nation's material wealth is built upon the vision and courage, the sweat and toil, hope and faith of our people. There has been no magic involved upon which we might again call to replenish our denuded coffers.

We can either advance upon the security of sound principles or we can plunge on to the precipice of disaster toward which we are now headed in the dangerous illusion that our wealth is inexhaustible—and can therefore be limitlessly shared with others.

It is argued that we must give boundlessly if we are to be insured allies in an emergency.

I reject this reasoning as an unwarranted calumny against well-tested friends of long standing. The survival of the free world is infinitely more dependent upon the maintenance of a strong, vigorous, healthy, and independent America as a leavening influence than upon any financial aid which we might provide under our own existing stringencies.

The free world's one great hope for survival now rests upon the maintaining and preserving of our own strength. Continue to dissipate it and that one hope is dead. If the American people would pass on the standard of life and the heritage of opportunity they themselves have enjoyed to their children and their children's children they should ask their representatives in Government:

"What is the plan for the easing of the tax burden upon us? What is the plan for bringing to a halt this inflationary movement which is progressively and inexorably decreasing the purchasing power of our currency, nullifying the protection of our insurance provisions, and reducing those of fixed income to hardship and even despair?"

I fear these questions, if asked, would be met by stony silence. For just as in Korea there has been no plan. We have long drifted aimlessly with the sole safeguard against the ineptitude of our leaders resting upon American enterprise, American skill and American courage. But once the incentive for the maximizing of these great attributes is lost the bulwark to support our failures is gone and the American way of life as we have known it will be gravely threatened.

LET-DOWN IN HIGH PLACES

Indivisible from this trend and probably contributory to it is a growing tendency to overlook certain forms of laxity in high quarters. Petty corruption in the public administration is a disease unfortunately common to all nations but I refer to an even more alarming situation.

Men of significant stature in national affairs appear to cower before the threat of reprisal if the truth be expressed in criticism of those in higher public authority.

For example, I find in existence a new and heretofore unknown and dangerous concept that the members of our Armed Forces owe primary allegiance and loyalty to those who temporarily exercise the authority of the executive branch of Government, rather than to the country and its Constitution which they are sworn to defend.

No proposition could be more dangerous. None could cast greater doubt upon the integrity of the armed services.

For its application would at once convert them from their traditional and constitutional role as the instrument for the defense of the Republic into something partaking of the nature of a pretorian guard, owing sole allegiance to the political master of the hour.

While for the purpose of administration and command the armed services are within the executive branch of the Government, they are accountable as well to the Congress, charged with the policy-making responsibility, and to the people, ultimate repository of all national power.

Yet so inordinate has been the application of the Executive power that members of the armed services have been subjected to the most arbitrary and ruthless treatment for daring to speak the truth in accordance with conviction and conscience.

DISMISSAL IS DISCERNED

I hesitate to refer to my own relief from the Far Eastern Commands as I have never questioned the legal authority underlying such action. But the three sole reasons publicly stated by the highest authority clearly demonstrate the arbitrary nature of the decision.

The first reason given was that, contrary to existing policy, I warned of the strategic

relationship of Formosa to American security and the dangers inherent in this area's falling under Communist control. Yet this viewpoint has since been declared by the Secretary of State, under oath before congressional committees, to have been and to be the invincible and long-standing policy of the United States.

The second reason given was that I communicated my readiness to meet the enemy commander at any time to discuss acceptable terms of a cease-fire arrangement. Yet, for this proposal, I was relieved of my command by the same authorities who since have received so enthusiastically the identical proposal when made by the Soviet Government.

The third and final reason advanced was my replying to a Congressman's request for information on a public subject then under open consideration by the Congress. Yet both Houses of Congress promptly passed a law confirming my action, which indeed had been entirely in accordance with a long-existing and well-recognized though unwritten policy.

This law states that no member of the Armed Forces shall be restricted or prevented from communicating directly or indirectly with any Member or Members of Congress concerning any subject unless such communication is in violation of law or the security and safety of the United States. And this formal enactment of basic public policy was approved without the slightest dissent by the President.

Is there wonder that men who seek an objective understanding of American policy thinking become completely frustrated and bewildered? Is there wonder that Soviet propaganda so completely dominates American foreign policy? And, indeed, what is our foreign policy?

We hear impassioned appeals that it be bipartisan—violent charges that sinister efforts are being made to obstruct and defeat it—but I defy you or any other man to tell me what it is. It has become a mass of confused misunderstandings and vacillations. It has meant one thing today—another tomorrow. It has almost blown with every wind, changed with every tide.

The sorry truth is we have no policy. Expediencies as variable and shifting as the exigencies of the moment seem to be the only guide. Yesterday, we disarmed, today we arm and what of tomorrow? We have been told of the war in Korea that it is the wrong war, with the wrong enemy, at the wrong time and in the wrong place. Does this mean that they intend and indeed plan what they would call a right war, with a right enemy, at a right time and in a right place?

If successful in mounting the North Atlantic Pact in 1953 or 1954 or at one of the ever changing dates fixed for its consummation, what comes then? Do we mean to throw down a gage of battle? Do we mean to continue the fantastic fiscal burden indefinitely to our inevitable exhaustion?

NEITHER VICTORY NOR DEFEAT

Is our only plan to spend and spend and spend? Do we intend to resist by force Red aggression in southeast Asia if it develops? Do we intend to take over commitments in the explosive Middle East? Do we intend to enter into a series of military alliances abroad? Do we intend to actually implement by force of arms the so-called Truman plan? These are questions that disturb us because there is no answer forthcoming. We do want and need unity and bipartisanship in our foreign policy—but when there is no policy we can but dangerously drift.

In Korea, despite the magnificent performance of our fighting forces, the result has been indecisive. The high moral purposes which so animated and inspired the world a year ago yielded to the timidity and fear

of our leaders as after defeating our original enemy a new one entered the field which they dared not fight to a decision. Appeasement thereafter became the policy of war on the battlefield.

In the actual fighting with this new enemy we did not lose but neither did we win. Yet, it can be accepted as a basic principle proven and reproven since the beginning of time that a great nation which enters upon war and fails to see it through to victory must accept the full moral consequences of defeat.

Now that the fighting has temporarily abated the outstanding impression which emerges from the scene is the utter uselessness of the enormous sacrifice in life and limb which has resulted. A million soldiers on both sides and unquestionably at least a like number of civilians are maimed or dead. A nation has been gutted and we stand today just where we stood before it all started.

The threat of aggression upon the weak by those callously inclined among the strong has not diminished. Indeed, nothing has been settled. No issue has been decided.

This experience again emphasizes the utter futility of modern war—its complete failure as an arbiter of international dissensions. Its threat must be abolished if the world is to go on—and if it does not go on it will go under.

We must finally come to realize that war is outmoded as an instrument of political policy, that it provides no solution for international suicide. We must understand that in final analysis the mounting cost of preparation for war is in many ways as materially destructive as war itself. We must find the means to avoid this great sapping of human energy and resource.

This requires leadership of the highest order—a spiritual and moral leadership—a leadership which our country alone is capable of providing. While we must be prepared to meet the trial of war if war comes, we should gear our foreign and domestic policies toward the ultimate goal—the abolition of war from the face of the earth.

This is what practically all mankind—all the great masses which populate the world—long and pray for. Therein lies the road, the only road, to universal peace and prosperity. We must lead the world down that road however long and tortuous and illusory it may now appear.

Such is the role as I see it for which this great Nation of ours is now cast. In this we follow the cross. If we meet the challenge we cannot fail. But no end may be achieved without first making a start—no success without a trial.

ABOLISH, NOT CONTROL, WAR

On this problem of greatest universal concern, unless we address ourselves to the fundamentals we shall get no farther than the preceding generations which have tried and failed. Convention after convention has been entered into designed to humanize war and bring it under the control of rules dictated by the highest human ideals. Yet each war becomes increasingly savage as the means for mass killing are further developed.

You cannot control war; you can only abolish it. Those who shrug this off as idealistic are the real enemies of peace—the real warmongers. Those who lack the enterprise, vision, and courage to try a new approach when none others have succeeded fail completely the most simple test of leadership.

As I have traveled through the country since my return, I find a great transformation in America, thought to be taking place. Our apathy is disappearing. American public opinion is bargaining to exert its immense power. The American people are expressing themselves with dynamic force on foreign policy. This is exerting a profound influence upon the Soviet course of action.

Few events in the life of our Republic have been of more significant importance nor

more heartening than this rallying of the collective will of the American people. They are putting pressure upon their own leaders and upon the leaders of those with whom we are directly or indirectly engaged. And just as it has cast its influence upon policy and events abroad it can be brought to bear with no less telling effect upon policy and events at home.

Therein lies our best hope in the battle to save America—the full weight of an aroused, informed and militant public opinion. I stated in Texas:

"If it be that my relief was the spark which ignited this great power of American public expression; which caused our people to rise above the level of narrow partisanship to unite in a common crusade to effect a spiritual rebirth in American life; which restored to the American people the full glory and dignity of self-rule under those same high principles and ideals which animated our fathers; which restored a lost faith in ourselves and our free institutions; which provided the symbol for rallying the mighty forces for good throughout the land—then I would be thankful, indeed, to a farseeing and merciful providence and could not ask for more."

We stand today at a critical moment in history—at a vital crossroad. In one direction is the path of courageous patriots seeking in humility but the opportunity to serve their country, the other that of those selfishly seeking to entrench autocratic power.

The one group stands for implacable resistance against communism; the other for compromising with communism. The one stands for our traditional system of government and freedom; the other for a socialist state and slavery.

The one boldly speaks the truth; the other spreads propaganda, fear, and deception. The one denounces excessive taxation, bureaucratic government and corruption; the other seeks more taxes, more bureaucratic power, and shields corruption.

The people, as the ultimate rulers, must choose the course our Nation shall follow. On their decision rests the future of our free civilization and the survival of our Christian faith. Not for a moment do I doubt that decision or that it will guide the Nation to a new and fuller greatness. Good night

Reserve Officers Association of the United States Express Profound Sorrow Over the Death of Admiral Forrest P. Sherman, Chief of Naval Operations

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. VAN ZANDT. Mr. Speaker, the president of the Reserve Officers Association on July 23, 1951, expressed the deep regret and sorrow of the reservists of the country to Mrs. Forrest P. Sherman, the wife of the former Chief of Naval Operations who died yesterday in Europe.

Col. John P. Coleman, of Dayton, Ohio, the national president of the group of 70,000 Reserve officers, said:

Admiral Sherman had the affection and confidence of all reservists. His firm hand at the tiller of the Navy will be missed sorely. He was a good friend to the civilian sailors of the Naval Reserve and was respected sincerely by reservists of the other services.

Colonel Coleman also announced that the ROA's distinguished service citation of outstanding service to the country will be awarded Admiral Sherman posthumously.

We had intended to present the admiral with the citation when he finished his term as Chief of Naval Operations—

Coleman said.

It is fitting and proper that his family at least be aware of the association's high regard for him.

The distinguished service citation, which has been awarded only three times before, is the highest honor the Reserve Association makes to military leaders.

The Soil Conservation Service—What It Does and How

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JENSEN. Mr. Speaker, the Soil Conservation Service has no one engaged in demonstration work. That type of work was eliminated from Service activities when the agency completed the first stage of its operation in 1944.

No one in the Service is employed in teaching, except that some of the more experienced technicians spend short periods occasionally in familiarizing SCS technical employees with the in-Service techniques of soil conservation.

Eighty-five percent of the funds of the Service are spent for employees' salaries, not for demonstration or teaching; but for actually going with farmers through their fields and pastures and over their idle lands, and up and down their gullies and eroded areas to prepare cooperatively with the farmer a blueprint, acre by acre, for the entire farm. If the farmer is satisfied with the blueprint and reaches the stage of wanting a plan applied to his land, then again the technicians of the Soil Conservation Service go out on the farm and help the actual application of the conservation job to the land.

This kind of work has to be done through the instrumentality of human beings. It is an action program of lay-out work and technical guidance. The best estimates we have indicate that we are still losing today around 500,000 acres of land every year—that much ruined or made unfit for further immediate practical cultivation as the result of excessive erosion, which we now know how to prevent. I think it should be pointed out in this connection that the Bureau of Agricultural Economics is said to have estimated that about 2½ acres of reasonably good land are required to produce a minimum, adequate, nutritional diet per capita. Others have pointed out that ½ acre additional is required per capita for the production of various raw materials of industry, such as cotton and flax. At this time,

with the population estimated at 154,000,000 (and increasing annually at the rate of 2,000,000), we have, according to estimates with respect to our present area of good cropland, only about 3.2 acres per capita. So we have not just a limited area of good cropland, but, in effect, a decreasing limited area. We must continue the soil conservation program at full speed or we will be a deficit Nation with respect to our supply of productive land. Getting to work on this basic job was delayed too long in the first place. Very little was done to halt the inroads of erosion until the program of the Soil Conservation Service got under way in the early thirties. Our delay cost us in the neighborhood of 100,000,000 acres of cropland.

If our population should continue to increase by 2,000,000 a year for so much as 10 years, and if we dilly-dally with our going and highly effective program of soil conservation, we will become a deficit Nation, while now we are supposed to be the leader of the world.

Last year alone some 6,500,000 acres of land was treated with conservation practices.

It is not unusual for good corn land in the Corn Belt to lose 60 tons of soil per acre annually by erosion under ordinary farming practices. The production of this land, on the average, is now about 60 bushels of corn per acre. In other words, a ton of soil is lost by erosion to each bushel of corn produced, or 36 pounds of soil required for the production of each pound of grain. Assuming that all the stalks and cobs are returned to the land, it takes approximately 2 pounds of ordinary Corn Belt soil to furnish the mineral nutrients required to produce 1 pound of grain. Consequently, 18 times as much soil is lost by erosion as it takes to supply necessary nutrients for corn without soil-conservation practices.

A relatively small percent of the total conservation job has been completed to date. The total conservation job of the Nation includes all kinds of farm and range land, not just a part of the land.

Contributions are being made by many States and State agencies, particularly by the State agricultural experiment stations and the State conservation departments. It must be remembered that the farmers themselves are contributing, as well as can be determined, about three-fourths of the cost of the job.

Soil-conservation work is going too slowly, we all agree, especially when we think of the annual loss of 500,000 acres each year, with additional damage to even more land. If we could, it would be most fortunate to finish the job within the next 10 years; but it probably cannot be finished that quickly. When I say finished, I mean the application of the needed basic conservation measures to the land, up to the stage of maintenance. The work is going much faster in some parts of the country than in others. It seems to go slower where the average productivity of the land is very much above the average of the United States. Probably this is because the farmer in these better areas feels that

his annual losses from erosion, while considerable, may not be serious enough to jeopardize his farm any time soon.

In some parts of the country, the soil-conservation program is going much more rapidly because the hazards have been of a much more threatening nature. In some sections it was not difficult for the farmers to see that in 3 or 4 or 5 years they would have to go out of the farming business if the erosion could not be reduced with practical measures. There are some counties in some parts of the country where conservation has progressed so rapidly that the farmers are beginning to talk about proper methods of celebrating the completion of the job—up to the state of maintenance. Actually, in a number of counties the job of applying the basic conservation measures have been completed to the extent of 80 to 90 percent.

I am proud to say that the farmers of the Seventh Iowa District are in the forefront in effectively conserving their priceless soil.

Why Shouldn't They Be Americans?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Blake Clark, appearing in the August number of Reader's Digest condensed from the Freeman. How much longer will the Congress delay action to remove the last remnants of the worst blot on America's record—discrimination against people of Asian ancestry just because of their race? How much longer will we jeopardize the lives of Americans by failing to remove the insult which denies us the full trust and good will of a billion people?

WHY SHOULDN'T THEY BE AMERICANS?

(By Blake Clark)

Mrs. Nawa Munemori is the mother of an American World War II hero. A grateful nation bestowed the Congressional Medal of Honor on her son, Sadao, for wiping out two machine-gun nests and throwing himself on an exploding hand grenade to save his fellow soldiers. The United States Army transport, *Pvt. Sadao Munemori*, which brought his regiment home from Europe, bears his name today. Yet Mrs. Munemori, his widowed mother, is denied citizenship by the country for which her son sacrificed his life.

Mrs. Munemori symbolizes the plight of victims of our outmoded immigration and naturalization laws, which discriminate against worthy people purely on the basis of their race. These antiquated statutes give the Communists in the Far East a powerful anti-American propaganda weapon and damage our relations with the people of Asia.

The situation of some 85,000 aliens in this country demonstrates the unfairness of the position we have taken. About 80,000 are Japanese; 5,000 are Koreans and Polynesians, with a sprinkling of other nationalities.

These residents legally entered this country before 1924. The Immigration Act of that year permitted them to remain here but continued to deny them the rights of naturalization that were granted to European immigrants. The sole consideration affecting our treatment of these long-time settlers is their race.

Sir Peter Buck, for example, a former professor of anthropology at Yale University, is one of the world's outstanding scientists in his field. England was proud to knight him, but he is refused the privilege of United States citizenship. Sir Peter is the son of an Irish father and a Maori mother. The fact that he is half-Maori—and that alone—bars Sir Peter from citizenship in his beloved adopted country.

Before his recent appointment as Korean Ambassador to the United States, Dr. Y. C. Yang was a prominent Honolulu physician and had practiced in this American community for half a lifetime. He was educated in the United States, is married to an American, and is the father of an American daughter. Dr. Yang would have welcomed American citizenship long ago had it been possible.

When Pearl Harbor was attacked, Dr. Yang responded immediately to an emergency appeal for medical volunteers to treat the wounded. He worked indefatigably to save the lives of many American seamen. He then volunteered in the Hawaii National Guard. After being commissioned a captain and serving 2 weeks, he was notified that his services could no longer be accepted. As a Korean, he was classified as an enemy alien. He could not serve his chosen country because of his race.

The Japanese—the largest group affected—have probably contributed more to America than any other Asiatics. Their sons formed the famous Four Hundred and Forty-second Regimental Combat Team, which probably received more decorations and suffered more casualties than any unit of similar size in the entire United States Army, yet these parents cannot become citizens.

The abuses against those of Japanese origin are compounded in California where many of them live. There State law forbids an alien ineligible for citizenship from owning a farm. Men who have turned acres of desert waste into green, producing fields can cultivate the land only as hired hands.

The California law makes it a crime for a Japanese alien to "enjoy, use, occupy, be, or remain on the land, or have a beneficial interest in the land, its crops, or proceeds." Temporarily in abeyance pending court decision on a case, this prejudiced law has been so strictly enforced in some counties that families cannot live together. California filed a suit to seize the property of Mrs. Roy K. Hirata, born an American citizen and mother of three citizen children, because her alien husband had helped her cultivate her farm and lived on it. Hirata had to leave home and watch hired strangers gather the crops he had planted.

Akira Iwamura was eager to get home after 2 years with Army Intelligence in the Pacific. His father had bought 60 acres of good Fresno grape land in his citizen son's name in 1938, and had been taking care of it for him. California welcomed Akira home from war service with a demand that he forfeit his land—because his alien parent had a beneficial interest in it. Akira's lawyer advised him to settle out of court. In exchange for the State's "quieting the title," Akira had to pay half the assessed value of the land to buy back his own acres.

California is not alone in making the racially ineligible alien run a stiff obstacle course for his livelihood. Nowhere from the Pacific to the Atlantic can he be a lawyer or certified public accountant. Despite shortages in important professions, 26 States prohibit his making a living as a dentist, 25 as

a physician, 18 as a teacher. Some 500 laws passed by various States bar him from such work as a real estate or insurance agent, pharmacist, or civil servant. In some States he cannot even accept an old-age pension, although money toward it may have been withheld from his wages.
